And if a contretemps does not have the good luck, a more or less calculated luck, to come *just in time*, then the inopportuneness of a strategy (political or other) may still *bear witness*, precisely [*justement*], to justice, bear witness, at least, to the justice which is demanded and about which we were saying a moment ago that it must be disadjusted, irreducible to exactness [*justesse*] and to law. But that is not the decisive motivation here and we need finally to break with the simplism of these slogans. What is certain is that I am not a Marxist, as someone said a long time ago, let us recall, in a witticism reported by Engels.⁸ Must we still cite Marx as an authority in order to say “I am not a Marxist”? What is the distinguishing trait of a Marxist statement? And who can still say “I am a Marxist”?

To continue to take inspiration from a certain spirit of Marxism would be to keep faith with what has always made of Marxism in principle and first of all a *radical* critique, namely a procedure ready to undertake its self-critique. This critique *wants itself* to be in principle and explicitly open to its own transformation, re-evaluation, self-reinterpretation. Such a critical “wanting-itself” necessarily takes root, it is involved in a ground that it not yet critical, even if it is not, not yet, pre-critical. This latter spirit is more than a style, even though it is also a style. It is heir to a spirit of the Enlightenment which must not be renounced. We would distinguish this spirit from other spirits of Marxism, those that rivet it to the body of Marxist doctrine, to its supposed systemic, metaphysical, or ontological totality (notably to its “dialectical method” or to “dialectical materialism”⁹), to its fundamental concepts of labor, mode of production, social class, and consequently to the whole history of its apparatuses (projected or real: the Internationals of the labor movement, the dictatorship of the proletariat, the single party, the State, and finally the totalitarian monstrosity).

*From The Animal That Therefore I Am*¹

From Chapter 1. The Animal That Therefore I Am (More to Follow)

* * *

The animal, what a word!

The animal is a word, it is an appellation that men have instituted, a name they have given themselves the right and the authority to give to the living other.

8. On November 2–3, 1882, Engels wrote in a letter to the German socialist and politician Eduard Bernstein, “Now what is known as ‘Marxism’ in France is, indeed, an altogether peculiar product—so much so that Marx once said to Lafargue: ‘Ce qu’il y a de certain c’est que moi, je ne suis pas Marxiste’ [If anything is certain, it is that I myself am not a Marxist].” He repeated the quip in a let-

ter of August 5, 1890, to the German economist and socialist Conrad Schmidt.

9. The Marxist theory that stresses the material basis of reality, including human consciousness and cultural forms, and posits that change results from a struggle of contradictory forces.

1. Translated by David Wills, who occasionally retains the original French in brackets.

At the point at which we find ourselves, even before I get involved, or try to drag you after me² or in pursuit of me upon an itinerary that some of you will no doubt find tortuous, labyrinthine, even aberrant, leading us astray from lure to lure, I'll attempt the operation of disarmament that consists in *posing* what one could call some hypotheses in view of theses; posing them simply, naked, frontally, as directly as possible, *pose* them as I just said, by no means posing in the way one indulgently poses by looking at oneself in front of a spectator, a portraitist, or a camera, but "pose" in the sense of situating a series of "positions."

First hypothesis: for about two centuries, intensely and by means of an alarming rate of acceleration, for we no longer even have a clock or chronological measure of it, we, we who call ourselves men or humans, we who recognize ourselves in that name, have been involved in an unprecedented transformation. This mutation affects the experience of what we continue to call imperturbably, as if there were nothing to it, the animal and/or animals. I intend to stake a lot, or play a lot on the flexible slash of this *and/or*. This new situation can be determined only on the basis of what is most ancient. We shall have to move continuously along this coming and going between the oldest and what is coming, in the exchange among the new, the "again [*de nouveau*]," and the "anew [*à nouveau*]" of repetition. Far from appearing, simply, within what we continue to call the world, history, life, etc., this unheard-of relation to the animal or to animals is so new that it should oblige us to worry all those concepts, more than just problematize them. That is why I would hesitate to say that we are *living through* that (if one can still confidently call *life* the experience whose limits come to tremble at the bordercrossings between *bios* and *zoē*,³ the biological, zoological, and anthropological, as between life and death, life and technology, life and history, etc.). I would therefore hesitate just as much to say that we are living through a historical turning point. The figure of the turning point implies a rupture or an instantaneous mutation whose model or figure remains genetic, biological, or zoological and which therefore remains, precisely, to be questioned. As for history, historicity, even historicity, those motifs belong precisely—as we shall see in detail—to *this* auto-definition, *this* auto-apprehension, *this* auto-situation of man or of the human *Dasein*⁴ as regards what is living and animal life; they belong to this auto-biography of man, which I wish to call into question today.

Since all these words, in particular *history*, belong in a constitutive manner to the language, interests, and lures of this autobiography, we should not be overhasty in giving them credence or in confirming their pseudo-evidence. I shall therefore not be speaking of a historical turning point in order to name a transformation in progress, an alteration that is at the same time more serious and less recognizable than a historical turning point in the relation to the animal, in the being-with shared by the human and by what the human calls the animal: the *being* of what calls itself man or the *Dasein* with what he himself calls, or what we ourselves are calling, what we are still daring, provisionally, to name in general but in the singular, *the animal*. However one names or interprets this alteration, no one could deny that it has been accelerating,

2. *Vous entraîner à ma suite*: also "to train you to follow me" [translator's note].

3. Physical life and eternal life (Greek), terms found in the New Testament.

4. Existence (literally, "being there"; German), a term famously used by the German philosopher MARTIN HEIDEGGER.

intensifying, no longer knowing where it is going, for about two centuries, at an incalculable rate and level.

Given this indetermination, the fact that it is left hanging, why should I say, as I have more than once, "for about two centuries," as though such a point of reference were rigorously possible within a process that is no doubt as old as man, what he calls his world, his knowledge, his history, and his technology? Well, in order to recall, for convenience to begin with and without laying claim here to being at all exact, certain preexisting indices that allow us to understand and agree in saying "us" today. Limiting ourselves to the most imposing of these indices, we can refer to those that go well beyond the animal sacrifices of the Bible or of ancient Greece, well beyond the hecatombs (sacrifices of one hundred cattle, with all the metaphors that that expression has since been charged with), beyond the hunting, fishing, domestication, training, or traditional exploitation of animal energy (transport, plowing, draught animals, the horse, ox, reindeer, etc., and then the guard dog, small-scale butchering, and then experiments on animals, etc.). It is all too evident that in the course of the last two centuries these traditional forms of treatment of the animal have been turned upside down by the joint developments of zoological, ethological, biological, and genetic forms of *knowledge*, which remain inseparable from *techniques* of intervention *into* their object, from the transformation of the actual object, and from the milieu and world of their object, namely, the living animal. This has occurred by means of farming and regimentalization at a demographic level unknown in the past, by means of genetic experimentation, the industrialization of what can be called the production for consumption of animal meat, artificial insemination on a massive scale, more and more audacious manipulations of the genome, the reduction of the animal not only to production and overactive reproduction (hormones, genetic crossbreeding, cloning, etc.) of meat for consumption, but also of all sorts of other end products, and all of that in the service of a certain being and the putative human well-being of man.

All that is all too well known; we have no need to take it further. However one interprets it, whatever practical, technical, scientific, juridical, ethical, or political consequence one draws from it, no one can today deny this event—that is, the *unprecedented* proportions of this subjection of the animal. Such a subjection, whose history we are attempting to interpret, can be called violence in the most morally neutral sense of the term and even includes the interventionist violence that is practiced, as in some very minor and in no way dominant cases, let us never forget, in the service of or for the protection of the animal, but most often the human animal. Neither can one seriously deny the disavowal that this involves. No one can deny seriously any more, or for very long, that men do all they can in order to dissimulate this cruelty or to hide it from themselves; in order to organize on a global scale the forgetting or misunderstanding of this violence, which some would compare to the worst cases of genocide (there are also animal genocides: the number of species endangered because of man takes one's breath away). One should neither abuse the figure of genocide nor too quickly consider it explained away. It gets more complicated: the annihilation of certain species is indeed in process, but it is occurring through the organization and exploitation of an artificial, infernal, virtually interminable survival, in conditions that previous generations would have judged monstrous, outside of

every presumed norm of a life proper to animals that are thus exterminated by means of their continued existence or even their overpopulation. As if, for example, instead of throwing a people into ovens and gas chambers (let's say Nazi) doctors and geneticists had decided to organize the overproduction and overgeneration of Jews, gypsies, and homosexuals by means of artificial insemination, so that, being continually more numerous and better fed, they could be destined in always increasing numbers for the same hell, that of the imposition of genetic experimentation, or extermination by gas or by fire. In the same abattoirs. I don't wish to abuse the ease with which one can overload with pathos the self-evidences I am drawing attention to here. Everybody knows what terrifying and intolerable pictures a realist painting could give to the industrial, mechanical, chemical, hormonal, and genetic violence to which man has been submitting animal life for the past two centuries. Everybody knows what the production, breeding, transport, and slaughter of these animals has become. Instead of thrusting these images in your faces or awakening them in your memory, something that would be both too easy and endless, let me simply say a word about this "pathos." If these images are "pathetic," if they evoke sympathy, it is also because they "pathetically" open the immense question of pathos and the pathological, precisely, that is, of suffering, pity, and compassion; and the place that has to be accorded to the interpretation of this compassion, to the sharing of this suffering among the living, to the law, ethics, and politics that must be brought to bear upon this experience of compassion. What has been happening for two centuries now involves a new experience of this compassion. In response to what is, for the moment, the irresistible but unacknowledged unleashing and the organized disavowal of this torture, voices are raised—minority, weak, marginal voices, little assured of their discourse, of their right to discourse, and of the enactment of their discourse within the law, as a declaration of rights—in order to protest, in order to appeal (we'll return to this) to what is still presented in such a problematic way as *animal rights*, in order to awaken us to our responsibilities and our obligations vis-à-vis the living in general, and precisely to this fundamental compassion that, were we to take it seriously, would have to change even the very cornerstone (and it is next to that cornerstone that I wish to do my business today) of the philosophical problematic of the animal.

It is in thinking of the source and ends of this compassion that about two centuries ago someone like Bentham,⁵ as is well known, proposed changing the very form of the question regarding the animal that dominated discourse within the tradition, in the language both of its most refined philosophical argumentation and of everyday acceptance and common sense. Bentham said something like this: the question is not to know whether the animal can think, reason, or speak, etc., something we still pretend to be asking ourselves (from Aristotle to Descartes, from Descartes, especially, to Heidegger, Levinas, and Lacan,⁶ and this question determines so many others concerning *power* or *capability* [pouvoirs] and *attributes* [avoirs]: being able, having the power or capability to give, to die, to bury one's dead,

5. Jeremy Bentham (1748–1832), English philosopher and social reformer, a founder of utilitarianism.

6. JACQUES LACAN (1901–1981), French psycho-

analyst. ARISTOTLE (384–322 B.C.E.), Greek philosopher; René Descartes (1596–1650), French philosopher; Emmanuel Lévinas (1906–1995), Lithuanian-born French philosopher.

to dress, to work, to invent a technique, etc, a power that consists in having such and such a faculty, thus such and such a capability, as an essential attribute). Thus the question will not be to know whether animals are of the type *zōon logon echon*,⁷ whether they *can* speak or reason thanks to that *capacity* or that *attribute* of the *logos*,⁸ the *can-have* [pouvoir-avoir] of the *logos*, the aptitude for the *logos* (and logo-centrism is first of all a thesis regarding the animal, the animal deprived of the *logos*, deprived of the *can-have-the-logos*: this is the thesis, position, or presupposition maintained from Aristotle to Heidegger, from Descartes to Kant,⁹ Levinas, and Lacan). The *first* and *decisive* question would rather be to know whether animals *can suffer*.

"Can they suffer?" asks Bentham, simply yet so profoundly.

Once its protocol is established, the form of this question changes everything. It no longer simply concerns the *logos*, the disposition and whole configuration of the *logos*, having it or not, nor does it concern, more radically, a *dynamis* or *hexis*,¹ this having or manner of being, this *habitus*² that one calls a faculty or "capability," this can-have or the power one possesses (as in the power to reason, to speak, and everything that that implies). The question is disturbed by a certain *passivity*. It bears witness, manifesting already, as question, the response that testifies to a sufferance, a passion, a not-being-able. The word *can* [pouvoir] changes sense and sign here once one asks, "Can they suffer?" Henceforth it wavers. What counts at the origin of such a question is not only the idea of what transitivity or activity (being able to speak, to reason, etc.) refer to; what counts is rather what impels it toward this self-contradiction, something we will later relate back to autobiography. "Can they suffer?" amounts to asking "Can they *not be able*?" And what of this inability [*impouvoir*]? What of the vulnerability felt on the basis of this inability? What is this nonpower at the heart of power? What is its quality or modality? How should one take it into account? What right should be accorded it? To what extent does it concern us? Being able to suffer is no longer a power; it is a possibility without power, a possibility of the impossible. Mortality resides there, as the most radical means of thinking the finitude that we share with animals, the mortality that belongs to the very finitude of life, to the experience of compassion, to the possibility of sharing the possibility of this nonpower, the possibility of this impossibility, the anguish of this vulnerability, and the vulnerability of this anguish.

With this question—"Can they suffer?"—we are not undermining the rock of indubitable certainty, the foundation of every assurance that one could, for example, look for in the *cogito*, in *Je pense donc je suis*.³ But from another perspective altogether we are putting our trust in an instance that is just as radical, although essentially different: namely, what is undeniable. No one can deny the suffering, fear, or panic, the terror or fright that can seize certain animals and that we humans can witness. (Descartes himself, as we shall see, was not able to claim that animals were insensitive to suf-

7. Animal having reason (Greek). The classical definition of humans as "rational animals" is often attributed to Aristotle.

8. Logic, reason, word (Greek).

9. IMMANUEL KANT (1724–1804), German philosopher.

1. A disposition to behave in a certain way: a key

term in the work of the French philosopher PIERRE BOURDIEU. *Dynamis*: potentiality, power (Greek).

2. Habit (Greek).

3. I think therefore I am (French). This famous foundational dictum of Descartes' *Discourse on Method* (1637) is better known in Latin: "cogito [I think], ergo sum."

fering.) Some will still try—this is something else we will come to—to contest the right to call that *suffering* or *anguish*, words or concepts that would still have to be reserved for man and for the *Dasein* in the freedom of its being-toward-death. We will have reason to problematize that discourse later. But for the moment let us note the following: the response to the question “Can they suffer?” leaves no room for doubt. In fact, it has never left any room for doubt; that is why the experience that we have of it is not even indubitable; it precedes the indubitable, it is older than it. No doubt either, then, of there being within us the possibility of giving vent to a surge of compassion, even if it is then misunderstood, repressed, or denied, held at bay. Before the *undeniability* of this response (yes, they suffer, like us who suffer for them and with them), before this response that precedes all other questions, both ground and cornerstone of the problematic shift. Perhaps it loses all security, but in any case it no longer rests on the old, supposedly natural (ground) or historic and *artifactual* (cornerstone) foundation. The two centuries I have been referring to somewhat casually in order to situate the present in terms of this tradition have been those of an unequal struggle, a war (whose inequality could one day be reversed) being waged between, on the one hand, those who violate not only animal life but even and also this sentiment of compassion, and, on the other hand, those who appeal for an irrefutable testimony to this pity.

War is waged over the matter of pity. This war is probably ageless but, and here is my hypothesis, it is passing through a critical phase. We are passing through that phase, and it passes through us. To think the war we find ourselves waging is not only a duty, a responsibility, an obligation, it is also a necessity, a constraint that, like it or not, directly or indirectly, no one can escape. Henceforth more than ever. And I say “to think” this war, because I believe it concerns what we call “thinking.” The animal looks at us, and we are naked before it. Thinking perhaps begins there.

Here now, in view of another thesis, is the *second hypothesis* that I think must be deduced without hesitation. It concerns or puts into effect another logic of the limit. I would thus be tempted to inscribe the subject of this thesis in the series of three conferences that, beginning with *The Ends of Man* and followed by *The Crossing of Borders*,⁴ have been devoted to a properly *transgressal* if not transgressive experience of *limitrophy*. Let’s allow that word to have a both general and strict sense: what abuts onto limits but also what feeds, is fed, is cared for, raised, and trained, what is cultivated on the edges of a limit. In the semantics of *trephō*, *trophē*, or *trophos*,⁵ we should be able to find everything we need to speak about what we should be speaking about in the course of these ten days devoted to the autobiographical animal: feeding, food, nursing, breeding, offspring, care and keeping of animals, training, upbringing, culture, living and allowing to live by giving to live, be fed, and grown, autobiographically. *Limitrophy* is therefore my subject. Not just because it will concern what sprouts or grows at the limit, around the limit, by maintaining the limit, but also what *feeds the limit*,

4. Three weeklong conferences focused on Derrida’s work took place in France at Cerisy-la-Salle’s International Cultural Center, in 1980,

1992, and 1997 (Autobiographical Animal).

5. I rear or nourish (originally but rarely, “I thicken or curdle”), food, or feeder (Greek).

generates it, raises it, and complicates it. Everything I'll say will consist, certainly not in effacing the limit, but in multiplying its figures, in complicating, thickening, delinearizing, folding, and dividing the line precisely by making it increase and multiply. Moreover, the supposed first or literal sense of *trephō* is just that: to transform by thickening, for example, in curdling milk. So it will in no way mean questioning, even in the slightest, the limit that we have had a stomachful of, the limit between Man with a capital *M* and Animal with a capital *A*. It will not be a matter of attacking frontally or antithetically the thesis of philosophical or common sense on which has been constructed the relation to the self, the presentation of self of human life, the autobiography of the human species, the whole history of the self that man recounts to himself, that is to say, the thesis of a limit as rupture or abyss between those who say "we men," "I, a human," and what this man among men who say "we," what he *calls* the animal or animals. I shan't for a single moment venture to contest that thesis, nor the rupture or abyss between this "I-we" and what we *call* animals. To suppose that I, or anyone else for that matter, could ignore that rupture, indeed that abyss, would mean first of all blinding oneself to so much contrary evidence; and, as far as my own modest case is concerned, it would mean forgetting all the signs that I have managed to give, tirelessly, of my attention to difference, to differences, to heterogeneities and abyssal ruptures as against the homogeneous and the continuous. I have thus never believed in some homogeneous continuity between what calls *itself* man and what *he* calls the animal. I am not about to begin to do so now. That would be worse than sleepwalking, it would simply be too asinine [*bête*]. To suppose such a stupid memory lapse or to take to task such a naive misapprehension of this abyssal rupture would mean, more seriously still, venturing to say almost anything at all for the cause, for whatever cause or interest that no longer had anything to do with what we claimed to want to talk about. When that cause or interest seeks to profit from what it simplistically suspects to be a biologicistic continuism, whose sinister connotations we are well aware of, or more generally to profit from what is suspected as a geneticism that one might wish to associate with this scatterbrained accusation of continuism, at that point the undertaking becomes in any case so aberrant that it neither calls for nor, it seems to me, deserves any direct discussion on my part. Everything I have suggested so far and every argument I shall put forward today stands overwhelmingly in opposition to the blunt instrument that such an allegation represents.

There is no interest to be found in debating something like a discontinuity, rupture, or even abyss between those who call themselves men and what so-called men, those who name themselves men, call the animal. Everybody agrees on this; discussion is closed in advance; one would have to be more asinine than any beast [*plus bête que les bêtes*] to think otherwise. Even animals know that (ask Abraham's ass or ram⁶ or the living beasts that Abel⁷ offered to God: they know what is about to happen to them when men say "Here I am"⁸ to God, then consent to sacrifice themselves, to sacrifice their

6. In Genesis 22, Abraham, the first of the Hebrew patriarchs, takes his ass along with his son, Isaac, when he follows God's instructions to sacrifice Isaac as a burnt offering; at the last minute, a ram is provided him to sacrifice instead.

7. The younger son of Adam and Eve, who offered God sacrifices from his flock (Genesis 4.4).

8. Abraham's response when hailed by God (Genesis 22.1) and by the angel of God (22.11), as well as by Isaac (22.7).

sacrifice, or to forgive themselves). The discussion is worth undertaking once it is a matter of determining the number, form, sense, or structure, the foliated consistency, of this abyssal limit, these edges, this plural and repeatedly folded frontier. The discussion becomes interesting once, instead of asking whether or not there is a limit that produces a discontinuity, one attempts to think what a limit becomes once it is abyssal, once the frontier no longer forms a single indivisible line but more than one internally divided line; once, as a result, it can no longer be traced, objectified, or counted as single and indivisible. What are the edges of a limit that grows and multiplies by feeding on an abyss? Here is my thesis in three versions:

1. This abyssal rupture doesn't describe two edges, a unilinear and indivisible line having two edges, Man and the Animal in general.

2. The multiple and heterogeneous border of this abyssal rupture has a history. Both macroscopic and microscopic and far from being closed, that history is now passing through the most unusual phase in which we now find ourselves, and for which we have no scale. Indeed, one can speak here of history, of a historic moment or phase, only from one of the supposed edges of the said rupture, the edge of an anthropo-centric subjectivity that is recounted or allows a history to be recounted about it, autobiographically, the history of its life, and that it therefore calls *History*.

3. Beyond the edge of the *so-called* human, beyond it but by no means on a single opposing side, rather than "The Animal" or "Animal Life" there is already a heterogeneous multiplicity of the living, or more precisely (since to say "the living" is already to say too much or not enough), a multiplicity of organizations of relations between living and dead, relations of organization or lack of organization among realms that are more and more difficult to dissociate by means of the figures of the organic and inorganic, of life and/or death. These relations are at once intertwined and abyssal, and they can never be totally objectified. They do not leave room for any simple exteriority of one term with respect to another. It follows that one will never have the right to take animals to be the species of a kind that would be named The Animal, or animal in general. Whenever "one" says "The Animal," each time a philosopher, or anyone else, says "The Animal" in the singular and without further ado, claiming thus to designate every living thing that is held not to be human (man as *rational animal*, man as political animal,⁹ speaking animal, *zōon logon echon*, man who says "I" and takes himself to be the subject of a statement that he proffers on the subject of the said animal, etc.), well, each time the subject of that statement, this "one," this "I," does that he utters an *asinity* [bêtise]. He avows without avowing it, he declares, just as a disease is declared by means of a symptom, he offers up for diagnosis the statement "I am uttering an *asinity*." And this "I am uttering an *asinity*" should confirm not only the animality that he is disavowing but his complicity, continued, and organized involvement in a veritable war of the species.

Such are my hypotheses in view of theses on the animal, on animals, on the words *animal* [animal] or *animals* [animaux].

Yes, animal, what a word!

Animal is a word that men have given themselves the right to give. These humans are found giving it to themselves, this word, but as if they had

9. In *Politics* 1, 1253a, Aristotle defines man as "by nature a political animal."

received it as an inheritance. They have given themselves the word in order to corral a large number of living beings within a single concept: "The Animal," they say. And they have given it to themselves, this word, at the same time according themselves, reserving for them, for humans, the right to the word, the naming noun [*nom*], the verb, the attribute, to a language of words, in short to the very thing that the others in question would be deprived of, those that are corralled within the grand territory of the beasts: The Animal. All the philosophers we will investigate (from Aristotle to Lacan, and including Descartes, Kant, Heidegger, and Levinas), all of them say the same thing: the animal is deprived of language. Or, more precisely, of response, of a response that could be precisely and rigorously distinguished from a reaction; of the right and power to "respond," and hence of so many other things that would be proper to man.

Men would be first and foremost those living creatures who have given themselves the word that enables them to speak of the animal with a single voice and to designate it as the single being that remains without a response, without a word with which to respond.

That wrong was committed long ago and with long-term consequences. It derives from this word, or rather it comes together in this word *animal*, which men have given themselves as at the origin of humanity, and which they have given themselves in order to be identified, in order to be recognized, with a view to being what they say they are, namely, men, capable of replying and responding in the name of men.

I would like to try to speak of a certain wrong or evil that derives from this word, to begin with, by stammering some chimerical aphorisms.

The animal that I am (following), does it speak?

That is an intact question, virginal, new, still to come, a completely naked question.

For language is like the rest—it is not enough to speak of it.

From the moment of this first question, one should be able to sniff the trace of the fact that this animal seems to speak French here, and is no less asinine for it. "The animal that I am (following), does it speak?" This address could be a feint, like the switch from "I" to "it." The question could be the ruse or stratagem of what English calls a rhetorical question, one whose response is already taken for granted. The question will shortly be very much that of the response, and no doubt I shall try to imply that one cannot treat the supposed animality of the animal without treating the question of the response, and of what *responding* means. And what *being erased*¹ means. As we shall see, even those who, from Descartes to Lacan, have conceded to the animal some aptitude for signs and for communication have always denied it the power to *respond*—to *pretend*, to *lie*, to *cover its tracks* or *erase* its own traces.

But whether it is fictive or not, when I ask, "The animal that I am, does it speak?" the question seems at that moment to be signed, to be sealed by someone.

What does it seal? What claim does it make? Pretense or not, what does it seem to translate?

What this animal is, what it will have been, what it would, would like to, or could be is perhaps what I am (following).

1. *S'effacer*: more literally, "erasing" or "effacing itself," "to erase itself" or "oneself" [translator's note].

But if I say that *I am (following) it* in French, in this and in no other language, that amounts less to claiming some national idiom than to recalling an irreducible ambiguity about which we shall have more to say: an animal's signature might yet be able to erase or cover its traces. Or allow it to be erased, rather, be unable to prevent its being erased. And this possibility, that of tracing, effacing, or scrambling its signature, allowing it to be lost, would then have considerable consequences. Having or not having traces at one's disposal so as to be able to dissimulate [*brouiller*] or erase them, in such a manner as, it is said, some (man, for example) can and some (the animal, for example, according to Lacan) cannot do, does not perhaps constitute a reliable alternative defining an indivisible limit. We will have reason to go back over these steps and tracks. The fact that a trace can always be erased, and forever, in no way means—and this is a critical difference—that someone, man *or* animal, I am emphasizing here, *can of his own accord* erase his traces.

It is a question of words, therefore. For I am not sure that what I am going to set about saying to you amounts to anything more ambitious than an exploration of language in the course of a sort of chimerical experimental exercise, or the testing of a testimony. Just to see. We can act as though I were simply trying to analyze a number of discursive modalities or usages—in order to put them to the test and to see, to keep an eye out for, what will come of it—that *they* (I insist on this “they”), what *humans* do with certain words, but also, and for some time yet, to track, to sniff, to trail, and to follow some of the reasons they adduce for the so confident usage they make, and which for the moment we are making together, of words such as, therefore, *animal* and *I*.

A critical uneasiness will persist, in fact, a bone of contention will be incessantly repeated throughout everything that I wish to develop. It would be aimed in the first place, once again, at the usage, in the singular, of a notion as general as “The Animal,” as if all nonhuman living things could be grouped within the common sense of this “commonplace,” the Animal, whatever the abyssal differences and structural limits that separate, in the very essence of their being, all “animals,” a name that we would therefore be advised, to begin with, to keep within quotation marks. Confined within this catch all concept, within this vast encampment of the animal, in this general singular, within the strict enclosure of this definite article (“the Animal” and not “animals”), as in a virgin forest, a zoo, a hunting or fishing ground, a paddock or an abattoir, a space of domestication, are *all the living things* that man does not recognize as his fellows, his neighbors, or his brothers. And that is so in spite of the infinite space that separates the lizard from the dog, the protozoon from the dolphin, the shark from the lamb, the parrot from the chimpanzee, the camel from the eagle, the squirrel from the tiger, the elephant from the cat, the ant from the silkworm, or the hedgehog from the echidna. I interrupt my nomenclature and call Noah² to help insure that no one gets left on the ark.

family, onto an ark so that they may be saved from the coming flood.

LI ZEHOU

b. 1930

Li Zehou is a galvanizing presence in contemporary Chinese academic circles. During China's New Era (1977–89), a period of openness and reform after the death of Mao Zedong, Li's writings on philosophy and aesthetics as well as his observations on Chinese culture and society captivated a generation of intellectuals. His works continue to be widely read by thinkers, scholars, and the common people. The nuanced and wide-ranging aesthetic theory that he developed merits attention, particularly for its original account of "primitive sedimentation."

Li Zehou was born in a city of Hunan, China, not far away from Mao's hometown. In his youth, an emotional crisis brought by his realization of the inevitability of death shifted his interest from a career in the sciences to the humanities. He became a student at Peking University from 1950 to 1954, majoring in philosophy. After graduation, he worked at the Institute of Philosophy of the Chinese Academy of Sciences. In the great debate on aesthetics that engrossed Chinese academia in 1956, he distinguished himself by offering his own ideas as he criticized those of leading Chinese philosophers and aestheticians. His career, like that of all Chinese intellectuals, became dormant during the social upheaval and political repression of the Cultural Revolution (1966–76). But he regained national prominence with the publication in 1979 of *A Collection of Essays on Aesthetics and Critique of Critical Philosophy: A Study of Kant*. For the next decade, a time of antitraditional "cultural fever" that ended in 1989 with the government's violent suppression of the Tiananmen Democratic Movement, Li Zehou was acknowledged as "the teacher of youth" and enjoyed among Chinese intellectuals a national reputation comparable to that of RAYMOND WILLIAMS in England and Jean-Paul Sartre in France. Although Li was not directly involved with the Democratic Movement, the authorities identified his writings as a source of inspiration for the demonstrators; he was placed under surveillance and his works were banned for a period. In 1991 he was allowed to leave the country and he emigrated to the United States, where he now resides. Li has held academic appointments at a number of institutions, including Colorado College, University of Michigan, University of Wisconsin, Swarthmore College, University of Colorado at Boulder, and University of Tübingen. He was elected to the Collège International de Philosophie in Paris in 1998.

Li constructs his philosophical and aesthetic system by fusing a variety of intellectual sources from both East and West: his work is rooted most deeply in the ideas of IMMANUEL KANT and KARL MARX (which he distinguishes from Marxism) and in traditional Chinese thought. He links Marx and Kant by offering new accounts of subjectivity, human knowledge, and aesthetics that entail reinterpreting the two thinkers in relation to traditional Chinese thought. Kant sees human knowledge as arising from the interaction of sensibility and understanding, which themselves exist a priori. While human sensibility shapes raw data and sensations according to the intuitions of time and space, the understanding at a higher level structures sensible experience according to categories such as plurality, unity, substance, causation, and so on. For Kant, we can never know "things in themselves" free from such framing. Li challenges this metaphysical view by turning to human history: "All a priori intuitions, concepts, and principles are the psychological forms of the 'sedimentation' (*jidian*) of the primary practice, which lasted millions of years. They are beyond the experience of any individual, group, or society, but not beyond the experience of humankind as a whole, not 'absolutely independent of all experience,' as Kant claimed."

Drawing on this view of history, Li develops a series of ideas, the most famous and original of which is his theory of "sedimentation" (or "cultural-psychological formation"). It reflects his efforts to give Kant's a priori subjectivity a Marxian materialistic

foundation, shaped by the traditional Chinese belief that “the Way of Heaven” is the same as the “Way of Humans.” Li emphasizes a dynamism extending in two directions: people humanize the natural world to make it a better place to live, and at the same time humanize their own physical and mental constitution, increasingly distancing themselves from animals. By combining Chinese and Western perspectives, Li complements Marx’s vision of the “humanization of nature” with the “naturalization of humans,” and Kant’s transcendental rationality with a materialist “pragmatic rationality” based on the race’s long experience and practice. In that experience, the arts play a key role.

Li’s major contribution to aesthetic theory lies in his introduction of practice into the study of the essence of beauty. He argues that individuals are capable of aesthetic appreciation of nature because their practice as a group has changed the relationship between nature and humans, turning what used to be an opposing force into something that serves human needs. An inquiry into the essence of beauty should take into account not only the sensual, psychological, and cultural responses of individuals but also the material and social dimensions of collective creative practices, including the development over time of the sense of beauty. Li’s dual emphasis on the universal and the historical gives rise to an intrinsic yet essential tension in what he calls his “philosophy of subjective practice,” underlying sedimentation. He once explained why he proposed this idea: “To explore how the rational is manifested in the sensual, the social in the individual, the historical in the psychological, I created the term, ‘sedimentation,’ by which I mean the process in which the social, rational, and historical are accumulated and precipitated into the individual, sensual, and intuitional. This process is realized through the humanization of nature.”

In the sphere of aesthetics, sedimentation refers to the historical formation of universalized artistic forms among human beings. In our selection, “The Stratification of Form and Primitive Sedimentation,” a chapter of his popular work *Four Essays on Aesthetics: Toward a Global View* (1989), he expounds on the nature of sedimentation. This text calls to mind the work of such Western aestheticians as VICO, HUME, SCHILLER, HEGEL, PIERRE BOURDIEU, and Barbara Herrnstein Smith, while fusing Chinese and Western aesthetic theories into an apparently simple theory of art that becomes increasingly complex. After raising a few common questions concerning the nature, essence, and conditions of art, Li describes how objects and activities created for other purposes came to be art.

Li points out that ancient tools exhibit elements and patterns of beauty, particularly symmetry, proportion, balance, and rhythm. The human energy (*qi*) that goes into labor (their fabrication) emerges in beautiful forms. Aesthetic objects evoke a feeling for beauty as well as pleasure in their making. These feelings are neither logical nor philosophy-oriented phenomena, he emphasizes. Such material vehicles as the movements of dancers and the sounds of poetry arouse emotions that precede critical understanding. None of these primitive dimensions of beauty and art, argues Li, relieves artists of the need to learn their crafts and traditions. Nor do artworks transcend their milieus or historical styles: every object or work, no matter how much its utilitarian aspects might diminish over time, no matter how purely aesthetic it might be, always has “worldly emotions” sedimented in it. It retains a legacy of materialization, of labor, of sensation, as well as social history, history of psychology, and form. Significantly, Li’s theory of sedimentation explicitly adds labor theory to the social psychology and history congealed in the aesthetic forms that constitute traditions in the arts.

Li directly asks “What are artworks?” Analyzing some art forms, he shows that their “formal structures, which were originally subordinate to practical utility, have become independent aesthetic objects, with their practical utility fading away.” When such art objects come into being, they exert an influence on the human mind. Philosophically speaking, they are responsible historically for the aesthetic psychological construction that makes possible the development of the artistic faculty and the

preservation of aesthetic legacies. Calling into question the popular view that art unites beholder and material vehicle, subject and object, Li argues that the primary factor in the aesthetic experience is the prior constitution of an aesthetic psychological formation. Such aesthetic experience attains an objective character through sedimentation. Li sees artworks as "simultaneously the material products of a certain society at a certain time and the corresponding products of a human mental construction." Here, he deviates from the usual sociological view of artworks as reflections of social forces and human relationships in society. He supports this historicist and psychological shift by analyzing the emergence of different literary genres through successive dynasties in ancient China. The various literary forms display "the isomorphic structure of the materialized states of mind of specific societies in specific times."

Li elaborates a theory of three stratifications of a work of art: form, image, and significance. These are related to three forms of sedimentation: primitive sedimentation, art sedimentation, and life sedimentation. Although his complete theory of stratification and sedimentation is his own and original, it draws its inspiration from Western thinkers such as Vico, Marx, SIGMUND FREUD, and Carl Jung, as he acknowledges. The three stratifications are, in the final analysis, "a representation of the theory of humanized nature, the humanization of senses, and the humanization of desires."

In our selection, Li focuses on the primary sedimentation: "primitive sedimentation," which corresponds to the stratification of form and the humanization of nature. It is through primitive sedimentation formed from the process of labor, he claims, that humans learned to recognize the beautiful. He further notes that the appeal of any artwork is dependent on its medium. To explore the appeal of certain ways of manipulating the "medium," Li uses the Chinese concept of *qi* (variously translated as "pneuma," "vital energy," or "material force"), which involves not only human physiology but also material media and formal structure. According to Li, "The presence, development, and transformation of the perceptual formal stratification of artworks are just the interfusion of a person's physiological, historical, and social functions that occur in sensation through sense organs." This formal stratification of artworks, which corresponds to the humanization of a person's senses and sensibility, has two aspects. The first involves the subjective efforts of both the creator's and beholder's body and mind, which approach, tally with, and form parallels or "isomorphic structures" with the dynamics of nature. Li calls this aspect "the naturalization of the human" apparent in such physical-spiritual activities as Chinese *qigong*, Taiji boxing, and other self-cultivation exercises, as well as in artworks. The second aspect entails stratifications that extend "to the ever-changing events, objects, and relationships that reflect the trends of different times and societies." These two aspects are intimately interrelated. Citing as an example the evolution of literary genres in traditional Chinese literature, Li maintains that "different historical periods exhibit different styles and forms [a]s the consequence of differing psychological demands, which in turn are affected by the social political life of the time." He concludes that primitive sedimentation, the humanization of nature, and the socialization of the individual's senses intermingle and interact in the production and reception of artworks. Throughout his discussion, he grounds the arts in the body and spirit (*qi*).

Li Zehou's aesthetic theory of primitive sedimentation is open to a number of criticisms. While it addresses the harmonies and agreements between artist and era, beholder and artwork, body/mind and society, it does not pay sufficient attention to dissonances, resistances, and disputes. Although this ambitious mimetic aesthetics is historically oriented, it risks both universalizing art and reducing it to reflective powers. The theory also casts the body, senses, feelings, and emotions as preceding thinking, logic, and imagination—as prerational—without arguing for the claim or dealing with their interrelationships. Nevertheless, by putting the body, labor, and *qi* at the heart of aesthetic theorizing, Li offers a unique as well as a broad and persua-

sive account of art production and reception. Stressing historical change, he avoids the eternalizing that is characteristic of much archetypal theory while maintaining that the arts are grounded in social psychology and history. A strong democratizing impulse accompanies the theory of primitive sedimentation, which operates as an equalizing force at micro levels of the human and social body. In Li's analysis, crafts as well as great works remain part of the realm of art practice and history.

*From Four Essays on Aesthetics: Toward a Global View*¹

Chapter 8. The Stratification of Form and Primitive Sedimentation

Contemporary aesthetics focuses on art and rarely pays attention to meta-physical issues such as the root (essence) of beauty. The aesthetic experience is tested and verified mainly through an analysis of art's principles and history, from individual psychological responses (aesthetic experience), and from public cultural studies. The public art world is the subject of the sociology of art, which may be a part of aesthetics but not the hard core. For me, these approaches ignore the real problems of aesthetics. However, there is still no common agreement about what art is and which works constitute art. At least we know that artworks are individual pieces of sculpture, painting, music, and other objects that we call art. We also know that many objects we call art—such as the Pyramids in Egypt, bronze vessels of the Yin and Zhou² dynasties in China, churches of the Middle Ages in Europe, the statues and mural paintings of Buddha in India and China, and the masks in Africa—were created for religious, ethical, political, or social purposes. Ancient articles of pottery and bronze that have been unearthed were designed for storing and cooking food, not for aesthetic appreciation. The mixture of exhibits in folk and art museums reveal that the line between art and craft is ambiguous.

The fact that the works of the modernist school appear in an infinite variety of fantastic forms expands the meaning of art. For example, one exhibit is a mass of earth and sand with something like shells scattered on it. Another is a frame of scrap iron tubing welded together with colorful light bulbs on it. When a button is pressed the lights flash, giving the impression of a street as one drives through it at night. Marcel Duchamp³ made a urinal a work of art by placing it in an exhibition hall. Some individuals smeared themselves with greasepaint and stood in an exhibition hall claiming to be works of art. Such a variety of artistic activity makes it difficult to distinguish art from nonart.

"What are artworks?" is one question and another is, "Do we mean the same thing by art and aesthetic experience, and by artworks and aesthetic objects?"

1. Translated by Li and Jane Cauval (who collaborated to create a version that differs significantly from the Chinese original).

2. Ca. 1046–256 B.C.E. Yin dynasty; ca. 1600–

1050 B.C.E. (also called Shang).

3. French artist (1887–1968), associated with dadaism and surrealism.

Whether they are historical relics or modern articles, whether they are churches or furniture, artworks on many occasions do not serve as aesthetic objects. They have other purposes such as buildings to live in or to hold religious services, or as objects in which to store food or to sit upon. Only when they serve as aesthetic objects, do they become artworks.

ARTWORKS EXIST ONLY WHEN THEY HAVE BECOME AESTHETIC OBJECTS

So how do objects made by humans, including both the practical and the so-called pure fine arts, come to be aesthetic objects? In seemingly pure appreciation, traces of the object's past utility are still sedimented. For example, we experience a sense of religious awe when we appreciate ancient temples and statues of gods. In fact, if artworks become pure beauty by losing their social functions, they become perfect decorations. To answer the question of what artworks are, I say that artworks appear and exist only when material objects made by a human being appeal to a person's aesthetic psychoemotional construction, that is, when these material forms turn into aesthetic objects.

When material objects, including temples, dramas, poetry, and prose, serve various practical or spiritual needs, exhorting people to do good or to develop interpersonal intercourse, patterns of formal experience are present. Even at this stage, the aesthetic, psychological-emotional construction begins to develop an independent function which differentiates it from other psychological constructions through a process of mutual action and reaction with them. Although drama originally was intended for recreation, propaganda, admonishment, or other practical purposes, the intensification of a person's fate strengthened by drama's formal structures can offer the person a sense of substantial experience and life impetus. These examples show that the formal structures, which were originally subordinate to practical utility, have become independent aesthetic objects, with their practical utility fading away. In this manner, the so-called pure artworks have come into being. Temples no longer serve merely as places of worship but also as beautiful architecture; paintings no longer serve simply to "perfect civilized teachings and help social relationships"⁴ but also become pleasures in the mind and heart.

However, even these artworks as aesthetic objects retain daily, practical psychical functions. For example, the emotion of worshipping God can coexist with an aesthetic experience in Gothic churches. And the fervent will to fight and universal love all weave into the aesthetic experience of Beethoven's Ninth Symphony.⁵ The same is true of comfortable houses, clothes, and furniture that give pleasure to the senses and mind. Even Bell's significant forms,⁶ which have nothing to do with daily practice, and the unique aesthetic emotion of intellectual aristocrats lead people to a mysterious, religious experience.

4. Zhang Yanyuan's (815–875) *Lidai minghuaji* (*Record of Famous Painters of All the Dynasties*) (Taipei: Yiwen yinshuguan, 1965). English translation based on Susan Bush and Hsio-yen Shih, *Early Chinese Texts on Painting* (Cambridge: Harvard University Press, 1985), 49 [translators' note].

5. The Ninth Symphony (1817–23) of the German composer Ludwig van Beethoven (1770–1827)

ends with a celebratory choral setting of FRIEDRICH SCHILLER's "Ode to Joy."

6. The idea that "Significant Form is the one quality common to all works of visual art," famously proposed in *Art* (1914) by the English art critic and aesthetician Clive Bell (1881–1964), was one of the starting points for Li Zehou's aesthetic inquiry.

There has never been truly *pure* art, only art permeated with more or less worldly emotions. The difference lies, more or less, in the ways of permeation, that is, the mathematical equation or double helix.⁷ Calligraphy differs from film and clothes from poetry but from the viewpoint of aesthetics when these artworks serve as aesthetic objects, they differ only in their relation to the aesthetic psychological construction and in the different proportions and elements of the meta-equation.

In short, the aesthetic psychological construction is important to the humanization of a person's interior nature because artworks directly produce the aesthetic psychological construction, which in turn creates new artworks. With the interaction and growth between these two processes, art has become an independent cultural classification. Simultaneously, the aesthetic psychological construction has become an important form and aspect of human mentality, which distinguishes itself from the intellectual psychological construction and volitional psychological construction. Therefore, we may explore and grasp the definition of art only by examining the direct effect, influence, and constitution of this human psychological construction. It is only from this approach that we can reasonably distinguish art from nonart.

An object is an artwork if it can arouse emotions (e.g., sorrow or joy) merely through its formal structure rather than depending on certain sorrowful or joyful images. This independent force or character of the formal structure of an artwork arises from its correspondence to the aesthetic psychological construction that developed in a gradual process of mutual penetration. This means that the force of the formal structure acts on, influences, and constitutes the aesthetic psychological construction.

Therefore, art as the sum of various kinds of artworks signifies the historical constitution of the human aesthetic psychological construction. Just as primitive tools prove that early humans lived on the earth and founded the material life of later generations, so artworks prove that early humans had a spiritual life and founded the spiritual life of their descendants. The legacy of art is deeply sedimented in the human psychological construction, in which lies the value and significance of artistic works as a kind of symbolic production. This system of symbols constitutes and affirms the human psychological construction.

WHAT ARE ARTWORKS?

Now I will expand on my response to the question, "What are artworks?" First, artworks manifest themselves in media made by human beings. In the process of creation, artists direct their illusory world of images and emotions onto specific materials such as stone, bronze, canvas, paper, wood, and even their own bodies, turning them into material objects. It is [in] the process of materialization through continuous correction and alteration that the illusory world is realized and becomes a work of art. For the beholder, without material media, the images could not affect the human senses, convey their aesthetic significance, and influence generations of people. Without material media, there would be no works of art.

7. In geometry, a spiral consisting of two strands around the same axis (most familiar as the structure of DNA).

Second, artworks exist only when a person perceiving them has an aesthetic experience. Only when we experience an object aesthetically does it become an aesthetic object, a work of art. Therefore, objects are works of art, whether created for appreciation, practical purposes, or spiritual reasons, as long as they directly appeal to, excite, and arouse an aesthetic experience. Since works of art exist as aesthetic objects only when a person appreciates them, they have only an illusory existence, which differs from the real existence of the artistic media or artistic vehicles. The illusory existence depends both on what is offered objectively by the material and by what is offered by the beholder because the nature of a beholder's aesthetic experience is relative to the person's culture, social class, background, character, cultivation, ideals, and previous aesthetic experiences. Scholars often repeat Marx's comment about a "musical ear,"⁸ which implies that things become artworks only when they enter into a person's aesthetic awareness. Various and complicated subjective conditions determine if an artistic product can be accepted as an aesthetic object. If a material vehicle, an artistic product, is a necessary condition, then the subjective aesthetic experience is the sufficient condition. Works of art, as aesthetic objects, unite these two conditions. This is the kind of unity between subject and object advocated by Zhu Guangqian,⁹ which explains the essential character of art.

Now, I wish to turn to the question of beauty in art. The social objectivity of artistic beauty means that artworks, which combine subjective experience and material media, change as aesthetic objects as the media changes. Since the illusory world of artworks exists in the aesthetic experiences of individuals, their common acceptability is possible because of the constitution of the aesthetic psychological construction. Psychological construction occurs because the summation and generalization of various aesthetic experiences develop a substantial character, comparatively independent of any single aesthetic experience, and in this way attain an objective character through sedimentation. This process brings about the materialization of a common psychological construction in human beings. The beauty of art possesses an objective character. However, this social objectivity differs from the social objectivity of the root of beauty.

Therefore, the definition of a work of art must be left open. There are no set conventions or rules for art to follow because materials change and so do subjective experiences. Therefore, there is no use in seeking an eternal and unchangeable definition of art. Jan Mukarovsky¹ said, "Artistic works are expressed in the form of symbols in their internal structure, in their relation with reality and society, and with creators and receivers." He made a study of artwork in three contexts: their relationships to society, to creators and appreciators, and to different elements in the artwork itself. Studying an artwork from these three aspects gives us a rather complete method. Undoubtedly, we will discover many specific aesthetic and artistic laws if we regard art as a pluralistic phenomenon instead of searching for one definition for all art. We

8. Karl Marx, *Economic and Philosophic Manuscripts of 1844*. See Robert C. Tucker ed., *The Marx-Engels Reader* [2d ed. (New York: Norton, 1978)], 89 [translators' note]. KARL MARX (1818–1883), German social and political philosopher; in the passage cited, he argues that aesthetic

gratification can occur only in the context of "humanized nature."

9. Western-educated Chinese aesthetician (1897–1986); as a young scholar, Li Zehou criticized his ideas.

1. Czech structuralist (1891–1975).

should study and examine art as an organic unity of various mutually interacting elements such as readers, writers, social circumstances, the formal structures of artworks (tone, rhythm, vocabulary, image, and so on), and analyze its history, individual works, artists, styles, and tastes. With the development of science, studies of art will become more scientific, formalized, and specialized.

SOCIOLOGY OF ART AS A STUDY OF AESTHETIC CONSCIOUSNESS

In mainland China, questions are raised about the sociology of art such as "Does the sociology of art belong to aesthetics, including theory, and history of art, and art criticism?" and if it does, "What are the characteristics of art sociology as a meaningful component of aesthetics?"

From the standpoint of philosophical aesthetics, which comprises the subjects of the humanization of nature, the constitution of a new sensuousness, and the psychological-emotional construction, the sociology of art in general focuses only on the external conditions and circumstances of aesthetic experience. However, if it views artworks, art history, and criticism as the presence, history, and appreciation of aesthetic objects, this new approach will keep the sociology of art interacting and collaborating with the study of aesthetic psychology.

Only when we actively appreciate artworks do we encounter the real presence of aesthetic objects, which are simultaneously the material products of a certain society at a certain time and the corresponding products of a human mental construction. Therefore, the study of artworks as aesthetic objects is actually the study of a materialized mental structure formed in a certain society and time. In fact, the human psychological-emotional construction manifests a history of taste. As a result, the sociology of art can be the study of an aesthetic consciousness presented in certain form. When the sociology of art treats aesthetic objects in this way, it differentiates itself from art theory in general. That is, given that aesthetic objects are related to a given state of mind, we can see that the study of the appearance, prevalence, and decline of a certain artwork, and the fashion, taste, and conception of art in a certain society and epoch is closely related to the aesthetic experiences and ideals of people at that time. In other words, the study of modern artworks (art criticism) and ancient artworks (art history) and the establishment of certain aesthetic principles (art theory) with aesthetic experience as an indispensable guide and starting point, will become a part of the sociology of art within the category of aesthetics.

Artworks are just the materialization and condensation of human aesthetic psychological processes. The externalized material formations, artworks, provide us with volumes of touchable works that reveal the psychology of the human inner world. Art is a brilliant mirror of the mind and soul.

The history of aesthetic objects is the history of human aesthetic psychological constructions; the objects manifest the history of cultures formed by humans and inherited generation after generation. The changes in style and attitudes toward the same artwork reflect the states of mind of people living in different times and societies. A specific social economy, politics, and culture determine and normalize the states of mind of its inhabitants.

Artworks reflecting many different states of mind have circulated widely for centuries. For instance, *shi* was popular in the Tang Dynasty, *ci* was in vogue in the Five Dynasties and the Song Dynasty,² and novels and dramas reached their climax in the middle of the Ming Dynasty.³ All were the products of their times and were displaying the isomorphic structure of the materialized states of mind of specific societies in specific times.

Various art trends, such as the rational, romantic, and sentimental reflect the various projections and proportions of different aspects of a peoples' aesthetic psychology and display the history of the unceasing enrichment, renewal, expansion, and growth of the human psychological-emotional construction. The study of works of art as the materialized aesthetic experience reveals richer and more varied historical details than does a direct study of psychology. In addition, this new approach to the sociology of art will give impetus and stimulation to the entire discipline of psychology. The fusion and unity of the sociology of art and of the psychology of aesthetics will be the scientific realization of Marx's philosophical conviction that the formation of the human mind and senses was, and continues to be, a labor of world history, the humanization of nature. This will result in the fundamental principles of the philosophy of beauty, aesthetic psychology, and sociology of art forming an integral unity.

My discussion in this essay—developing from the root of beauty to the aesthetic experience and on to aesthetic objects—tries to reflect the general development of the logical and historical from the abstract to the concrete and from the simple to the complex in the field of beauty and art. I try to show that the root (essence) of beauty relates to the root (essence) of human beings and that the art constructions relate to the emotional constructions. In other words, the origin of beauty connects with the instrumental-social construction and the artwork connects with the psychological-emotional construction.

THREE STRATIFICATIONS OF A WORK OF ART

Now, I will consider the three stratifications of a work of art: form, image, and significance. The former two are analogous to sensation and desire. Of course, we cannot draw a hard and fast line between any of these stratifications because they mutually penetrate, blend, and overlap and often exist in the same aesthetic object. Furthermore, they also exist in very complicated and crisscross patterns. For example, the stratification of form that appeals to sensation in literary works is vague. A novel appears to us through paper and words but the sensations of a novel are not the sensations of the paper and printed characters; instead, they are manifested in an imaginative presentation. Even the stratification of significance cannot exist by itself because it exists only in the stratification of form-sensation and in the stratification of image-desire, while simultaneously transcending them.

2. *Shi* [in Chinese] means poetry in general, but here it refers to a special type of poetry with eight or four lines, each containing five or seven characters, with a strict tonal pattern and rhyme scheme. This type of poetry was highly developed in the Tang Dynasty (618–907), though its origin can be traced back to preceding times. *Ci* is a type of poetry with strict tonal patterns and rhyme

schemes in fixed numbers of lines and words in accordance with the melody it is supposed to attune to. It originated in the Tang Dynasty and fully developed in the Song Dynasty (960–1297) [translators' note]. Five Dynasties: the period in Chinese history between the end of the Tang and beginning of the Song dynasty.

3. 1368–1644.

From the characteristics of these three stratifications, we see that they are nothing but a representation of the theory of humanized nature, the humanization of senses, and the humanization of desires. Nevertheless, I must ask, "Which came first, art or the sense of beauty?" This endless dispute remains unresolved. Some scholars, arguing that art came first, brought evidence from mural paintings in primitive caves. Others, arguing from the study of linear decorations on stone tools made by primitive man, insisted that aesthetic experience came first.

Although I take the latter stand, I do not base my arguments on the linear decorations found on articles such as baskets and early art works or from the geometrical lines that were abstracted from realistic images of animals. I believe, as I have said in parts 1 and 2,⁴ the earliest aesthetic experiences arose from labor through making and using tools. Linear patterns followed certain orders and laws, such as repetition, overlapping, symmetry, and balance, and became recognized as beautiful because primitive humans experienced, familiarized themselves with, and grasped these orders of nature and laws of form through human productive activities. Primitive sedimentation was the most important process that directed these changes and made them follow certain laws.

PRIMITIVE SEDIMENTATION

What is primitive sedimentation? It is the most fundamental sedimentation, formed from the process of material labor. Through a long process of labor, primitive humans employed aspects of the natural order, such as rhythm and sequence, and, in doing so, brought objective regularity and subjective purposiveness into a new unity. This new unity brought forth the earliest forms of beauty and aesthetic experience. In other words, through labor humans endowed the material world with forms which, although originally found in nature itself, began to develop an independent nature through the application of humans' abstractive faculty. Through the process of social labor production humans created the forms of beauty.

The earliest awareness of beauty arose from the human subjective emotions and sensations, which corresponded to the objective forms of beauty. This correspondence is the product of sedimentation. As humans began to utilize the laws of nature to create objects of beauty, their own senses and emotions formed an isomorphic correspondence with these external objects. Animals also have isomorphic correspondence, but humans differ from animals because they developed theirs through the long process of tool-using productive activity and by imbuing it with sociality. These social activities greatly extended the structures of isomorphic correspondence, and it is these dynamic structures of correspondence that I call primitive sedimentation.

At first, humans produced very simple tools—such as stone artifacts and bows and arrows—to improve their chances of survival. As they were engaged in these activities of making and using tools, they began to comprehend, imagine, understand, and become sensitive to the orders of nature. When a human achieved certain goals in the process of laboring (reforming the objective world), the regularity and purposiveness of the process would unite with

4. That is, the first two parts of the book from which this selection is taken, *Four Essays on Aesthetics*.

the human sensuous construction (the activity of labor) to produce feelings of pleasure. It is the pleasure derived from this process that is the pleasure of the earliest aesthetic experience. Although there may have been vague understandings, imaginings and intentions in the experience, sensation dominated. I call this the prehistory of humans' spiritual world or the process of primitive sedimentation.

At this primitive stage of sedimentation, the aesthetic psychological construction of humans was being formed. It was during the primitive productive practice that humans first experienced aesthetic pleasure from sensing the unity of their internal mentality and the laws of the external world. Because of these earliest processes and pleasures, I conclude that the feeling for beauty arose before our awareness of art.

Does any primitive sedimentation remain in the aesthetic experience of people, now that the productive activities are so different from those of primitive times? Our understanding of natural laws is far greater than it was thousands of years ago and the relation between aesthetic experience and productive labor is more complex. However, the fundamental relations, such as balance, symmetry, proportion, and rhythm in works of art, remain, although the concrete forms and laws are much more complicated and varied than during prehistoric times. These relationships are still the products of the accumulations of primitive sedimentations, derived from the activities of social productive practice in daily life.

For example, there is an essential difference between a human's sense of space and time derived from today's practical activities and that of primitive human beings. Primitive humans in the remote past had a sense of space and time similar to and as vague as that of children today. Primitive humans imagined time to be an uninterrupted sheet of expansion. As society progressed, the primary divisions of time appeared. At first, people's sense of space and time focused on specific events and content. For example, time meant seasons and space meant the directions of east, west, south, and north with no abstract or general concept of time or space. The views of space and time during agricultural, industrial, and our current information societies differ greatly and each period exerted its influence on the form and content of art. The feeling for different rhythms manifests the differences. Obviously, the rhythm in an agricultural society differs from that of the present information society. An individual sensation does not constitute the real character of a person's sense of space and time because character reflects the practice in society. This is equally true of our other senses, which have become what they are because of primitive sedimentation and express themselves in the sensory stratification of artworks.

Why is it that the different peoples in different times produce different machinery and architecture? Why is it that the technological modeling and design patterns of ancient times are so elaborate and complicated, while those of modern times so lucid and succinct? It must be true that small-scale agricultural production and large-scale industrial production produce great differences in design. Why is it that the fast rhythms, streams of consciousness, and vast expanses of space and time, which often appear in contemporary movies, make one feel full of energy? It must be that fast rhythms in time and vast expanses of space express the advent of an age of outer space navigation and of an information society. All of the above belong to the cat-

egory of primitive sedimentation in the sensory stratification of art forms, mainly the perceptual sedimentation of history and society in the external forms of art.

THE APPEAL OF AN ARTWORK IS DEPENDENT UPON ITS MEDIUM

Although critically important, primitive sedimentation is only one component of the formal stratification of artworks. The relationship of the object's medium to the psychological construction of the subject affects the appeal of artworks. For example, a statue made of black, rough bronze or the same figure made of white smooth marble will produce different impressions. The size of artworks is also important. When you enter a Christian cathedral, its high and broad interior will immediately give you a sense of awe. A small image of the Buddha does not convey Buddha's boundless supernatural power in the way a huge, golden statue does.

In literary works, the sound of the words and the rhythm of the sentences influence the quality of the aesthetic experience. Chinese poets pay special attention to the tones⁵ of characters. Stories of Chinese poets reveal the difficulty of choosing between *nong* (dense) and *nao* (sprightly) to describe the sense of spring and between *tui* (push) and *qiao* (knock) to open the gate.⁶ The connection between high pitch and brightness and between low pitch and darkness indicate a rich and complicated isomorphic correspondence between sensation and emotion, as well as among other elements of sensation aroused by artistic forms. Hence, Chinese poets and prose writers emphasize the importance of reading their works aloud for the rhythm, tempo, and melody, all of which are manifested in the sound of reading, the sensation.

Some examples from Chinese literature exhibit the kinds of formal stratification that appeal to readers' senses. There is the dignity of the five-regulated poetry (a form of poetry with eight lines, each consisting of five characters), the fluidity of seven-regulated poetry (a form of poetry with eight lines, each consisting of seven characters), the heaviness of four-line poetry, the grandiosity of ancient-style poetry (a form of poetry longer than the above-mentioned ones and with fewer restrictions), the symmetry of rhythmic prose with parallelism, the smoothness of prose without parallelism, the machismo of Han Yu's (768–824) prose, the gentleness of Ouyang Xiu's (1007–1072) prose, the terseness of Wang Anshi's (1021–1086) prose, and the

5. In all forms of the Chinese language, different tones distinguish words that are otherwise pronounced alike (e.g., Mandarin has four tones, including "high" and "falling").

6. Li refers to two poems. *Nong* and *nao* refers to Song Qi's (998–1061) poem *The Spring of the Jade Towel*, wherein is a famous line: "The sense of spring is sprightly on the pink twigs of apricot trees." *Nao* (sprightly), although an unusual word in this context because this word also means "noisy," is generally regarded by Chinese critics as much better than a common word, say, *nong* (dense). *Tui* and *qiao* refers to Jia Dao's (779–843) poem, *To Li Ningyou's House*, in which he wrote: "Birds are sleeping on trees by a pool, / A monk is knocking on the gate under the moon." A story in

connection with these two lines is that when Jia Dao, a common scholar, was riding on a donkey, concentrating on these two lines, and hesitating between "knocking" and "pushing," he collided with the servants of a high-ranking official, Han Yu (768–824), who was also a great poet and writer. It was a big offense according to the law at that time, but, after inquiring the cause, Han did not punish Jia; on the contrary, he helped him to decide to use "knocking," and henceforth took Jia as a friend. The main reason is that both words (*nao*, *qiao*) are correct, but when the poem is read aloud the sounds and tones differ, and the one selected is connected with the appropriate sensation [translators' note].

boundless expansion of Su Shi's (1036–1101) prose.⁷ Therefore, people experience the beautiful forms of literary works not through logical thinking but through sensation and through literary *qi* (vital force).⁸ This force comes alive and apparent in the process of reading aloud literary works, because the addition of the auditory to the visual intensifies the experience. In the earliest stages of learning, Chinese painters and calligraphers emphasized the importance of imitating works of the masters because by doing so, students experience the feel of the brush strokes used by the master and directly familiarize themselves with the beautiful forms that are the sensory formal stratifications of art.

In traditional China, many branches of learning discussed the importance of *qi* in philosophy and in traditional Chinese medicine as well as in literature and art. It is very difficult to know whether *qi* is material or spiritual or both, but it is a life force that appeals to sensuousness. Cao Pi⁹ (187–226) wrote:

The main point of literary works is *qi*, which may be strong or feeble in a fixed mold and cannot be changed by human effort. Take playing wind instruments for an example: The rules of melody, tempo, and rhythm may be the same, but the exertion of *qi* [vital force, but also breath or wind] is different, and thus ingenuity or clumsiness is distinguished. Such *qi* cannot be handed down, even from father to son or from the elder to the younger.¹

Qi refers to human physiology as well as to material stuff and structure. In literary works, it refers to morphology and syntax, including the literary *qi* of Han Yu, Ouyang Xiu, Wang Anshi, and Su Shi. However, a person's physiological force requires a human body for expression. *Qi* (its static state is called *shi* or impetus) comes from an artwork's formal structure, that is, its composition, lines, and proportion. The blank spaces in Chinese painting and emotional-function words in traditional Chinese prose directly influence a person's mind.² The influence of this *qi* is much more powerful than that which comes from its content. It arouses and excites a person's feelings, sensations, emotions, and vitality immediately without the mediation of understanding and imagination.

THE GENIUS OF ARTISTS LIES IN THE USE OF FORM

The genius of an artist lies in the creation of a brand new sensuous world by the formal stratification of art. As Goethe³ put it, everybody can see the content of artworks, an understanding mind can comprehend their implied

7. Famous Chinese literary figures, each with a distinctive prose style.

8. Literally, *qi* means "air" or "breath." In Chinese philosophy, it refers to the vital energy or material force in both humans and the universe (much like the classical Greek idea of *pneuma*). In aesthetics, it refers to the totality of creative force evinced by an artist, manifested in a piece of artwork, and experienced by a beholder or reader.

9. Founding emperor of Wei dynasty (220–280) and an influential poet and critic. In his most famous critical writing, "A Discourse on Literature,"

Cao posited the aesthetic concept of *wenqi* (literary *pneuma*), which became a foundational idea in Chinese literary criticism and aesthetics.

1. Cao Pi, "A Discourse on Literature (*Lun Wen*)," in Stephen Owens, *An Anthology of Chinese Literature: Beginnings to 1911* (New York: Norton, 1996), 361 [translators' note].

2. In Chinese painting, blank space is often pregnant with implications. Similarly, function words express no explicit meaning but convey subtle emotions and sensibilities.

3. Johann Wolfgang von Goethe (1749–1832), German poet, dramatist, novelist, and scientist.

significance, but for most people, the form is a mystery. The emergence of outstanding artworks and innovation does not necessarily mean a breakthrough in content; it may arise from a variation in formal and sensuous stratification. This leads to a variation in aesthetic experience as well as in genuine artistic creation. Although the breakthrough or creation arises from the form, the artwork may still be permeated with rich and substantial social content. Rudolf Arnheim⁴ emphasized that content expressed by sensuous form can produce an isomorphic structure corresponding to mental feeling and engendering moving force. In our daily life, putting the palms together signifies devotion, making a deep bow expresses respect, raising one's head or lowering it displays respectively arrogance or humility. People with different cultural backgrounds and different languages understand the meaning of such gestures and postures of sensuous forms. One of the functions of art is to discover, organize, and create the structural forms universally owned by everybody and to imbue the sensuous forms with significance.

The presence, development, and transformation of the perceptual formal stratification of artworks are just the interfusion of a person's physiological, historical, and social functions that occur in sensation through sense organs. These constitute one aspect of the world of art as it cultivates human nature and remolds a person's mind and heart. One reason photography can never take the place of representative painting is that the lines, colors, and compositions drawn by a human hand are not the same as those of natural things. In painting, there are shapes and shadings that derive from a person's technique, which, in some senses, are far superior to natural forms. The colors in the paintings of Qi Baishi and Henri Matisse⁵ are not the classical ones that "follow the categories [of the object] in applying colors,"⁶ nor are they natural colors; rather, they are emancipated colors, the free expression of a person. These colors are deeply significant. They manifest human uniqueness and the ability of a human to empower a painting, its composition, lines, colors, proportions, and empty spaces with his or her special aesthetic experience.

STRATIFICATION OF FORM IN ARTWORKS CORRESPONDS TO THE HUMANIZATION OF A PERSON'S SENSATION

In summary, the formal stratification of artworks extends itself, based on primitive sedimentation, in two directions. In one direction, the subjective efforts of a creator's and beholder's body and mind approaches, tallies with, and forms isomorphic structures according to the rhythm of nature. This is the naturalization of the human manifested not only in physical activities such as Chinese *qigong*, *taiji*, and *practice for longevity*⁷ but also in the formal stratification of artworks, including *qi* (vital force) and *bone-strength*. These do not express natural physiology, but result from human self-cultivation over long periods. In theory, from Mencius's⁸ cultivating *qi* to *guqi* (literally means

4. German-born American art theorist and perceptual psychologist (1904–2007).

5. French painter and sculptor (1869–1954). Qi Baishi (1864–1957), Chinese painter famous for his watercolors.

6. Li quotes from Xie He's (c. 500) *Six Canons*. See Jianping Gao, *The Expressive Act in Chinese Art: From Calligraphy to Painting* (Stockholm:

Almqvist & Wiksell International, 1996), 127 [translators' note].

7. Different kinds of Chinese exercises for body-mind self-cultivation; each has its distinct style and rationale, but all are predicated on the nurturing of the human *qi* (life force or vital energy).

8. Chinese Confucian philosopher (Mengzi, ca. 371–ca. 289 B.C.E.).

bone-breath, but actually means something near noble vitality), in later times it takes great effort to get the formal stratification of artworks to tally with the rhythm of the universe and thereby to form an isomorphic structure.⁹ In Chinese literary works and arts, the emphasis is to embody the Way, exemplified by sayings such as “skill promoting to the Way,”¹ “uncanny workmanship,” and “as if created by nature, though made by man.” Only through long periods of highly arduous self-cultivation can a person participate in the work of creation with nature. A vast amount of literary data about Chinese artworks testifies both to the difficulty and to the pleasure of achieving this goal.

The other direction in which the formal stratification extends itself refers to the ever-changing objects, events, and relationships that reflect the trends of different times and societies. These features refer to the formal variations, which are only more or less related to the primitive sedimentation. Earlier, I mentioned Worringer’s² idea that abstract modern art relates to modern life and social psychology. René Wellek compares the relationship between various styles and social psychology.³ Heinrich Wölfflin⁴ shows the different styles of plastic art created in the Renaissance and those created in the Baroque period. The Renaissance is static, distinct, formal, and rational; the Baroque is dynamic, unclear, picturesque, and sensuous. The former appeared in a time of happiness and prosperity, and the latter in a time of depression and solitude.⁵ The fact that different historical periods exhibit different styles and forms is the consequence of differing psychological demands, which in turn are affected by the social political life of the time.

How can we account for the transformations in art forms? In traditional Chinese literature, why did the five-character-a-line poetry turn into seven-character-a-line poetry, and the latter into *ci*, the uneven-numbered-character poetry? What is the difference among the artistic atmospheres produced by *shi*, *ci*, and *qu*?⁶ Why is it that in Chinese landscape painting the employment of dense blue and green colors turned into that of ink-wash? In addition to detailed drawings of real objects by fine brushwork, why is there the technique of splash-ink? These seem to be changes in the external forms, but in reality, they are deeply imbedded in human psychology and society. For instance, *shi* and *ci* demand implicitness, but *qu* puts stress on explicitness and liveliness. *Qu* took the place of *ci* because, under the oppression of the

9. Zehou Li and Liu Gangji’s *The History of Chinese Aesthetics* (vol. 2) provides a detailed discussion of *qi* (vital force) and *gu* (bone). Jianping Gao’s *The Expressive Act in Chinese Art* gives an explanation of *gu* and Xie He’s *gufa yongbi* after commenting on Susan Bush, Michael Sullivan, William Acker, Wen C. Fong, Zehou Li, and Liu Gangji’s relevant views. See *The Expressive Act in Chinese Art*, 176–79 [translators’ note].

1. A term from Zhuangzi, “The Secret of Caring for Life,” in which the Cook answers to the King’s praise by saying “What I care about is the Way, which goes beyond skill.” See Burton Watson, trans., *The Complete Works of Chuang Tzu* (New York: Columbia University Press, 1968), 50 [translators’ note]. Zhuangzi (or Chuang Tzu, 4th c. B.C.E.), influential Daoist philosopher.

2. Wilhelm Worringer (1881–1965), German art historian.

3. See René Wellek and Austin Warren, *Theory of*

Literature (New York: Harcourt Brace Jovanovich, 1977) [translators’ note]. Wellek (1903–1995), Czech-born American literary theorist and historian.

4. Swiss art critic (1864–1945).

5. Heinrich Wölfflin, *Principles of Art History: The Problem of the Development of Style in Later Art*, trans. M. D. Hottinger (New York: Dover Publications, 1950) [translators’ note]. Baroque art, which developed in Europe in the 17th century, was more dramatic and emotional than that of the Renaissance (14th–17th centuries), which usually displayed a more restrained classicism.

6. *Qu* is a form of poetry that gained popularity during the Yuan Dynasty (1271–1368), a dynasty ruled by the Mongolians. *Qu* can have two forms, one is in the form of short poetry presented independently and the other is a part of a much larger opera [translators’ note].

Yuan Dynasty (Mongolians), intellectuals held a very low social position. In addition, owing to the weakening of Confucian teachings of gentleness and mildness,⁷ the intellectuals expressed their complaints and indignation through the form of *qu* without hesitancy or reserve. This artistic atmosphere produced the smoothness and clearness of *qu*. In short, the social-political culture appeals to sensation through the formal stratification of art and constitutes the social psychology of a specific time. Conversely, the social psychology of the time, congealed and expressed in the formal stratification of sensation, passes from generation to generation and exerts unceasing and decisive influences on human psychology and sensation. This constitutes the tradition of formal stratification of artworks.

Gombrich's⁸ study of the history of fine arts demonstrates that the formal sensation of art relates to its historical and social context and later generations continue the inheritance of the former. Because of the many different social arrangements, religions, ethics, politics, and commerce, societies in different times and places produce different patterns of rhythm, meter, proportion, and balance in the sensuous stratification of art forms. Nevertheless, within these variations lies something inheritable, continual, and conventional. As a result, the history of artistic style is the history of the sensuous psychology of individual cultures as well as that of human beings.

This history retains the primitive sedimentation, which is the basis of the extension toward nature, to form an isomorphic structure in accordance with the universal laws of nature, as well as with social life and ideology. These aspects—primitive sedimentation, nature, and society—intermingle and interact in intricate patterns and, in doing so, form a succession of magnificent aesthetic products. The joint efforts of the three forces constitute the root of art, which is the objective existence of the materialized substance of the human mind and emotion. Herein lies the philosophical and aesthetic mystery of the history of artistic style.

1989, 2006

7. Confucianism was the traditional moral and religious system of China, based on the sayings attributed to the sage known as Confucius (Kongfuzi, 551–479 B.C.E.) and the commentaries on them.

8. Ernst Hans Josef Gombrich (1909–2001), Austrian-born British art historian; his *The Story of Art* (1950) is a very popular introduction to the visual arts.

TONI MORRISON

b. 1931

Toni Morrison is among the most prominent figures of American letters. She is often singled out for her prolific storytelling, which documents the black experience in literature, particularly the black female experience. The philosopher and public intellectual Cornel West has called Morrison “the great storyteller, the great literary artist, of black folk. She’s our Tolstoy, our Joyce, our Walter Scott.” As an essayist, novelist, lecturer, and educator, Morrison braids together American and African American life, history, and memory. Her work explores gender, sex, sexuality, race,

slavery, spirituality, music, and American literary, intellectual, and cultural history. On the one hand, Morrison picks apart the tangles and knots of American history, especially with respect to how black life is shaped and represented artistically, economically, politically, and socially. She addresses pivotal turns in that history, from slavery to the black power movement to U.S. Supreme Court confirmation hearings, while at the same time exposing the ugliness of systemic oppression and the beauty of resilience. On the other hand, Morrison specifically focuses on the black female experience, which is often trapped in the racist-sexist underpinnings of American culture and history and relegated to the periphery of American life. By moving black women to the narrative center, she reintroduces them as integral to the fabric of American life and history. Her novels and criticism give voice to the unspeakable experiences of black human beings and contest discourses that enforce and legitimate racism and oppression.

Morrison was born Chloe Ardelia Wofford in Lorain, Ohio, the second of four children. Her father, George Wofford, was a shipyard welder born in Georgia, and her mother, Ramah (*née* Willis) Wofford, was born in Alabama. By the time she was twelve years old, Morrison had converted to Catholicism; her baptismal name, St. Anthony, is the source of the name Toni. Lorain was a steel town that attracted many immigrants, and Morrison attended integrated schools. In her first grade class, she was the only black student and the only child who could read effortlessly. As she matured, Morrison continued her voracious reading of a great range of authors, from Jane Austen to Ernest Hemingway, Gustave Flaubert to Leo Tolstoy. Her appreciation for African American folk culture, particularly music, was nurtured by her mother, who sang and loved all music, classical music and spirituals alike. After graduating from Lorain High School, in 1949 Morrison enrolled in Howard University in Washington, D.C., the premier historically black university in the United States. The man considered the dean of the Harlem Renaissance, the philosopher Alain Locke, was one of her professors. Morrison was also actively involved with the Howard Repertory Theater, and she took part in a writing workshop where she began to explore the story of a little black girl who wanted blue eyes—a story that twenty years later would become her first novel, *The Bluest Eye* (1970). In 1953, Morrison received her bachelor's degree, with a major in English and a minor in the classics, and began graduate studies at Cornell University. In 1955 she earned her master's in English, writing a thesis that examined how the works of William Faulkner and VIRGINIA WOOLF address despair and suicide.

From 1955 to 1957, Morrison taught at Texas Southern University and then at Howard University from 1957 to 1964. Among her students at Howard were Houston A. Baker Jr., who would become a prominent literary scholar, and Stokely Carmichael, already active in the Student Nonviolent Coordinating Committee and the future honorary prime minister of the Black Panther Party. While on Howard's faculty, Morrison also began writing again. She joined a group of black writers in the Washington, D.C., area that included Claude Brown, who would publish *Manchild in the Promised Land* (1965). During this time she met and married Harold Morrison, a Jamaican architect, with whom she had two sons, Harold Ford Morrison and Kevin Slade Morrison; the couple divorced in 1964. Morrison left Howard University, returned briefly to Lorain, and then moved to Syracuse, New York, where she began editing textbooks for a subsidiary of Random House. In 1967 she was transferred to Random House's headquarters in New York City as a senior editor, a position she would hold for nearly twenty years. There she worked on books by African American authors such as Henry Dumas, Toni Cade Bambara, Angela Davis, Muhammad Ali, and Gayle Jones. She also oversaw the creation of *The Black Book* (1974), a narrative compilation—drawn largely from the collection of Middleton A. Harris—of photographs, slave auction posters, newspaper clippings, and other materials relating to the African American experience in the United States. At the same time, Morrison held a series of academic appointments at the State University of New

York at Purchase, Yale University, and Bard College. She left Random House in 1983, and a year later was named the Albert Schweitzer Professor of the Humanities at the State University of New York at Albany. In 1989 Morrison moved on to Princeton University as the Robert F. Goheen Professor of the Council of the Humanities, becoming professor emerita in 2006. Her papers are in the permanent collections of the Princeton University Library.

Early in her years at Random House, Morrison returned to the story of *The Bluest Eye*, a novel set in an Ohio town just before the outbreak of World War II. Morrison wrote the novel in part as a meditation on a slogan of the black power movement of the 1960s and 1970s, "Black is beautiful," questioning why it was necessary to publicly articulate the idea of black beauty, particularly in opposition to Western beauty ideals of whiteness. She wanted to counter the narrative in American literature that relegated black people—especially little black girls—to the periphery. In her novel, black girls were central characters. Unfortunately, *The Bluest Eye* was published to mixed reviews and it found few readers.

Soon Morrison began working on her second novel, *Sula* (1973), which placed black women in a small town in Ohio at the center of the story. Though *Sula* was nominated for a National Book Award, Morrison was not catapulted to the national stage until the publication of *Song of Solomon* (1977), which featured spectral hauntings, the mythology of flying Africans, and a male narrator. The book became a best seller and won the National Book Critics Circle Award in 1978. It was followed by another best seller—*Tar Baby* (1981), a novel set in a fictional Caribbean village that addressed gender, race, class, and transnationalism—which brought growing national acclaim and popularity.

Morrison's position in American letters was cemented with *Beloved* (1987), which would win both the American Book Award and the Pulitzer Prize for Fiction in 1988, be adapted as a film in 1998, and be named by the *New York Times* in 2006 as the best American novel published in the previous twenty-five years. *Beloved* is inspired in part by the true story of the fugitive slave Margaret Garner; the novel's protagonist, Sethe, is an escaped slave who murders her own daughter, Beloved, rather than consign the child to a life of slavery and sexual abuse. The book's themes include guilt, memory, and the political, sexual, and social implications of slavery and slaveholding.

Morrison has also acted as an important literary, cultural, and social critic. In 1988, she delivered "Unspeakable Things Unspoken: The Afro-American Presence in American Literature," our selection, as the Tanner Lecture on Human Values at the University of Michigan. In this address, later published in the *Michigan Quarterly Review*, Morrison takes up the canon wars raging in the United States: she focuses on the exclusion of black writers from the American literary canon despite the centrality of black people to America's national identity, particularly as their shadowy presence is articulated in the literary imagination of those white writers whose works are considered part of the canon of great American books. Morrison tackles questions of identity, literary quality, and nationhood. She wonders about the definition of "race." Who and what constitutes America and Americanness? What is American literature, and who are its great writers? She challenges literary "standards" that are exclusionary, based solely on a white male norm, as well as those that attribute value on the basis of race rather than mastery of form and feeling. At the same time, Morrison sees ignoring race as a liberal gesture that poses another set of problems. It is precisely the black presence, she suggests, that has enlivened and shaped American literature and the presence of Afro-American literature that raises the stakes and standards for the study of American literature. Literature should be universal—but cannot be if it has room only for white, predominantly male writers. In a nation built on the backs of blacks, the excising of the dark presence as writers and subjects leads to a greatly impoverished national literature.

Morrison turns specifically to Herman Melville's *Moby-Dick* (1851), a novel that she views as haunted and informed by the key issues of its time—namely, slavery,

blackness, and whiteness. In Morrison's reading, the contest between Ahab and the white whale is raced. Melville rejects the superiority of whiteness, particularly its deployment in fear to justify human bondage and trafficking. This ideology of whiteness is the unspeakable thing that has long remained unspoken in *Moby-Dick*. With "Unspeakable Things Unspoken," Morrison jumped into the thick of the creative fray around multiculturalism, third world literature, and the canon.

In 1992 Morrison expanded on the themes taken up in "Unspeakable Things Unspoken" in *Playing in the Dark: Whiteness and the Literary Imagination*, a text that drew in part on her William E. Massey Sr. Lectures in the History of American Civilization, delivered in 1990 at Harvard University. Also in 1992, she edited a collection on the raced and gendered implications of the confirmation hearings of Clarence Thomas, an African American judge nominated to the Supreme Court who faced allegations of sexual harassment from Anita Hill, an African American law professor: *Race-ing Justice, En-Gendering Power: Essays on Anita Hill, Clarence Thomas, and the Construction of Social Reality*. Again delving into issues of race, gender, justice, and cultural politics, Morrison co-edited *Birth of a Nation'hood: Gaze, Script, and Spectacle in the O.J. Simpson Case* (1997) with her Princeton colleague Claudia Brodsky Lacour, a professor of comparative literature. In 2017, she published *The Origin of Others*, another series of lectures given at Harvard University, where she addresses, among other ideas, slavery and subsequent European contact/conquest of Africa as originary moments of othering for African Americans.

In recent decades, Morrison has received awards and accolades from around the world, beginning in 1993 with the Nobel Prize in Literature—the first African American and the eighth woman to win that honor. Other awards include an honorary doctorate from Oxford University (2005); France's highest academic honor, the Légion d'Honneur (2010); and the U.S. Presidential Medal of Freedom (2012). Of late, Morrison continues to write and publish novels and opinion editorials, which revisit and refine some of her earlier themes and engage with the political climate of the moment and race.

"Unspeakable Things Unspoken: The Afro-American Presence in American Literature" Keywords: The Canon/Tradition, Identity, Institutional Studies, Literary History, Nationhood, The Novel, Race and Ethnicity Studies

From Unspeakable Things Unspoken: The Afro-American Presence in American Literature

I

I planned to call this paper "Canon Fodder," because the terms put me in mind of a kind of trained muscular response that appears to be on display in some areas of the recent canon debate. But I changed my mind (so many have used the phrase) and hope to make clear the appropriateness of the title I settled on.

My purpose here is to observe the panoply of this most recent and most anxious series of questions concerning what should or does constitute a literary canon in order to suggest ways of addressing the Afro-American presence in American Literature that require neither slaughter nor reification—views that may spring the whole literature of an entire nation from the solitude into which it has been locked. There is something called American literature that, according to conventional wisdom, is certainly not Chicano literature, or Afro-American literature, or Asian-American, or Native American, or . . . It

is somehow separate from them and they from it, and in spite of the efforts of recent literary histories, restructured curricula and anthologies, this separate confinement, be it breached or endorsed, is the subject of a large part of these debates. Although the terms used, like the vocabulary of earlier canon debates, refer to literary and/or humanistic value, aesthetic criteria, value-free or socially anchored readings, the contemporary battle plain is most often understood to be the claims of others against the whitemale origins and definitions of those values; whether those definitions reflect an eternal, universal and transcending paradigm or whether they constitute a disguise for a temporal, political and culturally specific program.

Part of the history of this particular debate is located in the successful assault that the feminist scholarship of men and women (black and white) made and continues to make on traditional literary discourse. The male part of the whitemale equation is already deeply engaged, and no one believes the body of literature and its criticism will ever again be what it was in 1965: the protected preserve of the thoughts and works and analytical strategies of whitemen.

It is, however, the "white" part of the question that this paper focuses on, and it is to my great relief that such terms as "white" and "race" can enter serious discussion of literature. Although still a swift and swiftly obeyed call to arms, their use is no longer forbidden.¹ It may appear churlish to doubt the sincerity, or question the proclaimed well-intentioned selflessness of a 900-year-old academy struggling through decades of chaos to "maintain standards." Yet of what use is it to go on about "quality" being the only criterion for greatness knowing that the definition of quality is itself the subject of much rage and is seldom universally agreed upon by everyone at all times? Is it to appropriate the term for reasons of state; to be in the position to distribute greatness or withhold it? Or to actively pursue the ways and places in which quality surfaces and stuns us into silence or into language worthy enough to describe it? What is possible is to try to recognize, identify and applaud the fight for and triumph of quality when it is revealed to us and to let go the notion that only the dominant culture or gender can make those judgments, identify that quality or produce it.

Those who claim the superiority of Western culture are entitled to that claim only when Western civilization is measured thoroughly against other civilizations and not found wanting, and when Western civilization owns up to its own sources in the cultures that preceded it.

A large part of the satisfaction I have always received from reading Greek tragedy, for example, is in its similarity to Afro-American communal structures (the function of song and chorus, the heroic struggle between the claims of community and individual hubris) and African religion and philosophy. In other words, that is part of the reason it has quality for me—I feel intellectually at home there. But that could hardly be so for those unfamiliar with my "home," and hardly a requisite for the pleasure they take. The point is, the form (Greek tragedy) makes available these varieties of provocative love because *it* is masterly—not because the civilization that is its referent was flawless or superior to all others.

1. Henry Louis Gates, ed., *"Race," Writing, and Difference* (Chicago: University of Chicago Press, 1986) [Morrison's note].

One has the feeling that nights are becoming sleepless in some quarters, and it seems to me obvious that the recoil of traditional “humanists” and some post-modern theorists to this particular aspect of the debate, the “race” aspect, is as severe as it is because the claims for attention come from that segment of scholarly and artistic labor in which the mention of “race” is either inevitable or elaborately, painstakingly masked; and if all of the ramifications that the term demands are taken seriously, the bases of Western civilization will require re-thinking. Thus, in spite of its implicit and explicit acknowledgement, “race” is still a virtually unspeakable thing, as can be seen in the apologies, notes of “special use” and circumscribed definitions that accompany it²—not least of which is my own deference in surrounding it with quotation marks. Suddenly (for our purposes, suddenly) “race” does not exist. For three hundred years black Americans insisted that “race” was no usefully distinguishing factor in human relationships. During those same three centuries every academic discipline, including theology, history, and natural science, insisted “race” was *the* determining factor in human development. When blacks discovered they had shaped or become a culturally formed race, and that it had specific and revered difference, suddenly they were told there is no such thing as “race,” biological or cultural, that matters and that genuinely intellectual exchange cannot accommodate it.³ In trying to come to some terms about “race” and writing, I am tempted to throw my hands up. It always seemed to me that the people who invented the hierarchy of “race” when it was convenient for them ought not to be the ones to explain it away, now that it does not suit their purposes for it to exist. But there *is* culture and both gender and “race” inform and are informed by it. Afro-American culture exists and though it is clear (and becoming clearer) how it has responded to Western culture, the instances where and means by which it has shaped Western culture are poorly recognized or understood.

I want to address ways in which the presence of Afro-American literature and the awareness of its culture both resuscitate the study of literature in the United States and raise that study’s standards. In pursuit of that goal, it will suit my purposes to contextualize the route canon debates have taken in Western literary criticism.

I do not believe this current anxiety can be attributed solely to the routine, even cyclical arguments within literary communities reflecting unpredictable yet inevitable shifts in taste, relevance or perception. Shifts in which an enthusiasm for and official endorsement of William Dean Howells,⁴ for example, withered; or in which the legalization of Mark Twain⁵ in critical court rose and fell like the fathoming of a sounding line (for which he may or may not have named himself); or even the slow, delayed but steady swell of attention and devotion on which Emily Dickinson⁶ soared to what is now, surely, a permanent crest of respect. No. Those were discoveries,

4. American realist novelist (1837–1920).

5. Pen name of the American writer and humorist Samuel Langhorne Clemens (1835–1910); the boatman’s phrase “mark twain” signifies water 2 fathoms (12 feet) deep.

6. American poet (1830–1886); only 10 of her almost 1,800 poems were published during her lifetime.

reappraisals of individual artists. Serious but not destabilizing. Such accommodations were simple because the questions they posed were simple: Are there one hundred sterling examples of high literary art in American literature and no more? One hundred and six? If one or two fall into disrepute, is there space, then, for one or two others in the vestibule, waiting like girls for bells chimed by future husbands who alone can promise them security, legitimacy—and in whose hands alone rests the gift of critical longevity? Interesting questions, but, as I say, not endangering.

Nor is this detectable academic sleeplessness the consequence of a much more radical shift, such as the mid-nineteenth century one heralding the authenticity of American literature itself. Or an even earlier upheaval—receding now into the distant past—in which theology and thereby Latin, was displaced for the equally rigorous study of the classics and Greek to be followed by what was considered a strangely arrogant and upstart proposal: that English literature was a suitable course of study for an aristocratic education, and not simply morally instructive fodder designed for the working classes. (The Chaucer Society was founded in 1848, four hundred years after Chaucer⁷ died.) No. This exchange seems unusual somehow, keener. It has a more strenuously argued (and felt) defense and a more vigorously insistent attack. And both defenses and attacks have spilled out of the academy into the popular press. Why? Resistance to displacement within or expansion of a canon is not, after all, surprising or unwarranted. That's what canonization is for. (And the question of whether there should be a canon or not seems disingenuous to me—there always is one whether there should be or not—for it is in the interests of the professional critical community to have one.) Certainly a sharp alertness as to *why* a work is or is not worthy of study is the legitimate occupation of the critic, the pedagogue and the artist. What is astonishing in the contemporary debate is not the resistance to displacement of works or to the expansion of genre within it, but the virulent passion that accompanies this resistance and, more importantly, the quality of its defense weaponry. The guns are very big; the trigger-fingers quick. But I am convinced the mechanism of the defenders of the flame is faulty. Not only may the hands of the gun-slinging cowboy-scholars be blown off, not only may the target be missed, but the subject of the conflagration (the sacred texts) is sacrificed, disfigured in the battle. This canon fodder may kill the canon. And I, at least, do not intend to live without Aeschylus or William Shakespeare, or James or Twain or Hawthorne, or Melville,⁸ etc., etc., etc. There must be some way to enhance canon readings without enshrining them.

When Milan Kundera,⁹ in *The Art of the Novel*, identified the historical territory of the novel by saying “The novel is Europe’s creation” and that “The only context for grasping a novel’s worth is the history of the European novel,” the *New Yorker* reviewer stiffened. Kundera’s “personal ‘idea of the

8. Herman Melville (1819–1891), American novelist. Aeschylus (525–456 B.C.E.), Greek playwright; Shakespeare (1564–1616), English poet and playwright; HENRY JAMES (1843–1916),

American-born novelist; Nathaniel Hawthorne (1804–1864), American novelist.

9. Czech-born writer (b. 1929), who in 1994 began publishing in French, the original language of *The Art of the Novel* (1986; trans. 1988).

novel,” he wrote, “is so profoundly Eurocentric that it’s likely to seem exotic, even perverse, to American readers. . . . *The Art of the Novel* gives off the occasional (but pungent) whiff of cultural arrogance, and we may feel that Kundera’s discourse . . . reveals an aspect of his character that we’d rather not have known about. . . . In order to become the artist he now is, the Czech novelist had to discover himself a second time, as a European. But what if that second, grander possibility hadn’t been there to be discovered? What if Broch, Kafka, Musil¹—all that reading—had never been a part of his education, or had entered it only as exotic, alien presence? Kundera’s polemical fervor in *The Art of the Novel* annoys us, as American readers, because we feel defensive, excluded from the transcendent ‘idea of the novel’ that for him seems simply to have been there for the taking. (If only he had cited, in his redeeming version of the novel’s history, a few more heroes from the New World’s culture.) Our novelists don’t discover cultural values within themselves; they invent them.”²

Kundera’s views, obliterating American writers (with the exception of William Faulkner³) from his own canon, are relegated to a “smugness” that Terrence Rafferty disassociates from Kundera’s imaginative work and applies to the “sublime confidence” of his critical prose. The confidence of an exile who has the sentimental education of, and the choice to become, a European.⁴

I was refreshed by Rafferty’s comments. With the substitution of certain phrases, his observations and the justifiable umbrage he takes can be appropriated entirely by Afro-American writers regarding their own exclusion from the “transcendent ‘idea of the novel.’”

For the present turbulence seems not to be about the flexibility of a canon, its range among and between Western countries, but about its miscegenation. The word is informative here and I do mean its use. A powerful ingredient in this debate concerns the incursion of third-world or so-called minority literature into a Eurocentric stronghold. When the topic of third world culture is raised, unlike the topic of Scandinavian culture, for example, a possible threat to and implicit criticism of the reigning equilibrium is seen to be raised as well. From the seventeenth century to the twentieth, the arguments resisting that incursion have marched in predictable sequence: (1) there is no Afro-American (or third world) art. (2) it exists but is inferior. (3) it exists and is superior when it measures up to the “universal” criteria of Western art. (4) it is not so much “art” as ore—rich ore—that requires a Western or Eurocentric smith to refine it from its “natural” state into an aesthetically complex form.

A few comments on a larger, older, but no less telling academic struggle—an extremely successful one—may be helpful here. It is telling because it sheds light on certain aspects of this current debate and may locate its sources. I made reference above to the radical upheaval in canon-building that took place at the inauguration of classical studies and Greek. This canonical re-

routing from scholasticism to humanism, was not merely radical, it must have been (may I say it?) savage. And it took some seventy years to accomplish. Seventy years to eliminate Egypt as the cradle of civilization *and* its model and replace it with Greece. The triumph of that process was that Greece lost its own origins and became itself original. A number of scholars in various disciplines (history, anthropology, ethnobotany, etc.) have put forward their research into cross-cultural and inter-cultural transmissions with varying degrees of success in the reception of their work. I am reminded of the curious publishing history of Ivan van Sertima's work, *They Came Before Columbus*, which researches the African presence in Ancient America. I am reminded of Edward Said's *Orientalism*,⁵ and especially the work of Martin Bernal,⁶ a linguist, trained in Chinese history, who has defined himself as an interloper in the field of classical civilization but who has offered, in *Black Athena*, a stunning investigation of the field. According to Bernal, there are two "models" of Greek history: one views Greece as Aryan⁷ or European (the Aryan Model); the other sees it as Levantine—absorbed by Egyptian and Semitic culture (the Ancient Model). "If I am right," writes Professor Bernal, "in urging the overthrow of the Aryan Model and its replacement by the Revised Ancient one, it will be necessary not only to rethink the fundamental bases of 'Western Civilization' but also to recognize the penetration of racism and 'continental chauvinism' into all our historiography, or philosophy of writing history. The Ancient Model had no major 'internal' deficiencies or weaknesses in explanatory power. It was overthrown for external reasons. For eighteenth and nineteenth century Romantics and racists it was simply intolerable for Greece, which was seen not merely as the epitome of Europe but also as its pure childhood, to have been the result of the mixture of native Europeans and *colonizing* Africans and Semites. Therefore the Ancient Model had to be overthrown and replaced by something more acceptable."⁸

It is difficult not to be persuaded by the weight of documentation Martin Bernal brings to his task and his rather dazzling analytical insights. What struck me in his analysis were the *process* of the fabrication of Ancient Greece and the *motives* for the fabrication. The latter (motive) involved the concept of purity, of progress. The former (process) required mis-reading, pre-determined selectivity of authentic sources, and—silence. From the Christian theological appropriation of Israel (the Levant), to the early nineteenth-century work of the prodigious Karl Müller,⁹ work that effectively dismissed the Greeks' own record of their influences and origins as their "Egyptomania," their tendency to be "wonderstruck" by Egyptian culture, a tendency "manifested in the 'delusion' that Egyptians and other non-European 'barbarians' had possessed superior cultures, from which the Greeks had borrowed massively,"¹⁰ on through the Romantic response to

the Enlightenment,² and the decline into disfavor of the Phoenicians, “the essential force behind the rejection of the tradition of massive Phoenician influence on early Greece was the rise of racial—as opposed to religious—anti-semitism.”³ This was because the Phoenicians were correctly perceived to have been culturally very close to the Jews.”⁴

I have quoted at perhaps too great a length from Bernal’s text because *motive*, so seldom an element brought to bear on the history of history, is located, delineated and confronted in Bernal’s research, and has helped my own thinking about the process and motives of scholarly attention to and an appraisal of Afro-American presence in the literature of the United States.

Canon building is Empire building. Canon defense is national defense, Canon debate, whatever the terrain, nature and range (of criticism, of history, of the history of knowledge, of the definition of language, the universality of aesthetic principles, the sociology of art, the humanistic imagination), is the clash of cultures. And *all* of the interests are vested.

In such a melee as this one—a provocative, healthy, explosive melee—extraordinarily profound work is being done. Some of the controversy, however, has degenerated into *ad hominem* and unwarranted speculation on the personal habits of artists, specious and silly arguments about politics (the destabilizing forces are dismissed as merely political; the status quo sees itself as not—as though the term “apolitical” were only its prefix and not the most obviously political stance imaginable since one of the functions of political ideology is to pass itself off as immutable, natural and “innocent”), and covert expressions of critical inquiry designed to neutralize and disguise the political interests of the discourse. Yet much of the research and analysis has rendered speakable what was formerly unspoken and has made humanistic studies, once again, the place where one has to go to find out what’s going on. Cultures, whether silenced or monologicistic, whether repressed or repressing, seek meaning in the language and images available to them.

Silences are being broken, lost things have been found and at least two generations of scholars are disentangling received knowledge from the apparatus of control, most notably those who are engaged in investigations of French and British Colonialist Literature, American slave narratives, and the delineation of the Afro-American literary tradition.

Now that Afro-American artistic presence has been “discovered” actually to exist, now that serious scholarship has moved from silencing the witnesses and erasing their meaningful place in and contribution to American culture, it is no longer acceptable merely to imagine us and imagine for us. We have always been imagining ourselves. We are not Isak Dinesen’s⁵ “aspects of nature,” nor Conrad’s⁶ unspeaking. We are the subjects of our own narrative, witnesses to and participants in our own experience, and, in no way coinci-

2. The emphasis on the emotional, subjective, and irrational that characterized Romanticism (a cultural and intellectual movement of late 18th- to mid-19th-century Europe) was in part a reaction against the rationalism and physical materialism of the Enlightenment (an intellectual movement of the 18th century).

3. Semitic peoples (speakers of one of a group of related languages) include Arabs, Hebrews, and Phoenicians, the sea traders and colonizers who

lived in the region corresponding roughly to modern Lebanon.

4. Bernal, *Black Athena*, p. 337 [Morrison’s note].

dentally, in the experience of those with whom we have come in contact. We are not, in fact, "other." We are choices. And to read imaginative literature by and about us is to choose to examine centers of the self and to have the opportunity to compare these centers with the "raceless" one with which we are, all of us, most familiar.

II

* * *

* * * [T]here is a great, ornamental, prescribed absence in early American literature and, I submit, it is instructive. It only seems that the canon of American literature is "naturally" or "inevitably" "white." In fact it is studiously so. In fact these absences of vital presences in Young American literature⁷ may be the insistent fruit of the scholarship rather than the text. Perhaps some of these writers, although under current house arrest, have much more to say than has been realized. Perhaps some were not so much transcending politics, or escaping blackness, as they were transforming it into intelligible, accessible, yet artistic modes of discourse. To ignore this possibility by never questioning the strategies of transformation is to disenfranchise the writer, diminish the text and render the bulk of the literature aesthetically and historically incoherent—an exorbitant price for cultural (whitemale) purity, and, I believe, a spendthrift one. The re-examination of founding literature of the United States for the unspeakable unspoken may reveal those texts to have deeper and other meanings, deeper and other power, deeper and other significances.

One such writer, in particular, it has been almost impossible to keep under lock and key is Herman Melville.

Among several astute scholars, Michael Rogin⁸ has done one of the most exhaustive studies of how deeply Melville's social thought is woven into his writing. He calls our attention to the connection Melville made between American slavery and American freedom, how heightened the one rendered the other. And he has provided evidence of the impact on the work of Melville's family, milieu, and, most importantly, the raging, all-encompassing conflict of the time: slavery. He has reminded us that it was Melville's father-in-law⁹ who had, as judge, decided the case that made the Fugitive Slave Law law, and that "other evidence in *Moby Dick* also suggests the impact of Shaw's ruling on the climax of Melville's tale. Melville conceived the final confrontation between Ahab¹ and the white whale some time in the first half of 1851. He may well have written his last chapters only after returning from a trip to New York in June. [Judge Shaw's decision was handed down in April, 1851]. When New York anti-slavery leaders William Seward and John van Buren²

8. American political scientist (1937–2001).

9. Lemuel Shaw (1781–1861), chief justice of the Supreme Judicial Court of Massachusetts (1830–60). In 1851, he denied an appeal to release Thomas Sims (ca. 1834–?), a slave who had fled to Boston from Georgia and had been seized in accordance with the Fugitive Slave Act of 1850,

which required that any runaway slave be returned from all states and federal territories.

1. In *Moby-Dick* (1851), the captain of a whaling ship, the *Pequod*, who is obsessed with finding the whale who cost him his leg.

2. American lawyer and politician (1810–1866). Seward (1801–1872), American lawyer and politician, later secretary of state (1861–69) under President Abraham Lincoln.

wrote public letters protesting the *Sims* ruling, the New York *Herald*³ responded. Its attack on "The Anti-Slavery Agitators" began: "Did you ever see a whale? Did you ever see a mighty whale struggling?"⁴

Rogin also traces the chronology of the whale from its "birth in a state of nature" to its final end as commodity.⁵ Central to his argument is that Melville in *Moby Dick* was being allegorically and insistently political in his choice of the whale. But within his chronology, one singular whale transcends all others, goes beyond nature, adventure, politics and commodity to an abstraction. What is this abstraction? This "wicked idea"? Interpretation has been varied. It has been viewed as an allegory of the state in which Ahab is Calhoun, or Daniel Webster;⁶ an allegory of capitalism and corruption, God and man, the individual and fate, and most commonly, the single allegorical meaning of the white whale is understood to be brute, indifferent Nature, and Ahab the madman who challenges that Nature.

But let us consider, again, the principal actor, Ahab, created by an author who calls himself Typee, signed himself Tawney, identified himself as Ishmael,⁷ and who had written several books before *Moby Dick* criticizing missionary forays into various paradises.

Ahab loses sight of the commercial value of his ship's voyage, its point, and pursues an idea in order to destroy it. His intention, revenge, "an audacious, immitigable and supernatural revenge," develops stature—maturity—when we realize that he is not a man mourning his lost leg or a scar on his face. However intense and dislocating his fever and recovery had been after his encounter with the white whale, however satisfactorily "male" this vengeance is read, the vanity of it is almost adolescent. But if the whale is more than blind, indifferent Nature unsubduable by masculine aggression, if it is as much its adjective as it is its noun, we can consider the possibility that Melville's "truth" was his recognition of the moment in America when whiteness became ideology. And if the white whale is the ideology of race, what Ahab has lost to it is personal dismemberment and family and society and his own place as a human in the world. The trauma of racism is, for the racist and the victim, the severe fragmentation of the self, and has always seemed to me a cause (not a symptom) of psychosis—strangely of no interest to psychiatry. Ahab, then, is navigating between an idea of civilization that he renounces and an idea of savagery he must annihilate, because the two cannot co-exist. The former is based on the latter. What is terrible in its complexity is that the idea of savagery is not the missionary one; it is white racial ideology that is savage and if, indeed, a white, nineteenth-century, American male took on not abolition, not the amelioration of racist institutions or their laws, but the very concept of whiteness as an inhuman idea,

3. A proslavery newspaper (published 1835–1924).

4. Michael Paul Rogin, *Subversive Genealogy: The Politics and Art of Herman Melville* (Berkeley: University of California Press, 1985), pp. 107, 142 [Morrison's note].

5. *Ibid.*, p. 112 [Morrison's note].

6. American orator and politician (1782–1852); as a U.S. senator from Massachusetts (1827–41, 1845–50), he defended federal power against those who argued that states could nullify a law they viewed as unconstitutional. The most

prominent nullificationist was John C. Calhoun (1782–1850), as vice president (1825–32) and as proslavery senator from South Carolina (1833–50). Both supported the Compromise of 1850, which included the Fugitive Slave Act.

7. The narrator of *Moby-Dick*. Typee was both the title of Melville's first novel (1846) and the name of the Polynesian people he describes in it; Tawney is an old and respected black sailor in his novel *White-Jacket* (1850).

he would be very alone, very desperate, and very doomed. Madness would be the only appropriate description of such audacity, and “he heaves me,” the most succinct and appropriate description of that obsession.

I would not like to be understood to argue that Melville was engaged in some simple and simple-minded black/white didacticism, or that he was satanizing white people. Nothing like that. What I am suggesting is that he was overwhelmed by the philosophical and metaphysical inconsistencies of an extraordinary and unprecedented idea that had its fullest manifestation in his own time in his own country, and that that idea was the successful assertion of whiteness as ideology.

On the *Pequod* the multiracial, mainly foreign, proletariat is at work to produce a commodity, but it is diverted and converted from that labor to Ahab's more significant intellectual quest. We leave whale as commerce and confront whale as metaphor. With that interpretation in place, two of the most famous chapters of the book become luminous in a completely new way. One is Chapter 9, The Sermon. In Father Mapple's thrilling rendition of Jonah's trials,⁸ emphasis is given to the purpose of Jonah's salvation. He is saved from the fish's belly for one single purpose, “To preach the Truth to the face of Falsehood! That was it!” Only then the reward “Delight”—which strongly calls to mind Ahab's lonely necessity. “Delight is to him . . . who against the proud gods and commodores of this earth, ever stand forth his own inexorable self. . . . Delight is to him whose strong arms yet support him, when the ship of this base treacherous world has gone down beneath him. Delight is to him who gives no quarter in the truth and kills, burns, and destroys all *sin* though he pluck it out from under the robes of Senators and Judges. Delight—top-gallant delight is to him who acknowledges no law or lord, but the Lord his God, and is only a *patriot to heaven*” [italics mine]. No one, I think, has denied that the sermon is designed to be prophetic, but it seems unremarked what the nature of the sin is—the sin that must be destroyed, regardless. Nature? A sin? The terms do not apply. Capitalism? Perhaps. Capitalism fed greed, lent itself inexorably to corruption, but probably was not in and of itself sinful to Melville. Sin suggests a moral outrage within the bounds of man to repair. The concept of racial superiority would fit seamlessly. It is difficult to read those words (“destruction of sin,” “patriot to heaven”) and not hear in them the description of a different Ahab. Not an adolescent male in adult clothing, a maniacal ego-centric, or the “exotic plant” that V. L. Parrington⁹ thought Melville was. Not even a morally fine liberal voice adjusting, balancing, compromising with racial institutions. But another Ahab: the only white male American heroic enough to try to slay the monster that was devouring the world as he knew it.

Another chapter that seems freshly lit by this reading is Chapter 42, The Whiteness of the Whale. Melville points to the do-or-die significance of his effort to say something unsayable in this chapter. “I almost despair,” he writes, “of putting it in a comprehensive form. It was the whiteness of the whale that above all things appalled me. But how can I hope to explain myself here; and yet in some dim, random way, explain myself I must, *else all these chapters might be naught*” [italics mine]. The language of this chapter

8. That is, the Hebrew prophet's swallowing by a “great fish” (see Jonah 1.17–2.10).

9. Vernon L. Parrington (1871–1929), American literary historian.

ranges between benevolent, beautiful images of whiteness and whiteness as sinister and shocking. After dissecting the ineffable, he concludes: "Therefore . . . symbolize whatever grand or gracious he will by whiteness, no man can deny that in its profoundest *idealized significance* it calls up a peculiar apparition to the soul." I stress "idealized significance" to emphasize and make clear (if such clarity needs stating) that Melville is not exploring white *people*, but whiteness idealized. Then, after informing the reader of his "hope to light upon some chance clue to conduct us to the hidden course we seek," he tries to nail it. To provide the key to the "hidden course." His struggle to do so is gigantic. He cannot. Nor can we. But in nonfigurative language, he identifies the imaginative tools needed to solve the problem: "subtlety appeals to subtlety, and without imagination no man can follow another into these halls." And his final observation reverberates with personal trauma. "This visible [colored] world seems formed in love, the invisible [white] spheres were formed in fright." The necessity for whiteness as privileged "natural" state, the invention of it, was indeed formed in fright.

"Slavery," writes Rogin, "confirmed Melville's isolation, decisively established in *Moby Dick*, from the dominant consciousness of his time."¹ I differ on this point and submit that Melville's hostility and repugnance for slavery would have found company. There were many white Americans of his acquaintance who felt repelled by slavery, wrote journalism about it, spoke about it, legislated on it and were active in abolishing it. His attitude to slavery alone would not have condemned him to the almost autistic separation visited upon him. And if he felt convinced that blacks were worthy of being treated like whites, or that capitalism was dangerous—he had company or could have found it. But to question the very notion of white progress, the very idea of racial superiority, of whiteness as privileged place in the evolutionary ladder of humankind, and to meditate on the fraudulent, self-destroying philosophy of that superiority, to "pluck it out from under the robes of Senators and Judges," to drag the "judge himself to the bar,"²—that was dangerous, solitary, radical work. Especially then. Especially now. To be "only a patriot to heaven" is no mean aspiration in Young America for a writer—or the captain of a whaling ship.

A complex, heaving, disorderly, profound text is *Moby Dick*, and among its several meanings it seems to me this "unspeakable" one has remained the "hidden course," the "truth in the Face of Falsehood." To this day no novelist has so wrestled with its subject. To this day literary analyses of canonical texts have shied away from that perspective: the informing and determining Afro-American presence in traditional American literature. The chapters I have made reference to are only a fraction of the instances where the text surrenders such insights, and points a helpful finger toward the ways in which the ghost drives the machine.

Melville is not the only author whose works double their fascination and their power when scoured for this presence and the writerly strategies taken to address or deny it. Edgar Allan Poe³ will sustain such a reading. So will Nathaniel Hawthorne and Mark Twain; and in the twentieth century, Willa

Cather, Ernest Hemingway, F. Scott Fitzgerald,⁴ and William Faulkner, to name a few. Canonical American literature is begging for such attention.

It seems to me a more than fruitful project to produce some cogent analysis showing instances where early American literature identifies itself, risks itself, to assert its antithesis to blackness. How its linguistic gestures prove the intimate relationship to what is being nulled by implying a full descriptive apparatus (identity) to a presence-that-is-assumed-not-to-exist. Afro-American critical inquiry can do this work.

I mentioned earlier that finding or imposing Western influences in/on Afro-American literature had value provided the valued process does not become self-anointing. There is an adjacent project to be undertaken * * *: the examination of contemporary literature (both the sacred and the profane) for the impact Afro-American presence has had on the structure of the work, the linguistic practice, and fictional enterprise in which it is engaged. * * * [T]his critical process must also eschew the pernicious goal of equating the fact of that presence with the achievement of the work. A work does not get better because it is responsive to another culture; nor does it become automatically flawed because of that responsiveness. The point is to clarify, not to enlist. And it does not “go without saying” that a work written by an Afro-American is automatically subsumed by an enforcing Afro-American presence. There is a clear flight from blackness in a great deal of Afro-American literature. In others there is the duel with blackness, and in some cases, as they say, “You’d never know.”

4. All canonical American authors: Cather (1873–1947), Hemingway (1899–1961), and Fitzgerald (1896–1940).

RICHARD OHMANN

b. 1931

Few contemporary debates in the humanities have incited as much controversy as those over the literary canon. Deemed “the best that is known and thought” by MATTHEW ARNOLD and his intellectual progeny, the traditional literary canon has been critiqued, attacked, defended, and revised in recent years. The problem, say many literary theorists and critics, is that the canon has been shaped not by eternal or universal standards, but instead by unacknowledged gender, racial, ethnic, and class biases, traditionally favoring, in a memorable phrase, “dead white European males.” These critics—feminist, African American, postcolonial, and other—have argued for “opening” the canon to include previously suppressed voices, especially women and people of color. Joining the fray, U.S. conservative political figures such as William Bennett and Lynne Cheney, along with academic allies such as Allan Bloom and HAROLD BLOOM, have blamed efforts to revise the canon for a loss of traditionally revered Western cultural values and a fracturing of a unified culture. In “The Shaping of a Canon: U.S. Fiction, 1960–1975” (1983), Richard Ohmann, a leading contemporary critic of the institution of literature, takes a step back and investigates the preliminary material, historical, and institutional processes that form the literary canon.

Born in Cleveland, Ohmann received his B.A. from Oberlin College in 1952 and his Ph.D. in English literature from Harvard University in 1960. He was a professor and an administrator at Wesleyan University in Connecticut from 1961 until his retirement in 1998. His initial scholarly work focused on literary style and traditional literary figures, like George Bernard Shaw (1856–1950), but through the 1960s he explored new theoretical approaches imported from linguistics; he was one of the first American scholars to introduce speech act theory (developed in the 1950s by the English philosopher of language J. L. AUSTIN) to literary criticism. In the late 1960s his work again shifted, as he began to examine social and political issues involved in the study of literature. He was deeply influenced by the social unrest and leftist politics of the time, and his later work, most notably his landmark book *English in America: A Radical View of the Profession* (1976), arises out of that era's "ruthless critique of all things existing."

English in America is a pioneering study of the social functions of literary study. While we normally justify the teaching of English as developing an appreciation of language and good writing through the study of great works of literature, Ohmann points out less publicized functions of English studies: "We train young people, and those who train young people, in the skills required by a society most of whose work is done on paper and through talk, not by physical labor. We also discipline the young to do assignments, on time, to follow instructions, to turn out uniform products, to observe the etiquette of verbal communication." In other words, university training in English is concerned not just with literary works but with inculcating the values and skills of white-collar work. Ohmann goes on to describe the class bias of English, arguing that despite the ideology of equal opportunity, "we eliminate the less adapted, the ill-trained, the city youth with bad verbal manners, blacks with the wrong dialect . . . and the rebellious of all shapes and sizes." In short, he produces a damning radical critique of the institution of English, which functions as an "instrument" to "maintain social and economic inequalities." Ohmann concludes *English in America* with a critique of the modern American university overall, detailing its connections to business and the military; he argues that universities are not "ivory towers" operating to produce "pure" knowledge, but the instruments of industrial and military research.

"The Shaping of a Canon: U.S. Fiction, 1960–1975" turns from English departments and the university to investigate institutions involved in the material production and distribution of literature, such as publishing houses, advertising firms, and book reviewing outlets, which are usually considered peripheral to discussions of the value and attributes of literary works. Judgments about literature are typically assumed to be a matter for literary critics, who read, criticize, and evaluate it on its autonomous artistic merits. Countering received opinion, Ohmann demonstrates how influential these institutions in fact are in determining merit and the canon.

As a test case, Ohmann examines a group of contemporary U.S. novels published in the 1960s and early 1970s, inspecting normally overlooked aspects of their distribution and consumption, including agenting, editing, marketing, advertising, and reviewing. He argues that this complex set of institutional channels determines which books receive attention, preselecting which texts are ordained as "precanonical," or potential entrants into the canon. The primary criterion of value for these institutions is the capitalist one of marketability rather than abstract aesthetic merit. In particular, Ohmann demonstrates the large role of advertising in determining value and shaping the canon. As he concludes from the evidence compiled, "if a novel did not become a best-seller within three or four weeks of publication, it was unlikely to reach a large readership later on." While not denying that such works might have aesthetic value, Ohmann shows that aesthetic judgments are inflected by capitalist criteria.

Significantly, Ohmann examines the class character of those who work in the institutions of literature. He notes that they are members of the "professional-managerial" class—those who do intellectual rather than blue-collar work—and that their class position informs their judgments of value. They thus attribute value to books that

speak to their lives and ideologies, and he speculates that they favor “illness stories,” or works that depict the alienation of white-collar life. Continuing his argument that aesthetic judgments are not simply a matter of abstract, artistic value, Ohmann points out that they are shaped by the class divisions of modern capitalism: those in positions of relative power have more influence in determining which books are considered to have literary merit.

Determining the value of artworks is a perennial problem in aesthetic theory, and contemporary debates over the canon pivot on conflicting theories of value. Those who defend the canon typically see its value as universal and timeless, whereas those who attack it generally see it as politically motivated and historically constructed. The eighteenth-century German philosopher IMMANUEL KANT, a founder of aesthetic theory, posited that aesthetic judgments are necessarily universal and disinterested, distinguishing them from the exercise of individual taste. Ohmann dispels just this sense of universality and disinterest through his analysis of the judgments rendered on contemporary U.S. fiction, which testify to specific class interests and are influenced by elements of the capitalist mode of production.

In his analysis of the social construction of aesthetic judgment, Ohmann has affinities with contemporary theorists such as PIERRE BOURDIEU and Barbara Herrnstein Smith. In *Distinction* (1979; see above), Bourdieu conducts a sociological study of contemporary French culture, showing how taste is determined by class. Drawing on the aesthetic theory of the eighteenth-century Scottish philosopher DAVID HUME and of Bourdieu, Smith argues in *Contingencies of Value* (1988) that judgments of value and taste are not universal and timeless, but historically contingent. Ohmann’s “Shaping of a Canon” offers a concrete counterpart to Smith’s more explicitly theoretical considerations of aesthetic value, providing a case study replete with a “thick description” of historical events illustrating the processes of aesthetic judgment.

Given its focus on class and the social and economic determinants of literary culture, Ohmann’s work has been characterized as Marxist and therefore criticized for overstressing material factors and for advocating the radicalization of the profession. Ohmann explains in an interview, however, that he had read few of the Marxist classics at the time he wrote *English in America*; his work arose instead from the collective, radical “Movement” of the 1960s and from his participation in leftist groups such as the Radical Caucus of the Modern Language Association (the central professional organization of academic literary scholars in North America). Ohmann’s innovative work in developing a cultural studies approach to literary practices makes him somewhat idiosyncratic in an era when most American critics have been more absorbed in debates over poststructuralist theory. “The Shaping of a Canon” remains a groundbreaking case study of the actual institutions of literature and what has come to be called “print culture.”

“The Shaping of a Canon: U.S. Fiction, 1960–1975” Keywords: Aesthetics, The Canon/Tradition, Cultural Studies, Ideology, Institutional Studies, Marxism, The Novel, Print Culture

From The Shaping of a Canon: U.S. Fiction, 1960–1975

Categorical names such as The English Novel, The Modern American Novel, and American Literature often turn up in catalogues as titles of college courses, and we know from them pretty much what to expect. They also have standing in critical discourse, along with allied terms unlikely to serve as course titles: *good writing*, *great literature*, *serious fiction*, *literature* itself. The

awareness has grown in recent years that such concepts pose problems, even though we use them with easy enough comprehension when we talk or write to others who share our cultural matrix.

Lately, critics like Raymond Williams¹ have been reminding us that the categories change over time (just as *literature* used to mean all printed books but has come to mean only certain poems, plays, novels, etc.) and that at any given moment categories embody complex social relations and a continuing historical process. That process deeply invests all terms with value: since not everyone's values are the same, the negotiating of such concepts is, among other things, a struggle for dominance—whether between adults and the young, professors and their students, one class and another, or men and women. One doesn't usually notice the power or the conflict, except when some previously weak or silent group seeks a share of the power: for example, when, in the 1960s, American blacks and their supporters insisted that black literature be included in school and college curricula, or when they openly challenged the candidacy of William Styron's *Confessions of Nat Turner*² for inclusion in some eventual canon.³ But the gradual firming up of concepts like, say, postwar American fiction is always a contest for cultural hegemony,⁴ even if in our society it is often muted—carried on behind the scenes or in the seemingly neutral marketplace.

Not only do the concepts change, in both intension and extension, but the process of their formation also changes. The English, who had power to do so, admitted *Great Expectations* to the canon by means very different from those used to admit the *Canterbury Tales*⁵ by earlier generations of tastemakers. Again, the process may differ from genre to genre even in a particular time and place. For instance, profit and the book market are relatively unimportant in deciding what will be considered modern American poetry, by contrast with their function in defining modern American fiction. As a result, in order to work toward a serviceable theory of canon formation, it is necessary to look at a variety of these processes and at how they impinge on one another.

Here, I attempt to sketch out one of them, the process by which novels written by Americans from about 1960 to 1975 have been sifted and assessed, so that a modest number of them retain the kind of attention and respect that eventually makes them eligible for canonical status.⁶ I am going to argue that

1. Welsh literary and cultural critic (1921–1988; see above), whose *Marxism and Literature* (1977) discusses the historical change that Ohmann refers to.

2. This 1967 novel by Styron (1925–2006) depicts a slave rebellion before the American Civil War. It won a Pulitzer Prize but generated controversy because some questioned whether Styron, a southern-born white author, could authentically represent African Americans.

3. See John Henrik Clarke, ed., *William Styron's Nat Turner: Ten Black Writers Respond* (Boston, 1968) [Ohmann's note]. Some of the author's notes have been edited, and some omitted.

4. The manufactured consent that legitimates a dominant group and unifies a society; a Marxist concept articulated by the Italian theorist ANTONIO GRAMSCI (1891–1937).

5. Middle English poem (ca. 1386–1400) by Geoffrey Chaucer; one of the great works of the

Middle Ages. *Great Expectations* (1861), English novel by Charles Dickens.

6. I make no large claims for my boundaries. They mark off, crudely, the time when publishing had become part of big business but before subsidiary rights had completely overshadowed hardbound novel publishing. My boundaries also mark the time when people born to one side or the other of 1930 attained cultural dominance and could most strongly advance their reading of the postwar experience. These years roughly enclose the rise and decline of the 1960s movements as well as economic boom and the U.S. intervention in Southeast Asia. Anyhow, things have changed since 1975, both in the great world and in fiction publishing; accordingly I use the past tense when describing the process of canon-formation, even though many of my generalizations still hold true [Ohmann's note].

the emergence of these novels has been a process saturated with class values and interests, a process inseparable from the broader struggle for position and power in our society, from the institutions that mediate that struggle, as well as from legitimation of and challenges to the social order. I will then try to be more specific about the representation of those values and interests in the fiction itself.

Reading and the Book Market

People read books silently, and often in isolation, but reading is nonetheless a social act. As one study concludes:

Book reading in adult life is sustained . . . by interpersonal situations which minimize the individual's isolation from others. To persist over the years, the act of book reading must be incorporated . . . into a social context. Reading a book becomes meaningful when, after completion, it is shared with others. . . . Social integration . . . sustains a persistent engagement with books. Social isolation, in contrast, is likely to lead to the abandonment of books.⁷

Simone Beserman found, in her study of best-sellers around 1970, that frequent reading of books correlated highly with social interaction—in particular, with the desire to rise in society. Upwardly mobile second- and third-generation Americans were heavy readers of best-sellers.⁸

As you would expect, given the way reading is embedded in and reinforced by social relations, networks of friends and family also contributed in determining which books would be widely read. In her survey, Beserman found that 58 percent of those who read a particular best-seller did so upon recommendation of a friend or relative. Who were these people, so crucial to a book's success? Beserman found that they were of better-than-average education (most had finished college), relatively well-to-do, many of them professionals, in middle life, upwardly mobile, living near New York or oriented, especially through the *New York Times*,⁹ to New York cultural life.

These people were responsive to novels where they discovered the values in which they believed or where they found needed moral guidance when shaken in their own beliefs. Saul Bellow's remark, "What Americans want to learn from their writers is how to live,"¹ finds support in Philip H. Ennis's study, *Adult Book Reading in the United States*. Ennis determined that three of the main interests people carried into their reading were a "search for personal meaning, for some kind of map to the moral landscape"; a need to "reinforce or to celebrate beliefs already held, or, when shaken by events, to

7. Jan Hajda, "An American Paradox: People and Books in a Metropolis" (Ph.D. diss., University of Chicago, 1963), p. 218, as cited in Elizabeth Warner McElroy, "Subject Variety in Adult Book Reading" (M.A. thesis, University of Chicago, 1967) [Ohmann's note].

8. See Simone Beserman, "Le Best-seller aux États-Unis de 1961 à 1970: Étude littéraire et sociologique" (Ph.D. diss., University of Paris, 1975), pp. 280–95. Surprisingly, neither this audience nor the ways it integrated novel reading into its social existence seem all that different from their

counterparts in early 18th-century England, as described, for example, in chap. 2 of Ian Watt, *The Rise of the Novel: Studies in Defoe, Richardson, and Fielding* (Berkeley, 1957) [Ohmann's note].

9. Arguably the most respected newspaper in the United States.

1. Saul Bellow, in Jason Epstein's interview, "Saul Bellow of Chicago," *New York Times Book Review*, May 9, 1971, p. 16 [Ohmann's note]. Bellow (1915–2005), Canadian-born American novelist; he won the Nobel Prize in Literature in 1976.

provide support in some personal crisis”; and a wish to keep up “with the book talk of friends and neighbors.”²

The values and beliefs of a small group of people played a disproportionate role in deciding what novels would be widely read in the United States. (Toward the end of this essay, I will turn to those values in some detail.) To underscore their influence, consider two other facts about the book market. First, if a novel did not become a best-seller within three or four weeks of publication, it was unlikely to reach a large readership later on. In the 1960s, only a very few books that were slow starters eventually became best-sellers (in paperback, not hardback). I know of three: *Catch-22*, *Call It Sleep*, and *I Never Promised You a Rose Garden*, to which we may add the early novels of Vonnegut, which were not published in hard covers, and—if we count its 1970s revival in connection with the film—*One Flew over the Cuckoo's Nest*.³ To look at the process the other way around, once a new book did make the *New York Times* best-seller list, many other people bought it (and store managers around the country stocked it) *because* it was a best-seller. The process was cumulative. So the early buyers of hardcover books exercised a crucial role in selecting the books that the rest of the country's readers would buy.

Second, best-sellerdom was much more important than suggested by the figures for hardbound sales through bookstores. *Love Story*,⁴ for instance, the leading best-seller (in all forms) of the decade sold 450,000 hardback copies in bookstores but more than 700,000 through book clubs, 2.5 million through the *Reader's Digest*, 6.5 million in the *Ladies' Home Journal*,⁵ and more than 9,000,000 in paperback—not to mention library circulation or the millions of people who saw the film. Books were adopted by clubs, paperback publishers, film producers, and so forth, in large part because they were best-sellers or because those investing in subsidiary rights thought them likely to become best-sellers. As Victor Navasky rather wryly said:

Publishers got out of the business of *selling* hardcover books ten or fifteen years ago. The idea now is to publish hardcover books so that they can be reviewed or promoted on television in order to sell paperback rights, movie rights, book club rights, serialization rights, international satellite rights, Barbie doll rights, etc.⁶

The phenomenon of the hardbound best-seller had only modest economic and cultural significance in itself but great significance in triggering reproduction and consumption of the story in other forms.

2. Philip H. Ennis, *Adult Book Reading in the United States*, National Opinion Research Center (University of Chicago, 1965), p. 25. Other main needs were (1) “escape,” which also implies a relationship between reading a book and the rest of one's social life (what one is escaping from), and (2) information, which I suspect is a need less often fulfilled by novels now than in the time of Defoe and Richardson [Ohmann's note]. Daniel Defoe (1660–1731) and Samuel Richardson (1689–1761) were among the earliest English novelists.

3. A 1962 novel by Ken Kesey (1935–2001), made into an Academy Award-winning film (1975, dir. Milos Forman). *Catch-22* (1961), by Joseph Heller (1923–1999). *Call It Sleep* (1934;

reissued 1960), by Henry Roth (1906–1995), Ukrainian-born American novelist. *I Never Promised You a Rose Garden* (1964), by Joanne Greenberg (b. 1932). Kurt Vonnegut (1922–2007), American novelist whose early works include *The Sirens of Titan* (1959), *Mother Night* (1962), and *Cat's Cradle* (1963).

4. A 1970 novel by Erich Segal (1937–2010), published by Harper and Row and made into a movie (dir. Arthur Hiller) that same year.

5. Popular mass-market magazines.

6. Victor Navasky, “Studies in Animal Behavior,” *New York Times Book Review*, February 20, 1973, p. 2 [Ohmann's note]. Navasky (b. 1932), American cultural critic and longtime editor of the liberal-left magazine the *Nation*.

A small group of relatively homogeneous readers, then, had a great deal of influence at this preliminary stage. But of course these people did not make *their* decisions freely among the thousands of novels completed each year. They chose among the smaller number actually published. This fact points to an important role in canon formation for literary agents and for editors at the major houses, who belong to the same social stratum as the buyers of hard-bound books, and who—as profitability in publishing came to hinge more and more on the achievement of best-sellerdom for a few books—increasingly earned their keep by spotting (and pushing) novels that looked like best-sellers. Here we have a nearly closed circle of marketing and consumption, the simultaneous exploitation and creation of taste, familiar to anyone who has examined marketplace culture under monopoly capitalism.

But, it is clear, influential readers chose not among all novels published but among the few that came to their attention in an urgent or attractive way. How did that happen? As a gesture toward the kind of answer that question requires, I will consider the extraordinary role of the *New York Times*. The *New York Times Book Review* had about a million and a half readers, several times the audience of any other literary periodical. Among them were most bookstore managers, deciding what to stock, and librarians, deciding what to buy, not to mention the well-to-do, well-educated east-coasters who led in establishing hardback best-sellers. The single most important boost a novel could get was a prominent review in the *Sunday New York Times*—better a favorable one than an unfavorable one, but better an unfavorable one than none at all.

Ads complemented the reviews, or perhaps the word is *inundated*: two-thirds of the space in the *Times Book Review* went to ads. According to Richard Kostelanetz, most publishers spent more than half their advertising budgets for space in that journal.⁷ They often placed ads in such a way as to reinforce a good *Times* review or offset a bad one with favorable quotations from reviews in other periodicals. And of course reviews and ads were further reinforced by the *Times* best-seller list itself, for the reason already mentioned. Apparently, the publishers' faith in the *Times* was not misplaced. Beserman asked early readers of *Love Story* where they had heard of the book. Most read it on recommendation of another person; Beserman then spoke to *that* person, and so on back to the beginning of the chain of verbal endorsements. At the original source, in more than half the instances, she found the *Times*.⁸ (This in spite of the quite unusual impact, for that time, of Segal's appearance on the "Today" show⁹ the day of publication—Barbara Walters said the book made her cry all night; Harper was immediately swamped with orders—and of the novel's appearance in the *Ladies' Home Journal* just before book publication.)

7. See Richard Kostelanetz, *The End of Intelligent Writing: Literary Politics in America* (New York, 1974), p. 207. Kostelanetz's estimate was confirmed by some of Beserman's interviews. Allan Green, who handled advertising for a number of publishers, including Viking, told her in 1971 that on the average, 50 to 60 percent of the budget went to the *New York Times Book Review* and another 10 to 20 percent to the daily *New York Times*. M. Stuart Harris, head of publicity at

Harper, said he ordinarily channeled 90 percent into the *Times* at the outset, though once a book's success was assured, he distributed advertising more broadly (see Beserman, p. 120) [Ohmann's note].

8. See Beserman, p. 168 [Ohmann's note].

9. The *Today Show*, a popular television show on NBC, debuted in 1952; Walters (b. 1929), television reporter and celebrity, was one of its hosts from 1964 to 1976.

The influence of the *Times Book Review* led publicity departments to direct much of their prepublication effort toward persuading the *Book Review*'s editors that a particular novel was important. It is hard to estimate the power of this suasion, but one thing can be measured: the correlation between advertising in the *Book Review* and being reviewed there. A 1968 study concluded, perhaps unsurprisingly, that the largest advertisers got disproportionately large amounts of review space. Among the large advertisers were, for instance:

| | <i>Pages of ads</i> | <i>Pages of reviews</i> |
|---------------|-------------------------|-----------------------------|
| Random House | 74 | 58 |
| Harper | 29 | 22 |
| Little, Brown | 29 | 21 |

And the smaller ones:

| | | |
|------------|----|--------------|
| Dutton | 16 | 4 |
| Lippincott | 16 | 4 |
| Harvard | 9 | "negligible" |

During the same year Random House (including Knopf and Pantheon) had nearly three times as many books mentioned in the feature "New and Recommended" as Doubleday or Harper, both of which published as many books as the Random House group.¹

To summarize: a small group of book buyers formed a screen through which novels passed on their way to commercial success; a handful of agents and editors picked the novels that would compete for the notice of those buyers; and a tight network of advertisers and reviewers, organized around the *New York Times Book Review*, selected from these a few to be recognized as compelling, important, "talked-about."

The Next Stage

So far I have been speaking of a process that led to a mass readership for a few books each year. But most of these were never regarded as serious literature and did not live long in popularity or memory. Books like *Love Story*, *The Godfather*, *Jonathan Livingston Seagull*, and the novels of Susann, Robbins, Wouk, Wallace, and Uris² would run a predictable course. They had large hardback sales for a few months, tapering off to a trickle in a year or so. Meanwhile, they were reprinted in paper covers and enjoyed two or three years of popularity (often stoked by a film version). After that they disappeared or remained in print to be bought in smaller numbers by, for instance, newly won fans of Wallace who wanted to go back and read his earlier books. There was a similar pattern for mysteries, science fiction, and other specialized genres.

But a few novels survived and continued (in paper covers) to attract buyers and readers for a longer time, and they still do. Why? To answer that the

1. See Kostelanetz, p. 209 [Ohmann's note].
 2. Jacqueline Susann (1918–1974), Harold Robbins (1916–1997), Herman Wouk (b. 1915), Irving Wallace (1916–1990) and Leon Uris (1924–2003) were well-known, best-selling authors of the period. *The Godfather* (1969) by Mario Puzo and *Jonathan Livingston Seagull* (1970) by Richard Bach were best-selling American novels.

best novels survive is to beg the question. Excellence is a constantly changing, socially chosen value. Who attributed it to only some novels, and how? I hope now to hint at the way such a judgment took shape.

First, one more word about the *New York Times Book Review*. I have argued that it led in developing a broad audience for fiction. It also began, I believe, the process of distinguishing between ephemeral popular novels and those to be taken seriously over a longer period of time. There was a marked difference in impact between, say, Martin Levin's favorable but mildly condescending (and brief) review of *Love Story* and the kind of front-page review by an Alfred Kazin or an Irving Howe³ that asked readers to regard a new novel as literature, and that so often helped give the stamp of highbrow approval to books by Bellow, Malamud, Updike, Roth, Doctorow,⁴ and so forth. Cultural leaders read the *Times Book Review* too: not only professors but (according to Julie Hoover and Charles Kadushin) 75 percent of our elite intellectuals.⁵ By reaching these circles, a major *Times* review could help put a novel on the cultural agenda and ensure that other journals would have to take it seriously.

Among those others, a few carried special weight in forming cultural judgments. In a survey of leading intellectuals, just eight journals—the *New York Review of Books*, the *New Republic*, the *New York Times Book Review*, the *New Yorker*, *Commentary*, *Saturday Review*, *Partisan Review*, and *Harpers*—received almost half the participants' "votes" in response to various questions about influence and importance.⁶ In effect, these periodicals were both a communication network among the influentials (where they reviewed one another's books) and an avenue of access to a wider cultural leadership. The elite, writing in these journals, largely determined which books would be seriously debated and which ones permanently valued, as well as what ideas were kept alive, circulated, discussed. Kadushin and his colleagues concluded, from their studies of our intellectual elite and influential journals, that the "top intellectual journals constitute the American equivalent of an Oxbridge establishment, and have served as one of the main gatekeepers for new talent and new ideas."⁷

A novel had to win at least the divided approval of these arbiters in order to remain in the universe of cultural discourse, once past the notoriety of best-sellerdom. The career of *Love Story* is a good example of failure to do so. After some initial favorable reviews (and enormous publicity on television and other media), the intellectuals began cutting it down to size. In the elite journals, it was either panned or ignored. Styron and the rest of the National Book Award⁸ fiction panel threatened to quit if it were not removed

3. Kazin (1915–1998) and Howe (1920–1993) were both highly regarded American literary critics affiliated with the New York Intellectuals. Levin (1919–2008), American writer and prolific book critic.

4. All respected "serious" American novelists: Bernard Malamud (1914–1986), John Updike (1932–2009), Philip Roth (b. 1933) and E. L. Doctorow (1931–2015).

6. See Charles Kadushin, Julie Hoover, and

Monique Tichy, "How and Where to Find the Intellectual Elite in the United States," *Public Opinion Quarterly*, spring 1971, pp. 1–18. For the method used to identify an intellectual elite, see Kadushin, "Who Are the Elite Intellectuals?" *Public Interest*, fall 1972, pp. 109–25 [Ohmann's note].

7. Kadushin, Hoover, and Tichy, p. 17 [Ohmann's note]. "Oxbridge establishment": English intellectual elite (assumed to be graduates of Oxford or Cambridge University).

8. A prestigious annual book prize, awarded in different genres.

from the list of candidates. And who will read it tomorrow, except on an excursion into the archives of mass culture?

In talking about the *New York Times Book Review*, I suggested a close alliance between reviewing and profit, literary and monetary values. The example of the *New York Review of Books* shows that a similar alliance can exist on the higher ramparts of literary culture. This journal, far and away the most influential among intellectuals (in answer to Kadushin's questions, it was mentioned almost twice as often as the *New Republic*, its nearest competitor), was founded by Jason Epstein, a vice president of Random House, and coedited by his wife, Barbara Epstein.⁹ It may be more than coincidental that in 1968 almost one-fourth of the books granted full reviews in the *New York Review* were published by Random House (again, including Knopf and Pantheon)—more than the combined total of books from Viking, Grove, Holt, Harper, Houghton Mifflin, Oxford, Doubleday, Macmillan, and Harvard so honored; or that in the same year one-fourth of the reviewers had books in print with Random House and that a third of those were reviewing other Random House books, mainly favorably; or that over a five-year period more than half the regular reviewers (ten or more appearances) were Random House authors.¹ This is not to deny the intellectual strength of the *New York Review*—only to suggest that it sometimes deployed that strength in ways consistent with the financial interest of Random House. One need not subscribe to conspiracy theories in order to see, almost everywhere one looks in the milieu of publishing and reviewing, linkages of fellowship and common interest. Together these networks make up a cultural establishment, inseparable from the market, both influencing and influenced by it.

If a novel was certified in the court of the prestigious journals, it was likely to draw the attention of academic critics in more specialized and academic journals like *Contemporary Literature* and by this route make its way into college curricula, where the very context—course title, academic setting, methodology—gave it de facto recognition as literature. This final step was all but necessary: the college classroom and its counterpart, the academic journal, have become in our society the final arbiters of literary merit, and even of survival. It is hard to think of a novel more than twenty-five years old, aside from specialist fiction and *Gone with the Wind*,² that still commands a large readership outside of school and college.

I am suggesting that novels moved toward a canonical position only if they attained both large sales (usually, but not always, concentrated enough to place them among the best-sellers for a while) and the right kind of critical attention. On the one side, this hypothesis conflicts with the one most vigorously advanced by Leslie A. Fiedler—that intellectuals are, in the long run, outvoted by the sorts of readers who keep liking *Gone with the Wind*.³ On the other side, it collides with the hopes or expectations of critics such as Kostelanetz and Jerome Klinkowitz, who promote an avant-garde fiction called postmodernist, postcontemporary, antinovel, or whatever.⁴

9. Jason Epstein (b. 1928) and Barbara Epstein (1928–2006), influential American literary figures.

1. See Kostelanetz, pp. 107–8 [Ohmann's note].

2. One of the most popular American novels of all time, published in 1936 by Margaret Mitchell.

3. See, for instance, Leslie A. Fiedler, *The Inad-*

vertent Epic: From "Uncle Tom's Cabin" to "Roots" (New York, 1979). Fiedler's *What Was Literature? Class Culture and Mass Society* (New York, 1982) argues again for the primacy of people over professors [Ohmann's note].

4. As Jerome Klinkowitz states in his preface: "For even the well and intelligently read, 'contemporary

Clearly, I need an independent measure of precanonical status, or my argument closes into a circle. Unfortunately, I don't have a very good one, in part, because it is still too early to settle the issue. But let me offer two scraps of pertinent information. First, the editors of *Wilson Quarterly* polled forty-four professors of American literature (in 1977 or 1978, apparently), asking them to rank in order the ten "most important" novels published in the United States after World War II.⁵ The editors printed a list of the twenty-one novels rated highest in this survey; eleven of them were published in or after 1960. In rank order, they are *Catch-22*, *Gravity's Rainbow*, *Herzog*, *An American Dream*, *The Sotweed Factor*, *Second Skin*, *Portnoy's Complaint*, *The Armies of the Night*, *V*, *Rabbit Run*,⁶ and *One Flew over the Cuckoo's Nest*. All easily meet the criterion of attention from intellectuals. (Again, it doesn't matter that Norman Podhoretz⁷ hates Updike's novels, so long as he takes them seriously enough to argue with his peers about them.) As for broad readership, all of the novels except *Second Skin* and perhaps *The Sotweed Factor* have sold over half a million copies—and one may be sure that many of those sales occurred through adoption in college courses.⁸

My second cast of the net is much broader. *Contemporary Literary Criticism* abstracts commentary on recent world literature, mainly by American professors and intellectuals. Its coverage includes critical books, respected academic journals, taste-forming magazines, quarterlies, and little magazines. It claims to excerpt from criticism of "work by well-known creative writers," "writers of considerable public interest," who are alive or who died after January 1, 1960. So it constitutes a sampling of the interests of those who set literary standards, and it monitors the intermediate stage in canon formation. During the ten years and twenty-two volumes of its publication, up through 1982, it has run four or more entries (maximum, nine; and the average entry includes excerpts from four or five critical sources) for forty-eight American novelists of the period in question:⁹

American fiction' suggests Ken Kesey, Joseph Heller, John Barth, and Thomas Pynchon at best—and at worst Updike, Roth, Bellow, and Malamud." He contends that such a list misses "the direction which fiction will take, and is taking, as the future unfolds before us" (*Literary Disruptions: The Making of a Post-Contemporary American Fiction*, 2d ed. [Urbana, Ill., 1980], p. ix) [Ohmann's note].

5. Twenty-six of the forty-four responded. The survey accompanies an article by Melvin J. Friedman, "To 'Make It New': The American Novel since 1945," *Wilson Quarterly*, winter 1978, pp. 136–37. I don't know how the professors were selected or who they were, but almost every novel on this list was written by a white male with an elite educational background [Ohmann's note].

6. With their authors, in order: *Gravity's Rainbow* (1973), by Thomas Pynchon (b. 1937); *Herzog* (1964), by Bellow; *An American Dream* (1965), by Norman Mailer (1923–2007); *The Sotweed Factor* (1960), by John Barth (b. 1930); *Second Skin* (1964), by John Hawkes (1925–1998); *Portnoy's*

Complaint (1969), by Philip Roth; *The Armies of the Night* (1968), by Mailer; *V* (1963), by Pynchon; and *Rabbit Run* (1960), by Updike.

7. American essayist and editor (b. 1930).

8. John Hawkes is the outstanding example of a novelist whose work has consistently impressed critics and professors, without ever appealing to a wider audience. Should any of us be around to witness the outcome, it will be interesting to see if any of his books has a place in the canon 40 or 50 years from now [Ohmann's note].

9. I omit novelists still alive in 1960, but whose possibly canonical work belongs to an earlier time—Steinbeck, Dos Passos, Hemingway, etc. I include those of an older generation (Porter, McCarthy) who did not publish a precanonical novel until the 1960s. I exclude novelists of foreign origin (Asimov, Kosinski, Nabokov) and writers mainly known for their poetry, plays, or criticism, unless (as with Dickey and Plath) they also produced a precanonical novel during this period [Ohmann's note].

| | | |
|-------------|--------------|---------------------|
| Auchincloss | Elkin | Piercy |
| Baldwin | Gaddis | Plath |
| Barth | Gardner | Porter |
| Barthelme | Gass | Pynchon |
| Bellow | Hawkes | Rechy |
| Berger | Heller | Reed |
| Bradbury | Higgins | Roth |
| Brautigan | Jong | Salinger |
| Burroughs | Kesey | Selby |
| Capote | R. MacDonald | Sorrentino |
| Cheever | Mailer | Styron |
| Condon | Malamud | Theroux |
| de Vries | McCarthy | Updike |
| Dickey | McMurtry | Vidal |
| Didion | Oates | Vonnegut |
| Doctorow | Percy | Walker ¹ |

Most of these meet my two criteria. All but a few (Bradbury, Condon, MacDonald, perhaps Auchincloss and Higgins) have received ample consideration by influential critics. Yet most novelists promoted by postcontemporary advocates such as Klinkowitz (Sloan, Coover, Wurlitzer, Katz, Federman, Sukenick,² etc.) are missing, while the list includes only a few writers who have had elite approval but small readerships (Elkin, Hawkes, Sorrentino, maybe two or three others). In fact, at least thirty-one of these novelists published one book or more between 1960 and 1975 that was a best-seller in hard or paper covers.³ On the other hand, the list excludes the overwhelming majority of the writers who regularly produced large best-sellers: Puzo, Susann, Wouk, West, Robbins, Wallace, Michener, Krantz, Forsyth, Crichton,⁴ and so on and on. I conclude that both the *Contemporary Literary Criticism* selection and the *Wilson Quarterly* survey give modest support to my thesis. Canon formation during this period took place in the interaction between large audiences and gatekeeper intellectuals.

1. Novelists whose dates have not already been given: Louis Auchincloss (1917–2010), James Baldwin (1924–1987), Donald Barthelme (1931–1989), Thomas Berger (1924–2014), Ray Bradbury (1920–2012), Richard Brautigan (1935–1984), William Burroughs (1914–1997), Truman Capote (1924–1984), John Cheever (1912–1982), Richard Condon (1915–1996), Peter De Vries (1910–1993), James Dickey (1923–1997), Joan Didion (b. 1934), Stanley Elkin (1930–1995), William Gaddis (1922–1998), John Gardner (1933–1982), William Gass (b. 1924), George Higgins (1939–1999), Erica Jong (b. 1942), Ross Macdonald (1915–1983), Mary McCarthy (1912–1989), Larry McMurtry (b. 1936), Joyce Carol Oates (b. 1938), Walker Percy (1916–1990), Marge Piercy (b. 1936), Sylvia Plath (1932–1963), Katherine Anne Porter (1890–1980), John Rechy (b. 1931), Ishmael Reed (b. 1938), J. D. Salinger (1919–2010), Hubert Selby Jr. (1928–2004), Gilbert Sorrentino

(1929–2006), Paul Theroux (b. 1941), Gore Vidal (1925–2012), and Margaret Walker (1915–1998).

2. American critics and novelists: James Park Sloan (b. 1945), Robert Coover (b. 1932), Rudolph Wurlitzer (b. 1937), Steve Katz (b. 1935), Raymond Federman (1928–2009), and Ronald Sukenick (1932–2004).

3. I got this count by surveying the hardback and paperback best-seller lists in the *New York Times* from 1969 through 1975 and by checking the annual summaries in Alice Payne Hackett and James Henry Burke, *Eighty Years of Best Sellers, 1895–1975* (New York, 1977) for the rest of the 1960s [Ohmann's note].

4. American authors: Paul West (1930–2015), born in England; James Michener (1907–1997); Judith Krantz (b. 1928); Frederick Forsyth (b. 1938), born in England; and Michael Crichton (1942–2008).

Class and the Canon

To return to the main theme, then: I have drawn a sketch of the course a novel had to run in order to lodge itself in our culture as precanonical—as “literature,” at least for the moment. It was selected, in turn, by an agent, an editor, a publicity department, a review editor (especially the one at the *Sunday New York Times Book Review*), the New York metropolitan book buyers whose patronage was necessary to commercial success, critics writing for gatekeeper intellectual journals, academic critics, and college teachers. Obviously, the sequence was not rigid, and some steps might on occasion be omitted entirely (as I have indicated with respect to *Catch-22* and *One Flew over the Cuckoo's Nest*). But one would expect the pattern to have become more regular through this period, as publishing was increasingly drawn into the sphere of monopoly capital (with RCA acquiring Random House; ITT, Howard Sams; Time, Inc., Little, Brown; CBS, Holt, Rinehart & Winston; Xerox, Ginn; and so on throughout almost the whole industry). For monopoly capital changed this industry much as it has changed the automobile and the toothpaste industries: by placing much greater emphasis on planned marketing and predictability of profits.⁵

This shift brought publishing into the same arena as many other cultural processes. In fact, the absorption of culture began almost as soon as monopoly capitalism itself, with the emergence of the advertising industry (crucial to planned marketing) in the 1880s and 1890s, and simultaneously with mass-circulation magazines as the main vehicle of national brand advertising.⁶ With some variations, cinema, radio, music, sports, newspapers, television, and many lesser forms have followed this path, with books among the last to do so. The change has transformed our culture and the ways we participate in it. It demands rethinking, not only of bourgeois ideas about culture but of central Marxian oppositions like base and superstructure, production and reproduction.⁷ Culture cannot, without straining, be understood as a reflex of basic economic activity, when culture is itself a core industry and a major source of capital accumulation. Nor can we bracket culture as reproduction, when it is inseparable from the making and selling of commodities. We have at present a relatively new and rapidly changing cultural process that calls for new and flexible ways of thinking about culture.

My account may, however, have made it sound as if in one respect nothing has changed. Under monopoly capital, even more than when Marx and Engels⁸ wrote *The German Ideology*, the “class which has the means of

5. See the analysis in Paul A. Baran and Paul M. Sweezy, *Monopoly Capital: An Essay on the American Economic and Social Order* (New York, 1966). In publishing, the ascendancy of media packaging over simple book publishing has continued apace in recent years. See Thomas Whiteside, *The Blockbuster Complex: Conglomerates, Show Business, and Book Publishing* (Middletown, Conn., 1981). The practices Whiteside describes, along with the growth of national bookstore chains, have further altered the dynamic of publishing, thereby providing another reason for terminating this study somewhere around 1975 [Ohmann's note]. According to Marxist analysis, capitalism inevitably leads to greater monopolistic control

and less competition.

6. See Ohmann's later study *Selling Culture: Magazines, Markets, and Class at the Turn of the Century* (New York: Verso, 1996).

7. See, for instance, Raymond Williams, “Base and Superstructure in Marxist Cultural Theory” [Ohmann's note; see above]. The base is the economic structure of society, which provides the foundation for the superstructure of forms of social consciousness (legal, political, artistic, etc.).

8. KARL MARX (1818–1883) and FRIEDRICH ENGELS (1820–1895), German social, economic, and political theorists; they wrote *The German Ideology* (see above) in 1845–46.

material production at its disposal, has control at the same time over the means of mental production.” But does it still follow that, “thereby, generally speaking, the ideas of those who lack the means of mental production are subject to” the ruling class?⁹ The theory can explain contemporary reality only with an expanded and enriched understanding of “control” and “subject to.” For although our ruling class owns the media and controls them formally, it does not exercise direct control over their content—does not now use them in the instrumental and ideological way that Marx and Engels identified 140 years ago. Mobil¹ “idea ads” are the exception, not the rule.

To return to the instance at hand: neither the major stockholders of ITT and Xerox and RCA nor their boards of directors played a significant role in deciding which novels of the 1960s and early 1970s would gain acceptance as literature, and they certainly established no house rules—printing only those books that would advance their outlook on the world. (If they had done so, how could they have allowed, e.g., the Pantheon division of Random House virtually to enlist in the New Left?) They exercised control over publishing in the usual abstract way: they sought a good return on investment and cared little whether it came from a novel by Bellow or by Krantz, or for that matter from novels or computer chips. And very few of the historical actors who did make critical decisions about fiction were members of the haute bourgeoisie.² Was class then irrelevant to the early shaping of a canon of fiction? Alternatively, did the working class make its own culture in this sphere?

My argument points toward a conclusion different from both of these, one that still turns upon class but not just upon the two great traditional classes. Intuitively, one can see that literary agents, editors, publicity people, reviewers, buyers of hardbound novels, taste-making intellectuals, critics, professors, most of the students who took literary courses, and, in fact, the writers of the novels themselves, all had social affinities. They went to the same colleges, married one another, lived in the same neighborhoods, talked about the same movies, had to work for their livings (but worked with their minds more than with their hands), and earned pretty good incomes. I hold that they belonged to a common class, one that itself emerged and grew up only with monopoly capitalism. Following Barbara and John Ehrenreich, I call it the professional-managerial class.³ I characterize it by the affinities just mentioned; by its conflicted relation to the ruling class (intellectuals managed that class’s affairs and many of its institutions, and they derived benefits from this position, but they also strove for autonomy and for a somewhat different vision of the future); by its equally mixed relation to the working class (it dominated, supervised, taught, and planned for them, but even in doing so it also served and augmented capital); and by its own marginal position with respect to capital (its members didn’t have the wealth to sit back and clip

9. *The Marx-Engels Reader*, ed. Robert C. Tucker (New York, 1972), p. 136 [Ohmann’s note].

1. The oil company Mobil Corporation (now Exxon Mobil Corporation).

2. The upper middle class (French).

3. See Barbara and John Ehrenreich, “The Professional-Managerial Class,” in Pat Walker, ed., *Between Labor and Capital* (Boston, 1979). Methodologically, I join the Ehrenreichs in holding that the point is not to “define” classes in some ahistorical way and that a notion of class is vali-

dated or invalidated by its power in theory, empirical explanation, and political practice. Hence I do not mean to be appropriating a preexisting definition of class in this essay and “applying” it to a particular situation and problem. Rather, I intend my argument and my evidence to help *develop* a more adequate picture of the way class has worked and works in the social process [Ohmann’s note]. Barbara Ehrenreich (b. 1941), American social critic and journalist. John Ehrenreich (b. 1943), American psychologist.

coupons, but they had ready access to credit and most could choose—at least at an early stage in their careers—between working for themselves and selling their labor power to others).

People in the professional-managerial class shared one relation to the bourgeoisie and another to the working class: they had many common social experiences and acted out similar styles of life. I hold that they also had—with of course many complexities and much variation—a common understanding of the world and their place in it. In the remainder of this essay, I will look at some of the values, beliefs, and interests that constituted that class perspective, by considering the novels given cultural currency by those class members who produced, marketed, read, interpreted, and taught fiction. My claim is that the needs and values of the professional-managerial class permeate the general form of these novels, as well as their categories of understanding and their means of representation.

For my examples I will draw upon such works as *Franny and Zooey*, *One Flew over the Cuckoo's Nest*, *The Bell Jar*, *Herzog*, *Portnoy's Complaint*, and Updike's *Rabbit* series.⁴ But what I say of these books is true of many other novels from the postwar period that have as yet a chance of becoming canonical. To glance ahead for a moment: these novels told stories of people trying to live a decent life in contemporary social settings, people represented as analogous to “us,” rather than as “cases” to be examined and understood from a clinical distance, as in an older realistic convention. They are unhappy people, who move toward happiness, at least a bit, by the ends of their stories.

A premise of this fiction—nothing new to American literature but particularly salient in this period—is that individual consciousness, not the social or historical field, is the locus of significant happening. In passing, note that on the level of style this premise authorizes variety, the pursuit of a unique and personal voice. But on the levels of conceptualization and story, the premise of individual autonomy has an opposite effect: it gives these fictions a common problem and drives their material into narratives that, seen from the middle distance, look very similar. I suggest that much precanonical fiction of this period expresses, in Williams's term, a particular structure of feeling,⁵ that that structure of feeling was a common one for the class in question, and that novelists explored its contours before it was articulated in books of social commentary like Philip Slater's *The Pursuit of Loneliness* (1970) and Charles Reich's *The Greening of America* (1970), or in films like *The Graduate*,⁶ and certainly, before that structure of feeling informed a broad social movement or entered conversational cliché, in phrases like “a sick society,” “the establishment,” and “the system.” (More avant-garde writers, outside the circuit of best-sellers, had given it earlier expression: the Beats, Mailer in *Advertisements for Myself*, Barth in *The End of the Road*,⁷ etc.)

4. The sequels to *Rabbit*, *Run* are *Rabbit Redux* (1971), *Rabbit Is Rich* (1981), and (after the publication of Ohmann's essay) *Rabbit at Rest* (1990). Novels not already mentioned: *Franny and Zooey* (1961), by J. D. Salinger; *The Bell Jar* (1963), by Sylvia Plath.

5. Williams has used this concept since writing *Culture and Society, 1780–1950* (New York, 1958). Its most exact theoretical formulation is in his *Marxism and Literature* (New York, 1977) [Ohmann's note].

6. An Academy Award-winning film (1967, dir. Mike Nichols), whose somewhat aimless title character is unsure of his career and life plans after college graduation.

7. A novel published in 1958. The Beats: members of a literary and social movement of the 1950s who stressed unconventionality and rebelled against “square” middle-class life. *Advertisements for Myself* (1959), a collection of Mailer's fiction, nonfiction, poems, and plays.

This structure of feeling gathered and strengthened during the postwar period. It became rather intense by the early 1960s. After 1965 it exploded into the wider cultural and political arena, when black rebellions, the student movement, the antiwar movement, and later the women's movement made it clear, right there in the headlines and on television, that not everyone considered ours an age of only "happy problems."⁸

In retrospect it is easy to understand some of the forces that generated this consciousness. To chart the connection, I will take a broad and speculative look at the historical experience of the class that endowed fiction with value and suggest how that experience shaped that class's concerns and needs, before I turn at greater length to the fiction that its members wrote, published, read, and preserved.

Like everyone in the society, people in the professional-managerial class lived through a time when the United States was enjoying the spoils of World War II. It altogether dominated the "free world" for two decades, militarily, politically, and economically. Its power sufficed to give it dominance among its allies and to prevent defections from the capitalist sphere, though the "loss" of China and Cuba⁹ gave cause for worried vigilance. Its products and its capital flowed freely through most parts of the world (its very money was the currency of capitalism after the Bretton Woods and Dumbarton Oaks agreements¹). U.S. values also flowed freely, borne by advertising, television shows, and the *Reader's Digest* more than by propaganda. The confidence one would expect to find in the metropolis of such an empire strengthened the feeling of righteousness that came from having defeated one set of enemies in war and having held at bay another set in peace. Both the war and the cold war fostered a chauvinistic and morally polarized conception of the world. They were totalitarian monsters; *we* were an open society of free citizens pursuing a way of life superior to any other, past or present.

Furthermore, that way of life generated a material prosperity that was historically unprecedented and that increased from one year to the next. The pent-up buying power of the war period (never before or since has the broad working class had so much money in the bank) eased the conversion from war production to production for consumers by providing capitalists with an enormous and secure domestic market, and they responded with rapid investment and a flow of old and new products. Affluence, like victory in war, made people confident that they and their society were doing things right.

On top of that, social conflict became muted. Inequality remained as pronounced as it had been before, but no more so, and the working class participated in the steady growth of total product.² Though workers could not see any narrowing of the divide between themselves and higher classes, the

8. For a sampling of this consciousness, see Herbert Gold's "The Age of Happy Problems" (1956; rpt. in a book of the same title, New York, 1962) [Ohmann's note].

9. That is, the institution in those countries of communist forms of government in 1949 and 1959, respectively.

1. Proposals drawn up in 1944 (at what was then a private estate in Washington, D.C.) that provided the basic plan for the United Nations, chartered the following year. Bretton Woods: at the United Nations Monetary and Financial Confer-

ence at Bretton Woods, N.H., in 1944, the International Monetary Fund and the International Bank for Reconstruction and Development (the World Bank) were created; headquartered in Washington, D.C., they are intended to expand international trade by stabilizing exchange rates and promoting investment, respectively. All calculations at the UN, IMF, and World Bank are based in dollars.

2. For instance, the poorest 40 percent of families in the country received 16.8 percent of the income in 1947 and 16.9 percent in 1960, while the

postwar generation experienced an absolute gain, both from year to year and by comparison with the 1930s; many *perceived* this gain as a softening of class lines. The sense of economic well-being that results from such an experience of history promoted allegiance to the social order, as did the tightening bonds between unions and management, amounting to a truce in class conflict within the assumptions of the welfare state. Cold war propaganda helped make it possible—especially for those who managed the new arrangements and lived in suburbs—to see our society as a harmonious collaboration.

Developments in business additionally gave support to this image of harmony. There was a rapid growth and sophistication of advertising, which not only sold products but continued to shape people into masses, for the purpose of selling those products and advancing a whole way of life whose cornerstones were the suburban home, the family, and the automobile. Leisure and social life became more private, drained of class feeling and even of the feeling of interdependence.

Politics seemed nearly irrelevant to such a life. Moreover, the boundaries of respectable political debate steadily closed in through the 1950s. On one side, socialism was pushed off the agenda by union leaders almost as vigorously as by Truman, McCarthy, the blacklisters, the FBI.³ On the other side, businessmen gradually abandoned the tough old capitalist principles of laissez-faire and espoused a more benign program of cooperation with labor and government. The spectrum of discussable ideas reached only from corporate liberalism to welfare-state liberalism; no wonder some thought they were witnessing the end of ideology.⁴

Consider the experience of the class that creates the canon of fiction in such an environment. Not only were its numbers and its prosperity growing rapidly along with its institutions but every public voice seemed to be saying to intellectuals, professionals, technical elites, and managers: "History is over, though progress continues. There is no more poverty. Everyone is middle class. The state is a friendly power, capable of smoothing out the abrasions of the economic system, solving its problems one by one through legislation that itself is the product of your ideas and values. You have brought a neutral and a humane rationality to the supervision of public life (exemplified beautifully by that parade of Harvard intellectuals to Washington in 1961⁵). Politics is for experts, not ideologues. You are, therefore, the favored

percentage going to the richest 5 percent went from 17.2 percent to 16.8 percent. The top 1 percent owned 23.3 percent of the nation's *wealth* in 1945 and 27.4 percent in 1962. These figures come from tables compiled by Frank Ackerman and Andrew Zimbalist, "Capitalism and Inequality in the United States," in Richard C. Edwards, Michael Reich, and Thomas E. Weisskopf, eds., *The Capitalist System: A Radical Analysis of American Society*, 2d ed. (Englewood Cliffs, N.J., 1978), pp. 298, 301 [Ohmann's note].

3. Representative figures of the cold war: Harry S. Truman (1884–1972), as U.S. president (1945–53), strongly opposed the spread of communist forms of government in the world; Joseph McCarthy (1908–1957), U.S. senator from Wisconsin (1947–57), made largely unsubstantiated charges

of Communist infiltration in American government and industry in the early 1950s; "the blacklisters" refused to hire those in the entertainment industry accused of having some connection to communism, following public congressional hearings by the House Committee on Un-American Activities that began in 1947; the Federal Bureau of Investigation secretly and sometimes illegally gathered information about American citizens who were alleged to be subversives.

4. See Daniel Bell, *The End of Ideology* (Glencoe, Ill.: Free Press, 1960).

5. During the presidency of John F. Kennedy (1917–1963; president, 1961–63), many intellectuals from Harvard University and elsewhere were appointed to positions in government.

people, the peacemakers, the technicians of an intelligent society, justly rewarded with quick promotions, respect, and adequate incomes. So carry forward this valued social mission, which in no way conflicts with individual achievement. Enjoy your prestige and comforts. Fulfill yourselves on the terrain of private life.”

But because the economic underpinnings of this consciousness were of course *not* unchanging and free of conflict, because material interdependence was an ever more pervasive fact,⁶ whether perceived or not, because society cannot be wished away, because freedom on such terms is an illusion—for all these reasons, the individual pursuit of happiness continued to be a problem. Yet myth, ideology, and experience assured the professional-managerial class that no real barriers would prevent personal satisfaction, so it was easy to nourish the suspicion that any perceived lack was one’s own fault. If unhappy, one must be personally maladjusted, perhaps even neurotic. I am suggesting that for the people who wrote, read, promoted, and preserved fiction, social contradictions were easily displaced into images of personal illness.⁷

* * *

What I hope to have accomplished * * * is to have given concrete enough form to the following powerful yet vague ideas about culture and value, so that they may be criticized and perhaps developed. (1) A canon—a shared understanding of what literature is worth preserving—takes shape through a troubled historical process. (2) It emerges through specific institutions and practices, not in some historically invariant way. (3) These institutions are likely to have a rather well-defined class base. (4) Although the ruling ideas and myths may indeed be, in every age, the ideas and myths of the ruling class, the ruling class in advanced capitalist societies does not advance its ideas directly through its control of the means of mental production. Rather, a subordinate but influential class shapes culture in ways that express its own interests and experience and that sometimes turn on ruling-class values rather critically—yet in a nonrevolutionary period end up confirming root elements of the dominant ideology, such as the premise of individualism. I hope, in short, to have given a usable and attackable account of the hegemonic process and to have added content to the claim that aesthetic value arises from class conflict.

1983

6. That is, people relied on others, through the intermediary of the market, for more and more goods and services. In an ordinary day’s “consuming,” each of us depends on the past and present labor of hundreds of millions of workers worldwide. But of course this is easy to forget, since that loaf of bread magically appears on the store shelf and the only labor we *see* is that of the

checker and the bagger [Ohmann’s note].

7. In the closing section of the essay, omitted here, Ohmann documents specific examples of what he calls “illness stories,” such as *The Bell Jar*, *Franny and Zooey*, and *One Flew over the Cuckoo’s Nest*, arguing that their depictions of mental illness represent the social fragmentation wrought by modern U.S. capitalism.

STUART HALL 1932–2014

Stuart Hall, the single most prominent and influential theorist of British cultural studies, embodied the theoretical and political trajectory of late twentieth-century leftist intellectuals. Deeply involved in the New Left's revisionist engagement with Marxism during the 1950s and 1960s, Hall subsequently moved through an encounter with structuralist and poststructuralist thought in the 1970s and 1980s that led to his highly productive reworking of ANTONIO GRAMSCI's theories of hegemony, civil society, and the role of intellectuals. In the 1990s Hall took up issues connected with racial and cultural identities, "the politics of difference," and the African diaspora. Disappointed with the record of the Labour Party after its 1997 return to power following the Thatcher years, Hall became increasingly discouraged about the prospects of leftist politics in Britain and turned his attention after 1998 to contemporary art, especially to video and other emerging urban art forms.

Born in Jamaica to a relatively privileged family, Hall came to Britain as a Rhodes Scholar in 1951 and never left. As he explained it, a combination of vexed family relations and his own intense involvement in the formation of the British New Left made him miss the moment when he might have returned to the Caribbean. His racial and national difference as a black colonial subject in Britain rendered him, in his words, "a familiar stranger," who occupied a "diasporic" position of knowing two "places intimately" (Jamaica and England) while being "not wholly of either place."

Hall's work within New Left circles, including his position as a founding editor of the influential *New Left Review*, kept him from completing his graduate work at Oxford University. The British New Left strove to create a non-Stalinist, noncommunist socialism that could influence Labour Party policies and move intellectual and political paradigms from a sole focus on economic factors to a more complex understanding of the multiple determinants of people's allegiances, attitudes, and beliefs. Interested in popular culture (as were those who laid the groundwork for British cultural studies, E. P. Thompson, RAYMOND WILLIAMS, and Richard Hoggart), Hall worked with the Education Department of the British Film Institute in the early sixties, which in 1961 led to his appointment at the University of London as the first "lecturer in film and mass media studies" in Britain. He moved to the University of Birmingham in 1964 to join Hoggart's newly formed Centre for Contemporary Cultural Studies, remaining there until 1979 and serving as the center's director during much of that time. He spent the years from 1979 until his retirement in 1998 at the Open University.

The Birmingham years have become legendary, with his work done at the Open University only slightly less so. Many figures later important in cultural studies (for instance, DICK HEBDIDGE, Hazel Carby, Angela McRobbie, PAUL GILROY, and Larry Grossberg) were students or co-workers of Hall's at some point. Collaborative work was the norm at both places; this founding work in cultural studies characteristically came to the world in the form of edited volumes in which eight to twelve authors address a topic, arguing with each other but also moving toward an overarching delineation of the factors that need to be considered if the topic is to be adequately analyzed.

Hall, like PAUL DE MAN, was a charismatic teacher, and his immense influence is only partially captured in his written work. An essayist, he produced no single distillation of his views, and his pieces are scattered in journals and edited volumes that are often hard to find. But the essay form is suited to his intellectual temperament, which is self-consciously nondogmatic, restless, and open to new ideas and changing social conditions.

To some extent, Hall's intellectual stance bedevils cultural studies, especially as it becomes institutionalized in American universities. The dialogic, multivoiced inception of cultural studies makes it a moving target, engaged in a series of debates with various formalized intellectual paradigms (notably Marxism, anthropological and sociological functionalism, and aestheticist literary criticism), all the while avoiding definitive statements of its own position. Hall advocated a "cultural studies . . . that is always self-reflectively deconstructing itself. . . . Let me put it this way: you have to be sure about a position to teach a class, but you have to be open-minded enough to know that you are going to change your mind by the time you teach it next week." Over the years, Hall's work was influenced by Western Marxism, poststructuralism (especially MICHEL FOUCAULT), critical race theory, and feminism, as he made clear in our selection. Such openness has been characterized by some critics of cultural studies as its willingness and ability to absorb anything, a kind of academic imperialism that lacks intellectual or disciplinary boundaries or values.

Hall's wariness about a codification of cultural studies comes through in our selection, "Cultural Studies and Its Theoretical Legacies" (1992), although certain traits typical of British cultural studies can be identified. The primary feature is a commitment to the political relevance of intellectual work. British cultural studies is an outgrowth of leftist politics, born of the theoretical need for alternatives to a vulgar Marxism that is rooted in class politics and economic determinism. As an offshoot of Marxism, this cultural studies is aligned with Gramsci against the more pessimistic visions of the Frankfurt School (see MAX HORKHEIMER and THEODOR W. ADORNO) and LOUIS ALTHUSSER. Adapting Gramsci's crucial notion of hegemony, Hall emphasized the ways in which the power of ruling elites is constituted and reconstituted within a complex cultural scene that affords various possibilities for action. Rather than stressing the ways that power, through ideology, imposes a mode of life on passive social subjects, he used the concept of hegemony to provide a more dynamic vision of ongoing struggles among all members of society, with only temporary and always fragile victories by any particular group. Hall's interest in connecting intellectuals "organically" to these political struggles also follows Gramsci's lead. But such Gramscian elements in Hall are elaborated through an engagement with Foucault, as he detailed power's dispersion through a whole social order, the processes of subject formation, and the power/knowledge produced by intellectual discourses.

The crucial move in Hall's revisionist leftist theory is his insistence on the role that cultural discourses play in shaping political realities and political possibilities. "My own view," Hall wrote, "is that events, relations, structures do have conditions of existence and real effects, outside the sphere of the discursive; but that only within the discursive, and subject to its specific conditions, limits and modalities, do they have or can they be constructed within meaning." In other words, the "culture" in cultural studies names the various signifying and representational processes through which things acquire meaning. For example, hunger is a biological reality. But what we eat and when and how we eat it, and whether we drink carrot juice or a Coke if we are thirsty, are all products of the cultural elaboration of the necessity of eating. And Hall insisted that "regimes of representation in a culture do play a constitutive, and not merely a reflexive, after-the-event, role." Thus, an American will often refuse to eat horse flesh even if extremely hungry, while the French eat it regularly. Our biological needs are altered by our culture's assignment of values. "This gives questions of culture and ideology, and the scenarios of representation—subjectivity, identity, politics—a formative, not merely an expressive, place in the constitution of social and political life." In this ability of signifying processes to change social and political life, cultural studies has located political hope.

What has confused—and sometimes infuriated—many academics about cultural studies is its refusal to declare a prevailing methodology and a designated object of study, two features required of traditional academic disciplines. Cultural studies

strives to analyze the hegemonic practices by which social groups are bound (institutionally, intellectually, emotionally, and economically) to dominant social forms. And it examines how forces of resistance creatively intervene in those practices. Since hegemony works through and on every social site and practice, cultural studies has deemed anything a potential object of study and has adapted any disciplinary methodology that might prove useful, ranging from surveys, case studies, and personal observation to textual explication, institutional analysis, and political critique. Partly in response to intellectual elitism, partly by happenstance, and partly as a form of leftist populism, much cultural studies work has focused on popular, as contrasted to high, culture. But any activity through which people negotiate their relationship to society and to the disparate forces and institutions in their lives is fair game for its attention.

The absence of a prevailing methodology does not mean that cultural studies lacks a theory. Hall's scattered essays have addressed a wide array of theoretical issues and, when taken together, delineate a comprehensive overview of the driving questions and angles of approach followed by many cultural studies practitioners. Processes of identity formation are central, as are the concepts of "conjuncture" and "articulation." Hall, like most Marxists, was a "conflict theorist": one who views the social field as a dynamic site of numerous contending forces. Within that field, he refused to recognize any stable identities—either group (like class) or personal (like ethnicity). Identity for him is always in the process of being constituted by prevailing social norms, institutions, and subject positions, as well as by particular struggles against those would-be determinants. Identity, in other words, is a battleground, where the meaning of social life is being forged and contested. Here as elsewhere, Hall relied on the concept of "conjuncture," the idea that everything exists simultaneously amid specific historical forces in process and amid specific determinant structures. The elements within any conjuncture and the relations of force among them are differently "articulated" at different times and places. Each conjuncture has its own configuration. Social groups, including intellectuals, will work to make their "articulation" of a given constellation of elements prevail.

For Hall, no dominant order could ever provide a seamless, synthetic, permanent vision. All hegemonies must be continually produced by very specific acts of public articulation. Cultural studies is interested in mapping the particular constellation of identities and hegemonic articulations at various social sites; it often focuses on dynamic tensions between mainstream norms and marginalized groups, studying how cultural materials are creatively resignified to fit the nonstandard purposes of such resistant groups. Typical counterhegemonic materials might include a punk 'zine, women's shop-floor gossip, romance novels, and rap poetry. A typical cultural studies research project might examine the circuits of production, distribution, and consumption through which such "discourses" pass.

Critics of Hall's work are divided between traditional leftists who object that he overemphasized a cultural politics of resistance at the expense of a socioeconomic politics focused on systematic inequalities and poststructuralist opponents who see the concept of hegemony as aspiring to a totalized vision that misses the irreducible heterogeneity of the social field. Nevertheless, Hall's—and cultural studies'—importance for contemporary literary studies may rest most crucially on his insistence in "Cultural Studies and Its Theoretical Legacies" that "textuality is never enough." That is to say, Hall insisted on linking literary theory's understanding of meaning production and textual interpretation with social theory's delineation of conflicting forces within the social field. If a literary critic believes that any interpretation of a literary text must consider both the social forces that contribute to the text's production *and* the hegemonic work that the text does, then he or she has taken up the concerns and questions that characterize cultural studies.

Cultural Studies and Its Theoretical Legacies

This Conference¹ provides us with an opportunity for a moment of self-reflection on cultural studies as a practice, on its institutional positioning, and what Lidia Curti² so effectively reminds us is both the marginality and the centrality of its practitioners as critical intellectuals. Inevitably, this involves reflecting on, and intervening in, the project of cultural studies itself.

My title, "Cultural Studies and Its Theoretical Legacies," suggests a look back to the past, to consult and think about the Now and the Future of cultural studies by way of a retrospective glance. It does seem necessary to do some genealogical and archaeological work on the archive. Now the question of the archives is extremely difficult for me because, where cultural studies is concerned, I sometimes feel like a *tableau vivant*,³ a spirit of the past resurrected, laying claim to the authority of an origin. After all, didn't cultural studies emerge somewhere at that moment when I first met Raymond Williams, or in the glance I exchanged with Richard Hoggart?⁴ In that moment, cultural studies was born; it emerged full grown from the head!⁵ I do want to talk about the past, but definitely not in that way. I don't want to talk about British cultural studies (which is in any case a pretty awkward signifier for me) in a patriarchal way, as the keeper of the conscience of cultural studies, hoping to police you back into line with what it really was if only you knew. That is to say, I want to absolve myself of the many burdens of representation which people carry around—I carry around at least three: I'm expected to speak for the entire black race on all questions theoretical, critical, etc., and sometimes for British politics, as well as for cultural studies. This is what is known as the black person's burden,⁶ and I would like to absolve myself of it at this moment.

That means, paradoxically, speaking autobiographically. Autobiography is usually thought of as seizing the authority of authenticity. But in order not to be authoritative, I've got to speak autobiographically. I'm going to tell you about my own take on certain theoretical legacies and moments in cultural studies, not because it is the truth or the only way of telling the history. I myself have told it many other ways before; and I intend to tell it in a different way later. But just at this moment, for this conjuncture, I want to take a position in relation to the "grand narrative"⁷ of cultural studies for the purposes of opening up some reflections on cultural studies as a practice, on our institutional position, and on its project. I want to do that by referring to some theoretical legacies or theoretical moments, but in a very particular way. This is not a commentary on the success or effectiveness of different theoretical positions in cultural studies (that is for some other occasion). It is an attempt to say something about what certain theoretical moments in cul-

6. An allusion to "The White Man's Burden" (1899), a poem by Rudyard Kipling that paints imperialism as the duty of the "advanced" peoples.

7. JEAN-FRANÇOIS LYOTARD (1924–1998) defined postmodernism as a skepticism toward any "grand narrative" that offers an all-encompassing vision of history's trajectory.

tural studies have been like for me, and from that position, to take some bearings about the general question of the politics of theory.

Cultural studies is a discursive formation, in Foucault's⁸ sense. It has no simple origins, though some of us were present at some point when it first named itself in that way. Much of the work out of which it grew, in my own experience, was already present in the work of other people. Raymond Williams has made the same point, charting the roots of cultural studies in the early adult education movement in his essay on "The Future of Cultural Studies" (1989). "The relation between a project and a formation is always decisive," he says, because they are "different ways of materializing . . . then of describing a common disposition of energy and direction." Cultural studies has multiple discourses; it has a number of different histories. It is a whole set of formations; it has its own different conjunctures and moments in the past. It included many different kinds of work. I want to insist on that! It always was a set of unstable formations. It was "centered" only in quotation marks, in a particular kind of way which I want to define in a moment. It had many trajectories; many people had and have different trajectories through it; it was constructed by a number of different methodologies and theoretical positions, all of them in contention. Theoretical work in the Centre for Contemporary Cultural Studies⁹ was more appropriately called theoretical noise. It was accompanied by a great deal of bad feeling, argument, unstable anxieties, and angry silences.

Now, does it follow that cultural studies is not a policed disciplinary area? That it is whatever people do, if they choose to call or locate themselves within the project and practice of cultural studies? I am not happy with that formulation either. Although cultural studies as a project is open-ended, it can't be simply pluralist in that way. Yes, it refuses to be a master discourse or a meta-discourse of any kind. Yes, it is a project that is always open to that which it doesn't yet know, to that which it can't yet name. But it does have some will to connect; it does have some stake in the choices it makes. It does matter whether cultural studies is this or that. It can't be just any old thing which chooses to march under a particular banner. It is a serious enterprise, or project, and that is inscribed in what is sometimes called the "political" aspect of cultural studies. Not that there's one politics already inscribed in it. But there is something *at stake* in cultural studies, in a way that I think, and hope, is not exactly true of many other very important intellectual and critical practices. Here one registers the tension between a refusal to close the field, to police it and, at the same time, a determination to stake out some positions within it and argue for them. That is the tension—the dialogic approach to theory—that I want to try to speak to in a number of different ways in the course of this paper. I don't believe knowledge is closed, but I do believe that politics is impossible without what I have called "the arbitrary closure"; without what Homi Bhabha¹ called social agency as an arbitrary closure. That is to say, I don't understand a practice which aims to make a difference in the world, which doesn't have some points of difference or distinction

8. MICHEL FOUCAULT (1926–1984), French philosopher and historian of ideas.

9. Founded at the University of Birmingham by Richard Hoggart in 1964; Hall served as the center's director from 1968 to 1979.

1. Indian postcolonial theorist and critic (b. 1949); BHABHA makes this point in "The Postcolonial and the Postmodern: A Question of Agency," in *The Location of Culture* (1994).

which it has to stake out, which really matter. It is a question of positionalities. Now, it is true that those positionalities are never final, they're never absolute. They can't be translated intact from one conjuncture to another; they cannot be depended on to remain in the same place. I want to go back to that moment of "staking out a wager" in cultural studies, to those moments in which the positions began to matter.

This is a way of opening the question of the "worldliness" of cultural studies, to borrow a term from Edward Said.² I am not dwelling on the secular connotations of the metaphor of worldliness here, but on the worldliness of cultural studies. I'm dwelling on the "dirtiness" of it: the dirtiness of the semiotic game, if I can put it that way. I'm trying to return the project of cultural studies from the clean air of meaning and textuality and theory to the something nasty down below. This involves the difficult exercise of examining some of the key theoretical turns or moments in cultural studies.

The first trace that I want to deconstruct has to do with a view of British cultural studies which often distinguishes it by the fact that, at a certain moment, it became a Marxist critical practice. What exactly does that assignment of cultural studies as a Marxist critical theory mean? How can we think cultural studies at that moment? What moment is it we are speaking of? What does that mean for the theoretical legacies, traces, and aftereffects which Marxism continues to have in cultural studies? There are a number of ways of telling that history, and let me remind you that I'm not proposing this as the only story. But I do want to set it up in what I think may be a slightly surprising way to you.

I entered cultural studies from the New Left, and the New Left always regarded Marxism as a problem, as trouble, as danger, not as a solution. Why? It had nothing to do with theoretical questions as such or in isolation. It had to do with the fact that my own (and its own) political formation occurred in a moment historically very much like the one we are in now—which I am astonished that so few people have addressed—the moment of the disintegration of a certain kind of Marxism. In fact, the first British New Left emerged in 1956 at the moment of the disintegration of an entire historical/political project.³ In that sense I came into Marxism backwards: against the Soviet tanks in Budapest, as it were. What I mean by that is certainly not that I wasn't profoundly, and that cultural studies then wasn't from the beginning, profoundly influenced by the questions that Marxism as a theoretical project put on the agenda: the power, the global reach and history-making capacities of capital; the question of class; the complex relationships between power, which is an easier term to establish in the discourses of culture than exploitation, and exploitation; the question of a general theory which could, in a critical way, connect together in a critical reflection different domains of life, politics and theory, theory and practice, economic, political, ideological questions, and so on; the notion of critical knowledge itself and the production of critical knowledge as a practice. These important, central questions are what one meant by working within shouting distance of Marxism, working on

3. That is, when Soviet troops suppressed a short-lived anti-Communist and anti-Soviet rebellion in Hungary in October 1956.

Marxism, working against Marxism, working with it, working to try to develop Marxism.

There never was a prior moment when cultural studies and Marxism represented a perfect theoretical fit. From the beginning (to use this way of speaking for a moment) there was always-already the question of the great inadequacies, theoretically and politically, the resounding silences, the great evasions of Marxism—the things that Marx did not talk about or seem to understand which were our privileged object of study: culture, ideology, language, the symbolic.⁴ These were always-already, instead, the things which had imprisoned Marxism as a mode of thought, as an activity of critical practice—its orthodoxy, its doctrinal character, its determinism, its reductionism, its immutable law of history, its status as a metanarrative. That is to say, the encounter between British cultural studies and Marxism has first to be understood as the engagement with a problem—not a theory, not even a problematic. It begins, and develops through the critique of a certain reductionism and economism, which I think is not extrinsic but intrinsic to Marxism; a contestation with the model of base and superstructure, through which sophisticated and vulgar Marxism alike had tried to think the relationships between society, economy, and culture. It was located and sited in a necessary and prolonged and as yet unending contestation with the question of false consciousness. In my own case, it required a not-yet-completed contestation with the profound Eurocentrism of Marxist theory. I want to make this very precise. It is not just a matter of where Marx happened to be born, and of what he talked about, but of the model at the center of the most developed parts of Marxist theory, which suggested that capitalism evolved organically from within its own transformations. Whereas I came from a society where the profound integument of capitalist society, economy, and culture had been imposed by conquest and colonization. This is a theoretical, not a vulgar critique. I don't blame Marx because of where he was born; I'm questioning the theory for the model around which it is articulated: its Eurocentrism.

I want to suggest a different metaphor for theoretical work: the metaphor of struggle, of wrestling with the angels. The only theory worth having is that which you have to fight off, not that which you speak with profound fluency. I mean to say something later about the astonishing theoretical fluency of cultural studies now. But my own experience of theory—and Marxism is certainly a case in point—is of wrestling with the angels—a metaphor you can take as literally as you like. I remember wrestling with Althusser.⁵ I remember looking at the idea of “theoretical practice” in *Reading Capital* and thinking, “I’ve gone as far in this book as it is proper to go.” I felt, I will not give an inch to this profound misreading, this super-structuralist mistranslation, of classical Marxism, unless he beats me down, unless he defeats me in the spirit. He’ll have to march over me to convince me. I warred with him, to the death. A long, rambling piece I wrote (Hall, 1974)⁶ on Marx’s 1857 Introduction to *The Grundrisse*, in which I tried to stake out the difference between

5. LOUIS ALTHUSSER (1918–1990), French philos-

opher. *Reading Capital* was published in 1965.

6. Stuart Hall, “Marx’s Notes on Method: A ‘Reading’ of the 1857 Introduction,” *Working Papers in Cultural Studies* 6 (1974) [Hall’s note].

structuralism in Marx's epistemology and Althusser's, was only the tip of the iceberg of this long engagement. And that is not simply a personal question. In the Centre for Contemporary Cultural Studies, for five or six years, long after the anti-theoreticism or resistance to theory of cultural studies had been overcome, and we decided, in a very un-British way, we had to take the plunge into theory, we walked right around the entire circumference of European thought, in order not to be, in any simple capitulation to the *zeitgeist*, Marxists. We read German idealism, we read Weber upside down, we read Hegelian idealism,⁷ we read idealistic art criticism. (I've written about this in the article called "The Hinterland of Science: Sociology of Knowledge" [1980] as well as in "Cultural Studies and the Centre: Some Problems and Problematics" [1980].)⁸

So the notion that Marxism and cultural studies slipped into place, recognized an immediate affinity, joined hands in some teleological or Hegelian moment of synthesis, and there was the founding moment of cultural studies, is entirely mistaken. It couldn't have been more different from that. And when, eventually, in the seventies, British cultural studies did advance—in many different ways, it must be said—within the problematic of Marxism, you should hear the term problematic in a genuine way, not just in a formalist-theoretical way: as a problem; as much about struggling against the constraints and limits of that model as about the necessary questions it required us to address. And when, in the end, in my own work, I tried to learn from and work with the theoretical gains of Gramsci,⁹ it was only because certain strategies of evasion had forced Gramsci's work, in a number of different ways, to respond to what I can only call (here's another metaphor for theoretical work) the conundrums of theory, the things which Marxist theory couldn't answer, the things about the modern world which Gramsci discovered remained unresolved within the theoretical framework of grand theory—Marxism—in which he continued to work. At a certain point, the questions I still wanted to address in short were inaccessible to me except via a detour through Gramsci. Not because Gramsci resolved them but because he at least addressed many of them. I don't want to go through what it is I personally think cultural studies in the British context, in a certain period, learned from Gramsci: immense amounts about the nature of culture itself, about the discipline of the conjunctural, about the importance of historical specificity, about the enormously productive metaphor of hegemony, about the way in which one can think questions of class relations only by using the displaced notion of ensemble and blocs. These are the particular gains of the "detour" via Gramsci, but I'm not trying to talk about that. I want to say, in this context, about Gramsci, that while Gramsci belonged and belongs to the problematic of Marxism, his importance for this moment of British cultural studies is precisely the degree to which he radically *displaced* some of the inheritances of Marxism in cultural studies. The radical character of Gramsci's "displacement" of Marxism has not yet been understood and probably won't ever be

7. In some respects, Marx's materialism was a reaction against the idealist philosophy of GEORG WILHELM FRIEDRICH HEGEL (1770–1831). Max Weber (1864–1920), German social theorist and a founder of sociology as an academic discipline.
8. "The Hinterland of Science" is in *On Ideology*

9. ANTONIO GRAMSCI (1891–1937), Italian Marxist theorist and cultural critic.

reckoned with, now we are entering the era of post-Marxism. Such is the nature of the movement of history and of intellectual fashion. But Gramsci also did something else for cultural studies, and I want to say a little bit about that because it refers to what I call the need to reflect on our institutional position, and our intellectual practice.

I tried on many occasions, and other people in British cultural studies and at the Centre especially have tried, to describe what it is we thought we were doing with the kind of intellectual work we set in place in the Centre. I have to confess that, though I've read many, more elaborated and sophisticated, accounts, Gramsci's account still seems to me to come closest to expressing what it is I think we were trying to do. Admittedly, there's a problem about his phrase "the production of organic intellectuals."¹ But there is no doubt in my mind that we were trying to find an institutional practice in cultural studies that might produce an organic intellectual. We didn't know previously what that would mean, in the context of Britain in the 1970s, and we weren't sure we would recognize him or her if we managed to produce it. The problem about the concept of an organic intellectual is that it appears to align intellectuals with an emerging historic movement and we couldn't tell then, and can hardly tell now, where that emerging historical movement was to be found. We were organic intellectuals without any organic point of reference; organic intellectuals with a nostalgia or will or hope (to use Gramsci's phrase from another context) that at some point we would be prepared in intellectual work for that kind of relationship, if such a conjuncture ever appeared. More truthfully, we were prepared to imagine or model or simulate such a relationship in its absence: "pessimism of the intellect, optimism of the will."²

But I think it is very important that Gramsci's thinking around these questions certainly captures part of what we were about. Because a second aspect of Gramsci's definition of intellectual work, which I think has always been lodged somewhere close to the notion of cultural studies as a project, has been his requirement that the "organic intellectual" must work on two fronts at one and the same time. On the one hand, we had to be at the very forefront of intellectual theoretical work because, as Gramsci says, it is the job of the organic intellectual to know more than the traditional intellectuals do: really know, not just pretend to know, not just to have the facility of knowledge, but to know deeply and profoundly. So often knowledge for Marxism is pure recognition—the production again of what we have always known! If you are in the game of hegemony you have to be smarter than "them." Hence, there are no theoretical limits from which cultural studies can turn back. But the second aspect is just as crucial: that the organic intellectual cannot absolve himself or herself from the responsibility of transmitting those ideas, that knowledge, through the intellectual function, to those who do not belong, professionally, in the intellectual class. And unless those two fronts are operating at the same time, or at least unless those two ambitions are part of the project of cultural studies, you can get enormous theoretical advance without any engagement at the level of the political project.

1. That is, the thinking element that guides their particular class; Gramsci sets organic intellectuals against "traditional intellectuals" (e.g., scien-

tists and academics).

2. Quoted from Gramsci's *Prison Notebooks* (1948–51).

I'm extremely anxious that you should not decode what I'm saying as an anti-theoretical discourse. It is not anti-theory, but it does have something to do with the conditions and problems of developing intellectual and theoretical work as a political practice. It is an extremely difficult road, not resolving the tensions between those two requirements, but living with them. Gramsci never asked us to resolve them, but he gave us a practical example of how to live with them. We never produced organic intellectuals (would that we had) at the Centre. We never connected with that rising historic movement; it was a metaphoric exercise. Nevertheless, metaphors are serious things. They affect one's practice. I'm trying to redescribe cultural studies as theoretical work which must go on and on living with that tension.

I want to look at two other theoretical moments in cultural studies which interrupted the already-interrupted history of its formation. Some of these developments came as it were from outer space: they were not at all generated from the inside, they were not part of an inner-unfolding general theory of culture. Again and again, the so-called unfolding of cultural studies was interrupted by a break, by real ruptures, by exterior forces; the interruption, as it were, of new ideas, which decentered what looked like the accumulating practice of the work. There's another metaphor for theoretical work: theoretical work as interruption.

There were at least two interruptions in the work of the Centre for Contemporary Cultural Studies: The first around feminism, and the second around questions of race. This is not an attempt to sum up the theoretical and political advances and consequences for British cultural studies of the feminist intervention; that is for another time, another place. But I don't want, either, to invoke that moment in an open-ended and casual way. For cultural studies (in addition to many other theoretical projects), the intervention of feminism was specific and decisive. It was ruptural. It reorganized the field in quite concrete ways. First, the opening of the question of the personal as political, and its consequences for changing the object of study in cultural studies, was completely revolutionary in a theoretical and practical way. Second, the radical expansion of the notion of power, which had hitherto been very much developed within the framework of the notion of the public, the public domain, with the effect that we could not use the term power—so key to the earlier problematic of hegemony—in the same way. Third, the centrality of questions of gender and sexuality to the understanding of power itself. Fourth, the opening of many of the questions that we thought we had abolished around the dangerous area of the subjective and the subject, which lodged those questions at the center of cultural studies as a theoretical practice. Fifth, the "re-opening" of the closed frontier between social theory and the theory of the unconscious—psychoanalysis. It's hard to describe the import of the opening of that new continent in cultural studies, marked out by the relationship—or rather, what Jacqueline Rose³ has called the as yet "unsettled relations"—between feminism, psychoanalysis, and cultural studies, or indeed how it was accomplished.

We know it was, but it's not known generally how and where feminism first broke in. I use the metaphor deliberately. As the thief in the night, it broke in; interrupted, made an unseemly noise, seized the time, crapped on

3. British feminist literary critic (b. 1949).

the table of cultural studies. The title of the volume in which this dawn-raided was first accomplished—*Women Take Issue*⁴—is instructive: for they “took issue” in both senses—took over that year’s book and initiated a quarrel. But I want to tell you something else about it. Because of the growing importance of feminist work and the early beginnings of the feminist movement outside in the very early 1970s, many of us in the Centre—mainly, of course, men—thought it was time there was good feminist work in cultural studies. And we indeed tried to buy it in, to import it, to attract good feminist scholars. As you might expect, many of the women in cultural studies weren’t terribly interested in this benign project. We were opening the door to feminist studies, being good, transformed men. And yet, when it broke in through the window, every single unsuspected resistance rose to the surface—fully installed patriarchal power, which believed it had disavowed itself. There are no leaders here, we used to say; we are all graduate students and members of staff together, learning how to practice cultural studies. You can decide whatever you want to decide, etc. And yet, when it came to the question of the reading list . . . Now that’s where I really discovered about the gendered nature of power. Long, long after I was able to pronounce the words, I encountered the reality of Foucault’s profound insight into the individual reciprocity of knowledge and power. Talking about giving up power is a radically different experience from being silenced. That is another way of thinking, and another metaphor for theory: the way feminism broke, and broke into, cultural studies.

Then there is the question of race in cultural studies. I’ve talked about the important “extrinsic” sources of the formation of cultural studies—for example, in what I called the moment of the New Left, and its original quarrel with Marxism—out of which cultural studies grew. And yet, of course, that was a profoundly English or British moment. Actually getting cultural studies to put on its own agenda the critical questions of race, the politics of race, the resistance to racism, the critical questions of cultural politics, was itself a profound theoretical struggle, a struggle of which *Policing the Crisis*,⁵ was, curiously, the first and very late example. It represented a decisive turn in my own theoretical and intellectual work, as well as in that of the Centre. Again, it was only accomplished as the result of a long, and sometimes bitter—certainly bitterly contested—internal struggle against a resounding but unconscious silence. A struggle which continued in what has since come to be known, but only in the rewritten history, as one of the great seminal books of the Centre for Cultural Studies, *The Empire Strikes Back*.⁶ In actuality, Paul Gilroy⁷ and the group of people who produced the book found it extremely difficult to create the necessary theoretical and political space in the Centre in which to work on the project.

I want to hold to the notion, implicit in both these examples, that movements provoke theoretical moments. And historical conjunctures insist on theories: they are real moments in the evolution of theory. But here I have to stop and retrace my steps. Because I think you could hear, once again, in

4. *Women Take Issue: Aspects of Women's Subordination*, edited by the Women's Studies Group, Centre for Contemporary Cultural Studies (1978).

5. *Policing the Crisis: Mugging, the State, and Law and Order*, edited by Stuart Hall et al. (1978).

6. *The Empire Strikes Back: Race and Racism in 70s Britain*, edited by the Centre for Contemporary Cultural Studies (1982), an important early text in postcolonial theory and criticism.

7. British-Caribbean cultural theorist and critic (b. 1956; see below).

what I'm saying a kind of invocation of a simple-minded anti-theoretical populism, which does not respect and acknowledge the crucial importance, at each point in the moves I'm trying to renarrativize, of what I would call the necessary delay or detour through theory. I want to talk about that "necessary detour" for a moment. What decentered and dislocated the settled path of the Centre for Contemporary Cultural Studies certainly, and British cultural studies to some extent in general, is what is sometimes called "the linguistic turn": the discovery of discursivity, of textuality. There are casualties in the Centre around those names as well. They were wrestled with, in exactly the same way I've tried to describe earlier. But the gains which were made through an engagement with them are crucially important in understanding how theory came to be advanced in that work. And yet, in my view, such theoretical "gains" can never be a self-sufficient moment.

Again, there is no space here to do more than begin to list the theoretical advances which were made by the encounters with structuralist, semiotic, and poststructuralist work: the crucial importance of language and of the linguistic metaphor to *any* study of culture; the expansion of the notion of text and textuality, both as a source of meaning, and as that which escapes and postpones meaning; the recognition of the heterogeneity, of the multiplicity of meanings, of the struggle to close arbitrarily the infinite semiosis beyond meaning; the acknowledgment of textuality and cultural power, of representation itself, as a site of power and regulation; of the symbolic as a source of identity. These are enormous theoretical advances, though of course, it had always attended to questions of language (Raymond Williams's work, long before the semiotic revolution, is central there). Nevertheless, the refiguring of theory, made as a result of having to think questions of culture through the metaphors of language and textuality, represents a point beyond which cultural studies must now always necessarily locate itself. The metaphor of the discursive, of textuality, instantiates a necessary delay, a displacement, which I think is *always* implied in the concept of culture. If you work on culture, or if you've tried to work on some other really important things and you find yourself driven back to culture, if culture happens to be what seizes hold of your soul, you have to recognize that you will always be working in an area of displacement. There's always something decentered about the medium of culture, about language, textuality, and signification, which always escapes and evades the attempt to link it, directly and immediately, with other structures. And yet, at the same time, the shadow, the imprint, the trace, of those other formations, of the intertextuality of texts in their institutional positions, of texts as sources of power, of textuality as a site of representation and resistance, all of those questions can never be erased from cultural studies.

The question is what happens when a field, which I've been trying to describe in a very punctuated, dispersed, and interrupted way, as constantly changing directions, and which is defined as a political project, tries to develop itself as some kind of coherent theoretical intervention? Or, to put the same question in reverse, what happens when an academic and theoretical enterprise tries to engage in pedagogies which enlist the active engagement of individuals and groups, tries to make a difference in the institutional world in which it is located? These are extremely difficult issues to resolve, because what is asked of us is to say "yes" and "no" at one and the same time.

It asks us to assume that culture will always work through its textualities—and at the same time that textuality is never enough. But never enough of what? Never enough for what? That is an extremely difficult question to answer because, philosophically, it has always been impossible in the theoretical field of cultural studies—whether it is conceived either in terms of texts and contexts, of intertextuality, or of the historical formations in which cultural practices are lodged—to get anything like an adequate theoretical account of culture's relations and its effects. Nevertheless I want to insist that until and unless cultural studies learns to live with this tension, a tension that all textual practices must assume—a tension which Said describes as the study of the text in its affiliations with “institutions, offices, agencies, classes, academies, corporations, groups, ideologically defined parties and professions, nations, races, and genders”⁸—it will have renounced its “worldly” vocation. That is to say, unless and until one respects the necessary displacement of culture, and yet is always irritated by its failure to reconcile itself with other questions that matter, with other questions that cannot and can never be fully covered by critical textuality in its elaborations, cultural studies as a project, an intervention, remains incomplete. If you lose hold of the tension, you can do extremely fine intellectual work, but you will have lost intellectual practice as a politics. I offer this to you, not because that's what cultural studies ought to be, or because that's what the Centre managed to do well, but simply because I think that, overall, is what defines cultural studies as a project. Both in the British and the American context, cultural studies has drawn the attention itself, not just because of its sometimes dazzling internal theoretical development, but because it holds theoretical and political questions in an ever irresolvable but permanent tension. It constantly allows the one to irritate, bother, and disturb the other, without insisting on some final theoretical closure.

I've been talking very much in terms of a previous history. But I have been reminded of this tension very forcefully in the discussions on AIDS. AIDS is one of the questions which urgently brings before us our marginality as critical intellectuals in making real effects in the world. And yet it has often been represented for us in contradictory ways. Against the urgency of people dying in the streets, what in God's name is the point of cultural studies? What is the point of the study of representations, if there is no response to the question of what you say to someone who wants to know if they should take a drug and if that means they'll die two days later or a few months earlier? At that point, I think anybody who is into cultural studies seriously as an intellectual practice, must feel, on their pulse, its ephemerality, its insubstantiality, how little it registers, how little we've been able to change anything or get anybody to do anything. If you don't feel that as one tension in the work that you are doing, theory has let you off the hook. On the other hand, in the end, I don't agree with the way in which this dilemma is often posed for us, for it is indeed a more complex and displaced question than just people dying out there. The question of AIDS is an extremely important terrain of struggle and contestation. In addition to the people we know who are dying, or have died, or will, there are the many people dying who are never spoken of. How could we say that the question of AIDS is not also a

8. Said, *The World, the Text, and the Critic*, chap. 1.

question of who gets represented and who does not? AIDS is the site at which the advance of sexual politics is being rolled back. It's a site at which not only people will die, but desire and pleasure will also die if certain metaphors do not survive, or survive in the wrong way. Unless we operate in this tension, we don't know what cultural studies can do, can't, can never do; but also, what it has to do, what it alone has a privileged capacity to do. It has to analyze certain things about the constitutive and political nature of representation itself, about its complexities, about the effects of language, about textuality as a site of life and death. Those are the things cultural studies can address.

I've used that example, not because it's a perfect example, but because it's a specific example, because it has a concrete meaning, because it challenges us in its complexity, and in so doing has things to teach us about the future of serious theoretical work. It preserves the essential nature of intellectual work and critical reflection, the irreducibility of the insights which theory can bring to political practice, insights which cannot be arrived at in any other way. And at the same time, it rivets us to the necessary modesty of theory, the necessary modesty of cultural studies as an intellectual project.

I want to end in two ways. First I want to address the problem of the institutionalization of these two constructions: British cultural studies and American cultural studies. And then, drawing on the metaphors about theoretical work which I tried to launch (not I hope by claiming authority or authenticity but in what inevitably has to be a polemical, positional, political way), to say something about how the field of cultural studies has to be defined.

I don't know what to say about American cultural studies. I am completely dumfounded by it. I think of the struggles to get cultural studies into the institution in the British context, to squeeze three or four jobs for anybody under some heavy disguise, compared with the rapid institutionalization which is going on in the U.S. The comparison is not only valid for cultural studies. If you think of the important work which has been done in feminist history or theory in Britain and ask how many of those women have ever had full-time academic jobs in their lives or are likely to, you get a sense of what marginality is really about. So the enormous explosion of cultural studies in the U.S., its rapid professionalization and institutionalization, is not a moment which any of us who tried to set up a marginalized Centre in a university like Birmingham could, in any simple way, regret. And yet I have to say, in the strongest sense, that it reminds me of the ways in which, in Britain, we are always aware of institutionalization as a moment of profound danger. Now, I've been saying that dangers are not places you run away from but places that you go towards. So I simply want you to know that my own feeling is that the explosion of cultural studies along with other forms of critical theory in the academy represents a moment of extraordinarily profound danger. Why? Well, it would be excessively vulgar to talk about such things as how many jobs there are, how much money there is around, and how much pressure that puts on people to do what they think of as critical political work and intellectual work of a critical kind while also looking over their shoulders at the promotions stakes and the publication stakes, and so on. Let me instead return to the point that I made before: my astonishment at what I called the theoretical fluency of cultural studies in the United States.

Now, the question of theoretical fluency is a difficult and provoking metaphor, and I want only to say one word about it. Some time ago, looking at what one can only call the deconstructive deluge (as opposed to deconstructive turn) which had overtaken American literary studies, in its formalist mode, I tried to distinguish the extremely important theoretical and intellectual work which it had made possible in cultural studies from a mere repetition, a sort of mimicry or deconstructive ventriloquism which sometimes passes as a serious intellectual exercise.⁹ My fear at that moment was that if cultural studies gained an equivalent institutionalization in the American context, it would, in rather the same way, formalize out of existence the critical questions of power, history, and politics. Paradoxically, what I mean by theoretical fluency is exactly the reverse. There is no moment now, in American cultural studies, where we are *not* able, extensively and without end, to theorize power—politics, race, class, and gender, subjugation, domination, exclusion, marginality, Otherness, etc. There is hardly anything in cultural studies which isn't so theorized. And yet, there is the nagging doubt that this overwhelming textualization of cultural studies' own discourses somehow constitutes power and politics as exclusively matters of language and textuality itself. Now, this is not to say that I don't think that questions of power and the political have to be and are always lodged within representations, that they are always discursive questions. Nevertheless, there are ways of constituting power as an easy floating signifier which just leaves the crude exercise and connections of power and culture altogether emptied of any signification. That is what I take to be the moment of danger in the institutionalization of cultural studies in this highly rarified and enormously elaborated and well-funded professional world of American academic life. It has nothing whatever to do with cultural studies making itself more like British cultural studies, which is, I think, an entirely false and empty cause to try to propound. I have specifically tried not to speak of the past in an attempt to police the present and the future. But I do want to extract, finally, from the narrative I have constructed of the past some guidelines for my own work and perhaps for some of yours.

I come back to the deadly seriousness of intellectual work. It is a deadly serious matter. I come back to the critical distinction between intellectual work and academic work: they overlap, they abut with one another, they feed off one another, the one provides you with the means to do the other. But they are not the same thing. I come back to the difficulty of instituting a genuine cultural and critical practice, which is intended to produce some kind of organic intellectual political work, which does not try to inscribe itself in the overarching metanarrative of achieved knowledges, within the institutions. I come back to theory and politics, the politics of theory. Not theory as the will to truth, but theory as a set of contested, localized, conjunctural knowledges, which have to be debated in a dialogical way. But also as a practice which always thinks about its intervention in a world in which it would make some difference, in which it would have some effect. Finally, a practice which understands the need for intellectual modesty. I do think

9. See Stuart Hall, "In Defence of Theory," in *People's History and Socialist Theory*, edited by Ralph Samuels (1981).

there is all the difference in the world between understanding the politics of intellectual work and substituting intellectual work for politics.

1990

1992

SUSAN SONTAG 1933–2004

Susan Sontag intended the title of her classic essay “Against Interpretation,” first published in 1964 in *Evergreen Review* and reprinted in *Against Interpretation and Other Essays* (1966), to be highly provocative, and she certainly succeeded. Both then and now, many readers have assumed from the title that Sontag is saying something strange, peculiar, perverse. Why should we be opposed to interpretation? Surely interpretation is both desirable and inevitable. But, as the essay makes clear, Sontag is advancing a complex argument, one that describes a specific sense for the term *interpretation* and that lays out a pointed and particular set of claims for why we should be against it.

Sontag had an immediate polemical purpose: she wanted her readers to become more attentive and responsive to the literature, art, and especially film of the 1950s and early 1960s. But at the same time, she located her argument within the long history, classic to contemporary, of literary theory and criticism. Sontag begins with PLATO and ARISTOTLE; she glances at medieval and Renaissance theories of interpretation; she refers to MARX, NIETZSCHE, and FREUD; she invokes T. S. ELIOT and other major modernist writers and critics; and she praises WALTER BENJAMIN, NORTHROP FRYE, ERICH AUERBACH, and ROLAND BARTHES.

“The function of criticism should be to help us experience art more fully,” Sontag maintains, “to show *how it is what it is*, even *that it is what it is*, rather than to show *what it means*.” But she also insists, in the preface to *Against Interpretation and other Essays*: “What I have been writing is not criticism at all, strictly speaking, but case studies for an aesthetic, a theory of my own sensibility.” Concise, forceful, and zealous in its commitments, bold in its claims, and as relevant for our era as it was for the 1960s, “Against Interpretation” organizes and sharpens an understanding of the history and meaning of interpretation and the function of criticism.

Susan Sontag was born Susan Rosenblatt in New York City in 1933, the daughter of first-generation Jewish Americans. Her father, Jack Rosenblatt, was a businessman whose fur-trading work was based in China, and he and his wife Mildred lived there. Mildred returned to the United States to give birth to her daughter, but she then returned to China, and Susan was raised for the first five years of her life in New York and New Jersey by relatives and a nanny. In 1936, Mildred came to the United States a second time to give birth to a second daughter, Judith, and she moved back permanently in late 1938 after Jack’s death in China. She and her daughters lived first in Florida, next in New York City, and then settled in Tucson, Arizona—which Sontag later termed the years of her “desert childhood.” After Mildred’s marriage in 1946 to Nathan Sontag, an army captain, she and her daughters relocated to Sherman Oaks, a suburb of Los Angeles.

In an interview in 1995, Sontag said: “I remember reading real books—biographies, travel books—when I was about six. And then free fall into Poe and Shakespeare

and Dickens and the Brontës and Victor Hugo and Schopenhauer and Pater, and so on. I got through my childhood in a delirium of literary exaltations." As a "literature-intoxicated" student at North Hollywood High School, one who in her journal listed more than 100 authors (Faulkner, Dostoyevsky, DANTE, etc.) as "must reads," she became even more fervently attached to American, English, and especially European literature and culture. In an autobiographical piece, "Pilgrimage" (1987), she recalled a visit that she and a friend made in 1947 to the German Nobel Prize-winning novelist and essayist Thomas Mann, who was living in California. Barely a teenager, Sontag already was an intellectual whose "sense of literary vocation," she later explained, "had been shaped by reading literary magazines—*Kenyon Review*, *Sewanee Review*, *Hudson Review*, *Partisan Review*"—and by her voracious reading of challenging works of literature and philosophy.

After graduating from high school at age fifteen, Sontag began undergraduate study in 1949 at the University of California at Berkeley; but after one semester she transferred to the University of Chicago, eager to be part of its humanities-centered Great Books curriculum. One of her teachers was the political philosopher LEO STRAUSS, another was the philosopher and literary scholar Richard McKeon, and still another was the brilliantly idiosyncratic writer, literary theorist, and critic Kenneth Burke. In 1950, Sontag audited a course on Sigmund Freud taught by the sociologist Philip Rieff. He invited her to lunch, and ten days later they married. Sontag completed her undergraduate degree in 1951, and she and Rieff lived briefly in Wisconsin and then moved to the Boston area when he was offered a position at Brandeis University. She gave birth to a son, David, in 1952, and she did graduate work in philosophy at Harvard, receiving her master's degree in 1957.

Sontag left her husband and son behind after winning a fellowship to study at Oxford University, where she intended to work toward a doctorate in philosophy. In December 1957, she traveled to Paris. She decided to live there—she had become involved in a passionate relationship with the writer Harriet Sohmers—and pursued further academic study at the Sorbonne. She immersed herself in French literature and culture, and she responded with much enthusiasm to French and Italian movies. Returning to the United States in late 1958, Sontag ended her marriage and settled with her son in New York City. By the early 1960s, she was well known in intellectual circles for her essays in the *New York Review of Books*, *Partisan Review*, and *Commentary* on literature, film, and theater and for her first foray into fiction, an experimental novel titled *The Benefactor* (1963), which, as the critic Liam Kennedy has noted, is less a work of fiction than "an extended treatise on subjectivity."

Two of her groundbreaking early essays, "Notes on 'Camp'" (1964) and "Against Interpretation," established her reputation as a major cultural critic who was bringing to the attention of American readers an array of avant-garde European authors and filmmakers. She was a public intellectual and literary celebrity, recognized for her insight and intelligence as well as for her striking appearance: her photo was featured on the covers of *Vanity Fair* and the *New York Times Magazine*. Sontag published widely, saying about her intentions at this time: "I thought of my essays as cultural work. They were written out of a sense of what needed to be written."

Sontag's pioneering, influential essay on the aesthetic of camp has been described as an exploration and affirmation of the "gay sensibility." "Camp," for her, implies a deliberately exaggerated, overstated, and theatrical style, typically for humorous effect—ironic, clever, self-mocking, subversive of conventional norms of gender roles and sexual identities. As Sontag observes in one of the essay's "notes,"

Camp is a vision of the world in terms of style—but a particular kind of style. It is the love of the exaggerated, the "off," of things-being-what-they-are-not. The best example is in Art Nouveau, the most typical and fully developed

Camp style. Art Nouveau objects, typically, convert one thing into something else: the lighting fixtures in the form of flowering plants, the living room which is really a grotto. A remarkable example: the Paris Métro entrances designed by Hector Guimard in the late 1890s in the shape of cast-iron orchid stalks.

Camp, she explains, “sees everything in quotation marks. It’s not a lamp, but a ‘lamp’; not a woman, but a ‘woman.’ To perceive Camp in objects and persons is to understand Being-as-Playing-a-Role. It is the farthest extension, in sensibility, of the metaphor of life as theater.” In its heightened emphasis on style and form, “Notes on ‘Camp’” is a companion piece to “Against Interpretation,” our selection below.

Sontag wrote a second novel, *Death Kit* (1967), but she attracted greater acclaim and controversy for her political and critical essays, some of which were collected in *Styles of Radical Will* (1969). She was strongly opposed to the Vietnam War, wrote sympathetically about North Vietnam and Cuba, and denounced much about the United States and Europe. In “What’s Happening in America” (1967), Sontag declared:

[T]he quality of American life is an insult to the possibilities of human growth; and the pollution of American space, with gadgetry and cars and TV and box architecture, brutalizes the senses, making gray neurotics of most of us, and perverse spiritual athletes and strident self-transcenders of the best of us. . . . The truth is that Mozart, Pascal, Boolean algebra, Shakespeare, parliamentary government, baroque churches, Newton, the emancipation of women, Kant, Marx, and Balanchine ballets don’t redeem what this particular civilization has wrought upon the world. The white race is the cancer of human history; it is the white race and it alone—its ideologies and inventions—which eradicates autonomous civilizations wherever it spreads, which has upset the ecological balance of the planet, which now threatens the very existence of life itself.

Other important essays of this period are “The Double Standard of Aging” (1972) and “The Third World of Women” (1973). In an essay collection, *Under the Sign of Saturn* (1980), Sontag considers a range of figures, including the American anarchist philosopher and writer Paul Goodman; the French actor, director, and writer Antonin Artaud; the French critic Roland Barthes; and the German film director and Nazi propagandist Leni Riefenstahl.

Sontag wrote screenplays for and directed a number of films, the most enduring of which is *Promised Lands* (1973), a documentary about Israel and Palestine in the aftermath of the Yom Kippur War of October 1973. This is her only work in any medium that explicitly treats Jewish themes and issues. During a five-year span from the early to mid-1970s, Sontag also crafted essays on the theory and practice of photography; in 1977 these were collected in *On Photography*, a book that won that year’s National Book Critics Circle Award for Criticism. Her observations are trenchant: “In America, the photographer is not simply the person who records the past but the one who invents it.” She notes that “photographs alter and enlarge our notions of what is worth looking at and what we have a right to observe,” elsewhere declaring that “the camera makes everyone a tourist in other people’s reality, and eventually in one’s own.” The images in a photograph can “always . . . be made compatible, even when the realities they depict are not.”

This project was all the more challenging for Sontag because at the time she was suffering from, and was being treated for, stage IV breast cancer. In 1975 she was told that she had only a 10 percent chance of surviving for two more years. This grievous affliction and the painful regimen of its treatment prompted Sontag to write *Illness as Metaphor* (1978), which famously begins: “Illness is the night-side of life, a more onerous citizenship. Everyone who is born holds dual citizenship, in the

kingdom of the well and the kingdom of the sick." Sontag's cancer responded to treatment but returned in later years, and she continued her commentaries on illness in *AIDS and Its Metaphors* (1989), the short story "The Way We Live Now" (1986), and a play, *Alice in Bed*, about Alice James, the invalid sister of the American philosopher William James and the novelist HENRY JAMES. This play premiered (in translation) in Bonn, Germany, in 1991 and was published in 1993, the same year that, politically active as ever, Sontag directed Samuel Beckett's *Waiting for Godot* (1952) in Sarajevo, during the Bosnian war.

In 1990, Sontag received a MacArthur Foundation Fellowship, popularly called a "genius grant," and from the 1990s to her death in 2004 she was widely honored in the United States and Europe as a public intellectual. Sontag referred to "feminism" as "an empty word," but she also defined herself as a "feminist," noting that "because women are, culturally speaking, a minority, with my minority consciousness I always rejoice in the achievement of women." She spoke in support of the British Indian author Salman Rushdie (who had been sentenced to death by the Iranian leader Ayatollah Khomeini for his "blasphemous" novel *Satanic Verses*); she called for American intervention in the Bosnian war; and she took a strong position on the terrorist attacks of September 11, 2001—insisting that it was wrong to refer to the suicide bombers as "cowards," a statement that angered many Americans in the immediate aftermath of the horrific assaults.

Sontag remained productive even as she battled illness, publishing two successful novels: *The Volcano Lover: A Romance* (1992) and *In America* (2000). In *Regarding the Pain of Others* (2003), she returned to photography and to the question of how to respond "when the subject is looking at other people's pain." She gathered nonfiction pieces from the 1980s and 1990s in *Where the Stress Falls: Essays* (2001), and, after her death, Sontag's publisher collected in *At the Same Time: Essays and Speeches* (2007) more than forty pieces, from her last two decades, on notable figures and topics in film, dance, photography, painting, opera, and theater. Sontag died on December 28, 2004. "With her dies the era," noted an obituary, "of the glamorous public intellectual—and perhaps even the idea of New York as the center of modern literary intelligence."

Sontag produced an impressive body of work; many admire her criticism and novels, and some see her as an inspiration and role model. She has been rebuked, however, for failing to deal more directly with class, gender, race, and ethnicity, and some have claimed that she became more conservative, culturally and politically, in her later years. Sontag's book on AIDS was praised by many members of the gay and lesbian community—Sontag herself was bisexual and the longtime lover of the renowned photographer Annie Leibovitz—but it was harshly attacked by others for its neglect of the urgent social and political contexts and implications of the AIDS crisis. One reviewer noted that while "Sontag alludes to issues of sexuality and discrimination against homosexuals," she "ignores the tremendous response of the homosexual community to the AIDS epidemic through educational programs, health maintenance initiatives, governmental lobbying, and volunteer support services." D. A. Miller, in "Sontag's Urbanity" (*October* 49 [1989]), took aim at her "mandarin aloofness" and concluded that her positions "continue to ratify the prejudice, oppression, and violence that gay people and people with AIDS daily encounter." Sontag was described more than once as a proponent, in her later writings, of an "elegiac modernism," and one critic even identified her as an "eminent Victorian"—"our greatest living Victorian writer."

In "Against Interpretation," writing as a literary theorist and cultural commentator, Sontag argues that critics have focused on content at the expense of form. She believes that the emphasis on interpretation—that is, the extraction of some "content" from a work—disserves literature and art and prevents us from responding to its (at its best) thrilling immediacy. Sontag suggests that we should question whether

"there really is such a thing as the content of a work of art." It is this essential question that our ongoing commitment to interpretation fails to acknowledge and engage. In her view, "The modern style of interpretation excavates, and as it excavates, destroys; it digs 'behind' the text, to find a sub-text which is the true one." She judges Marxist and Freudian "doctrines" to be damaging: critics who adhere to those systems of thought impose them on the text, revising and transvaluing it through them, making it into something other than what it is. Such modes of interpretation, she argues, reduce art to thought and privilege utilitarian science over myth and aesthetics. Instead, audiences in our advanced capitalist societies—characterized by overproduction and excess—must employ great care and discrimination. As her essay proceeds, Sontag becomes yet more extreme, claiming that "the very distinction between form and content . . . is, ultimately, an illusion." The work of art thus is its form, is the impact of its form on us, as both modern and contemporary cinema and abstract art vividly demonstrate and as we could see if we could break free from the addiction to interpretation that "poisons our sensibilities."

Sontag lists examples of the type of criticism that she esteems, in which the critic "dissolves considerations of content into those of form"—referring to essays by Frye, Barthes, Auerbach, and others. She neither gives examples of the critical writing that she rejects nor mentions the formalist theory and practice of Anglo-American New Criticism, which resemble her own. At the time Sontag was writing, New Criticism (as employed by CLEANTH BROOKS and W. K. WIMSATT, among others) was the critical approach and procedure that dominated literary journals and had become central to literature departments of colleges and universities.

Perhaps Sontag viewed the New Criticism as simply (and narrowly) academic, linked to pedagogy, and too tied to a limited canon of English and American authors to encompass contemporary and avant-garde European writers and critics and filmmakers. But her failure to assess its formalist emphasis or consider its relationship to her own position creates a glaring absence. Sontag also may underestimate the difficulty of divorcing form from content, which has a way of reappearing in critical discourse, no matter how deliberately the critic seeks to fix his or her attention on form, style, and technique. At one point in the essay, Sontag protests that the misguided emphasis on "interpretation" has led critics to mistakenly describe the main theme of Samuel Beckett's dramas as "modern man's alienation from meaning or from God," but it is not evident that her description of them as "delicate dramas of the withdrawn consciousness" is any less of an interpretation—a statement of content, not of form.

Nevertheless, "Against Interpretation" is and remains a provocation to thought, to our efforts to understand what it means to read, respond to, and interpret a literary text or cultural artifact. "Interpretation is the revenge of the intellect upon art"; "In place of a hermeneutics we need an erotics of art"—such declarations bear witness to the aphoristic brilliance of Sontag's prose and to her skill as a provocateur. She told an interviewer that she aimed in her writing to exemplify an "intelligence" that is "critical, dialectical, skeptical, desimplifying." She also remarked that she defined herself as "a writer"—that is, "someone who pays attention to the world." In this essay and in her work at its most lively and invigorating, Sontag shows the value of paying close attention to the old and the new in culture from top to bottom, and of experiencing the intellectual power and emotional pleasure of both the great tradition and the avant-garde.

"Against Interpretation" Keywords: Aesthetics, Defense of Criticism, Formalism, Hermeneutics, Modernity, Popular Culture

Against Interpretation

Content is a glimpse of something, an encounter like a flash. It's
very tiny—very tiny, content.

—Willem de Kooning,¹ in an interview

It is only shallow people who do not judge by appearances. The
mystery of the world is the visible, not the invisible.

—Oscar Wilde,² in a letter

The earliest *experience* of art must have been that it was incantatory, magical; art was an instrument of ritual. (Cf. the paintings in the caves at Lascaux, Altamira, Niaux, La Pasiega,³ etc.) The earliest *theory* of art, that of the Greek philosophers, proposed that art was mimesis, imitation of reality.

It is at this point that the peculiar question of the *value* of art arose. For the mimetic theory, by its very terms, challenges art to justify itself.

Plato,⁴ who proposed the theory, seems to have done so in order to rule that the value of art is dubious. Since he considered ordinary material things as themselves mimetic objects, imitations of transcendent forms or structures, even the best painting of a bed would be only an “imitation of an imitation.” For Plato, art is neither particularly useful (the painting of a bed is no good to sleep on), nor, in the strict sense, true. And Aristotle’s⁵ arguments in defense of art do not really challenge Plato’s view that all art is an elaborate *trompe l’oeil*,⁶ and therefore a lie. But he does dispute Plato’s idea that art is useless. Lie or no, art has a certain value according to Aristotle because it is a form of therapy. Art is useful, after all, Aristotle counters, medicinally useful in that it arouses and purges dangerous emotions.⁷

In Plato and Aristotle, the mimetic theory of art goes hand in hand with the assumption that art is always figurative. But advocates of the mimetic theory need not close their eyes to decorative and abstract art. The fallacy that art is necessarily a “realism” can be modified or scrapped without ever moving outside the problems delimited by the mimetic theory.

The fact is, all Western consciousness of and reflection upon art have remained within the confines staked out by the Greek theory of art as mimesis or representation. It is through this theory that art as such—above and beyond given works of art—becomes problematic, in need of defense. And it is the defense of art which gives birth to the odd vision by which something we have learned to call “form” is separated off from something we have learned to call “content,” and to the well-intentioned move which makes content essential and form accessory.

1. Dutch-born American abstract expressionist painter (1904–1997); this 1960 interview by David Sylvester for the BBC radio was published in *Location 1* (spring 1963).

2. Irish playwright, critic, and poet (1854–1900; see above). The quotation is actually from his novel *The Picture of Dorian Gray* (1890), chap. 2, which has “true mystery” rather than “mystery.”

3. All sites—in southwestern France, northern Spain, southern France, and northern Spain, respectively—famous for their prehistoric cave paintings.

4. Greek philosopher (ca. 427–ca. 347 B.C.E.), who viewed all knowledge and objects as dependent on perfect and immutable transcendent Forms; for his theory of mimesis and art, presented in *Ion* and *Republic* 10, see above.

5. Greek philosopher (384–322 B.C.E.); see his *Poetics* and excerpts from *On Rhetoric*, above.

6. Visual illusion, especially through photographically realistic detail (literally, “deceives the eye”; French).

7. For Aristotle’s idea of catharsis, see *Poetics* 6, 1449b.

Even in modern times, when most artists and critics have discarded the theory of art as representation of an outer reality in favor of the theory of art as subjective expression, the main feature of the mimetic theory persists. Whether we conceive of the work of art on the model of a picture (art as a picture of reality) or on the model of a statement (art as the statement of the artist), content still comes first. The content may have changed. It may now be less figurative, less lucidly realistic. But it is still assumed that a work of art *is* its content. Or, as it's usually put today, that a work of art by definition *says* something. ("What X is saying is . . .," "What X is trying to say is . . .," "What X said is . . ." etc., etc.)

2

None of us can ever retrieve that innocence before all theory when art knew no need to justify itself, when one did not ask of a work of art what it *said* because one knew (or thought one knew) what it *did*. From now to the end of consciousness, we are stuck with the task of defending art. We can only quarrel with one or another means of defense. Indeed, we have an obligation to overthrow any means of defending and justifying art which becomes particularly obtuse or onerous or insensitive to contemporary needs and practice.

This is the case, today, with the very idea of content itself. Whatever it may have been in the past, the idea of content is today mainly a hindrance, a nuisance, a subtle or not so subtle philistinism.⁸

Though the actual developments in many arts may seem to be leading us away from the idea that a work of art is primarily its content, the idea still exerts an extraordinary hegemony. I want to suggest that this is because the idea is now perpetuated in the guise of a certain way of encountering works of art thoroughly ingrained among most people who take any of the arts seriously. What the overemphasis on the idea of content entails is the perennial, never consummated project of *interpretation*. And, conversely, it is the habit of approaching works of art in order to *interpret* them that sustains the fancy that there really is such a thing as the content of a work of art.

3

Of course, I don't mean interpretation in the broadest sense, the sense in which Nietzsche⁹ (rightly) says, "There are no facts, only interpretations." By interpretation, I mean here a conscious act of the mind which illustrates a certain code, certain "rules" of interpretation.

Directed to art, interpretation means plucking a set of elements (the X, the Y, the Z, and so forth) from the whole work. The task of interpretation is virtually one of translation. The interpreter says, Look, don't you see that X is really—or, really means—A? That Y is really B? That Z is really C?

What situation could prompt this curious project for transforming a text? History gives us the materials for an answer. Interpretation first appears

8. That is, disdain for culture and the arts, a term borrowed from MATTHEW ARNOLD's label for the materialist middle classes in "The Function of Criticism at the Present Time" (1864; see above).
9. German philosopher (1844–1900; see above);

this statement appears in his notebooks of 1887, published after his death in *The Will to Power* (1901). In *The Portable Nietzsche* (1954), Walter Kaufman translates it as "It is precisely facts that do not exist, only *interpretations*."

in the culture of late classical antiquity, when the power and credibility of myth had been broken by the “realistic” view of the world introduced by scientific enlightenment. Once the question that haunts post-mythic consciousness—that of the *seemliness* of religious symbols—had been asked, the ancient texts were, in their pristine form, no longer acceptable. Then interpretation was summoned, to reconcile the ancient texts to “modern” demands. Thus, the Stoics,¹ to accord with their view that the gods had to be moral, allegorized away the rude features of Zeus and his boisterous clan in Homer’s² epics. What Homer really designated by the adultery of Zeus with Leto,³ they explained, was the union between power and wisdom. In the same vein, Philo of Alexandria⁴ interpreted the literal historical narratives of the Hebrew Bible as spiritual paradigms. The story of the exodus from Egypt, the wandering in the desert for forty years, and the entry into the promised land, said Philo, was really an allegory of the individual soul’s emancipation, tribulations, and final deliverance. Interpretation thus presupposes a discrepancy between the clear meaning of the text and the demands of (later) readers. It seeks to resolve that discrepancy. The situation is that for some reason a text has become unacceptable; yet it cannot be discarded. Interpretation is a radical strategy for conserving an old text, which is thought too precious to repudiate, by revamping it. The interpreter, without actually erasing or rewriting the text, is altering it. But he can’t admit to doing this. He claims to be only making it intelligible, by disclosing its true meaning. However far the interpreters alter the text (another notorious example is the Rabbinic and Christian “spiritual” interpretations of the clearly erotic Song of Songs⁵), they must claim to be reading off a sense that is already there.

Interpretation in our own time, however, is even more complex. For the contemporary zeal for the project of interpretation is often prompted not by piety toward the troublesome text (which may conceal an aggression), but by an open aggressiveness, an overt contempt for appearances. The old style of interpretation was insistent, but respectful; it erected another meaning on top of the literal one. The modern style of interpretation excavates, and as it excavates, destroys; it digs “behind” the text, to find a sub-text which is the true one. The most celebrated and influential modern doctrines, those of Marx and Freud,⁶ actually amount to elaborate systems of hermeneutics,⁷ aggressive and impious theories of interpretation. All observable phenomena are bracketed, in Freud’s phrase, as *manifest content*. This manifest content must be probed and pushed aside to find the true meaning—the *latent content*—beneath. For Marx, social events like revolutions and wars; for Freud, the events of individual lives (like neurotic symptoms and slips of

1. Followers of the Greek philosopher Zeno (335–263 B.C.E.).

2. According to tradition, the author of the *Iliad* and the *Odyssey* (8th c. B.C.E.); in those Greek epics, the Olympian gods, whose ruler was Zeus, play an active role.

3. In Greek mythology, a Titan and the mother (by Zeus, whose wife was his sister Hera) of Apollo and Artemis.

4. Hellenistic Jewish philosopher (ca. 20 B.C.E.–ca. 50 C.E.), who attempted to reconcile biblical teaching and Greek philosophy; his works include *Questions and Answers on Exodus*, the second book of the Bible (which tells the story of the Israelites’ liberation from slavery in Egypt

and the years of wandering in the desert before they entered the Promised Land). Alexandria is in Egypt, then a Roman province.

5. A book of the Hebrew Bible that is a collection of poems of love and courtship (also known as the Song of Solomon, king of Israel, to whom it is traditionally ascribed).

6. SIGMUND FREUD (1856–1939), Austrian neurologist and founder of psychoanalysis; for his concepts of manifest content and latent content, see chapter 6 of *The Interpretation of Dreams* (1900; above). KARL MARX (1818–1883), German economic and political theorist and revolutionary.

7. Theories of interpretation.

the tongue) as well as texts (like a dream or a work of art)—all are treated as occasions for interpretation. According to Marx and Freud, these events only *seem* to be intelligible. Actually, they have no meaning without interpretation. To understand *is* to interpret. And to interpret is to restate the phenomenon, in effect to find an equivalent for it.

Thus, interpretation is not (as most people assume) an absolute value, a gesture of mind situated in some timeless realm of capabilities. Interpretation must itself be evaluated, within a historical view of human consciousness. In some cultural contexts, interpretation is a liberating act. It is a means of revising, of transvaluing, of escaping the dead past. In other cultural contexts, it is reactionary, impertinent, cowardly, stifling.

4

Today is such a time, when the project of interpretation is largely reactionary, stifling. Like the fumes of the automobile and of heavy industry which befoul the urban atmosphere, the effusion of interpretations of art today poisons our sensibilities. In a culture whose already classical dilemma is the hypertrophy of the intellect at the expense of energy and sensual capability, interpretation is the revenge of the intellect upon art.

Even more. It is the revenge of the intellect upon the world. To interpret is to impoverish, to deplete the world—in order to set up a shadow world of “meanings.” It is to turn *the* world into *this* world. (“This world”! As if there were any other.)

The world, our world, is depleted, impoverished enough. Away with all duplicates of it, until we again experience more immediately what we have.

5

In most modern instances, interpretation amounts to the philistine refusal to leave the work of art alone. Real art has the capacity to make us nervous. By reducing the work of art to its content and then interpreting *that*, one tames the work of art. Interpretation makes art manageable, comfortable.

This philistinism of interpretation is more rife in literature than in any other art. For decades now, literary critics have understood it to be their task to translate the elements of the poem or play or novel or story into something else. Sometimes a writer will be so uneasy before the naked power of his art that he will install within the work itself—albeit with a little shyness, a touch of the good taste of irony—the clear and explicit interpretation of it. Thomas Mann⁸ is an example of such an overcooperative author. In the case of more stubborn authors, the critic is only too happy to perform the job.

The work of Kafka,⁹ for example, has been subjected to a mass ravishment by no less than three armies of interpreters. Those who read Kafka as a social allegory see case studies of the frustrations and insanity of modern bureaucracy and its ultimate issuance in the totalitarian state. Those who read Kafka as a psychoanalytic allegory see desperate revelations of Kafka's fear of his father, his castration anxieties, his sense of his own impotence,

8. Eminent German novelist and essayist (1875–1955).

9. Franz Kafka (1883–1924), Austrian writer who was born and lived most of his life in Prague; his

works often blend the fantastic and realistic. His novels *The Trial* (1925) and *The Castle* (1926) both portray nightmarish bureaucracies.

his thralldom to his dreams. Those who read Kafka as a religious allegory explain that K. in *The Castle* is trying to gain access to heaven, that Joseph K. in *The Trial* is being judged by the inexorable and mysterious justice of God. . . . Another *oeuvre* that has attracted interpreters like leeches is that of Samuel Beckett.¹ Beckett's delicate dramas of the withdrawn consciousness—pared down to essentials, cut off, often represented as physically immobilized—are read as a statement about modern man's alienation from meaning or from God, or as an allegory of psychopathology.

Proust, Joyce, Faulkner, Rilke, Lawrence, Gide² . . . one could go on citing author after author; the list is endless of those around whom thick encrustations of interpretation have taken hold. But it should be noted that interpretation is not simply the compliment that mediocrity pays to genius. It is, indeed, *the* modern way of understanding something, and is applied to works of every quality. Thus, in the notes that Elia Kazan³ published on his production of *A Streetcar Named Desire*, it becomes clear that, in order to direct the play, Kazan had to discover that Stanley Kowalski represented the sensual and vengeful barbarism that was engulfing our culture, while Blanche Du Bois was Western civilization, poetry, delicate apparel, dim lighting, refined feelings and all, though a little the worse for wear to be sure. Tennessee Williams' forceful psychological melodrama now became intelligible: it was *about* something, about the decline of Western civilization. Apparently, were it to go on being a play about a handsome brute named Stanley Kowalski and a faded mangy belle named Blanche Du Bois, it would not be manageable.

6

It doesn't matter whether artists intend, or don't intend, for their works to be interpreted. Perhaps Tennessee Williams thinks *Streetcar* is about what Kazan thinks it to be about. It may be that Cocteau⁴ in *The Blood of a Poet* and in *Orpheus* wanted the elaborate readings which have been given these films, in terms of Freudian symbolism and social critique. But the merit of these works certainly lies elsewhere than in their "meanings." Indeed, it is precisely to the extent that Williams' plays and Cocteau's films do suggest these portentous meanings that they are defective, false, contrived, lacking in conviction.

From interviews, it appears that Resnais and Robbe-Grillet⁵ consciously designed *Last Year at Marienbad* to accommodate a multiplicity of equally plausible interpretations. But the temptation to interpret *Marienbad*

1. Irish playwright, novelist, and poet (1906–1989); his best-known work is the play *Waiting for Godot* (1952).

2. All major modernist writers: Marcel Proust (1871–1922), French novelist; James Joyce (1882–1941), Irish writer; William Faulkner (1897–1962), American writer; Rainer Maria Rilke (1875–1926), Austrian poet; D. H. Lawrence (1885–1930), English novelist, poet, and essayist; and André Gide (1869–1951), French novelist, essayist, and critic.

3. Turkish-born American director of film and stage (1909–2003). Among his acclaimed productions was *A Streetcar Named Desire*, by the Amer-

ican playwright Tennessee Williams (1911–1983), which he directed first on stage (1947) and then on screen (1951). *Streetcar's* main characters are Stanley Kowalski and his sister-in-law, Blanche DuBois.

4. Jean Cocteau (1889–1963), French writer, artist, and director. His films include *The Blood of a Poet* (1930) and *Orpheus* (1950).

5. Alain Robbe-Grillet (1922–2008), French writer and director. Alain Resnais (1922–2014), French film director whose works include *Last Year at Marienbad* (1961), for which Robbe-Grillet wrote the screenplay.

should be resisted. What matters in *Marienbad* is the pure, untranslatable, sensuous immediacy of some of its images, and its rigorous if narrow solutions to certain problems of cinematic form.

Again, Ingmar Bergman⁶ may have meant the tank rumbling down the empty night street in *The Silence* as a phallic symbol. But if he did, it was a foolish thought. ("Never trust the teller, trust the tale," said Lawrence.⁷) Taken as a brute object, as an immediate sensory equivalent for the mysterious abrupt armored happenings going on inside the hotel, that sequence with the tank is the most striking moment in the film. Those who reach for a Freudian interpretation of the tank are only expressing their lack of response to what is there on the screen.

It is always the case that interpretation of this type indicates a dissatisfaction (conscious or unconscious) with the work, a wish to replace it by something else.

Interpretation, based on the highly dubious theory that a work of art is composed of items of content, violates art. It makes art into an article for use, for arrangement into a mental scheme of categories.

7

Interpretation does not, of course, always prevail. In fact, a great deal of today's art may be understood as motivated by a flight from interpretation. To avoid interpretation, art may become parody. Or it may become abstract. Or it may become ("merely") decorative. Or it may become non-art.

The flight from interpretation seems particularly a feature of modern painting. Abstract painting⁸ is the attempt to have, in the ordinary sense, no content; since there is no content, there can be no interpretation. Pop Art⁹ works by the opposite means to the same result; using a content so blatant, so "what it is," it, too, ends by being uninterpretable.

A great deal of modern poetry as well, starting from the great experiments of French poetry (including the movement that is misleadingly called Symbolism¹) to put silence into poems and to reinstate the *magic* of the word, has escaped from the rough grip of interpretation. The most recent revolution in contemporary taste in poetry—the revolution that has deposed Eliot and elevated Pound²—represents a turning away from content in

6. Swedish film director and writer (1918–2007); among his many films are *The Silence* (1963) and *Winter Light* (1963, *Nattvardsgästerna*; also known as *The Communicants*), mentioned below.

7. From Lawrence's *Studies in Classic American Literature* (1923), chap. 1: "Never trust the artist. Trust the tale. The proper function of a critic is to save the tale from the artist who created it."

8. Sontag is referring specifically to abstract expressionism, a variety of nonobjective, nonfigurative art that began in New York in the 1940s and became dominant in the 1950s; prominent painters in the movement included de Kooning and Jackson Pollock.

9. A British and American movement, largely of the mid-1950s and 1960s, in which objects and images from contemporary popular culture and the mass media are the subjects of and are incorporated into artworks. Pop artists, including Andy Warhol and Roy Lichtenstein, reacted

against both traditional fine art and abstract expressionism.

1. A literary movement led by French poets and critics in the last third of the 19th century, including Arthur Rimbaud and Stéphane Mallarmé; it emphasized the evocation of subjective emotion, via symbol and metaphor, rather than objective description.

2. Ezra Pound (1885–1972), American poet and critic, a major promoter and shaper of modernist writing, including that of the American-born British poet, critic, and playwright T. S. Eliot (1888–1965). Sontag is referring here to poets in the post–World War II decades, including Charles Olson, Robert Duncan, Robert Creeley, Allen Ginsberg, Denise Levertov, and Gary Snyder, who defined their theory and practice in relation to the experimental modernist poetry and prose of Pound, rather than to that of T. S. Eliot and the New Critics who endorsed his views and values.

poetry in the old sense, an impatience with what made modern poetry prey to the zeal of interpreters.

I am speaking mainly of the situation in America, of course. Interpretation runs rampant here in those arts with a feeble and negligible avant-garde: fiction and the drama. Most American novelists and playwrights are really either journalists or gentlemen sociologists and psychologists. They are writing the literary equivalent of program music. And so rudimentary, uninspired, and stagnant has been the sense of what might be done with *form* in fiction and drama that even when the content isn't simply information, news, it is still peculiarly visible, handier, more exposed. To the extent that novels and plays (in America), unlike poetry and painting and music, don't reflect any interesting concern with changes in their form, these arts remain prone to assault by interpretation.

But programmatic avant-gardism—which has meant, mostly, experiments with form at the expense of content—is not the only defense against the infestation of art by interpretations. At least, I hope not. For this would be to commit art to being perpetually on the run. (It also perpetuates the very distinction between form and content which is, ultimately, an illusion.) Ideally, it is possible to elude the interpreters in another way, by making works of art whose surface is so unified and clean, whose momentum is so rapid, whose address is so direct that the work can be . . . just what it is. Is this possible now? It does happen in films, I believe. This is why cinema is the most alive, the most exciting, the most important of all art forms right now. Perhaps the way one tells how alive a particular art form is, is by the latitude it gives for making mistakes in it, and still being good. For example, a few of the films of Bergman—though crammed with lame messages about the modern spirit, thereby inviting interpretations—still triumph over the pretentious intentions of their director. In *Winter Light* and *The Silence*, the beauty and visual sophistication of the images subvert before our eyes the callow pseudo-intellectuality of the story and some of the dialogue. (The most remarkable instance of this sort of discrepancy is the work of D. W. Griffith.³) In good films, there is always a directness that entirely frees us from the itch to interpret. Many old Hollywood films, like those of Cukor, Walsh, Hawks,⁴ and countless other directors, have this liberating anti-symbolic quality, no less than the best work of the new European directors, like Truffaut's *Shoot the Piano Player* and *Jules and Jim*, Godard's *Breathless* and *Vivre Sa Vie*, Antonioni's *L'Avventura*, and Olmi's *The Fiancés*.⁵

The fact that films have not been overrun by interpreters is in part due simply to the newness of cinema as an art. It also owes to the happy accident that films for such a long time were just movies; in other words, that they were understood to be part of mass, as opposed to high, culture, and were left alone by most people with minds. Then, too, there is always some-

3. American film director (1875–1948); his best-known film, *The Birth of a Nation* (1915), is recognized for its brilliant technical and dramatic innovations and notorious for its overt racism.

4. All American directors of the golden age of the Hollywood studios: George Cukor (1899–1983), Raoul Walsh (1887–1980), and Howard Hawks (1896–1977).

5. All adherents of the view that emerged in the

mid-1950s that directors are *auteurs* (i.e., authors of the film), and all responsible for more films than are listed here: François Truffaut (1932–1984), French—*Shoot the Piano Player* (1960) and *Jules and Jim* (1962); Jean-Luc Godard (b. 1930), French—*Breathless* (1960) and *Vivre Sa Vie* (1962, *My Life to Live*); Michelangelo Antonioni (1912–2007), Italian—*L'Avventura* (1960, *The Adventure*); and Ermanno Olmi (b. 1931), Italian—*The Fiancés* (1963, *I fidanzati*).

thing other than content in the cinema to grab hold of, for those who want to analyze. For the cinema, unlike the novel, possesses a vocabulary of forms—the explicit, complex, and discussable technology of camera movements, cutting, and composition of the frame that goes into the making of a film.

8

What kind of criticism, of commentary on the arts, is desirable today? For I am not saying that works of art are ineffable, that they cannot be described or paraphrased. They can be. The question is how. What would criticism look like that would serve the work of art, not usurp its place?

What is needed, first, is more attention to form in art. If excessive stress on *content* provokes the arrogance of interpretation, more extended and more thorough descriptions of *form* would silence. What is needed is a vocabulary—a descriptive, rather than prescriptive, vocabulary—for forms.⁶ The best criticism, and it is uncommon, is of this sort that dissolves considerations of content into those of form. On film, drama, and painting respectively, I can think of Erwin Panofsky's essay "Style and Medium in the Motion Pictures,"⁷ Northrop Frye's essay "A Conspectus of Dramatic Genres,"⁸ and Pierre Francastel's essay "The Destruction of a Plastic Space."⁹ Roland Barthes' book *On Racine* and his two essays on Robbe-Grillet¹ are examples of formal analysis applied to the work of a single author. (The best essays in Erich Auerbach's *Mimesis*, like "The Scar of Odysseus,"² are also of this type.) An example of formal analysis applied simultaneously to genre and author is Walter Benjamin's essay, "The Story Teller: Reflections on the Works of Nicolai Leskov."³

Equally valuable would be acts of criticism which would supply a really accurate, sharp, loving description of the appearance of a work of art. This seems even harder to do than formal analysis. Some of Manny Farber's⁴ film criticism, Dorothy Van Ghent's essay "The Dickens World: A View from Todgers,"⁵ Randall Jarrell's essay on Walt Whitman⁶ are among the rare

6. One of the difficulties is that our idea of form is spatial (the Greek metaphors for form are all derived from notions of space). This is why we have a more ready vocabulary of forms for the spatial than for the temporal arts. The exception among the temporal arts, of course, is the drama; perhaps this is because the drama is a narrative (i.e., temporal) form that extends itself visually and pictorially, upon a stage. . . . What we don't have yet is a poetics of the novel, any clear notion of the forms of narration. Perhaps film criticism will be the occasion of a breakthrough here, since films are primarily a visual form, yet they are also a subdivision of literature [Sontag's note].

7. Originally published as "On Movies" (1936), expanded successively under this title (1936, 1947), and reprinted in *Three Essays on Style* (1995), by the German-born American art historian Panofsky (1892–1968).

8. First published in 1951 and later incorporated into *Anatomy of Criticism* (1957), by the Canadian literary critic and theorist FRYE (1912–1991).

9. Essay excerpted from a longer original by the French art historian Francastel (1900–1970) and published in *Art History: An Anthology of Modern Criticism* (ed. Wylie Sypher, 1963).

4. American film and art critic and painter (1917–2008).

5. Published (with the subtitle "A View from Todgers's") in *Sewanee Review* 58 (1950); Todgers's is a boardinghouse in *Martin Chuzzlewit* (1843–44), by the English novelist Charles Dickens (1812–1870). Van Ghent (1907–1967), literary scholar.

6. American poet (1819–1892); the essay is "Some Lines from Whitman," in *Poetry and the Age* (1953), by the American poet and critic Jarrell (1914–1965).

examples of what I mean. These are essays which reveal the sensuous surface of art without mucking about in it.

9

Transparence is the highest, most liberating value in art—and in criticism—today. Transparence means experiencing the luminousness of the thing in itself, of things being what they are. This is the greatness of, for example, the films of Bresson and Ozu and Renoir's *The Rules of the Game*.⁷

Once upon a time (say, for Dante⁸), it must have been a revolutionary and creative move to design works of art so that they might be experienced on several levels. Now it is not. It reinforces the principle of redundancy that is the principal affliction of modern life.

Once upon a time (a time when high art was scarce), it must have been a revolutionary and creative move to interpret works of art. Now it is not. What we decidedly do not need now is further to assimilate Art into Thought, or (worse yet) Art into Culture.

Interpretation takes the sensory experience of the work of art for granted, and proceeds from there. This cannot be taken for granted, now. Think of the sheer multiplication of works of art available to every one of us, super-added to the conflicting tastes and odors and sights of the urban environment that bombard our senses. Ours is a culture based on excess, on overproduction; the result is a steady loss of sharpness in our sensory experience. All the conditions of modern life—its material plenitude, its sheer crowdedness—conjoin to dull our sensory faculties. And it is in the light of the condition of our senses, our capacities (rather than those of another age), that the task of the critic must be assessed.

What is important now is to recover our senses. We must learn to see more, to *hear* more, to *feel* more.

Our task is not to find the maximum amount of content in a work of art, much less to squeeze more content out of the work than is already there. Our task is to cut back content so that we can see the thing at all.

The aim of all commentary on art now should be to make works of art—and, by analogy, our own experience—more, rather than less, real to us. The function of criticism should be to show *how it is what it is*, even *that it is what it is*, rather than to show *what it means*.

10

In place of a hermeneutics we need an erotics of art.

1964

7. A 1939 film that was the masterpiece of the French director Jean Renoir (1894–1979). Robert Bresson (1901–1999), French film director. Ozu Yasujiro (1903–1963), Japanese film director.

8. DANTE ALIGHIERI (1265–1321), Italian writer of prose and poetry; his masterwork is an allegorical epic poem, *The Divine Comedy* (1307–21).

FREDRIC JAMESON

b. 1934

Although it flourished during the 1930s, Marxist aesthetics and literary criticism all but vanished from critical discourse in the United States after World War II. The cold war consensus stigmatized everything associated with communism, and the dominant methods of the New Criticism practiced by CLEANTH BROOKS and others focused on internal features of works rather than external connections with society, politics, and history. Even when radical cultural criticism reemerged in the social tumult of the 1960s, its main roots were not in Marxism but in new social movements such as feminism, black power, and environmentalism. Against this current, Fredric Jameson almost single-handedly revived Marxist literary studies within the American academy, principally with *Marxism and Form* (1971), which recovered major figures in the Western Marxist tradition, and with his landmark *The Political Unconscious: Narrative as a Socially Symbolic Act* (1981), which outlined his methods for a Marxist literary criticism. An ambitious synthesis of contemporary structuralist theory and Marxism, *The Political Unconscious*, from which we take our first selection, argues that political and economic history form the subtexts and allegorical meanings of literary works. Jameson broadened his focus to examine contemporary culture, and "Postmodernism and Consumer Society" (1988), our second selection, encapsulates his widely influential views on postmodernism, in particular on the relation of art to present-day capitalist production.

Born in Cleveland, Ohio, Jameson was educated at Haverford College, receiving his B.A. in 1954, and at Yale University, where he earned a doctorate in French and comparative literature in 1959. He also spent a formative year in Germany on a Fulbright Fellowship at the Universities of Munich and Berlin (1956–57). After teaching at Harvard University from 1959 to 1967, Jameson moved to the newly created University of California at San Diego, where he encountered Herbert Marcuse, guru for many student radicals and a surviving figure from the Frankfurt School (of which THEODOR W. ADORNO was a central member). Thereafter Jameson held positions at Yale University (1976–83) and the University of California at Santa Cruz (1983–85), settling at Duke University in 1986 as Distinguished Professor of Comparative Literature and director of the Center for Critical Theory.

By the mid-1970s, Jameson and TERRY EAGLETON were being hailed as the most significant Marxist literary critics and theorists in the Anglophone world, but it was not until the publication of *The Political Unconscious* that the originality of Jameson's project became clear. Opening with the famous exhortation "Always historicize!" he sets out the methodological approach he calls "metacommentary," which provides a theoretically sophisticated answer to the perennial question of the relation of aesthetics to social history. In contrast to those practicing more conventional forms of historical criticism, Jameson not only situates cultural texts in relation to their immediate context but also approaches them from the vantage point of hermeneutics, exploring the interpretive strategies that shape how we understand individual works. Unlike other modern theories of interpretation, Jameson's stresses that its object is an analysis of ideology and that Marxism encompasses all other interpretive strategies, showing that their explanations of a text's meaning are only partial.

Jameson holds that a critic wishing to decipher the meaning of a text must proceed through a series of distinct phases, embodied in the text and uncovered through systematic decoding. He draws on a wide array of twentieth-century theoretical sources to do this, from NORTHROP FRYE's four levels of interpretation (which ultimately derive from the medieval interpretive schema of THOMAS AQUINAS), to JACQUES LACAN's theory of the unconscious, to LOUIS ALTHUSSER's account of ideology. Jameson sees Marxist

criticism not as exclusionary or separatist but as comprehensive, assimilating a compendium of sources and thereby achieving greater "semantic richness." The critic should examine in turn the political history to which a text refers, social history (conceived in traditional Marxist terms as the history of class struggles), and the history of modes of production. These approaches do not displace but are embedded in each other, building to higher levels of generality and deeper layers of historical causation.

To interpret a text within the horizon of political history, Jameson focuses on "the individual work . . . grasped essentially as a *symbolic act*." For instance, one can read Shakespeare's *Macbeth* (ca. 1606) as a presentation of the burning political issue of its historical moment, royal succession. Shakespeare's contemporaries would have recognized this both as the play's obvious theme (Macbeth as the murderous usurper; Malcolm as the legitimate but feckless heir) and as a matter of immediate political concern—the play was performed at court not long after James VI of Scotland had assumed the English throne as James I, a Stuart supplanting the Tudor dynasty. Details of plot, character, and thought are in this reading understood as allegorical signs referring to historical figures and to Renaissance doctrines about royal power and its legitimacy.

For the second phase of interpretation, the object of investigation is "the *ideologeme*, that is, the smallest intelligible unit of the essentially antagonistic collective discourses of social classes." To take another example from Shakespeare, in a number of the history plays, such as the two parts of *Henry IV* (ca. 1597, 1599), as well as in several of the tragedies, such as *Hamlet* (ca. 1600) and *King Lear* (ca. 1605), the dramatic struggle between the major characters stages the ideological conflict between older, medieval ideals of kingship and the modernizing tendencies of an emergent absolutist power that advances the interests of the bourgeoisie against the prerogatives of powerful feudal landlords. This sociological interpretation does not cancel out the first; one can still recognize the political allegory in *Henry IV*, which justifies Tudor rule by showing the superiority of the modernizing Tudors (embodied in Prince Hal) over both the rebellious English barons and the effeminate French monarchy.

The outermost circle of interpretation, "the ideology of form," links the literary work with the mode of production (characterized, according to KARL MARX, as tribal hordes, Neolithic kinship societies, Oriental despotism, ancient slaveholding societies, feudalism, capitalism, and finally communism). Thus Hamlet's "problems" (famously elaborated by T. S. ELIOT) do not indicate Shakespeare's dramatic failure (as Eliot argued) but rather signify a historical tension between the feudal ideals embodied in Hamlet's father, ideals to which Hamlet owes one sort of allegiance, and the modern habits imbibed by the prince through his university education at Wittenberg. These latter include Hamlet's tendency toward obsessive individualistic reflection, which prevents his carrying out the revenge that his father decreed against the usurping Claudius. This conflict is visible in the play's dramatic form, which overlays a modern psychological drama onto its older source material governed by the conventions of revenge tragedy (a popular form in Shakespeare's day). The play stands, thematically and formally, on the cusp of a major historical transformation—the transition from feudalism to capitalism. Hamlet's fatal actions at the end do not resolve the play's ideological and formal contradictions because no resolution was imaginable in 1600; the triumph of capitalism over feudalism in Britain would not be achieved until near the end of the seventeenth century, with remnants of feudal ideologies persisting long after.

The imaginative limits imposed on an author or a text by its historical moment reveal the operation of history itself, which "sets inexorable limits to individual as well as collective praxis." And though its causes might not be immediately apparent, we can apprehend history in its effects, which are "inaccessible to us except in textual form." Here Jameson espouses a distinctly poststructuralist view, that—as articulated by PAUL DE MAN—"the bases for historical knowledge are not empirical

facts but written texts, even if these texts masquerade in the guise of wars or revolutions"; however, he departs from de Man in stressing the text's ideological over its linguistic import.

In "Postmodernism and Consumer Society," which anticipates his magisterial study *Postmodernism, or, The Cultural Logic of Late Capitalism* (1991), Jameson expands his consideration of the ideology of form, moving beyond the literary canon to contemporary culture—including film, experimental poetry, popular fiction, art, and architecture. He identifies two causal conditions for postmodernism across the arts: first, its products "emerge as specific reactions against the established forms of high modernism"; and second, it results from the "erosion of the older distinction between high culture and so-called mass or popular culture." These essentially aesthetic determinations, however, are not postmodernism's ultimate cause. In classically Marxist fashion, Jameson looks to the underlying economic formation: postmodernism "expresses the inner truth of that newly emergent social order of late capitalism," sometimes also called consumer, postindustrial, or multinational capitalism, which arose in the aftermath of World War II and reached both its fulfillment and a moment of crisis during the 1960s and 1970s. For Jameson, "postmodernism" names a historical period, not just a new style or aesthetic. As modernism was a result of the imperial stage of capitalism, so postmodernism is the distinctive "ideology of form" of the contemporary period of consumer capitalism.

Postmodern works exhibit a range of distinctive formal features, such as pastiche and simulation. Focusing on what he calls "the nostalgia mode," Jameson describes the peculiar dehistoricized depthlessness of certain postmodern works, such as the popular film *American Graffiti* (1973) and novels like E. L. Doctorow's *Ragtime* (1975). In a postmodern world, we "seem condemned to seek the historical past through our own pop images and stereotypes about the past, which itself remains forever out of reach." Jameson goes on to analyze one of the exemplary monuments of postmodern architecture, John Portman's Bonaventure Hotel (1977) in downtown Los Angeles. Showing how space is configured in disorienting new ways by Portman's structure, Jameson argues that postmodern architecture embodies an objectively new kind of bewildering hyperspace, which we lack the necessary perceptual and cognitive tools to understand. He concludes by returning to the contrast between high modernist and postmodern works, reemphasizing modernism's oppositional stance toward the dominant culture of the bourgeoisie. About postmodernism, Jameson is more tentative; he suggests that it may be more than the reflection of consumer society, but he ultimately declines to answer the question he has posed about its critical potential.

Recognized as the leading contemporary Marxist critic in the United States as well as a major practitioner of poststructuralist theory, Jameson has drawn both a large following and a great deal of criticism. Some have charged that his writing is overly difficult, obscure, and inaccessible. Theoretically attuned critics have variously questioned his "totalizing" allegorical method of interpretation, his eclectic borrowing from diverse theories, his reductive scheme of historical periods leading to postmodernism, his disregard of feminism and gender dynamics, and his lack of concrete attention to ongoing political struggles. From the Marxist Left, Terry Eagleton questions the connection between theory and politics, pointedly asking of one of Jameson's readings in *The Political Unconscious*: "How is a Marxist-structuralist analysis of a minor novel of Balzac to help shake the foundations of capitalism?" Although Eagleton allows, quoting Althusser, that it contributes to the "class struggle at the level of theory," he concludes that the relation is unclear. Jameson himself answers in an interview that his intention is to make Marxism a central concern in intellectual circles, as well as to redefine it in light of contemporary thought. Though his work may not immediately translate to concrete political practices and policies, Jameson has been a

tireless analyst of “the ideology of form” in literary and cultural works, and he is arguably the most influential proponent of Marxism in contemporary criticism.

“Postmodernism and Consumer Society” Keywords: Cultural Studies, Modernity, Popular Culture, Postmodernity, Representation

From The Political Unconscious: Narrative as a Socially Symbolic Act

Preface

Always historicize! This slogan—the one absolute and we may even say “transhistorical” imperative of all dialectical thought¹—will unsurprisingly turn out to be the moral of *The Political Unconscious* as well. But, as the traditional dialectic teaches us, the historicizing operation can follow two distinct paths, which only ultimately meet in the same place: the path of the object and the path of the subject, the historical origins of the things themselves and that more intangible historicity of the concepts and categories by which we attempt to understand those things. In the area of culture, which is the central field of the present book, we are thus confronted with a choice between study of the nature of the “objective” structures of a given cultural text (the historicity of its forms and of its content, the historical moment of emergence of its linguistic possibilities, the situation-specific function of its aesthetic) and something rather different which would instead foreground the interpretive categories or codes through which we read and receive the text in question. For better or for worse, it is this second path we have chosen to follow here: *The Political Unconscious* accordingly turns on the dynamics of the act of interpretation and presupposes, as its organizational fiction, that we never really confront a text immediately, in all its freshness as a thing-in-itself. Rather, texts come before us as the always-already-read; we apprehend them through sedimented layers of previous interpretations, or—if the text is brand-new—through the sedimented reading habits and categories developed by those inherited interpretive traditions. This presupposition then dictates the use of a method (which I have elsewhere termed the “metacommentary”²) according to which our object of study is less the text itself than the interpretations through which we attempt to confront and to appropriate it. Interpretation is here construed as an essentially allegorical act, which consists in rewriting a given text in terms of a particular interpretive master code. The identification of the latter will then lead to an evaluation of such codes or, in other words, of the “methods” or approaches current in American literary and cultural study today. Their juxtaposition with a dialectical or totalizing, properly Marxist ideal of understanding will

1. In Marxist theory, thought that links ideas and cultural forms to their economic foundations.

2. See “Metacommentary” (1971), included in

Jameson’s *Ideologies of Theory: Essays, 1971–1986*, vol. 1, *Situations of Theory* (Minneapolis: University of Minnesota Press, 1988).

be used to demonstrate the structural limitations of the other interpretive codes, and in particular to show the "local" ways in which they construct their objects of study and the "strategies of containment" whereby they are able to project the illusion that their readings are somehow complete and self-sufficient.

The retrospective illusion of the metacommentary thus has the advantage of allowing us to measure the yield and density of a properly Marxist interpretive act against those of other interpretive methods—the ethical, the psychoanalytic, the myth-critical, the semiotic, the structural, and the theological—against which it must compete in the "pluralism" of the intellectual marketplace today. I will here argue the priority of a Marxian interpretive framework in terms of semantic richness. Marxism cannot today be defended as a mere substitute for such other methods, which would then triumphalistically be consigned to the ashcan of history; the authority of such methods springs from their faithful consonance with this or that local law of a fragmented social life, this or that subsystem of a complex and mushrooming cultural superstructure.³ In the spirit of a more authentic dialectical tradition, Marxism is here conceived as that "untranscendable horizon" that subsumes such apparently antagonistic or incommensurable critical operations, assigning them an undoubted sectoral validity within itself, and thus at once canceling and preserving them.

Because of the peculiar focus of this retrospective organization, however, it may be worth warning the reader what *The Political Unconscious* is not. The reader should not, in the first place, expect anything like that exploratory projection of what a vital and emergent political culture should be and do which Raymond Williams⁴ has rightly proposed as the most urgent task of a Marxist cultural criticism. There are, of course, good and objective historical reasons why contemporary Marxism has been slow in rising to this challenge: the sorry history of Zhdanovite prescription⁵ in the arts is one, the fascination with modernisms and "revolutions" in form and language is another, as well as the coming of a whole new political and economic "world system," to which the older Marxist cultural paradigms only imperfectly apply. A provisional conclusion to the present work will spell out some of the challenges Marxist interpretation must anticipate in conceiving those new forms of collective thinking and collective culture which lie beyond the boundaries of our own world. The reader will there find an empty chair reserved for some as yet unrealized, collective, and decentered cultural production of the future, beyond realism and modernism alike.

If this book, then, fails to propose a political or revolutionary aesthetic, it is equally little concerned to raise once again the traditional issues of philosophical aesthetics: the nature and function of art, the specificity of poetic language and of the aesthetic experience, the theory of the beautiful, and so forth. Yet the very absence of such issues may serve as an implicit commentary on them; I have tried to maintain an essentially historicist perspective,

3. According to the German social and political philosopher KARL MARX (1818–1883), all social, political, and cultural forms are part of a society's superstructure, which interacts with but ultimately depends on its economic base.

4. British literary and cultural critic (1921–1988;

see above).

5. The censorship by Andrey Zhdanov (1896–1948), a Bolshevik leader during the Russian Revolution who later, as a member of the Soviet Politburo, tightened the guidelines for cultural activities.

in which our readings of the past are vitally dependent on our experience of the present, and in particular on the structural peculiarities of what is sometimes called the *société de consommation* (or the “disaccumulative” moment of late monopoly or consumer or multinational capitalism), what Guy Debord⁶ calls the society of the image or of the spectacle. The point is that in such a society, saturated with messages and with “aesthetic” experiences of all kinds, the issues of an older philosophical aesthetics themselves need to be radically historicized, and can be expected to be transformed beyond recognition in the process.

Nor, although literary history is here everywhere implied, should *The Political Unconscious* be taken as paradigmatic work in this discursive form or genre, which is today in crisis. Traditional literary history was a subset of representational narrative, a kind of narrative “realism” become as problematic as its principal exemplars in the history of the novel. The second chapter of the present book, which is concerned with genre criticism, will raise the theoretical problem of the status and possibility of such literary-historical narratives, which in *Marxism and Form* I termed “diachronic” constructs⁷; the subsequent readings of Balzac, Gissing, and Conrad⁸ project a diachronic framework—the construction of the bourgeois subject in emergent capitalism and its schizophrenic disintegration in our own time—which is, however, here never fully worked out. Of literary history today we may observe that its task is at one with that proposed by Louis Althusser⁹ for historiography in general: not to elaborate some achieved and lifelike simulacrum of its supposed object, but rather to “produce” the latter’s “concept.” This is indeed what the greatest modern or modernizing literary histories—such as Erich Auerbach’s *Mimesis*¹—have sought to do in their critical practice, if not in their theory.

Is it at least possible, then, that the present work might be taken as an outline or projection of a new kind of critical method? Indeed it would seem to me perfectly appropriate to recast many of its findings in the form of a methodological handbook, but such a manual would have as its object *ideological analysis*, which remains, I believe, the appropriate designation for the critical “method” specific to Marxism. For reasons indicated above, this book is not that manual, which would necessarily settle its accounts with rival “methods” in a far more polemic spirit. Yet the unavoidably Hegelian² tone of the retrospective framework of *The Political Unconscious* should not be taken to imply that such polemic interventions are not of the highest priority for Marxist cultural criticism. On the contrary, the latter must necessarily also be what Althusser has demanded of the practice of Marxist philosophy proper, namely “class struggle within theory.”

6. French critic (1931–1994), author of *The Society of the Spectacle* (1967), in which he coins these phrases. *Société de consommation*: consumer society (French).

7. Dealing with change over time (a term common in structuralist linguistics, and often paired with the *synchronic*, which focuses on phenomena at one moment of time). *Marxism and Form* was published in 1971.

8. Joseph Conrad (1857–1924), Polish-born

English novelist. Honoré de Balzac (1799–1850), French novelist. George Gissing (1857–1903), English novelist.

9. French Marxist philosopher (1918–1990; see above).

1. *Mimesis: The Representation of Reality in Western Literature* (1946; see above), by the German literary critic AUERBACH (1892–1957).

2. Characteristic of GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German idealist philosopher.

For the non-Marxist reader, however, who may well feel that this book is quite polemic enough, I will add what should be unnecessary and underline my debt to the great pioneers of narrative analysis. My theoretical dialogue with them in these pages is not merely to be taken as yet another specimen of the negative critique of “false consciousness”³ (although it is that too, and, indeed, in the Conclusion I will deal explicitly with the problem of the proper uses of such critical gestures as demystification and ideological unmasking). It should meanwhile be obvious that no work in the area of narrative analysis can afford to ignore the fundamental contributions of Northrop Frye, the codification by A. J. Greimas of the whole Formalist and semiotic traditions, the heritage of a certain Christian hermeneutics, and above all, the indispensable explorations by Freud of the logic of dreams, and by Claude Lévi-Strauss⁴ of the logic of “primitive” storytelling and *pensée sauvage*, not to speak of the flawed yet monumental achievements in this area of the greatest Marxist philosopher of modern times, Georg Lukács.⁵ These divergent and unequal bodies of work are here interrogated and evaluated from the perspective of the specific critical and interpretive task of the present volume, namely to restructure the problematics of ideology, of the unconscious and of desire, of representation, of history, and of cultural production, around the all-informing process of *narrative*, which I take to be (here using the shorthand of philosophical idealism) the central function or *instance* of the human mind. This perspective may be reformulated in terms of the traditional dialectical code as the study of *Darstellung*:⁶ that untranslatable designation in which the current problems of *representation* productively intersect with the quite different ones of *presentation*, or of the essentially narrative and rhetorical movement of language and writing through time.

Last but not least, the reader may well be puzzled as to why a book ostensibly concerned with the interpretive act should devote so little attention to issues of interpretive validity, and to the criteria by which a given interpretation may be faulted or accredited. I happen to feel that no interpretation can be effectively disqualified on its own terms by a simple enumeration of inaccuracies or omissions, or by a list of unanswered questions. Interpretation is not an isolated act, but takes place within a Homeric battlefield, on which a host of interpretive options are either openly or implicitly in conflict. If the positivistic conception of philological accuracy be the only alternative, then I would much prefer to endorse the current provocative celebration of strong misreadings over weak ones.⁷ As the Chinese proverb has it, you use one ax handle to hew another: in our context, only another, stronger interpretation can overthrow and practically refute an interpretation already in place.

I would therefore be content to have the theoretical sections of this book judged and tested against its interpretive practice. But this very antithesis

3. A Marxist term referring to an individual's tendency to view reality in ways congruent with the interests of the dominant orthodoxy rather than in ways that reflect his or her own class interest.

4. French structuralist anthropologist (1908–2009; see above), whose works include *La Pensée sauvage* (1962, *The Savage Mind*). FRYE (1912–1991), Canadian literary critic associated with archetypal criticism. Greimas (1917–1992), Lithuanian-born

French semiotician. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis and author of *The Interpretation of Dreams* (1900).

5. GYÖRGY LUKÁCS (1885–1971), Hungarian literary critic and philosopher.

6. Representation (German).

7. A reference to the theory of literary influence presented by the American critic HAROLD BLOOM in such works as *The Anxiety of Influence* (1973; see above) and *A Map of Misreading* (1975).

marks out the double standard and the formal dilemma of all cultural study today, from which *The Political Unconscious* is scarcely exempt: an uneasy struggle for priority between models and history, between theoretical speculation and textual analysis, in which the former seeks to transform the latter into so many mere examples, adduced to support its abstract propositions, while the latter continues insistently to imply that the theory itself was just so much methodological scaffolding, which can readily be dismantled once the serious business of practical criticism is under way. These two tendencies—theory and literary history—have so often in Western academic thought been felt to be rigorously incompatible that it is worth reminding the reader, in conclusion, of the existence of a third position which transcends both. That position is, of course, Marxism, which, in the form of the dialectic, affirms a primacy of theory which is at one and the same time a recognition of the primacy of History itself.

*From Chapter 1. On Interpretation: Literature
as a Socially Symbolic Act*

* * *

III

At this point it might seem appropriate to juxtapose a Marxist method of literary and cultural interpretation with those just outlined, and to document its claims to greater adequacy and validity. For better or for worse, however, as I warned in the Preface, this obvious next step is not the strategy projected by the present book, which rather seeks to argue the perspectives of Marxism as necessary preconditions for adequate literary comprehension. Marxist critical insights will therefore here be defended as something like an ultimate *semantic* precondition for the intelligibility of literary and cultural texts. Even this argument, however, needs a certain specification: in particular we will suggest that such semantic enrichment and enlargement of the inert givens and materials of a particular text must take place within three concentric frameworks, which mark a widening out of the sense of the social ground of a text through the notions, first, of political history, in the narrow sense of punctual event and a chroniclelike sequence of happenings in time; then of society, in the now already less diachronic and time-bound sense of a constitutive tension and struggle between social classes; and, ultimately, of history now conceived in its vastest sense of the sequence of modes of production⁸ and the succession and destiny of the various human social formations, from prehistoric life to whatever far future history has in store for us.

These distinct semantic horizons are, to be sure, also distinct moments of the process of interpretation, and may in that sense be understood as dialectical equivalents of what Frye has called the successive “phases” in our reinterpretation—our rereading and rewriting—of the literary text. What we must also note, however, is that each phase or horizon governs a distinct

8. In the Marxist schema, human history progresses through tribal hordes, Neolithic kinship societies, Oriental despotism, ancient slavehold-

ing societies, feudalism, capitalism, and finally to communism.

reconstruction of its object, and construes the very structure of what can now only in a general sense be called "the text" in a different way.

Thus, within the narrower limits of our first, narrowly political or historical, horizon, "the text," the object of study, is still more or less construed as coinciding with the individual literary work or utterance. The difference between the perspective enforced and enabled by this horizon, however, and that of ordinary *explication de texte*, or individual exegesis, is that here the individual work is grasped essentially as a *symbolic act*.

When we pass into the second phase, and find that the semantic horizon within which we grasp a cultural object has widened to include the social order, we will find that the very object of our analysis has itself been thereby dialectically transformed, and that it is no longer construed as an individual "text" or work in the narrow sense, but has been reconstituted in the form of the great collective and class discourses of which a text is little more than an individual *parole* or utterance.⁹ Within this new horizon, then, our object of study will prove to be the *ideologeme*, that is, the smallest intelligible unit of the essentially antagonistic collective discourses of social classes.

When finally, even the passions and values of a particular social formation find themselves placed in a new and seemingly relativized perspective by the ultimate horizon of human history as a whole, and by their respective positions in the whole complex sequence of the modes of production, both the individual text and its ideologemes know a final transformation, and must be read in terms of what I will call the *ideology of form*, that is, the symbolic messages transmitted to us by the coexistence of various sign systems which are themselves traces or anticipations of modes of production.

The general movement through these three progressively wider horizons will largely coincide with the shifts in focus of the final chapters in this book, and will be felt, although not narrowly and programmatically underscored, in the methodological transformations determined by the historical transformations of their textual objects, from Balzac to Gissing to Conrad.

We must now briefly characterize each of these semantic or interpretive horizons. We have suggested that it is only in the first narrowly political horizon—in which history is reduced to a series of punctual events and crises in time, to the diachronic agitation of the year-to-year, the chronicle-like annals of the rise and fall of political regimes and social fashions, and the passionate immediacy of struggles between historical individuals—that the "text" or object of study will tend to coincide with the individual literary work or cultural artifact. Yet to specify this individual text as a symbolic act is already fundamentally to transform the categories with which traditional *explication de texte* (whether narrative or poetic) operated and largely still operates.

The model for such an interpretive operation remains the readings of myth and aesthetic structure of Claude Lévi-Strauss as they are codified in his fundamental essay "The Structural Study of Myth."¹ These suggestive, often

9. Structural linguistics follows the distinction first made by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913), often retaining his French terms, between the speech of an individual language user (*parole*) and language as an abstract system (*langue*).

1. Claude Lévi-Strauss, *Structural Anthropology*, trans. C. Jacobson and B. G. Schoepf (New York: Basic, 1963), pp. 206–31 [Jameson's note]. Some of the author's notes have been edited, and some omitted.

sheerly occasional, readings and speculative glosses immediately impose a basic analytical or interpretive principle: the individual narrative, or the individual formal structure, is to be grasped as the imaginary resolution of a real contradiction. Thus, to take only the most dramatic of Lévi-Strauss's analyses—the “interpretation” of the unique facial decorations of the Caduveo Indians²—the starting point will be an immanent description of the formal and structural peculiarities of this body art; yet it must be a description already pre-prepared and oriented toward transcending the purely formalistic, a movement which is achieved not by abandoning the formal level for something extrinsic to it—such as some inertly social “content”—but rather immanently, by construing purely formal patterns as a symbolic enactment of the social within the formal and the aesthetic. Such symbolic functions are, however, rarely found by an aimless enumeration of random formal and stylistic features; our discovery of a text's symbolic efficacy must be oriented by a formal description which seeks to grasp it as a determinate structure of still properly formal *contradictions*. Thus, Lévi-Strauss orients his still purely visual analysis of Caduveo facial decorations toward this climactic account of their contradictory dynamic: “the use of a design which is symmetrical but yet lies across an oblique axis . . . a complicated situation based upon two contradictory forms of duality, and resulting in a compromise brought about by a secondary opposition between the ideal axis of the object itself [the human face] and the ideal axis of the figure which it represents.”³ Already on the purely formal level, then, this visual text has been grasped as a contradiction by way of the curiously provisional and asymmetrical resolution it proposes for that contradiction.

Lévi-Strauss's “interpretation” of this formal phenomenon may now, perhaps overhastily, be specified. Caduveo are a hierarchical society, organized in three endogamous groups⁴ or castes. In their social development, as in that of their neighbors, this nascent hierarchy is already the place of the emergence, if not of political power in the strict sense, then at least of relations of domination: the inferior status of women, the subordination of youth to elders, and the development of a hereditary aristocracy. Yet whereas this latent power structure is, among the neighboring Guana and Bororo,⁵ masked by a division into moieties which cuts across the three castes, and whose exogamous exchange⁶ appears to function in a nonhierarchical, essentially egalitarian way, it is openly present in Caduveo life, as surface inequality and conflict. The social institutions of the Guana and Bororo, on the other hand, provide a realm of appearance, in which real hierarchy and inequality are dissimulated by the reciprocity of the moieties, and in which, therefore, “asymmetry of class is balanced . . . by symmetry of ‘moieties.’”

As for the Caduveo,

they were never lucky enough to resolve their contradictions, or to disguise them with the help of institutions artfully devised for that purpose. On the social level, the remedy was lacking . . . but it was never completely

out of their grasp. It was within them, never objectively formulated, but present as a source of confusion and disquiet. Yet since they were unable to conceptualize or to live this solution directly, they began to dream it, to project it into the imaginary. . . . We must therefore interpret the graphic art of Caduveo women, and explain its mysterious charm as well as its apparently gratuitous complication, as the fantasy production of a society seeking passionately to give symbolic expression to the institutions it might have had in reality, had not interest and superstition stood in the way.⁷

In this fashion, then, the visual text of Caduveo facial art constitutes a symbolic act, whereby real social contradictions, insurmountable in their own terms, find a purely formal resolution in the aesthetic realm.

This interpretive model thus allows us a first specification of the relationship between ideology and cultural texts or artifacts: a specification still conditioned by the limits of the first, narrowly historical or political horizon in which it is made. We may suggest that from this perspective, ideology is not something which informs or invests symbolic production; rather the aesthetic act is itself ideological, and the production of aesthetic or narrative form is to be seen as an ideological act in its own right, with the function of inventing imaginary or formal "solutions" to unresolvable social contradictions.

Lévi-Strauss's work also suggests a more general defense of the proposition of a political unconscious than we have hitherto been able to present, insofar as it offers the spectacle of so-called primitive peoples perplexed enough by the dynamics and contradictions of their still relatively simple forms of tribal organization to project decorative or mythic resolutions of issues that they are unable to articulate conceptually. But if this is the case for pre-capitalist and even pre-political societies, then how much more must it be true for the citizen of the modern *Gesellschaft*,⁸ faced with the great constitutional options of the revolutionary period, and with the corrosive and tradition-annihilating effects of the spread of a money and market economy, with the changing cast of collective characters which oppose the bourgeoisie, now to an embattled aristocracy, now to an urban proletariat, with the great fantasies of the various nationalisms, now themselves virtual "subjects of history" of a rather different kind, with the social homogenization and psychic constriction of the rise of the industrial city and its "masses," the sudden appearance of the great transnational forces of communism and fascism, followed by the advent of the superstates and the onset of that great ideological rivalry between capitalism and communism, which, no less passionate and obsessive than that which, at the dawn of modern times, seethed through the wars of religion, marks the final tension of our now global village? It does not, indeed, seem particularly farfetched to suggest that these texts of history, with their fantasmatic collective "actants,"⁹ their narrative organization, and their immense charge of anxiety and libidinal investment, are lived by the contemporary subject as a genuine politico-historical *pensée sauvage* which necessarily informs all of our cultural artifacts, from the literary institutions

of high modernism all the way to the products of mass culture. Under these circumstances, Lévi-Strauss's work suggests that the proposition whereby all cultural artifacts are to be read as symbolic resolutions of real political and social contradictions deserves serious exploration and systematic experimental verification. It will become clear in later chapters of this book that the most readily accessible formal articulation of the operations of a political *pensée sauvage* of this kind will be found in what we will call the structure of a properly political *allegory*, as it develops from networks of topical allusion in Spenser or Milton or Swift¹ to the symbolic narratives of class representatives or "types" in novels like those of Balzac. With political allegory, then, a sometimes repressed ur-narrative² or master fantasy about the interaction of collective subjects, we have moved to the very borders of our second horizon, in which what we formerly regarded as individual texts are grasped as "utterances" in an essentially collective or class discourse.

We cannot cross those borders, however, without some final account of the critical operations involved in our first interpretive phase. We have implied that in order to be consequent, the will to read literary or cultural texts as symbolic acts must necessarily grasp them as resolutions of determinate contradictions; and it is clear that the notion of contradiction is central to any Marxist cultural analysis, just as it will remain central in our two subsequent horizons, although it will there take rather different forms. The methodological requirement to articulate a text's fundamental contradiction may then be seen as a test of the completeness of the analysis: this is why, for example, the conventional sociology of literature or culture, which modestly limits itself to the identification of class motifs or values in a given text, and feels that its work is done when it shows how a given artifact "reflects" its social background, is utterly unacceptable. Meanwhile, Kenneth Burke's³ play of emphases, in which a symbolic act is on the one hand affirmed as a genuine *act*, albeit on the symbolic level, while on the other it is registered as an act which is "merely" symbolic, its resolutions imaginary ones that leave the real untouched, suitably dramatizes the ambiguous status of art and culture.

Still, we need to say a little more about the status of this external reality, of which it will otherwise be thought that it is little more than the traditional notion of "context" familiar in older social or historical criticism. The type of interpretation here proposed is more satisfactorily grasped as the rewriting of the literary text in such a way that the latter may itself be seen as the rewriting or restructuration of a prior historical or ideological *subtext*, it being always understood that that "subtext" is not immediately present as such, not some common-sense external reality, nor even the conventional narratives of history manuals, but rather must itself always be (re)constructed after the fact. The literary or aesthetic act therefore always entertains some active relationship with the Real;⁴ yet in order to do so, it cannot simply allow "reality" to persevere inertly in its own being, outside the text and at distance. It

(1897–1993).

4. A technical term from the theory of the French psychoanalyst JACQUES LACAN (1901–1981); the Real can be studied only in its effects on the Symbolic (and the Imaginary).

must rather draw the Real into its own texture, and the ultimate paradoxes and false problems of linguistics, and most notably of semantics, are to be traced back to this process, whereby language manages to carry the Real within itself as its own intrinsic or immanent subtext. Insofar, in other words, as symbolic action—what Burke will map as “dream,” “prayer,” or “chart”⁵—is a way of doing something to the world, to that degree what we are calling “world” must inhere within it, as the content it has to take up into itself in order to submit it to the transformations of form. The symbolic act therefore begins by generating and producing its own context in the same moment of emergence in which it steps back from it, taking its measure with a view toward its own projects of transformation. The whole paradox of what we have here called the subtext may be summed up in this, that the literary work or cultural object, as though for the first time, brings into being that very situation to which it is also, at one and the same time, a reaction. It articulates its own situation and textualizes it, thereby encouraging and perpetuating the illusion that the situation itself did not exist before it, that there is nothing but a text, that there never was any extra- or con-textual reality before the text itself generated it in the form of a mirage. One does not have to argue the reality of history: necessity, like Dr. Johnson’s stone,⁶ does that for us. That history—Althusser’s “absent cause,” Lacan’s “Real”—is *not* a text, for it is fundamentally non-narrative and nonrepresentational; what can be added, however, is the proviso that history is inaccessible to us except in textual form, or in other words, that it can be approached only by way of prior (re)textualization. Thus, to insist on either of the two inseparable yet incommensurable dimensions of the symbolic act without the other: to overemphasize the active way in which the text reorganizes its subtext (in order, presumably, to reach the triumphant conclusion that the “referent” does not exist); or on the other hand to stress the imaginary status of the symbolic act so completely as to reify its social ground, now no longer understood as a subtext but merely as some inert given that the text passively or fantasmatically “reflects”—to overstress either of these functions of the symbolic act at the expense of the other is surely to produce sheer ideology, whether it be, as in the first alternative, the ideology of structuralism, or, in the second, that of vulgar materialism.

Still, this view of the place of the “referent” will be neither complete nor methodologically usable unless we specify a supplementary distinction between several types of subtext to be (re)constructed. We have implied, indeed, that the social contradiction addressed and “resolved” by the formal prestidigitation of narrative must, however reconstructed, remain an absent cause, which cannot be directly or immediately conceptualized by the text. It seems useful, therefore, to distinguish, from this ultimate subtext which is the place of social *contradiction*, a secondary one, which is more properly the place of ideology, and which takes the form of the *aporia* or the *antinomy*.⁷

Berkeley.

7. A contradiction between two statements of apparently equal validity. “Aporia”: difficulty, logical impasse (a term often used in deconstructive criticism to indicate the point in a text where inherent contradictions render interpretation undecidable).

what can in the former be resolved only through the intervention of praxis here comes before the purely contemplative mind as logical scandal or double bind, the unthinkable and the conceptually paradoxical, that which cannot be unknotted by the operation of pure thought, and which must therefore generate a whole more properly narrative apparatus—the text itself—to square its circles and to dispel, through narrative movement, its intolerable closure. Such a distinction, positing a system of antinomies as the symptomatic expression and conceptual reflex of something quite different, namely a social contradiction, will now allow us to reformulate that coordination between a semiotic and a dialectical method, which was evoked in the preceding section. The operational validity of semiotic analysis, and in particular of the Greimassian semiotic rectangle,⁸ derives, as was suggested there, not from its adequacy to nature or being, nor even from its capacity to map all forms of thinking or language, but rather from its vocation specifically to model ideological closure and to articulate the workings of binary oppositions, here the privileged form of what we have called the antinomy. A dialectical reevaluation of the findings of semiotics intervenes, however, at the moment in which this entire system of ideological closure is taken as the symptomatic projection of something quite different, namely of social contradiction.

We may now leave this first textual or interpretive model behind, and pass over into the second horizon, that of the social. The latter becomes visible, and individual phenomena are revealed as social facts and institutions, only at the moment in which the organizing categories of analysis become those of social class. I have in another place described the dynamics of ideology in its constituted form as a function of social class:⁹ suffice it only to recall here that for Marxism classes must always be apprehended relationally, and that the ultimate (or ideal) form of class relationship and class struggle is always dichotomous. The constitutive form of class relationships is always that between a dominant and a laboring class: and it is only in terms of this axis that class fractions (for example, the petty bourgeoisie) or ec-centric or dependent classes (such as the peasantry) are positioned. To define class in this way is sharply to differentiate the Marxian model of classes from the conventional sociological analysis of society into strata, subgroups, professional elites and the like, each of which can presumably be studied in isolation from one another in such a way that the analysis of their “values” or their “cultural space” folds back into separate and independent *Weltanschauungen*,¹ each of which inertly reflects its particular “stratum.” For Marxism, however, the very content of a class ideology is relational, in the sense that its “values” are always actively in situation with respect to the opposing class, and defined against the latter: normally, a ruling class ideology will explore various strategies of the *legitimation* of its own power position, while an oppositional culture or ideology will, often in covert

1. Worldviews (German).

and disguised strategies, seek to contest and to undermine the dominant "value system."

This is the sense in which we will say, following Mikhail Bakhtin, that within this horizon class discourse—the categories in terms of which individual texts and cultural phenomena are now rewritten—is essentially *dialogical* in its structure.² As Bakhtin's (and Voloshinov's) own work in this field is relatively specialized, focusing primarily on the heterogeneous and explosive pluralism of moments of carnival or festival (moments, for example, such as the immense resurfacing of the whole spectrum of the religious or political sects in the English 1640s or the Soviet 1920s) it will be necessary to add the qualification that the normal form of the dialogical is essentially an *antagonistic* one, and that the dialogue of class struggle is one in which two opposing discourses fight it out within the general unity of a shared code. Thus, for instance, the shared master code of religion becomes in the 1640s in England the place in which the dominant formulations of a hegemonic theology are reappropriated and polemically modified.³

Within this new horizon, then, the basic formal requirement of dialectical analysis is maintained, and its elements are still restructured in terms of *contradiction* (this is essentially, as we have said, what distinguishes the rationality of a Marxist class analysis from static analysis of the sociological type). Where the contradiction of the earlier horizon was univocal, however, and limited to the situation of the individual text, to the place of a purely individual symbolic resolution, contradiction here appears in the form of the dialogical as the irreconcilable demands and positions of antagonistic classes. Here again, then, the requirement to prolong interpretation to the point at which this ultimate contradiction begins to appear offers a criterion for the completeness or insufficiency of the analysis.

Yet to rewrite the individual text, the individual cultural artifact, in terms of the antagonistic dialogue of class voices is to perform a rather different operation from the one we have ascribed to our first horizon. Now the individual text will be refocused as a *parole*, or individual utterance, of that vaster system, or *langue*, of class discourse. The individual text retains its formal structure as a symbolic act: yet the value and character of such symbolic action are now significantly modified and enlarged. On this rewriting, the individual utterance or text is grasped as a symbolic move in an essentially polemic and strategic ideological confrontation between the classes, and to describe it in these terms (or to reveal it in this form) demands a whole set of different instruments.

For one thing, the illusion or appearance of isolation or autonomy which a printed text projects must now be systematically undermined. Indeed, since by definition the cultural monuments and masterworks that have survived tend necessarily to perpetuate only a single voice in this class dialogue, the

voice of a hegemonic class, they cannot be properly assigned their relational place in a dialogical system without the restoration or artificial reconstruction of the voice to which they were initially opposed, a voice for the most part stifled and reduced to silence, marginalized, its own utterances scattered to the winds, or reappropriated in their turn by the hegemonic culture.

This is the framework in which the reconstruction of so-called popular cultures must properly take place—most notably, from the fragments of essentially peasant cultures: folk songs, fairy tales, popular festivals, occult or oppositional systems of belief such as magic and witchcraft. Such reconstruction is of a piece with the reaffirmation of the existence of marginalized or oppositional cultures in our own time, and the reaudition of the oppositional voices of black or ethnic cultures, women's and gay literature, "naive" or marginalized folk art, and the like. But once again, the affirmation of such nonhegemonic cultural voices remains ineffective if it is limited to the merely "sociological" perspective of the pluralistic rediscovery of other isolated social groups: only an ultimate rewriting of these utterances in terms of their essentially polemic and subversive strategies restores them to their proper place in the dialogical system of the social classes. Thus, for instance, Bloch's⁴ reading of the fairy tale, with its magical wish-fulfillments and its Utopian fantasies of plenty and the *pays de Cocagne*, restores the dialogical and antagonistic content of this "form" by exhibiting it as a systematic deconstruction and undermining of the hegemonic aristocratic form of the epic, with its somber ideology of heroism and baleful destiny; thus also the work of Eugene Genovese on black religion restores the vitality of these utterances by reading them, not as the replication of imposed beliefs, but rather as a process whereby the hegemonic Christianity of the slave-owners is appropriated, secretly emptied of its content and subverted to the transmission of quite different oppositional and coded messages.⁵

Moreover, the stress on the dialogical then allows us to reread or rewrite the hegemonic forms themselves; they also can be grasped as a process of the reappropriation and neutralization, the cooptation and class transformation, the cultural universalization, of forms which originally expressed the situation of "popular," subordinate, or dominated groups. So the slave religion of Christianity is transformed into the hegemonic ideological apparatus of the medieval system; while folk music and peasant dance find themselves transmuted into the forms of aristocratic or court festivity and into the cultural visions of the pastoral; and popular narrative from time immemorial—romance, adventure story, melodrama, and the like—is ceaselessly drawn on to restore vitality to an enfeebled and asphyxiating "high culture." Just so, in our own time, the vernacular and its still vital sources of production (as in black language) are reappropriated by the exhausted and media-standardized speech of a hegemonic middle class. In the aesthetic realm, indeed, the process of cultural "universalization" (which implies the repression of the oppositional voice, and the illusion that there is only one genuine "culture") is the specific form taken by what can

4. Ernst Bloch (1885–1977), German philosopher, a Marxist whose "philosophy of hope" sees history ending in utopia, which he calls the *pays de Cocagne* ("land of plenty"; French).

5. Eugene Genovese, *Roll, Jordan, Roll: The World the Slaves Made* (New York: Vintage, 1976), pp. 161–284 [Jameson's note]. Genovese (1930–2012), American historian.

be called the process of legitimation in the realm of ideology and conceptual systems.

Still, this operation of rewriting and of the restoration of an essentially dialogical or class horizon will not be complete until we specify the "units" of this larger system. The linguistic metaphor (rewriting texts in terms of the opposition of a *parole* to a *langue*) cannot, in other words, be particularly fruitful until we are able to convey something of the dynamics proper to a class *langue* itself, which is evidently, in Saussure's sense, something like an ideal construct that is never wholly visible and never fully present in any one of its individual utterances. This larger class discourse can be said to be organized around minimal "units" which we will call *ideologemes*. The advantage of this formulation lies in its capacity to mediate between conceptions of ideology as abstract opinion, class value, and the like, and the narrative materials with which we will be working here. The ideologeme is an amphibious formation, whose essential structural characteristic may be described as its possibility to manifest itself either as a pseudoidea—a conceptual or belief system, an abstract value, an opinion or prejudice—or as a protonarrative, a kind of ultimate class fantasy about the "collective characters" which are the classes in opposition. This duality means that the basic requirement for the full description of the ideologeme is already given in advance: as a construct it must be susceptible to both a conceptual description and a narrative manifestation all at once. The ideologeme can of course be elaborated in either of these directions, taking on the finished appearance of a philosophical system on the one hand, or that of a cultural text on the other; but the ideological analysis of these finished cultural products requires us to demonstrate each one as a complex work of transformation on that ultimate raw material which is the ideologeme in question. The analyst's work is thus first that of the identification of the ideologeme, and, in many cases, of its initial naming in instances where for whatever reason it had not yet been registered as such. The immense preparatory task of identifying and inventorying such ideologemes has scarcely even begun, and to it the present book will make but the most modest contribution: most notably in its isolation of that fundamental nineteenth-century ideologeme which is the "theory" of *ressentiment*,⁶ and in its "unmasking" of ethics and the ethical binary opposition of good and evil as one of the fundamental forms of ideological thought in Western culture. However, our stress here and throughout on the fundamentally narrative character of such ideologemes (even where they seem to be articulated only as abstract conceptual beliefs or values) will offer the advantage of restoring the complexity of the transactions between opinion and protonarrative or libidinal fantasy. Thus we will observe, in the case of Balzac, the generation of an overt and constituted ideological and political "value system" out of the operation of an essentially narrative and fantasy dynamic; the chapter on Gissing, on the other hand, will show how an already constituted "narrative paradigm" emits an ideological message in its own right without the mediation of authorial intervention.

This focus or horizon, that of class struggle and its antagonistic discourses, is, as we have already suggested, not the ultimate form a Marxist analysis of

6. Resentment (French); this theory was developed by the German philosopher FRIEDRICH NIETZSCHE (1844–1900).

culture can take. The example just alluded to—that of the seventeenth-century English revolution, in which the various classes and class fractions found themselves obliged to articulate their ideological struggles through the shared medium of a religious master code—can serve to dramatize the shift whereby these objects of study are reconstituted into a structurally distinct “text” specific to this final enlargement of the analytical frame. For the possibility of a displacement in emphasis is already given in this example: we have suggested that within the apparent unity of the theological code, the fundamental difference of antagonistic class positions can be made to emerge. In that case, the inverse move is also possible, and such concrete semantic differences can on the contrary be focused in such a way that what emerges is rather the all-embracing unity of a single code which they must share and which thus characterizes the larger unity of the social system. This new object—code, sign system, or system of the production of signs and codes—thus becomes an index of an entity of study which greatly transcends those earlier ones of the narrowly political (the symbolic act), and the social (class discourse and the ideologeme), and which we have proposed to term the historical in the larger sense of this word. Here the organizing unity will be what the Marxian tradition designates as a *mode of production*.

I have already observed that the “problematic” of modes of production is the most vital new area of Marxist theory in all the disciplines today; not paradoxically, it is also one of the most traditional, and we must therefore, in a brief preliminary way, sketch in the “sequence” of modes of production as classical Marxism, from Marx and Engels to Stalin,⁷ tended to enumerate them.⁸ These modes, or “stages” of human society, have traditionally included the following: primitive communism or tribal society (the horde), the *gens* or hierarchical kinship societies (neolithic society), the Asiatic mode of production (so-called Oriental despotism), the *polis* or an oligarchical slaveholding society (the ancient mode of production), feudalism, capitalism, and communism (with a good deal of debate as to whether the “transitional” stage between these last—sometimes called “socialism”—is a genuine mode of production in its own right or not). What is more significant in the present context is that even this schematic or mechanical conception of historical “stages” (what the Althusserians have systematically criticized under the term “historicism”) includes the notion of a cultural dominant or form of ideological coding specific to each mode of production. Following the same order these have generally been conceived as magic and mythic narrative, kinship, religion or the sacred, “politics” according to the narrower category of citizenship in the ancient city state, relations of personal domination, commodity reification, and (presumably) original and as yet nowhere fully developed forms of collective or communal association.

7. Jameson suggests that “classical Marxism,” or a Marxism relying on definite descriptions of classes, class struggle, and so on, was at its height between the time of Marx and his collaborator FRIEDRICH ENGELS (1820–1895) and that of Joseph Stalin (1879–1953), 2d leader of the U.S.S.R. (1924–53).

8. The “classical” texts on modes of production, besides Lewis Henry Morgan’s *Ancient Society* (1877), are Karl Marx, *Pre-Capitalist Economic*

Formations, a section of the *Grundrisse* (1857–58), and Friedrich Engels, *The Family, Private Property, and the State* (1884). An important recent contribution to the mode of production debate is Étienne Balibar’s “The Basic Concepts of Historical Materialism,” in Louis Althusser and Balibar, *Reading Capital*, trans. Ben Brewster (London: New Left Books, 1970), pp. 199–308 [Jameson’s note]. Balibar (b. 1942), French political philosopher.

Before we can determine the cultural “text” or object of study specific to the horizon of modes of production, however, we must make two preliminary remarks about the methodological problems it raises. The first will bear on whether the concept of “mode of production” is a synchronic one, while the second will address the temptation to use the various modes of production for a classifying or typologizing operation, in which cultural texts are simply dropped into so many separate compartments.

Indeed, a number of theorists have been disturbed by the apparent convergence between the properly Marxian notion of an all-embracing and all-structuring mode of production (which assigns everything within itself—culture, ideological production, class articulation, technology—a specific and unique place), and non-Marxist visions of a “total system” in which the various elements or levels of social life are programmed in some increasingly constricting way. Weber’s dramatic notion of the “iron cage” of an increasingly bureaucratic society,⁹ Foucault’s image of the gridwork of an ever more pervasive “political technology of the body,”¹⁰ but also more traditional “synchronic” accounts of the cultural programming of a given historical “moment,” such as those that have variously been proposed from Vico and Hegel to Spengler and Deleuze²—all such monolithic models of the cultural unity of a given historical period have tended to confirm the suspicions of a dialectical tradition about the dangers of an emergent “synchronic” thought, in which change and development are relegated to the marginalized category of the merely “diachronic,” the contingent or the rigorously nonmeaningful (and this, even where, as with Althusser, such models of cultural unity are attacked as forms of a more properly Hegelian and idealistic “expressive causality”). This theoretical foreboding about the limits of synchronic thought can perhaps be most immediately grasped in the political area, where the model of the “total system” would seem slowly and inexorably to eliminate any possibility of the *negative* as such, and to reintegrate the place of an oppositional or even merely “critical” practice and resistance back into the system as the latter’s mere inversion. In particular, everything about class struggle that was anticipatory in the older dialectical framework, and seen as an emergent space for radically new social relations, would seem, in the synchronic model, to reduce itself to practices that in fact tend to reinforce the very system that foresaw and dictated their specific limits. This is the sense

9. “The Puritan wanted to work in a calling; we are forced to do so. For when asceticism was carried out of monastic cells into everyday life, and began to dominate worldly morality, it did its part in building the tremendous cosmos of the modern economic order. This order is now bound to the technical and economic conditions of machine production which today determine the lives of all the individuals who are born into this mechanism, not only those directly concerned with economic acquisition, with irresistible force. Perhaps it will so determine them until the last ton of fossilized coal is burnt. In [one] view the care for external goods should only lie on the shoulders of the saint ‘like a light cloak, which can be thrown aside at any moment.’ But fate decreed that the cloak should become an iron cage.” Max Weber, *The Protestant Ethic and the Spirit of Capitalism*,

1. Michel Foucault, *Discipline and Punish: The Birth of the Prison*, trans. Alan Sheridan (New York: Vintage, 1979), pp. 26ff. [Jameson’s note]. FOUCAULT (1926–1984), French philosopher and historian of ideas.

2. All philosophers who made large claims about historical change: the Italian GIAMBATTISTA VICO (1668–1744) viewed historical change as a cycle; Hegel proposed a dialectical model of thesis, antithesis, and synthesis; the German Oswald Spengler (1880–1936) saw a pattern of decline; and the French GILLES DELEUZE (1925–1995) argued for a Nietzschean repetition modified for differences.

in which Jean Baudrillard³ has suggested that the “total-system” view of contemporary society reduces the options of resistance to anarchist gestures, to the sole remaining ultimate protests of the wildcat strike, terrorism, and death. Meanwhile, in the framework of the analysis of culture also, the latter’s integration into a synchronic model would seem to empty cultural production of all its antisystemic capacities, and to “unmask” even the works of an overtly oppositional or political stance as instruments ultimately programmed by the system itself.

It is, however, precisely the notion of a series of enlarging theoretical horizons proposed here that can assign these disturbing synchronic frameworks their appropriate analytical places and dictate their proper use. This notion projects a long view of history which is inconsistent with concrete political action and class struggle only if the specificity of the horizons is not respected; thus, even if the concept of a mode of production is to be considered a synchronic one (and we will see in a moment that things are somewhat more complicated than this), at the level of historical abstraction at which such a concept is properly to be used, the lesson of the “vision” of a total system is for the short run one of the structural limits imposed on praxis rather than the latter’s impossibility.

The theoretical problem with the synchronic systems enumerated above lies elsewhere, and less in their analytical framework than in what in a Marxist perspective might be called their infrastructural regrounding. Historically, such systems have tended to fall into two general groups, which one might term respectively the hard and soft visions of the total system. The first group projects a fantasy future of a “totalitarian” type in which the mechanisms of domination—whether these are understood as part of the more general process of bureaucratization, or on the other hand derive more immediately from the deployment of physical and ideological force—are grasped as irrevocable and increasingly pervasive tendencies whose mission is to colonize the last remnants and survivals of human freedom—to occupy and organize, in other words, what still persists of Nature objectively and subjectively (very schematically, the Third World and the Unconscious).

This group of theories can perhaps hastily be associated with the central names of Weber and Foucault; the second group may then be associated with names such as those of Jean Baudrillard and the American theorists of a “post-industrial society.”⁴ For this second group, the characteristics of the total system of contemporary world society are less those of political domination than those of cultural programming and penetration: not the iron cage, but rather the *société de consommation* with its consumption of images and simulacra, its free-floating signifiers and its effacement of the older structures of social class and traditional ideological hegemony. For both groups, world capitalism is in evolution toward a system which is not socialist in any classical sense, on the one hand the nightmare of total control and on the other the polymorphous or schizophrenic intensities of some ultimate

3. French sociologist (1929–2007; see above), who argues that in postmodern society we deal only with simulations of reality (simulacra), not representations.

4. The most influential statement of the American version of this “end of ideology”/consumer

society position is, of course, that of Daniel Bell: see his *Coming of Post-Industrial Society* (New York: Basic, 1973) and *The Cultural Contradictions of Capitalism* (New York: Basic, 1976) [Jameson’s note]. Bell (1919–2011), American sociologist.

counterculture (which may be no less disturbing for some than the overtly threatening characteristics of the first vision). What one must add is that neither kind of analysis respects the Marxian injunction of the "ultimately determining instance" of economic organization and tendencies: for both, indeed, economics (or political economy) of that type is in the new total system of the contemporary world at an end, and the economic finds itself in both reassigned to a secondary and nondeterminant position beneath the new dominant of political power or of cultural production respectively.

There exist, however, within Marxism itself precise equivalents to these two non-Marxian visions of the contemporary total system: rewritings, if one likes, of both in specifically Marxian and "economic" terms. These are the analyses of late capitalism in terms of *capitalogic*⁵ and of *disaccumulation*,⁶ respectively; and while this book is clearly not the place to discuss such theories at any length, it must be observed here that both, seeing the originality of the contemporary situation in terms of systemic tendencies *within* capitalism, reassert the theoretical priority of the organizing concept of the mode of production which we have been concerned to argue.

We must therefore now turn to the second related problem about this third and ultimate horizon, and deal briefly with the objection that cultural analysis pursued within it will tend toward a purely typological or classificatory operation, in which we are called upon to "decide" such issues as whether Milton is to be read within a "precapitalist" or a nascent capitalist context, and so forth. I have insisted elsewhere on the sterility of such classificatory procedures, which may always, it seems to me, be taken as symptoms and indices of the repression of a more genuinely dialectical or historical practice of cultural analysis. This diagnosis may now be expanded to cover all three horizons at issue here, where the practice of homology, that of a merely "sociological" search for some social or class equivalent, and that, finally, of the use of some typology of social and cultural systems, respectively, may stand as examples of the misuse of these three frameworks. Furthermore, just as in our discussion of the first two we have stressed the centrality of the category of contradiction for any Marxist analysis (seen, within the first horizon, as that which the cultural and ideological artifact tries to "resolve," and in the second as the nature of the social and class conflict within which a given work is one act or gesture), so too here we can effectively validate the horizon of the mode of production by showing the form contradiction takes on this level, and the relationship of the cultural object to it.

Before we do so, we must take note of more recent objections to the very concept of the mode of production. The traditional schema of the various modes of production as so many historical "stages" has generally been felt to be unsatisfactory, not least because it encourages the kind of typologizing criticized above, in political quite as much as in cultural analysis. (The form taken in political analysis is evidently the procedure which consists in "decid-

5. See, for a review and critique of the basic literature, Stanley Aronowitz, "Marx, Braverman, and the Logic of Capital," *Insurgent Sociologist* 8, nos. 2/3 (fall 1978): 126-46 [Jameson's note].

6. The basic texts on "disaccumulation theory" are Martin J. Sklar, "On the Proletarian Revolution and the End of Political-Economic Society," *Radical America* 3, no. 3 (May-June 1969): 1-41; Jim

O'Connor, "Productive and Unproductive Labor," *Politics and Society* 5 (1975): 297-336; Fred Block and Larry Hirschhorn, "New Productive Forces and the Contradictions of Contemporary Capitalism," *Theory and Society* 7 (1979): 363-95; and Stanley Aronowitz, "The End of Political Economy," *Social Text*, no. 2 (1980): 3-52 [Jameson's note].

ing" whether a given conjuncture⁷ is to be assigned to a moment within feudalism—the result being a demand for bourgeois and parliamentary rights—or within capitalism—with the accompanying "reformist" strategy—or, on the contrary, a genuine "revolutionary" moment—in which case the appropriate revolutionary strategy is then deduced.)

On the other hand, it has become increasingly clear to a number of contemporary theorists that such classification of "empirical" materials within this or that abstract category is impermissible in large part because of the level of abstraction of the concept of a mode of production: no historical society has ever "embodied" a mode of production in any pure state (nor is *Capital*⁸ the description of a historical society, but rather the construction of the abstract concept of capitalism). This has led certain contemporary theorists, most notably Nicos Poulantzas,⁹ to insist on the distinction between a "mode of production" as a purely theoretical construction and a "social formation" that would involve the description of some historical society at a certain moment of its development. This distinction seems inadequate and even misleading, to the degree that it encourages the very empirical thinking which it was concerned to denounce, in other words, subsuming a particular or an empirical "fact" under this or that corresponding "abstraction." Yet one feature of Poulantzas' discussion of the "social formation" may be retained: his suggestion that every social formation or historically existing society has in fact consisted in the overlay and structural coexistence of *several* modes of production all at once, including vestiges and survivals of older modes of production, now relegated to structurally dependent positions within the new, as well as anticipatory tendencies which are potentially inconsistent with the existing system but have not yet generated an autonomous space of their own.

But if this suggestion is valid, then the problems of the "synchronic" system and of the typological temptation are both solved at one stroke. What is synchronic is the "concept" of the mode of production; the moment of the historical coexistence of several modes of production is not synchronic in this sense, but open to history in a dialectical way. The temptation to classify texts according to the appropriate mode of production is thereby removed, since the texts emerge in a space in which we may expect them to be crisscrossed and intersected by a variety of impulses from contradictory modes of cultural production all at once.

Yet we have still not characterized the specific object of study which is constructed by this new and final horizon. It cannot, as we have shown, consist in the concept of an individual mode of production (any more than, in our second horizon, the specific object of study could consist in a particular social class in isolation from the others). We will therefore suggest that this new and ultimate object may be designated, drawing on recent historical experience, as *cultural revolution*, that moment in which the coexistence of various modes of production becomes visibly antagonistic, their contradictions moving to the very center of political, social, and historical

7. Moment in social development at which various antagonistic and sometimes contradictory forces and trends combine.

8. See Marx, *Capital*, vol. 1 (1867).

9. Nicos Poulantzas, *Political Power and Social Classes*, trans. T. O'Hagan (London: New Left Books, 1973), pp. 13–16 [Jameson's note]. Poulantzas (1936–1979), Greek political theorist.

life. The incomplete Chinese experiment with a “proletarian” cultural revolution¹ may be invoked in support of the proposition that previous history has known a whole range of equivalents for similar processes to which the term may legitimately be extended. So the Western Enlightenment may be grasped as part of a properly bourgeois cultural revolution, in which the values and the discourses, the habits and the daily space, of the *ancien régime*² were systematically dismantled so that in their place could be set the new conceptualities, habits and life forms, and value systems of a capitalist market society. This process clearly involved a vaster historical rhythm than such punctual historical events as the French Revolution or the Industrial Revolution, and includes in its *longue durée*³ such phenomena as those described by Weber in *The Protestant Ethic and the Spirit of Capitalism*—a work that can now in its turn be read as a contribution to the study of the bourgeois cultural revolution, just as the corpus of work on romanticism is now repositioned as the study of a significant and ambiguous moment in the resistance to this particular “great transformation,” alongside the more specifically “popular” (precapitalist as well as working-class) forms of cultural resistance.

But if this is the case, then we must go further and suggest that all previous modes of production have been accompanied by cultural revolutions specific to them of which the neolithic “cultural revolution,” say, the triumph of patriarchy over the older matriarchal or tribal forms, or the victory of Hellenic “justice” and the new legality of the *polis* over the vendetta system are only the most dramatic manifestations. The concept of cultural revolution, then—or more precisely, the reconstruction of the materials of cultural and literary history in the form of this new “text” or object of study which is cultural revolution—may be expected to project a whole new framework for the humanities, in which the study of culture in the widest sense could be placed on a materialist basis.

This description is, however, misleading to the degree to which it suggests that “cultural revolution” is a phenomenon limited to so-called “transitional” periods, during which social formations dominated by one mode of production undergo a radical restructuring in the course of which a different “dominant” emerges. The problem of such “transitions” is a traditional crux of the Marxian problematic of modes of production, nor can it be said that any of the solutions proposed, from Marx’s own fragmentary discussions to the recent model of Etienne Balibar, are altogether satisfactory, since in all of them the inconsistency between a “synchronic” description of a given system and a “diachronic” account of the passage from one system to another seems to return with undiminished intensity. But our own discussion began with the idea that a given social formation consisted in the coexistence of various synchronic systems or modes of production, each with its own dynamic or time scheme—a kind of metasynchronicity, if one likes—while we have now shifted to a description of cultural revolution which has been

1. That is, the 1966–76 Cultural Revolution, an attempt to stamp out “bourgeois values” that caused great social and economic disruption in China.

2. That is, the aristocracy.

3. Long duration (French), a phrase used by the French historian Fernand Braudel (1902–1985), whose work emphasized large-scale, long-term changes.

couched in the more diachronic language of systemic transformation. I will therefore suggest that these two apparently inconsistent accounts are simply the twin perspectives which our thinking (and our presentation or *Darstellung* of that thinking) can take on this same vast historical object. Just as overt revolution is no punctual event either, but brings to the surface the innumerable daily struggles and forms of class polarization which are at work in the whole course of social life that precedes it, and which are therefore latent and implicit in "prerevolutionary" social experience, made visible as the latter's deep structure only in such "moments of truth"—so also the overtly "transitional" moments of cultural revolution are themselves but the passage to the surface of a permanent process in human societies, of a permanent struggle between the various coexisting modes of production. The triumphant moment in which a new systemic dominant gains ascendancy is therefore only the diachronic manifestation of a constant struggle for the perpetuation and reproduction of its dominance, a struggle which must continue throughout its life course, accompanied at all moments by the systemic or structural antagonism of those older and newer modes of production that resist assimilation or seek deliverance from it. The task of cultural and social analysis thus construed within this final horizon will then clearly be the rewriting of its materials in such a way that this perpetual cultural revolution can be apprehended and read as the deeper and more permanent constitutive structure in which the empirical textual objects know intelligibility.

Cultural revolution thus conceived may be said to be beyond the opposition between synchrony and diachrony, and to correspond roughly to what Ernst Bloch has called the *Ungleichzeitigkeit* (or "nonsynchronous development") of cultural and social life.⁴ Such a view imposes a new use of concepts of periodization, and in particular of that older schema of the "linear" stages which is here preserved and canceled all at once. We will deal more fully with the specific problems of periodization in the next chapter: suffice it to say at this point that such categories are produced within an initial diachronic or narrative framework, but become usable only when that initial framework has been annulled, allowing us now to coordinate or articulate categories of diachronic origin (the various distinct modes of production) in what is now a synchronic or metasynchronic way.

We have, however, not yet specified the nature of the textual object which is constructed by this third horizon of cultural revolution, and which would

4. Ernst Bloch, "Nonsynchronism and Dialectics," *New German Critique*, no. 11 (spring 1977): 22–38. The "nonsynchronous" use of the concept of the mode of production outlined above is in my opinion the only way to fulfill Marx's well-known program for dialectical knowledge "of rising from the abstract to the concrete" (1857 Introduction, *Grundrisse*, ed. Eric Hobsbawm [New York: International, 1965], p. 101). Marx there distinguished three stages of knowledge: (1) the notation of the particular (this would correspond to something like empirical history, the collection of data and descriptive materials on the variety of human societies); (2) the conquest of abstraction, the coming into being of a properly "bourgeois" science or of what Hegel called the categories of the

Understanding; (3) the transcendence of abstraction by the dialectic, the "rise to the concrete," the setting in motion of hitherto static and typologizing categories by their reinsertion in a concrete historical situation (in the present context, this is achieved by moving from a classificatory use of the categories of modes of production to a perception of their dynamic and contradictory coexistence in a given cultural moment). Althusser's own epistemology, incidentally, is a gloss on this same fundamental passage of the 1857 Introduction, but one which succeeds only too well in eliminating its dialectical spirit (*For Marx*, trans. Ben Brewster [London: Verso, 1990], pp. 183ff. [Jameson's note]).

be the equivalent within this dialectically new framework of the objects of our first two horizons—the symbolic act, and the ideologeme or dialogical organization of class discourse. I will suggest that within this final horizon the individual text or cultural artifact (with its appearance of autonomy which was dissolved in specific and original ways within the first two horizons as well) is here restructured as a field of force in which the dynamics of sign systems of several distinct modes of production can be registered and apprehended. These dynamics—the newly constituted “text” of our third horizon—make up what can be termed *the ideology of form*, that is, the determinate contradiction of the specific messages emitted by the varied sign systems which coexist in a given artistic process as well as in its general social formation.

What must now be stressed is that at this level “form” is apprehended as content. The study of the ideology of form is no doubt grounded on a technical and formalistic analysis in the narrower sense, even though, unlike much traditional formal analysis, it seeks to reveal the active presence within the text of a number of discontinuous and heterogeneous formal processes. But at the level of analysis in question here, a dialectical reversal has taken place in which it has become possible to grasp such formal processes as sedimented content in their own right, as carrying ideological messages of their own, distinct from the ostensible or manifest content of the works; it has become possible, in other words, to display such formal operations from the standpoint of what Louis Hjelmslev⁵ will call the “content of form” rather than the latter’s “expression,” which is generally the object of the various more narrowly formalizing approaches. The simplest and most accessible demonstration of this reversal may be found in the area of literary genre. Our next chapter, indeed, will model the process whereby generic specification and description can, in a given historical text, be transformed into the detection of a host of distinct generic messages—some of them objectified survivals from older modes of cultural production, some anticipatory, but all together projecting a formal conjuncture through which the “conjuncture” of coexisting modes of production at a given historical moment can be detected and allegorically articulated.

Meanwhile, that what we have called the ideology of form is something other than a retreat from social and historical questions into the more narrowly formal may be suggested by the relevance of this final perspective to more overtly political and theoretical concerns; we may take the much debated relation of Marxism to feminism as a particularly revealing illustration. The notion of overlapping modes of production outlined above has indeed the advantage of allowing us to short-circuit the false problem of the priority of the economic over the sexual, or of sexual oppression over that of social class. In our present perspective, it becomes clear that sexism and the patriarchal are to be grasped as the sedimentation and the virulent survival of forms of alienation specific to the oldest mode of production of human history, with its division of labor between men and women, and its division of power between youth and elder. The analysis of the ideology of form, properly completed, should reveal the formal persistence of such archaic structures of

5. Danish linguist (1899–1965).

alienation—and the sign systems specific to them—beneath the overlay of all the more recent and historically original types of alienation—such as political domination and commodity reification—which have become the dominants of that most complex of all cultural revolutions, late capitalism, in which all the earlier modes of production in one way or another structurally coexist. The affirmation of radical feminism, therefore, that to annul the patriarchal is the most *radical* political act—insofar as it includes and subsumes more partial demands, such as the liberation from the commodity form—is thus perfectly consistent with an expanded Marxian framework, for which the transformation of our own dominant mode of production must be accompanied and completed by an equally radical restructuring of all the more archaic modes of production with which it structurally coexists.

With this final horizon, then, we emerge into a space in which History itself becomes the ultimate ground as well as the untranscendable limit of our understanding in general and our textual interpretations in particular. This is, of course, also the moment in which the whole problem of interpretive priorities returns with a vengeance, and in which the practitioners of alternate or rival interpretive codes—far from having been persuaded that History is an interpretive code that includes and transcends all the others—will again assert “History” as simply one more code among others, with no particularly privileged status. This is most succinctly achieved when the critics of Marxist interpretation, borrowing its own traditional terminology, suggest that the Marxian interpretive operation involves a thematization and a reification of “History” which is not markedly different from the process whereby the other interpretive codes produce their own forms of thematic closure and offer themselves as absolute methods.

It should by now be clear that nothing is to be gained by opposing one reified theme—History—by another—Language—in a polemic debate as to ultimate priority of one over the other. The influential forms this debate has taken in recent years—as in Jürgen Habermas’ attempt to subsume the “Marxist” model of production beneath a more all-embracing model of “communication” or intersubjectivity,⁶ or in Umberto Eco’s assertion of the priority of the Symbolic in general over the technological and productive systems which it must organize as *signs* before they can be used as *tools*⁷—are based on the misconception that the Marxian category of a “mode of production” is a form of technological or “productionist” determinism.

It would seem therefore more useful to ask ourselves, in conclusion, how History as a ground and as an absent cause can be conceived in such a way as to resist such thematization or reification, such transformation back into one optional code among others. We may suggest such a possibility obliquely by attention to what the Aristotelians would call the generic satisfaction specific to the form of the great monuments of historiography,⁸ or what the semioticians might call the “history-effect” of such narrative texts. Whatever the raw material on which historiographic form works (and we will here only touch

8. That is, emphasizing, as does ARISTOTLE in his *Poetics* (ca. 330 B.C.E.; see above), the importance of form.

on that most widespread type of material which is the sheer chronology of fact as it is produced by the rote-drill of the history manual), the “emotion” of great historiographic form can then always be seen as the radical restructuration of that inert material, in this instance the powerful reorganization of otherwise inert chronological and “linear” data in the form of Necessity: why what happened (at first received as “empirical” fact) had to happen the way it did. From this perspective, then, causality is only one of the possible tropes by which this formal restructuration can be achieved, although it has obviously been a privileged and historically significant one. Meanwhile, should it be objected that Marxism is rather a “comic” or “romance” paradigm, one which sees history in the salvational perspective of some ultimate liberation, we must observe that the most powerful realizations of a Marxist historiography—from Marx’s own narratives of the 1848 revolution⁹ through the rich and varied canonical studies of the dynamics of the Revolution of 1789 all the way to Charles Bettelheim’s¹ study of the Soviet revolutionary experience—remain visions of historical Necessity in the sense evoked above. But Necessity is here represented in the form of the inexorable logic involved in the determinate failure of all the revolutions that have taken place in human history: the ultimate Marxian presupposition—that socialist revolution can only be a total and worldwide process (and that this in turn presupposes the completion of the capitalist “revolution” and of the process of commodification on a global scale)—is the perspective in which the failure or the blockage, the contradictory reversal or functional inversion, of this or that local revolutionary process is grasped as “inevitable,” and as the operation of objective limits.

History is therefore the experience of Necessity, and it is this alone which can forestall its thematization or reification as a mere object of representation or as one master code among many others. Necessity is not in that sense a type of content, but rather the inexorable *form* of events; it is therefore a narrative category in the enlarged sense of some properly narrative political unconscious which has been argued here, a retextualization of History which does not propose the latter as some new representation or “vision,” some new content, but as the formal effects of what Althusser, following Spinoza,² calls an “absent cause.” Conceived in this sense, History is what hurts, it is what refuses desire and sets inexorable limits to individual as well as collective praxis, which its “ruses” turn into grisly and ironic reversals of their overt intention. But this History can be apprehended only through its effects, and never directly as some reified force. This is indeed the ultimate sense in which History as ground and untranscendable horizon needs no particular theoretical justification: we may be sure that its alienating necessities will not forget us, however much we might prefer to ignore them.

1. French economist and social scientist (1913–2006), who wrote *Class Struggles in the USSR* (3 vols., 1974–83).

2. BARUCH SPINOZA (1632–1677), Dutch rationalist philosopher.

Postmodernism and Consumer Society¹

The concept of postmodernism is not widely accepted or even understood today. Some of the resistance to it may come from the unfamiliarity of the works it covers, which can be found in all the arts: the poetry of John Ashbery,² for instance, but also the much simpler talk poetry that came out of the reaction against complex, ironic, academic modernist poetry in the 1960s; the reaction against modern architecture and in particular against the monumental buildings of the International Style, the pop buildings and decorated sheds celebrated by Robert Venturi in his manifesto, *Learning from Las Vegas*;³ Andy Warhol and Pop art, but also the more recent Photorealism;⁴ in music, the moment of John Cage but also the later synthesis of classical and 'popular' styles found in composers like Philip Glass and Terry Riley, and also punk and new-wave rock with such groups as the Clash, Talking Heads and the Gang of Four;⁵ in film, everything that comes out of Godard⁶—contemporary vanguard film and video—but also a whole new style of commercial or fiction films, which has its equivalent in contemporary novels as well, where the works of William Burroughs, Thomas Pynchon and Ishmael Reed⁷ on the one hand, and the French new novel⁸ on the other, are also to be numbered among the varieties of what can be called postmodernism.

This list would seem to make two things clear at once: first, most of the postmodernisms mentioned above emerge as specific reactions against the established forms of high modernism, against this or that dominant high modernism which conquered the university, the museum, the art gallery network, and the foundations. Those formerly subversive and embattled styles—Abstract Expressionism;⁹ the great modernist poetry of Pound, Eliot or Wallace Stevens; the International Style (Le Corbusier, Frank Lloyd Wright, Mies); Stravinsky; Joyce, Proust and Mann¹—felt to be scandalous or shocking by our grandparents are, for the generation which arrives at the gate in the 1960s, felt to be the establishment and the enemy—dead, stifling, canonical,

1. The present text combines elements of two previously published essays: "Postmodernism and Consumer Society," in *The Anti-Aesthetic* (Port Townsend, Wash.: Bay Press, 1983), and "Postmodernism: The Cultural Logic of Late Capitalism," in *New Left Review*, no. 146 (1984) [Jameson's note].

2. American poet (1927–2017) whose work is often obscure and demanding.

3. Published in 1972, by the American eclectic postmodern architect Venturi (b. 1925), Denise Scott Brown, and Steven Izenour. International Style: an architectural style, developed in Europe and the United States during the 1920s and 1930s and dominant by midcentury, characterized by rectilinear forms without ornamentation and by construction in glass and steel.

4. An art movement that flourished in the 1970s; it was an outgrowth of pop art, which came to prominence in the 1960s and also focused on everyday subjects from consumer and popular culture, such as the Campbell's Soup cans depicted by Warhol (1928–1987), its best-known American proponent.

5. Jameson names avant-garde musicians: the American composers Cage (1912–1992), Glass (b. 1937), and Riley (b. 1935); and the British punk band the Clash, the American art rock band Talk-

ing Heads, and the British Marxist band Gang of Four, all of whom released debut albums in the late 1970s.

6. Jean-Luc Godard (b. 1930), French film director.

7. All American authors of avant-garde fiction: Burroughs (1914–1997), Pynchon (b. 1937), and Reed (b. 1938).

8. A French literary movement that began in the 1950s and sought to frustrate conventional expectations of plot, character, and dialogue.

9. School of abstract painting that emerged in the United States, during the 1940s, characterized by attention to surface qualities, huge canvases, and the attempt to express pure emotion.

1. All prominent representatives of high modernism: in poetry, Ezra Pound (1885–1972), T. S. Eliot (1888–1965), and Stevens (1879–1955), all Americans; in architecture, the French Le Corbusier (Charles Édouard Jeanneret, 1887–1965), the American Wright (1867–1959), and the German Ludwig Mies van der Rohe (1886–1969); in music, the Russian composer Igor Stravinsky (1882–1971); and in the novel, the Irish James Joyce (1882–1941), the French Marcel Proust (1871–1922), and the German Thomas Mann (1875–1955).

the reified monuments one has to destroy to do anything new. This means that there will be as many different forms of postmodernism as there were high modernisms in place, since the former are at least initially specific and local reactions *against* those models. That obviously does not make the job of describing postmodernism as a coherent thing any easier, since the unity of this new impulse—if it has one—is given not in itself but in the very modernism it seeks to displace.

The second feature of this list of postmodernisms is the effacement in it of some key boundaries or separations, most notably the erosion of the older distinction between high culture and so-called mass or popular culture. This is perhaps the most distressing development of all from an academic standpoint, which has traditionally had a vested interest in preserving a realm of high or elite culture against the surrounding environment of philistinism,² of schlock and kitsch, of TV series and *Reader's Digest* culture, and in transmitting difficult and complex skills of reading, listening and seeing to its initiates. But many of the newer postmodernisms have been fascinated precisely by that whole landscape of advertising and motels, of the Las Vegas strip, of the late show and Grade-B Hollywood film, of so-called paraliterature with its airport paperback categories of the gothic and the romance, the popular biography, the murder mystery and the science fiction or fantasy novel. They no longer 'quote' such 'texts' as a Joyce might have done, or a Mahler;³ they incorporate them, to the point where the line between high art and commercial forms seems increasingly difficult to draw.

A rather different indication of this effacement of the older categories of genre and discourse can be found in what is sometimes called contemporary theory. A generation ago there was still a technical discourse of professional philosophy—the great systems of Sartre or the phenomenologists, the work of Wittgenstein⁴ or analytical or common language philosophy—alongside which one could still distinguish that quite different discourse of the other academic disciplines—of political science, for example, or sociology or literary criticism. Today, increasingly, we have a kind of writing simply called 'theory' which is all or none of those things at once. This new kind of discourse, generally associated with France and so-called French theory, is becoming widespread and marks the end of philosophy as such. Is the work of Michel Foucault,⁵ for example, to be called philosophy, history, social theory or political science? It's undecidable, as they say nowadays; and I will suggest that such 'theoretical discourse' is also to be numbered among the manifestations of postmodernism.

Now I must say a word about the proper use of this concept: it is not just another word for the description of a particular style. It is also, at least in my use, a periodizing concept whose function is to correlate the emergence of new formal features in culture with the emergence of a new type of social life and a new economic order—what is often euphemistically called modernization, postindustrial or consumer society, the society of the media or the spectacle, or multinational capitalism. This new moment of capitalism can be

2. Middle-class materialism (a term coined by MATTHEW ARNOLD in "The Function of Criticism at the Present Time," 1864; see above).

3. Gustav Mahler (1860–1911), Austrian composer.

4. Ludwig Wittgenstein (1889–1951), Austrian-born English philosopher whose early work was analytic and whose later work explored the nature

of language. Jean-Paul Sartre (1905–1980), French existentialist philosopher, novelist, and dramatist. "Phenomenologists": philosophers who focus introspectively on the contents of consciousness. 5. French philosopher and historian of ideas (1926–1984; see above).

dated from the postwar boom in the United States in the late 1940s and early 1950s or, in France, from the establishment of the Fifth Republic in 1958.⁶ The 1960s are in many ways the key transitional period, a period in which the new international order (neocolonialism, the Green Revolution,⁷ computerization and electronic information) is at one and the same time set in place and is swept and shaken by its own internal contradictions and by external resistance. I want here to sketch a few of the ways in which the new postmodernism expresses the inner truth of that newly emergent social order of late capitalism, but will have to limit the description to only two of its significant features, which I will call pastiche and schizophrenia; they will give us a chance to sense the specificity of the postmodernist experience of space and time respectively.

Pastiche Eclipses Parody

One of the most significant features or practices in postmodernism today is pastiche. I must first explain this term, which people generally tend to confuse with or assimilate to that related verbal phenomenon called parody. Both pastiche and parody involve the imitation or, better still, the mimicry of other styles and particularly of the mannerisms and stylistic twitches of other styles. It is obvious that modern literature in general offers a very rich field for parody, since the great modern writers have all been defined by the invention or production of rather unique styles: think of the Faulknerian long sentence or of D. H. Lawrence's characteristic nature imagery; think of Wallace Stevens's peculiar way of using abstractions; think also of the mannerisms of the philosophers, of Heidegger for example, or Sartre; think of the musical styles of Mahler or Prokofiev.⁸ All of these styles, however different from each other, are comparable in this: each is quite unmistakable; once one is learned, it is not likely to be confused with something else.

Now parody capitalizes on the uniqueness of these styles and seizes on their idiosyncrasies and eccentricities to produce an imitation which mocks the original. I won't say that the satiric impulse is conscious in all forms of parody. In any case, a good or great parodist has to have some secret sympathy for the original, just as a great mimic has to have the capacity to put himself/herself in the place of the person imitated. Still, the general effect of parody is—whether in sympathy or with malice—to cast ridicule on the private nature of these stylistic mannerisms and their excessiveness and eccentricity with respect to the way people normally speak or write. So there remains somewhere behind all parody the feeling that there is a linguistic norm in contrast to which the styles of the great modernists can be mocked.

But what would happen if one no longer believed in the existence of normal language, of ordinary speech, of the linguistic norm (the kind of clarity

6. The government established under a new constitution, written in response to the crisis brought on by France's colonial war in Algeria; Charles de Gaulle (1890–1970) became its first president in 1959.

7. The enormous increase in third world agricultural production (especially in India and Pakistan) in the 1960s made possible by new high-yield varieties of wheat and rice, the use of chemical

fertilizers and pesticides, irrigation, and mechanization.

8. All innovators of modernism: the American novelist William Faulkner (1897–1962), the English novelist and poet Lawrence (1885–1930), the German philosopher MARTIN HEIDEGGER (1889–1976), and the Russian composer Sergei Prokofiev (1891–1953).

and communicative power celebrated by Orwell in his famous essay,⁹ say)? One could think of it in this way; perhaps the immense fragmentation and privatization of modern literature—its explosion into a host of distinct private styles and mannerisms—foreshadows deeper and more general tendencies in social life as a whole. Supposing that modern art and modernism—far from being a kind of specialized aesthetic curiosity—actually anticipated social developments along these lines; supposing that in the decades since the emergence of the great modern styles society has itself begun to fragment in this way, each group coming to speak a curious private language of its own, each profession developing its private code or idiolect, and finally each individual coming to be a kind of linguistic island, separated from everyone else? But then in that case, the very possibility of any linguistic norm in terms of which one could ridicule private languages and idiosyncratic styles would vanish, and we would have nothing but stylistic diversity and heterogeneity.

That is the moment at which pastiche appears and parody has become impossible. Pastiche is, like parody, the imitation of a peculiar or unique style, the wearing of a stylistic mask, speech in a dead language: but it is a neutral practice of such mimicry, without parody's ulterior motive, without the satirical impulse, without laughter, without that still latent feeling that there exists something *normal* compared to which what is being imitated is rather comic. Pastiche is blank parody, parody that has lost its sense of humor: pastiche is to parody what that curious thing, the modern practice of a kind of blank irony, is to what Wayne Booth¹ calls the stable and comic ironies of, say, the eighteenth century.

The Death of the Subject

But now we need to introduce a new piece into this puzzle, which may help to explain why classical modernism is a thing of the past and why postmodernism should have taken its place. This new component is what is generally called the 'death of the subject'² or, to say it in more conventional language, the end of individualism as such. The great modernisms were, as we have said, predicated on the invention of a personal, private style, as unmistakable as your fingerprint, as incomparable as your own body. But this means that the modernist aesthetic is in some way organically linked to the conception of a unique self and private identity, a unique personality and individuality, which can be expected to generate its own unique vision of the world and to forge its own unique, unmistakable style.

Yet today, from any number of distinct perspectives, the social theorists, the psychoanalysts, even the linguists, not to speak of those of us who work in the area of culture and cultural and formal change, are all exploring the notion that that kind of individualism and personal identity is a thing of the past; that the old individual or individualist subject is 'dead'; and that one might even describe the concept of the unique individual and the theoretical basis of individualism as ideological. There are in fact two positions on all this, one of which is more radical than the other. The first one is content to

9. "Politics and the English Language" (1946), by the English novelist and essayist George Orwell (pen name of Eric Arthur Blair, 1903–1950).

1. American literary critic (1921–2005), author

of *The Rhetoric of Irony* (1974).

2. Compare ROLAND BARTHES, "The Death of the Author" (1968; see above).

say: yes, once upon a time, in the classic age of competitive capitalism, in the heyday of the nuclear family and the emergence of the bourgeoisie as the hegemonic social class, there was such a thing as individualism, as individual subjects. But today, in the age of corporate capitalism, of the so-called organization man,³ of bureaucracies in business as well as in the state, of demographic explosion—today, that older bourgeois individual subject no longer exists.

Then there is a second position, the more radical of the two, what one might call the poststructuralist position. It adds: not only is the bourgeois individual subject a thing of the past, it is also a myth; it *never* really existed in the first place; there have never been autonomous subjects of that type. Rather, this construct is merely a philosophical and cultural mystification which sought to persuade people that they 'had' individual subjects and possessed this unique personal identity.

For our purposes, it is not particularly important to decide which of these positions is correct (or rather, which is more interesting and productive). What we have to retain from all this is rather an aesthetic dilemma: because if the experience and the ideology of the unique self, an experience and ideology which informed the stylistic practice of classical modernism, is over and done with, then it is no longer clear what the artists and writers of the present period are supposed to be doing. What is clear is merely that the older models—Picasso,⁴ Proust, T. S. Eliot—do not work any more (or are positively harmful), since nobody has that kind of unique private world and style to express any longer. And this is perhaps not merely a 'psychological' matter: we also have to take into account the immense weight of seventy or eighty years of classical modernism itself. There is another sense in which the writers and artists of the present day will no longer be able to invent new styles and worlds—they've already been invented; only a limited number of combinations are possible; the unique ones have been thought of already. So the weight of the whole modernist aesthetic tradition—now dead—also 'weighs like a nightmare on the brains of the living', as Marx said in another context.⁵

Hence, once again, pastiche: in a world in which stylistic innovation is no longer possible, all that is left is to imitate dead styles, to speak through the masks and with the voices of the styles in the imaginary museum. But this means that contemporary or postmodernist art is going to be about art itself in a new kind of way; even more, it means that one of its essential messages will involve the necessary failure of art and the aesthetic, the failure of the new, the imprisonment in the past.

The Nostalgia Mode

As this may seem very abstract, I want to give a few examples, one of which is so omnipresent that we rarely link it with the kinds of developments in high art discussed here. This particular practice of pastiche is not high-cultural but very much within mass culture, and it is generally known as the 'nostalgia film' (what the French neatly call *la mode rétro*—retrospective styling). We must conceive of this category in the broadest way: narrowly, no doubt, it con-

3. See William Whyte, *The Organization Man* (1956).

4. Pablo Picasso (1881–1973), Spanish painter and a pioneer of modernist art, especially cubism.

5. See *The Eighteenth Brumaire of Louis Bonaparte* (1852) by the German social and political philosopher KARL MARX (1818–1883).

sists merely of films about the past and about specific generational moments of that past. Thus, one of the inaugural films in this new 'genre' (if that's what it is) was Lucas's *American Graffiti*, which in 1973 set out to recapture all the atmosphere and stylistic peculiarities of the 1950s United States, the United States of the Eisenhower era. Polanski's great film *Chinatown* does something similar for the 1930s, as does Bertolucci's *The Conformist* for the Italian and European context of the same period, the fascist era in Italy;⁶ and so forth. We could go on listing these films for some time: why call them pastiche? Are they not rather work in the more traditional genre known as the historical film—work which can more simply be theorized by extrapolating that other well-known form which is the historical novel?

I have my reasons for thinking that we need new categories for such films. But let me first add some anomalies: supposing I suggested that *Star Wars*⁷ is also a nostalgia film. What could that mean? I presume we can agree that this is not a historical film about our own intergalactic past. Let me put it somewhat differently: one of the most important cultural experiences of the generations that grew up from the 1930s to the 1950s was the Saturday afternoon serial of the Buck Rogers⁸ type—alien villains, true American heroes, heroines in distress, the death ray or the doomsday box, and the cliffhanger at the end whose miraculous resolution was to be witnessed next Saturday afternoon. *Star Wars* reinvents this experience in the form of a pastiche: that is, there is no longer any point to a parody of such serials since they are long extinct. *Star Wars*, far from being a pointless satire of such now dead forms, satisfies a deep (might I even say repressed?) longing to experience them again: it is a complex object in which on some first level children and adolescents can take the adventures straight, while the adult public is able to gratify a deeper and more properly nostalgic desire to return to that older period and to live its strange old aesthetic artifacts through once again. This film is thus *metonymically*⁹ a historical or nostalgia film: unlike *American Graffiti*, it does not reinvent a picture of the past in its lived totality; rather, by reinventing the feel and shape of characteristic art objects of an older period (the serials), it seeks to reawaken a sense of the past associated with those objects. *Raiders of the Lost Ark*,¹ meanwhile, occupies an intermediary position here: on some level it is *about* the 1930s and 1940s, but in reality it too conveys that period metonymically through its own characteristic adventure stories (which are no longer ours).

Now let me discuss another interesting anomaly which may take us further towards understanding nostalgia film in particular and pastiche generally. This one involves a recent film called *Body Heat*,² which, as has abundantly been pointed out by the critics, is a kind of distant remake of *The Postman Always Rings Twice* or *Double Indemnity*. (The allusive and elusive plagiarism of older plots is, of course, also a feature of pastiche.) Now *Body Heat* is technically not a nostalgia film, since it takes place in a contemporary setting, in a little Florida village near Miami. On the other hand, this technical contem-

6. All films of the 1970s, set in the relatively recent past: *American Graffiti* (1973), directed by George Lucas (b. 1944), an American; *Chinatown* (1974), directed by Roman Polanski (b. 1933), raised in Poland; and *The Conformist* (1970), written and directed by Bernardo Bertolucci (b. 1940), an Italian.

7. A 1977 film, written and directed by Lucas.

8. Hero of a comic strip created in 1929 featuring science fiction adventures, later popularized

in movie serials.

9. Through association, not through resemblance.

1. A 1981 film, directed by Steven Spielberg; the story is by Lucas.

2. This 1981 film, starring William Hurt (b. 1950), follows the same seduction-murder plot line as the films noir named, *The Postman Always Rings Twice* (1946) and *Double Indemnity* (1944).

poraneity is most ambiguous indeed: the credits—always our first cue—are lettered and scripted in a 1930s Art-Deco style which cannot but trigger nostalgic reactions (first to *Chinatown*, no doubt, and then beyond it to some more historical referent). Then the very style of the hero himself is ambiguous: William Hurt is a new star but has nothing of the distinctive style of the preceding generation of male superstars like Steve McQueen or even Jack Nicholson, or rather, his persona here is a kind of mix of their characteristics with an older role of the type generally associated with Clark Gable.³ So here too there is a faintly archaic feel to all this. The spectator begins to wonder why this story, which could have been situated anywhere, is set in a small Florida town, in spite of its contemporary reference. One begins to realize after a while that the small town setting has a crucial strategic function: it allows the film to do without most of the signals and references which we might associate with the contemporary world, with consumer society—the appliances and artifacts, the high rises, the object world of late capitalism. Technically, then, its objects (its cars, for instance) are 1980s products, but everything in the film conspires to blur that immediate contemporary reference and to make it possible to receive this too as nostalgia work—as a narrative set in some indefinable nostalgic past, an eternal 1930s, say, beyond history. It seems to me exceedingly symptomatic to find the very style of nostalgia films invading and colonizing even those movies today which have contemporary settings: as though, for some reason, we were unable today to focus our own present, as though we have become incapable of achieving aesthetic representations of our own current experience. But if that is so, then it is a terrible indictment of consumer capitalism itself—or, at the very least, an alarming and pathological symptom of a society that has become incapable of dealing with time and history.

So now we come back to the question of why nostalgia film or pastiche is to be considered different from the older historical novel or film. (I should also include in this discussion the major literary example of all this, to my mind: the novels of E. L. Doctorow⁴—*Ragtime*, with its turn-of-the-century atmosphere, and *Loon Lake*, for the most part about our 1930s. But these are, in my opinion, historical novels in appearance only. Doctorow is a serious artist and one of the few genuinely left or radical novelists at work today. It is no disservice to him, however, to suggest that his narratives do not represent our historical past so much as they represent our ideas or cultural stereotypes about that past.) Cultural production has been driven back inside the mind, within the monadic subject: it can no longer look directly out of its eyes at the real world for the referent but must, as in Plato's cave,⁵ trace its mental images of the world on its confining walls. If there is any realism left here, it is a 'realism' which springs from the shock of grasping that confinement and of realizing that, for whatever peculiar reasons, we seem condemned to seek the historical past through our own pop images and stereotypes about that past, which itself remains forever out of reach.

3. Gable (1901–1960), like McQueen (1930–1980) and Nicholson (b. 1937), an American leading man.

4. American novelist (1931–2015), who published *Ragtime* in 1975 and *Loon Lake* in 1980.

5. That is, the allegory of the cave that opens book 7 of *Republic* (see above), by the Greek philosopher PLATO (ca. 427–ca. 347 B.C.E.); it describes the majority of humanity as trapped in a cave,

seeing only the shadows cast by the representations of real objects (the "real" being the Forms or Ideas of things, located outside the cave). This view is echoed in the argument of the French theorist JEAN BAUDRILLARD (1929–2007) that in postmodernity we deal only with simulations of things (their simulacra), not with the things themselves or even with their representations.

Postmodernism and the City

Now, before I try to offer a somewhat more positive conclusion, I want to sketch the analysis of a full-blown postmodern building—a work which is in many ways uncharacteristic of that postmodern architecture whose principal names are Robert Venturi, Charles Moore, Michael Graves, and more recently Frank Gehry,⁶ but which to my mind offers some very striking lessons about the originality of postmodernist space. Let me amplify the figure which has run through the preceding remarks, and make it even more explicit: I am proposing the notion that we are here in the presence of something like a mutation in built space itself. My implication is that we ourselves, the human subjects who happen into this new space, have not kept pace with that evolution; there has been a mutation in the object, unaccompanied as yet by any equivalent mutation in the subject; we do not yet possess the perceptual equipment to match this new hyperspace, as I will call it, in part because our perceptual habits were formed in that older kind of space I have called the space of high modernism. The newer architecture therefore—like many of the other cultural products I have evoked in the preceding remarks—stands as something like an imperative to grow new organs to expand our sensorium and our body to some new, as yet unimaginable, perhaps ultimately impossible, dimensions.

THE BONAVENTURE HOTEL

The building whose features I will very rapidly enumerate in the next few moments is the Bonaventure Hotel, built in the new Los Angeles downtown by the architect and developer John Portman,⁷ whose other works include the various Hyatt Regencies, the Peachtree Center in Atlanta, and the Renaissance Center in Detroit. I have mentioned the populist aspect of the rhetorical defence of postmodernism against the elite (and utopian) austerities of the great architectural modernisms: it is generally affirmed, in other words, that these newer building are popular works on the one hand; and that they respect the vernacular of the American city fabric on the other, that is to say, that they no longer attempt, as did the masterworks and monuments of high modernism, to insert a different, a distinct, an elevated, a new utopian language into the tawdry and commercial sign-system of the surrounding city, but rather, on the contrary, seek to speak that very language, using its lexicon and syntax as that has been emblematically ‘learned from Las Vegas’.

On the first of these counts, Portman’s Bonaventure fully confirms the claim: it is a popular building, visited with enthusiasm by locals and tourists alike (although Portman’s other buildings are even more successful in this respect). The populist insertion into the city fabric is, however, another matter, and it is with this that we will begin. There are three entrances to the Bonaventure, one from Figueroa, and the other two by way of elevated gardens on the other side of the hotel, which is built into the remaining slope of the former Beacon Hill. None of these is anything like the old hotel marquee, or the monumental *porte-cochère*⁸ with which the sumptuous buildings of yesteryear were wont to stage your passage from city street to the older inte-

6. All prominent American architects: Moore (1925–1993), Graves (1934–2015), and the Canadian-born Gehry (b. 1929).

7. Influential American architect (b. 1924).

8. Coach doorway (French); now, a porch roof extending from an entrance over a driveway.

rior. The entryways of the Bonaventure are as it were lateral and rather back-door affairs: the gardens in the back admit you to the sixth floor of the towers, and even there you must walk down one flight to find the elevator by which you gain access to the lobby. Meanwhile, what one is still tempted to think of as the front entry, on Figueroa, admits you, baggage and all, onto the second-story balcony, from which you must take an escalator down to the main registration desk. More about these elevators and escalators in a moment. What I first want to suggest about these curiously unmarked ways-in is that they seem to have been imposed by some new category of closure governing the inner space of the hotel itself (and this over and above the material constraints under which Portman had to work). I believe that, with a certain number of other characteristic postmodern buildings, such as the Beaubourg in Paris, or the Eaton Centre in Toronto, the Bonaventure aspires to being a total space, a complete world, a kind of miniature city (and I would want to add that to this new total space corresponds a new collective practice, a new mode in which individuals move and congregate, something like the practice of a new and historically original kind of hyper-crowd). In this sense, then, ideally the mini-city of Portman's Bonaventure ought not to have entrances at all, since the entryway is always the seam that links the building to the rest of the city that surrounds it: for it does not wish to be a part of the city, but rather its equivalent and its replacement or substitute. That is, however, obviously not possible or practical, whence the deliberate downplaying and reduction of the entrance function to its bare minimum. But this disjunction from the surrounding city is very different from that of the great monuments of the International Style: there, the act of disjunction was violent, visible, and had a very real symbolic significance—as in Le Corbusier's great *pilotis*⁹ whose gesture radically separates the new utopian space of the modern from the degraded and fallen city fabric which it thereby explicitly repudiates (although the gamble of the modern was that this new utopian space, in the virulence of its *Novum*,¹ would fan out and transform that eventually by the power of its new spatial language). The Bonaventure, however, is content to 'let the fallen city fabric continue to be in its being' (to parody Heidegger²); no further effects, no larger protopolitical utopian transformation, is either expected or desired.

This diagnosis is to my mind confirmed by the great reflective glass skin of the Bonaventure, whose function I will now interpret rather differently that I did a moment ago when I saw the phenomenon of reflexion generally as developing a thematics of reproductive technology (the two readings are however not incompatible). Now one would want rather to stress the way in which the glass skin repels the city outside; a repulsion for which we have analogies in those reflector sunglasses which make it impossible for your interlocutor to see your own eyes and thereby achieve a certain aggressivity towards and power over the Other. In a similar way, the glass skin achieves a peculiar and placeless dissociation of the Bonaventure from its neighborhood: it is not even an exterior, inasmuch as when you seek to look at the hotel's outer walls you cannot see the hotel itself, but only the distorted images of everything that surrounds it.

9. Pilings (French), pillars that support a building and make bearing walls unnecessary; Le Corbusier used them to leave the ground floor open.

1. New thing, novelty (Latin).

2. Jameson echoes language often used by Heidegger in *Being and Time* (1927).

Now I want to say a few words about escalators and elevators: given their very real pleasures in Portman, particularly these last, which the artist has termed 'gigantic kinetic sculptures' and which certainly account for much of the spectacle and the excitement of the hotel interior, particularly in the Hyatts, where like great Japanese lanterns or gondolas they ceaselessly rise and fall—given such a deliberate marking and foregrounding in their own right, I believe one has to see such 'people movers' (Portman's own term, adapted from Disney³) as something a little more than mere functions and engineering components. We know in any case that recent architectural theory has begun to borrow from narrative analysis in other fields, and to attempt to see our physical trajectories through such buildings as virtual narratives or stories, as dynamic paths and narrative paradigms which we as visitors are asked to fulfill and to complete with our own bodies and movements. In the Bonaventure, however, we find a dialectical heightening of this process: it seems to me that the escalators and elevators here henceforth replace movement but also and above all designate themselves as new reflexive signs and emblems of movement proper (something which will become evident when we come to the whole question of what remains of older forms of movement in this building, most notably walking itself). Here the narrative stroll has been underscored, symbolized, reified and replaced by a transportation machine which becomes the allegorical signifier of that older promenade we are no longer allowed to conduct on our own: and this is a dialectical intensification of the autoreferentiality of all modern culture, which tends to turn upon itself and designate its own cultural production as its content.

I am more at a loss when it comes to conveying the thing itself, the experience of space you undergo when you step off such allegorical devices into the lobby or atrium, with its great central column, surrounded by a miniature lake, the whole positioned between the four symmetrical residential towers with their elevators, and surrounded by rising balconies capped by a kind of greenhouse roof at the sixth level. I am tempted to say that such space makes it impossible for us to use the language of volume or volumes any longer, since these last are impossible to seize. Hanging streamers indeed suffuse this empty space in such a way as to distract systematically and deliberately from whatever form it might be supposed to have; while a constant busyness gives the feeling that emptiness is here absolutely packed, that it is an element within which you yourself are immersed, without any of that distance that formerly enabled the perception of perspective or volume. You are in this hyperspace up to your eyes and your body; and if it seemed to you before that that suppression of depth I spoke of in postmodern painting or literature would necessarily be difficult to achieve in architecture itself, perhaps you may now be willing to see this bewildering immersion as the formal equivalent in the new medium.

Yet escalator and elevator are also in this context dialectical opposites; and we may suggest that the glorious movement of the elevator gondolas is also a dialectical compensation for this filled space of the atrium—it gives us the chance at a radically different, but complementary, spatial experience, that of rapidly shooting up through the ceiling and outside, along one of the four symmetrical towers, with the referent, Los Angeles itself, spread out breath-takingly and even alarmingly before us. But even this vertical movement is

3. Walt Disney (1901–1966), American animator and filmmaker who planned the amusement parks Disneyland and Walt Disney World; they included

escalators and monorails, which Disney called "people movers."

contained: the elevator lifts you to one of those revolving cocktail lounges, in which you, seated, are again passively rotated about and offered a contemplative spectacle of the city itself, now transformed into its own images by the glass windows through which you view it.

Let me quickly conclude all this by returning to the central space of the lobby itself (with the passing observation that the hotel rooms are visibly marginalized: the corridors in the residential sections are low-ceilinged and dark, most depressingly functional indeed: while one understands that the rooms are in the worst of taste). The descent is dramatic enough, plummeting back down through the roof to splash down in the lake; what happens when you get there is something else, which I can only try to characterize as milling confusion, something like the vengeance this space takes on those who still seek to walk through it. Given the absolute symmetry of the four towers, it is quite impossible to get your bearings in this lobby; recently, colour coding and directional signals have been added in a pitiful and revealing, rather desperate attempt to restore the coordinates of an older space. I will take as the most dramatic practical result of this spatial mutation the notorious dilemma of the shopkeepers on the various balconies: it has been obvious, since the very opening of the hotel in 1977, that nobody could ever find any of these stores, and even if you located the appropriate boutique, you would be most unlikely to be as fortunate a second time; as a consequence, the commercial tenants are in despair and all the merchandise is marked down to bargain prices. When you recall that Portman is a businessman as well as an architect, and a millionaire developer, an artist who is at one and the same time a capitalist in his own right, you cannot but feel that here too something of a 'return of the repressed' is involved.

So I come finally to my principal point here, that this latest mutation in space—postmodern hyperspace—has finally succeeded in transcending the capacities of the individual human body to locate itself, to organize its immediate surroundings perceptually, and cognitively to map its position in a mappable external world. And I have already suggested that this alarming disjunction point between the body and its built environment—which is to the initial bewilderment of the older modernism as the velocities of spacecraft are to those of the automobile—can itself stand as the symbol and analog of that even sharper dilemma which is the incapacity of our minds, at least at present, to map the great global multinational and decentered communicational network in which we find ourselves caught as individual subjects.

THE NEW MACHINE

But as I am anxious that Portman's space not be perceived as something either exceptional or seemingly marginalized and leisure-specialized on the order of Disneyland, I would like in passing to juxtapose this complacent and entertaining (although bewildering) leisure-time space with its analog in a very different area, namely the space of postmodern warfare, in particular as Michael Herr evokes it in his great book on the experience of Vietnam, called *Dispatches*.⁴ The extraordinary linguistic innovations of this work may still be considered postmodern, in the eclectic way in which its language impersonally fuses a whole range of contemporary collective idiolects, most notably rock language and black language: but the fusion is dictated by problems of

4. A memoir published in 1977; Herr (1940–2016) was an American journalist.

content. This first terrible postmodernist war cannot be told in any of the traditional paradigms of the war novel or movie—indeed that breakdown of all previous narrative paradigms is, along with the breakdown of any shared language through which a veteran might convey such experience, among the principal subjects of the book and may be said to open up the place of a whole new reflexivity. Benjamin's account of Baudelaire,⁵ and of the emergence of modernism from a new experience of city technology which transcends all the older habits of bodily perception, is both singularly relevant here, and singularly antiquated, in the light of this new and virtually unimaginable quantum leap in technological alienation:

He was a moving-target-survivor subscriber, a true child of the war, because except for the rare times when you were pinned or stranded the system was geared to keep you mobile, if that was what you thought you wanted. As a technique for staying alive it seemed to make as much sense as anything, given naturally that you were there to begin with and wanted to see it close; it started out sound and straight but it formed a cone as it progressed, because the more you moved the more you saw, the more you saw the more besides death and mutilation you risked, and the more you risked of that the more you would have to let go of one day as a 'survivor'. Some of us moved around the war like crazy people until we couldn't see which way the run was taking us anymore, only the war all over its surface with occasional, unexpected penetration. As long as we could have choppers like taxis it took real exhaustion or depression near shock or a dozen pipes of opium to keep us even apparently quiet, we'd still be running around inside our skins like something was after us, ha, ha, La Vida Loca.⁶ In the months after I got back the hundreds of helicopters I'd flown in begin to draw together until they'd formed a collective meta-chopper, and in my mind it was the sexiest thing going; saver-destroyer, provider-waster, right hand-left hand, nimble, fluent, canny and human; hot steel, grease, jungle-saturated canvas webbing, sweat cooling and warming up again, cassette rock and roll in one ear and door-gun fire in the other, fuel, heat, vitality and death, death itself, hardly an intruder.⁷

In this new machine, which does not, like the older modernist machinery of the locomotive or the airplane, represent motion, but which can only be represented *in motion*, something of the mystery of the new postmodernist space is concentrated.

The Aesthetic of Consumer Society

Now I must try very rapidly in conclusion to characterize the relationship of cultural production of this kind to social life in this country today. This will also be the moment to address the principal objection to concepts of post-modernism of the type I have sketched here: namely that all the features we have enumerated are not new at all but abundantly characterized modern-

5. Charles Baudelaire (1821–1867), French poet; the German critic WALTER BENJAMIN (1892–1940) discusses him and 19th-century Paris in his unfinished *Arcades Project* (1983; trans. 1999), part of which was published earlier as

Charles Baudelaire: A Lyric Poet in the Era of High Capitalism (1969; trans. 1973).

6. *The Crazy Life* (Spanish).

7. Michael Herr, *Dispatches* (New York: Knopf, 1977), pp. 8–9 [Jameson's note].

ism proper or what I call high modernism. Was not Thomas Mann, after all, interested in the idea of pastiche, and are not certain chapters of *Ulysses* its most obvious realization? Can Flaubert, Mallarmé and Gertrude Stein⁸ not be included in an account of postmodernist temporality? What is so new about all of this? Do we really need the concept of *postmodernism*?

One kind of answer to this question would raise the whole issue of periodization and of how a historian (literary or other) posits a radical break between two henceforth distinct periods. I must limit myself to the suggestion that radical breaks between periods do not generally involve complete changes of content but rather the restructuring of a certain number of elements already given: features that in an earlier period or system were subordinate now become dominant, and features that had been dominant again become secondary. In this sense, everything we have described here can be found in earlier periods and most notably within modernism proper: my point is that until the present day those things have been secondary or minor features of modernist art, marginal rather than central, and that we have something new when they become the central features of cultural production.

But I can argue this more concretely by turning to the relationship between cultural production and social life generally. The older or classical modernism was an oppositional art; it emerged within the business society of the gilded age⁹ as scandalous and offensive to the middle-class public—ugly, dissonant, bohemian, sexually shocking. It was something to make fun of (when the police were not called in to seize the books or close the exhibitions): an offense to good taste and to common sense, or, as Freud and Marcuse¹ would have put it, a provocative challenge to the reigning reality- and performance-principles of early twentieth-century middle-class society. Modernism in general did not go well with over-stuffed Victorian furniture, with Victorian moral taboos, or with the conventions of polite society. This is to say that whatever the explicit political content of the great high modernisms, the latter were always in some mostly implicit ways dangerous and explosive, subversive within the established order.

If then we suddenly return to the present day, we can measure the immensity of the cultural changes that have taken place. Not only are Joyce and Picasso no longer weird and repulsive, they have become classics and now look rather realistic to us. Meanwhile, there is very little in either the form or the content of contemporary art that contemporary society finds intolerable and scandalous. The most offensive forms of this art—punk rock, say, or what is called sexually explicit material—are all taken in stride by society, and they are commercially successful, unlike the productions of the older high modernism. But this means that even if contemporary art has all the same formal features as the older modernism, it has still shifted its position fundamentally within our culture. For one thing, commodity production and in particular our clothing, furniture, buildings and other artifacts are now intimately tied in with styling changes which derive from artistic experimentation; our advertising, for example, is fed by postmodernism in all the arts and inconceivable without it. For another, the classics of high modernism are now part of the

8. American modernist (1874–1946), who was innovative in poetry and prose. *Ulysses* (1922), Joyce's landmark modernist novel. Gustave Flaubert (1821–1880), French novelist. Stéphane Mallarmé (1842–1898), French poet.

9. Era in late 19th-century America of rapid industrial expansion, burgeoning wealth for some,

and gaudy materialism (the name is taken from an 1873 novel by Mark Twain and Charles Dudley Warner).

1. Herbert Marcuse (1898–1979), German-born American philosopher and social critic. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis.

so-called canon and are taught in schools and universities—which at once empties them of any of their older subversive power. Indeed, one way of marking the break between the periods and of dating the emergence of postmodernism is precisely to be found there: in the moment (the early 1960s, one would think) in which the position of high modernism and its dominant aesthetics become established in the academy and are henceforth felt to be academic by a whole new generation of poets, painters and musicians.

But one can also come at the break from the other side, and describe it in terms of periods of recent social life. As I have suggested, non-Marxists and Marxists alike have come around to the general feeling that at some point following World War II a new kind of society began to emerge (variously described as postindustrial society, multinational capitalism, consumer society, media society and so forth). New types of consumption; planned obsolescence; an ever more rapid rhythm of fashion and styling changes; the penetration of advertising, television and the media generally to a hitherto unparalleled degree throughout society; the replacement of the old tension between city and country, center and province, by the suburb and by universal standardization; the growth of the great networks of superhighways and the arrival of automobile culture—these are some of the features which would seem to mark a radical break with that older prewar society in which high modernism was still an underground force.

I believe that the emergence of postmodernism is closely related to the emergence of this new moment of late, consumer or multinational capitalism. I believe also that its formal features in many ways express the deeper logic of that particular social system. I will only be able, however, to show this for one major theme: namely the disappearance of a sense of history, the way in which our entire contemporary social system has little by little begun to lose its capacity to retain its own past, has begun to live in a perpetual present and in a perpetual change that obliterates traditions of the kind which all earlier social formations have had in one way or another to preserve. Think only of the media exhaustion of news: of how Nixon and, even more so, Kennedy² are figures from a now distant past. One is tempted to say that the very function of the news media is to relegate such recent historical experiences as rapidly as possible into the past. The informational function of the media would thus be to help us forget, to serve as the very agents and mechanisms for our historical amnesia.

But in that case the two features of postmodernism on which I have dwelt here—the transformation of reality into images, the fragmentation of time into a series of perpetual presents—are both extraordinarily consonant with this process. My own conclusion here must take the form of a question about the critical value of the newer art. There is some agreement that the older modernism functioned against its society in ways which are variously described as critical, negative, contestatory, subversive, oppositional and the like. Can anything of the sort be affirmed about postmodernism and its social moment? We have seen that there is a way in which postmodernism replicates or reproduces—reinforces—the logic of consumer capitalism; the more significant question is whether there is also a way in which it resists that logic. But that is a question we must leave open.

1988

2. John F. Kennedy (1917–1963), 35th U.S. president (1961–63). Richard Nixon (1913–1994), 37th U.S. president (1969–74), who lost to Kennedy in the 1960 election.

DAVID HARVEY

b. 1935

David Harvey is a leading theorist of contemporary capitalism, updating the Marxist tradition to explain postmodernism and neoliberalism. A geographer by training, he describes how capitalism operates over the expanse of the globe and remakes our spaces, often exploiting labor as well as resources. In our selections from his best-selling *A Brief History of Neoliberalism* (2005), he succinctly defines the policies and practices of neoliberalism, tracing its rise from the 1970s onward and critiquing its tendency toward “accumulation by dispossession,” as it draws wealth from poorly paid “disposable workers.”

Born in Kent, England, in 1935, Harvey attended Cambridge University (B.A., 1957; Ph.D., 1961). After teaching at the University of Bristol (1961–69), he went to the United States to teach at Johns Hopkins University (1969–87); there he established a seminar studying KARL MARX’s *Capital* every year. In 1987 he became the Halford Mackinder Professor of Geography at Oxford, but he returned to Johns Hopkins in 1993. In 2001 he moved to the Graduate Center of the City University of New York as Distinguished Professor of Anthropology.

While Marx declared in *The Communist Manifesto* (1848; see above) that “The history of all hitherto existing society is the history of class struggles,” he also distinguished several modes of production, which progressed from ancient hunting and gathering to feudalism and to modern capitalism. Famously, Marx predicted that the next mode of production will be socialism or communism. In more recent years, theorists have distinguished different phases of capitalism itself. In *Late Capitalism* (1972), the radical theorist Ernest Mandel argued that capitalism encompasses three stages: entrepreneurial capitalism in the eighteenth and nineteenth centuries, imperialism in the late nineteenth through the twentieth century, and postindustrial or consumer capitalism after World War II. In “Postmodernism and Consumer Society” (1988; see above), FREDRIC JAMESON applied Mandel’s scheme to culture, finding that the first stage corresponded to the European realist novel, the second to modernism, and the third to postmodernism.

In his landmark book *The Condition of Postmodernity: An Enquiry into the Origins of Cultural Change* (1989), Harvey developed his own interpretation of postmodernism, diagnosing the bewildering changes in the economy since the 1970s as “post-Fordism,” which exhibits a new form of “flexible accumulation.” The previous moment, “Fordism,” takes its name from the American pioneering automobile manufacturer Henry Ford, who in the early twentieth century paid his workers a relatively high wage so that they could buy the products they were producing. This general policy is often credited with creating a prosperous American middle class, whose members were paid reasonably well and whose spending in turn could spur the consumer economy. But after a recession and an oil crisis during the 1970s, labor lost power, wages stagnated or fell, and capitalist owners adopted more flexible practices, moving production at will from nationally based businesses to “multi-national” ones. As a geographer, Harvey has focused on the movements of capital and labor around the world; rather than relying on a factory fixed in one place manufacturing large stocks, the post-Fordist model emphasizes “just-in-time” production, utilizing the cheapest locations and undermining any concerted power wielded by labor. A car sold in the United States, for instance, might be assembled in Mexico from parts fabricated in China, Korea, and Ohio out of raw materials shipped from various countries in South America and Africa. Rather than accumulating wealth in one stable location—say Detroit, during the heyday of American automobile manu-

facturing, or Manchester, during the heyday of British industrialism—the model has shifted to flexible accumulation.

Through the 1990s, Harvey turned to look at “neoliberalism,” a label he came to prefer to “postmodernism,” which has a range of meanings in art and culture as well as political economy. As he explains in our selections, neoliberalism arose from policies put in place in the 1970s in response to the crisis of Western capitalism; these included the paring back of social programs, deregulation rather than governmental oversight, an emphasis on the free market and trade, and the privatization of formerly public services. However reduced, neoliberal government plays a key role in instituting policies that support capitalism, usually favoring finance and constricting unions, and in providing police and military protection to private property. The philosophy of neoliberalism sprang from conservative thinkers such as FRIEDRICH HAYEK and LEO STRAUSS, who reacted against the liberal social welfare programs of the postwar era and stressed individual rights and the benefits of market competition.

In our selections, Harvey begins with the observation that the changes of the late 1970s and early 1980s show a surprising global range, linking not just countries such as the United States and Britain but also their erstwhile opponents China and Russia. After defining this trend, he points out its decisive effects on workers, who have largely lost control of their labor power as companies are likely to move production on short notice and unions have become more restricted. Moreover, workers have experienced declining wages and worsening conditions, as they face perpetual insecurity. Indeed, Harvey asserts that low-wage workers have become “disposable” and that capitalism fosters “accumulation by dispossession”—that is, capitalists profit at the expense of workers in various places around the globe. For instance, as Harvey elaborated in an interview, after the bankruptcy of an American airline, all the flight attendants and service workers lost their pensions, but the senior managers of the company made millions of dollars, as did the bankers who negotiated the deal. Among the other distinctive results of neoliberalism that Harvey points out are new vulnerabilities for women, especially in less developed countries, and the spread of religious fundamentalisms.

Harvey's views have had a great deal of influence in literary and cultural studies, providing a useful description of the political and economic structure of contemporary society. In particular, his idea of disposable workers has resonated with critics of mental labor, such as ANDREW ROSS and MARC BOUSQUET, whose analysis of the current system of academic teaching labor exposes its reliance on casual or term jobs rather than permanent ones. Harvey has also influenced academics working in geography, sociology, and anthropology, but not in mainstream economics, where some dismiss his views as outmoded, fixed on the archaic concepts of Marxism. Moreover, some conservatives argue that despite their problems, human societies today have better conditions than ever before thanks to modernization.

Within cultural studies and allied fields, a few scholars have expressed reservations that Harvey evokes a totalizing view—the kind of grand narrative whose demise has been announced by postmodernist theorists such as JEAN-FRANÇOIS LYOTARD. However, Harvey combines detailed historical analysis with an abstract understanding of capitalism and its processes. As he told his interviewer, “I try to mobilize the power of abstraction and do it in a way that allows me then to connect to the ground” and to the conditions that people experience.

A Brief History of Neoliberalism Keywords: Globalization, Hegemony, Marxism, Postmodernity, Religion

From A Brief History of Neoliberalism

Introduction

Future historians may well look upon the years 1978–80 as a revolutionary turning-point in the world's social and economic history. In 1978, Deng Xiaoping¹ took the first momentous steps towards the liberalization of a communist-ruled economy in a country that accounted for a fifth of the world's population. The path that Deng defined was to transform China in two decades from a closed backwater to an open centre of capitalist dynamism with sustained growth rates unparalleled in human history. On the other side of the Pacific, and in quite different circumstances, a relatively obscure (but now renowned) figure named Paul Volcker² took command at the US Federal Reserve in July 1979, and within a few months dramatically changed monetary policy. The Fed thereafter took the lead in the fight against inflation no matter what its consequences (particularly as concerned unemployment). Across the Atlantic, Margaret Thatcher had already been elected Prime Minister of Britain in May 1979, with a mandate to curb trade union power and put an end to the miserable inflationary stagnation that had enveloped the country for the preceding decade. Then, in 1980, Ronald Reagan was elected President of the United States and, armed with geniality and personal charisma, set the US on course to revitalize its economy by supporting Volcker's moves at the Fed and adding his own particular blend of policies to curb the power of labour, deregulate industry, agriculture, and resource extraction, and liberate the powers of finance both internally and on the world stage. From these several epicentres, revolutionary impulses seemingly spread and reverberated to remake the world around us in a totally different image.

Transformations of this scope and depth do not occur by accident. So it is pertinent to enquire by what means and paths the new economic configuration—often subsumed under the term 'globalization'—was plucked from the entrails of the old. Volcker, Reagan, Thatcher, and Deng Xiaoping all took minority arguments that had long been in circulation and made them majoritarian (though in no case without a protracted struggle). Reagan brought to life the minority tradition that stretched back within the Republican Party to Barry Goldwater³ in the early 1960s. Deng saw the rising tide of wealth and influence in Japan, Taiwan, Hong Kong, Singapore, and South Korea and sought to mobilize market socialism instead of central planning to protect and advance the interests of the Chinese state. Volcker and Thatcher both plucked from the shadows of relative obscurity a particular doctrine that went under the name of 'neoliberalism' and transformed it into the central guiding principle of economic thought and man-

1. Chinese Communist leader (1904–1997); though he never held the highest posts in China's government, by 1980 he held the most power (remaining influential even after his official retirement in 1992).

2. American economist (b. 1927); he was chairman of the board of governors of the U.S. Federal

Reserve System until 1987.

3. Arizona politician (1909–1998), often viewed as the father of modern U.S. conservatism; he was a U.S. senator (1953–64, 1969–87) and unsuccessful Republican presidential candidate (1964).

agement. And it is with this doctrine—its origins, rise, and implications—that I am here primarily concerned.⁴

Neoliberalism is in the first instance a theory of political economic practices that proposes that human well-being can best be advanced by liberating individual entrepreneurial freedoms and skills within an institutional framework characterized by strong private property rights, free markets, and free trade. The role of the state is to create and preserve an institutional framework appropriate to such practices. The state has to guarantee, for example, the quality and integrity of money. It must also set up those military, defence, police, and legal structures and functions required to secure private property rights and to guarantee, by force if need be, the proper functioning of markets. Furthermore, if markets do not exist (in areas such as land, water, education, health care, social security, or environmental pollution) then they must be created, by state action if necessary. But beyond these tasks the state should not venture. State interventions in markets (once created) must be kept to a bare minimum because, according to the theory, the state cannot possibly possess enough information to second-guess market signals (prices) and because powerful interest groups will inevitably distort and bias state interventions (particularly in democracies) for their own benefit.

There has everywhere been an emphatic turn towards neoliberalism in political-economic practices and thinking since the 1970s. Deregulation, privatization, and withdrawal of the state from many areas of social provision have been all too common. Almost all states, from those newly minted after the collapse of the Soviet Union⁵ to old-style social democracies and welfare states such as New Zealand and Sweden, have embraced, sometimes voluntarily and in other instances in response to coercive pressures, some version of neoliberal theory and adjusted at least some policies and practices accordingly. Post-apartheid South Africa quickly embraced neoliberalism, and even contemporary China, as we shall see, appears to be headed in this direction. Furthermore, the advocates of the neoliberal way now occupy positions of considerable influence in education (the universities and many 'think tanks'), in the media, in corporate boardrooms and financial institutions, in key state institutions (treasury departments, the central banks), and also in those international institutions such as the International Monetary Fund (IMF), the World Bank, and the World Trade Organization (WTO) that regulate global finance and trade. Neoliberalism has, in short, become hegemonic as a mode of discourse. It has pervasive effects on ways of thought to the point where it has become incorporated into the common-sense way many of us interpret, live in, and understand the world.

4. S. George, "A Short History of Neoliberalism: Twenty Years of Elite Economics and Emerging Opportunities for Structural Change," in W. Bello, N. Bullard, and K. Malhotra (eds.), *Global Finance: New Thinking on Regulating Capital Markets* (London: Zed Books, 2000), 27–35; G. Duménil and D. Lévy, *Capital Resurgent: Roots of the Neoliberal Revolution*, trans. D. Jeffers (Cambridge, Mass.: Harvard University Press, 2004); J. Peck, "Geography and Public Policy: Constructions of Neoliberalism," *Progress*

in *Human Geography*, 28/3 (2004), 392–405; J. Peck and A. Tickell, "Neoliberalizing Space," *Antipode*, 34/3 (2002), 380–404; P. Treanor, "Neoliberalism: Origins, Theory, Definition," <http://web.inter.nl.net/users/Paul.Treanor/neoliberalism.html> [Harvey's note].

5. In December 1991, the Union of Soviet Socialist Republics—which had formed in 1922 after the Russian Revolution of 1917—dissolved into three independent nations and twelve republics in the Commonwealth of Independent States.

The process of neoliberalization has, however, entailed much 'creative destruction',⁶ not only of prior institutional frameworks and powers (even challenging traditional forms of state sovereignty) but also of divisions of labour, social relations, welfare provisions, technological mixes, ways of life and thought, reproductive activities, attachments to the land and habits of the heart. In so far as neoliberalism values market exchange as 'an ethic in itself, capable of acting as a guide to all human action, and substituting for all previously held ethical beliefs', it emphasizes the significance of contractual relations in the marketplace.⁷ It holds that the social good will be maximized by maximizing the reach and frequency of market transactions, and it seeks to bring all human action into the domain of the market. This requires technologies of information creation and capacities to accumulate, store, transfer, analyse, and use massive databases to guide decisions in the global marketplace. Hence neoliberalism's intense interest in and pursuit of information technologies (leading some to proclaim the emergence of a new kind of 'information society'). These technologies have compressed the rising density of market transactions in both space and time. They have produced a particularly intensive burst of what I have elsewhere called 'time-space compression'. The greater the geographical range (hence the emphasis on 'globalization') and the shorter the term of market contracts the better. This latter preference parallels Lyotard's famous description of the postmodern condition as one where 'the temporary contract' supplants 'permanent institutions in the professional, emotional, sexual, cultural, family and international domains, as well as in political affairs'. The cultural consequences of the dominance of such a market ethic are legion, as I earlier showed in *The Condition of Postmodernity*.⁸

While many general accounts of global transformations and their effects are now available, what is generally missing—and this is the gap this book aims to fill—is the political-economic story of where neoliberalization came from and how it proliferated so comprehensively on the world stage. Critical engagement with that story suggests, furthermore, a framework for identifying and constructing alternative political and economic arrangements.

From Chapter 6. *Neoliberalism on Trial*

* * *

Neoliberalization seeks to strip away the protective coverings that embedded liberalism allowed and occasionally nurtured. The general attack against labour has been two-pronged. The powers of trade unions and other working-class institutions are curbed or dismantled within a particular state (by violence if necessary). Flexible labour markets are established. State withdrawal from social welfare provision and technologically induced shifts in job structures that render large segments of the labour force redundant complete the

6. A phrase coined by the Moravian-born American economist and sociologist Joseph Schumpeter in *Capitalism, Socialism, and Democracy* (1942): it describes the incessant process of "industrial mutation" as old economic structures are destroyed and new ones created.

7. Treanor, "Neoliberalism" [Harvey's note].

8. Harvey, *The Condition of Postmodernity* (Oxford: Basil Blackwell, 1989); J.-F. Lyotard, *The Postmodern Condition* (Manchester: Manchester University Press, 1984), 66 [Harvey's note]. For the French philosopher JEAN-FRANÇOIS LYOTARD (1924–1998), see above.

domination of capital over labour in the marketplace. The individualized and relatively powerless worker then confronts a labour market in which only short-term contracts are offered on a customized basis. Security of tenure becomes a thing of the past (Thatcher abolished it in universities, for example). A 'personal responsibility system'⁹ (how apt Deng's language was!) is substituted for social protections (pensions, health care, protections against injury) that were formerly an obligation of employers and the state. Individuals buy products in the markets that sell social protections instead. Individual security is therefore a matter of individual choice tied to the affordability of financial products embedded in risky financial markets.

The second prong of attack entails transformations in the spatial and temporal co-ordinates of the labour market. While too much can be made of the 'race to the bottom' to find the cheapest and most docile labour supplies, the geographical mobility of capital permits it to dominate a global labour force whose own geographical mobility is constrained. Captive labour forces abound because immigration is restricted. These barriers can be evaded only by illegal immigration (which creates an easily exploitable labour force) or through short-term contracts that permit, for example, Mexican labourers to work in Californian agribusiness only to be shamelessly shipped back to Mexico when they get sick and even die from the pesticides to which they are exposed.

Under neoliberalization, the figure of 'the disposable worker' emerges as prototypical upon the world stage.¹ Accounts of the appalling conditions of labour and the despotic conditions under which labourers work in the sweatshops of the world abound. In China, the conditions under which migrant young women from rural areas work are nothing short of appalling: 'unbearably long hours, substandard food, cramped dorms, sadistic managers who beat and sexually abuse them, and pay that arrives months late, or sometimes not at all'.² In Indonesia, two young women recounted their experiences working for a Singapore-based Levi-Strauss subcontractor as follows:

We are regularly insulted, as a matter of course. When the boss gets angry he calls the women dogs, pigs, sluts, all of which we have to endure patiently without reacting. We work officially from seven in the morning until three (salary less than \$2 a day), but there is often compulsory overtime, sometimes—especially if there is an urgent order to be delivered—until nine. However tired we are, we are not allowed to go home. We may get an extra 200 rupiah (10 US cents) . . . We go on foot to the factory from where we live. Inside it is very hot. The building has a metal roof, and there is not much space for all the workers. It is very cramped. There are over 200 people working there, mostly women, but there is only one toilet for the whole factory . . . when we come home from work, we have no energy left to do anything but eat and sleep . . .³

9. A phrase associated with reforms (1979–82) that liberalized rural markets in China, which previously had been controlled entirely by state quotas and prices.

3. J. Seabrook, *In the Cities of the South: Scenes from a Developing World* (London: Verso, 1996), 103 [Harvey's note].

Similar tales come from the Mexican *maquila* factories,⁴ the Taiwanese- and Korean-operated manufacturing plants in Honduras, South Africa, Malaysia, and Thailand. The health hazards, the exposure to a wide range of toxic substances, and death on the job pass by unregulated and unremarked. In Shanghai, the Taiwanese businessman who ran a textile warehouse 'in which 61 workers, locked in the building, died in a fire' received a 'lenient' two-year suspended sentence because he had 'showed repentance' and 'cooperated in the aftermath of the fire'.⁵

Women, for the most part, and sometimes children, bear the brunt of this sort of degrading, debilitating, and dangerous toil.⁶ The social consequences of neoliberalization are in fact extreme. Accumulation by dispossession typically undermines whatever powers women may have had within household production/marketing systems and within traditional social structures and relocates everything in male-dominated commodity and credit markets. The paths of women's liberation from traditional patriarchal controls in developing countries lie either through degrading factory labour or through trading on sexuality, which varies from respectable work as hostesses and waitresses to the sex trade (one of the most lucrative of all contemporary industries in which a good deal of slavery is involved). The loss of social protections in advanced capitalist countries has had particularly negative effects on lower-class women, and in many of the ex-communist countries of the Soviet bloc the loss of women's rights through neoliberalization has been nothing short of catastrophic.

So how, then, do disposable workers—women in particular—survive both socially and affectively in a world of flexible labour markets and short-term contracts, chronic job insecurities, lost social protections, and often debilitating labour, amongst the wreckage of collective institutions that once gave them a modicum of dignity and support? For some the increased flexibility in labour markets is a boon, and even when it does not lead to material gains the simple right to change jobs relatively easily and free of the traditional social constraints of patriarchy and family has intangible benefits. For those who successfully negotiate the labour market there are seemingly abundant rewards in the world of a capitalist consumer culture. Unfortunately, that culture, however spectacular, glamorous, and beguiling, perpetually plays with desires without ever conferring satisfactions beyond the limited identity of the shopping mall and the anxieties of status by way of good looks (in the case of women) or of material possessions. 'I shop therefore I am'⁷ and possessive individualism together construct a world of pseudo-satisfactions that is superficially exciting but hollow at its core.

But for those who have lost their jobs or who have never managed to move out of the extensive informal economies that now provide a parlous refuge for most of the world's disposable workers, the story is entirely different. With

4. Factories (also called *maquiladoras*) that import components, assemble them using low-wage labor, and then export the finished product (sometimes back to the country that provided the components).

7. A play on "I think, therefore I am," the dictum presented by René Descartes in *Discourse on Method* (1637) as the foundational principle of knowledge.

some 2 billion people condemned to live on less than \$2 a day, the taunting world of capitalist consumer culture, the huge bonuses earned in financial services, and the self-congratulatory polemics as to the emancipatory potential of neoliberalization, privatization, and personal responsibility must seem like a cruel joke. From impoverished rural China to the affluent US, the loss of health-care protections and the increasing imposition of all manner of user fees adds considerably to the financial burdens of the poor.⁸

Neoliberalization has transformed the positionality of labour, of women, and of indigenous groups in the social order by emphasizing that labour is a commodity like any other. Stripped of the protective cover of lively democratic institutions and threatened with all manner of social dislocations, a disposable workforce inevitably turns to other institutional forms through which to construct social solidarities and express a collective will. Everything from gangs and criminal cartels, narco-trafficking networks, mini-mafias and favela⁹ bosses, through community, grassroots and non-governmental organizations, to secular cults and religious sects proliferate. These are the alternative social forms that fill the void left behind as state powers, political parties, and other institutional forms are actively dismantled or simply wither away as centres of collective endeavour and of social bonding. The marked turn to religion is in this regard of interest. Accounts of the sudden appearance and proliferation of religious sects in the derelict rural regions of China, to say nothing of the emergence of Fulan Gong, are illustrative of this trend.¹ The rapid progress of evangelical proselytizing in the chaotic informal economies that have burgeoned under neoliberalization in Latin America, and the revived and in some instances newly constructed religious tribalism and fundamentalism that structure politics in much of Africa and the Middle East, testify to the need to construct meaningful mechanisms of social solidarity. The progress of fundamentalist evangelical Christianity in the US has some connection with proliferating job insecurities, the loss of other forms of social solidarity, and the hollowness of capitalist consumer culture. In Thomas Frank's account, the religious right took off in Kansas only at the end of the 1980s, after a decade or more of neoliberal restructuring and deindustrialization.² Such connections may seem far-fetched. But if Polanyi³ is right and the treatment of labour as a commodity leads to social dislocation, then moves to rebuild different social networks to defend against such a threat become increasingly likely.

EDWARD W. SAID

1935–2003

One of the most prominent public intellectuals of recent decades, Edward W. Said was an influential literary critic and theorist as well as a significant political figure, especially as an advocate of the rights of Palestinians. Arguing for a socially engaged criticism against both linguistically oriented theories like deconstruction and ideologically dogmatic positions, he promoted a “worldly,” “secular criticism.” Beginning with his landmark *Orientalism* (1978), which is often regarded as having established the field of postcolonial studies, his work focused on imperialism and the interplay between the dominant West (the “Occident”) and the Middle and Far East (the “Orient”). In the introduction to *Orientalism*, our first selection, Said discusses how European and U.S. literary and cultural representations, academic disciplines, and public perceptions foster biases against non-Western peoples, casting them as oriental Others. In our second selection, excerpted from *Culture and Imperialism* (1993), his major work of literary interpretation, Said examines how a classic literary portrait of British country life, Jane Austen’s 1814 novel *Mansfield Park*, surprisingly reveals the ways that empire permeates the colonizers’ homeland.

Of Palestinian heritage but educated in British and American colonial schools in Cairo and later in U.S. universities, Said experienced firsthand the complicated relations between the East and Western imperialism. He was born in Jerusalem, Palestine, which had been controlled by Great Britain since 1922 (with a mandate from the League of Nations to help establish a Jewish national home); but in 1947, in the aftermath of World War II, the United Nations divided Palestine into Arab and Jewish territories and placed the city of Jerusalem under its control. The resulting political tension and fighting within Palestine led Said’s family to emigrate to Cairo at the end of 1947. When the British mandate expired in 1948, Jewish authorities declared the establishment of the State of Israel, on which all the neighboring Arab countries immediately declared war; hundreds of thousands of Arabs fled what had been Palestine. Though the creation of Israel is celebrated in the West as the restoration of a Jewish homeland, Palestinians call it the *nakbah*, or “disaster”; Said comments, “Israel was established; Palestine was destroyed.”

Said’s father, Wadie Said, was a prosperous businessman who sold office equipment in Cairo and elsewhere, and Said himself, in the midst of political turmoil, received an elite education. He attended St. George’s, an Anglican preparatory school; the American School in Cairo, whose student body was composed primarily of children of U.S. diplomats; and Victoria College, a secondary school where his classmates included the future King Hussein of Jordan. After Said was expelled from school for disciplinary reasons in 1951, his father sent him to Mount Hermon, a preparatory school in Massachusetts, to complete high school and to gain U.S. citizenship. (His father had emigrated to the United States in the 1910s and served in the army in World War I, becoming a naturalized U.S. citizen.) Said became a naturalized citizen in 1953 and attended Princeton University, receiving his B.A. degree in 1957. After a year in Cairo helping with his father’s business, he returned to the United States to do doctoral work in English and comparative literature at Harvard University, earning an M.A. in 1960 and a Ph.D. in 1964.

Said’s academic career was remarkably successful; after joining the faculty at Columbia University in 1963 he quickly ascended the ladder of academic rank, eventually being appointed to several prestigious chairs. He also held distinguished visiting professorships and fellowships at Harvard, Yale, Princeton, Stanford, and

elsewhere, and his books garnered a long list of honors, among them a National Book Critics Circle Award nomination for *Orientalism*. At the same time, Said gained political prominence, translating the first address of Yasir Arafat, longtime leader of the Palestinians, to the General Assembly of the United Nations in 1974; serving as a member of the Palestine National Council from 1977 to 1991 (helping to draft its declaration of Palestinian statehood in 1988); and advocating Palestinian national rights in international news media. While often criticizing Israel's and the United States' refusal to recognize a Palestinian state, he also criticized the leadership and policies of the Palestinian Liberation Organization. He died in 2003 after a long battle with cancer.

In some sense, Said fulfilled the definition of an "organic intellectual"—to use the phrase of the Italian Marxist philosopher ANTONIO GRAMSCI, one of Said's intellectual heroes—developing his criticism of Western representations of Arab culture and his advocacy for the rights of Palestinians out of his personal roots. As he remarked in an interview, however, he always experienced his identity as complicated—as a U.S. citizen as well as a Palestinian, as an "Oriental" as well as a Western scholar educated in the British tradition, and as a renowned academic figure as well as an often dissenting political spokesperson. He felt, as he titled his memoir, "out of place"; this sense of homelessness defined for him the proper stance of the intellectual, who should remain independent of fixed theoretical, disciplinary, professional, and national loyalties, yet always be attentive to social injustice and what he calls the "brute reality" of history.

Said first gained wide attention with the publication of *Beginnings: Intention and Method* (1975), a pioneering comparison of MICHEL FOUCAULT's method of historical "archaeology" and JACQUES DERRIDA's deconstructive critique of language, ultimately favoring Foucault's focus on social forces. A dense meditation on literary "beginnings" and influences, it also conducted an erudite examination of figures from the Western humanistic tradition—GIAMBATTISTA VICO, ERICH AUERBACH, and others. Though already well known in literary circles, Said attained broader prominence across the academic disciplines and among the general public with the publication of his next book, *Orientalism*. Appearing as conflicts in the Middle East were escalating, it provided a timely—and controversial—critical overview of the history of Western understandings of Arab culture. In particular, it voiced a strong dissent against largely pro-Israeli U.S. policies that operated at the expense of Arab peoples.

With *Orientalism*, Said turned to examine more directly the political dimensions of literature and culture. Many critics see this turn as a decisive shift in Said's focus from academic literary theory to actual politics, but in fact his writings display a number of consistent concerns: a grounding in the literary canon; an appreciation of philology and the long humanistic tradition of criticism; research across disciplines, especially history; an overarching concern, influenced by Foucault, with the complex interrelation of culture and the operation of political power; a belief in the value of individual achievements in literature, criticism, and politics; and an assertion of the independent role of the intellectual as someone who eschews orthodoxies both theoretical and political. For Said, literary, philological, and critical texts are always "in the world" and have social resonances.

In our first selection, Said propounds a broad definition of Orientalism, encompassing both Western academic scholarship in disciplines whose field of study is the "Orient"—such as anthropology, philology, history, and area studies—and the general Western image of the "Orient" depicted in novels, political accounts, and contemporary media. He shows how Western writers, archaeologists, linguists, historians, and politicians from the eighteenth century to the present day have "discovered" and in a sense invented the Orient. According to Said, Orientalism reveals more about the West and its fantasies than it does about the actual people, culture, and history of the East; not simply a myth, it is "more particularly valuable as a sign of European-Atlantic power over the Orient than it is as a veridic discourse about

the Orient." In effect, the various literary, cultural, and historical discourses of Orientalism participate in the conquest and continuing subjugation of the East. Furthermore, Said's analysis is a sharp warning to scholars and intellectuals, showing how scholarship is sometimes informed by racism and how intellectuals have been complicit in the administration of imperial power.

This examination of Orientalism is particularly indebted to the work of Foucault, as Said adopts Foucault's method of archival research, his focus on cultural and historical knowledges as constituting a system of "discourse," and his tracing of the complex interrelation of power and knowledge. But for Said, the disciplinary institutions of knowledge are not simply embedded in the overarching Foucauldian category of "power": they directly serve the historical interests of European imperialism. Said also diverges from Foucault's generalized, impersonal sense of "discourse," instead retaining a humanistic belief in "the determining imprint of individual writers" and intellectuals. Another poststructuralist influence is Derrida's critique of concepts such as *center* and *margin* and *self* and *Other*. For Said, the "margin" of the East helps define the colonial center of the West, and the Oriental "Other" is a projection of the Western view that constructs it. These and related terms have played a crucial role in the development of postcolonial studies. Said criticizes Derrida's linguistic focus, however, and extends poststructuralist theory to examine its implications for real-world politics—especially in the British rule of India, the European partitioning of the Middle East, and the U.S. intervention in Vietnam.

A less often recognized influence on Said's work is that of RAYMOND WILLIAMS, the British literary and cultural critic. Said praised the work of Williams, particularly his disregard for such traditional academic boundaries as the distinction between literature and history, and followed Williams in his concern with the societal effects of literature and culture. Although Said's *Culture and Imperialism* is often taken as a riposte to MATTHEW ARNOLD's *Culture and Anarchy* (1869) in showing how culture not only improves society but operates in the service of imperialism, its direct forebear is Williams's *Culture and Society* (1958), as well as Williams's *The Country and the City* (1973). In our second selection, "Jane Austen and Empire," Said follows Williams in considering literary works as representing their social world rather than as autonomous objects, but gently corrects Williams's lack of attention to imperialism as he focuses on it.

Culture and Imperialism ranges over a great many literary and artistic works, such as Verdi's opera *Aida* (1871) and Joseph Conrad's *Heart of Darkness* (1902), that explicitly portray territories under European control. Said's point is that the great works in the European tradition are enmeshed in empire; *Heart of Darkness*, for instance, depicts imperial outposts in Africa. Said uses a more unexpected example when he turns to Jane Austen's novel *Mansfield Park*. Her novels typically depict country life, especially of the middle and upper classes in England around 1800, and their plots center on courtship and marriage. Austen's occasional comments on society tend to be limited to moral advice—for instance, on the proper behavior of the gentry toward their inferiors. Williams, in *The Country and the City*, sees Austen's novels as portraits of British society on the brink of change. Austen is beloved because she presented the passing values of rural English life rather than those of the new order, based in urban centers and industry, that was emerging.

Said demonstrates that though *Mansfield Park* seems to be an isolated, domestic enclave, it depends on imperialism, which stretches across the Atlantic to the Caribbean. In the midst of the action, the head of the family, Lord Bertram, has to travel twice to Antigua to manage affairs on his plantation. His leaving is usually taken as a plot device: freedom from his watchful eye leads to his children's social entanglements (set aright by the end, when Bertram returns). But Said argues that his leaving foregrounds the colonial situation essential to maintaining *Mansfield Park*. Much narrative theory, especially of modern literature, focuses on time and time-oriented themes like memory. Said instead calls us to pay attention to location

and geography, so that we can see how a house in the countryside of England rested on the global interconnections of empire.

Some critics have claimed that such a reading judges classic works of literature too harshly and anachronistically, foisting contemporary standards on past eras. Said is careful to head off this charge. He notes that representations such as Austen's did not cause imperialism; rather, they record the role of imperialism in their society. Said also unequivocally calls *Mansfield Park* a great work, and he acknowledges the value of the humanistic tradition. In this, he is surprisingly allied with Arnold and his celebration of "the best that is known and thought." However, Said does not mince words about the wrongs that imperialism sponsored, such as the slavery on which plantations like Lord Bertram's relied. This is a more measured position than that of many other postcolonial writers or critics. CHINUA ACHEBE, for example, points out the racism of *Heart of Darkness* and then concludes that we should no longer teach or read the work. In Said's view, we should continue to subject it to interpretation, understanding both its humanistic value and its participation in injustice and oppression.

Said's work has exerted considerable influence, especially in the development of postcolonial studies. *Orientalism* was immediately recognized as a critical classic, with an impact not only on literary studies but also on anthropology, history, international studies, and the discipline known as Orientalism. *Culture and Imperialism* was also hailed as a major work, capping Said's career and showing the reach of imperialism through its erudite readings of a broad selection of literary and other cultural works. Said himself was praised as an exemplary intellectual, having crossed the boundary between the academic world and the public sphere and speaking out on contemporary politics. His advocacy on behalf of a Palestinian state provoked attacks, sometimes vehement. Within the field of literary studies, various scholars criticized different aspects of his work: his residual humanism and belief in individual will, his liberal rather than radical views, his eschewal of professionalism for amateurism, his inattention to feminism, and his primary focus on the high Western literary tradition. However, most critics acknowledge his pivotal role in contemporary theory and his success in forging a path that crossed disciplinary boundaries and in combining political commitment and intellectual work. As demonstrated in *Orientalism*, he persistently underscored the relation of literary study to the world, especially the relation of culture to the "brute reality" of imperialism.

From Orientalism

Introduction

I

On a visit to Beirut during the terrible civil war of 1975–1976 a French journalist wrote regretfully of the gutted downtown area that "it had once seemed to belong to . . . the Orient of Chateaubriand and Nerval."¹ He was right

1. Thierry Desjardins, *Le Martyre du Liban* (Paris: Plon, 1976), p. 14 [Said's note]. François-René, vicomte de Chateaubriand (1768–1848), French writer and statesman. Gérard de Nerval (1808–

1855), French poet and journalist; he wrote an account of a journey to the Middle East, *Le Voyage en Orient* (1851).

about the place, of course, especially so far as a European was concerned. The Orient was almost a European invention, and had been since antiquity a place of romance, exotic beings, haunting memories and landscapes, remarkable experiences. Now it was disappearing; in a sense it had happened, its time was over. Perhaps it seemed irrelevant that Orientals themselves had something at stake in the process, that even in the time of Chateaubriand and Nerval Orientals had lived there, and that now it was they who were suffering; the main thing for the European visitor was a European representation of the Orient and its contemporary fate, both of which had a privileged communal significance for the journalist and his French readers.

Americans will not feel quite the same about the Orient, which for them is much more likely to be associated very differently with the Far East (China and Japan, mainly). Unlike the Americans, the French and the British—less so the Germans, Russians, Spanish, Portuguese, Italians, and Swiss—have had a long tradition of what I shall be calling *Orientalism*, a way of coming to terms with the Orient that is based on the Orient's special place in European Western experience. The Orient is not only adjacent to Europe; it is also the place of Europe's greatest and richest and oldest colonies, the source of its civilizations and languages, its cultural contestant, and one of its deepest and most recurring images of the Other. In addition, the Orient has helped to define Europe (or the West) as its contrasting image, idea, personality, experience. Yet none of this Orient is merely imaginative. The Orient is an integral part of European *material* civilization and culture. Orientalism expresses and represents that part culturally and even ideologically as a mode of discourse with supporting institutions, vocabulary, scholarship, imagery, doctrines, even colonial bureaucracies and colonial styles. In contrast, the American understanding of the Orient will seem considerably less dense, although our recent Japanese, Korean, and Indochinese adventures² ought now to be creating a more sober, more realistic "Oriental" awareness. Moreover, the vastly expanded American political and economic role in the Near East (the Middle East) makes great claims on our understanding of that Orient.

It will be clear to the reader (and will become clearer still throughout the many pages that follow) that by Orientalism I mean several things, all of them, in my opinion, interdependent. The most readily accepted designation for Orientalism is an academic one, and indeed the label still serves in a number of academic institutions. Anyone who teaches, writes about, or researches the Orient—and this applies whether the person is an anthropologist, sociologist, historian, or philologist—either in its specific or its general aspects, is an Orientalist, and what he or she does is Orientalism. Compared with *Oriental studies* or *area studies*, it is true that the term *Orientalism* is less preferred by specialists today, both because it is too vague and general and because it connotes the high-handed executive attitude of nineteenth-century and early-twentieth-century European colonialism. Nevertheless books are written and congresses held with "the Orient" as their main focus, with the Orientalist in his new or old guise as their main authority. The point is that even if it does not survive as it once did, Orientalism lives on

2. That is, the Pacific Theater of World War II (1941–45), the Korean War (1950–53), and the Vietnam War (1964–75), respectively.

academically through its doctrines and theses about the Orient and the Oriental.

Related to this academic tradition, whose fortunes, transmigrations, specializations, and transmissions are in part the subject of this study, is a more general meaning for Orientalism. Orientalism is a style of thought based upon an ontological and epistemological distinction³ made between "the Orient" and (most of the time) "the Occident." Thus a very large mass of writers, among whom are poets, novelists, philosophers, political theorists, economists, and imperial administrators, have accepted the basic distinction between East and West as the starting point for elaborate theories, epics, novels, social descriptions, and political accounts concerning the Orient, its people, customs, "mind," destiny, and so on. *This* Orientalism can accommodate Aeschylus, say, and Victor Hugo, Dante and Karl Marx.⁴ A little later in this introduction I shall deal with the methodological problems one encounters in so broadly construed a "field" as this.

The interchange between the academic and the more or less imaginative meanings of Orientalism is a constant one, and since the late eighteenth century there has been a considerable, quite disciplined—perhaps even regulated—traffic between the two. Here I come to the third meaning of Orientalism, which is something more historically and materially defined than either of the other two. Taking the late eighteenth century as a very roughly defined starting point Orientalism can be discussed and analyzed as the corporate institution for dealing with the Orient—dealing with it by making statements about it, authorizing views of it, describing it, by teaching it, settling it, ruling over it: in short, Orientalism as a Western style for dominating, restructuring, and having authority over the Orient. I have found it useful here to employ Michel Foucault's notion of a discourse, as described by him in *The Archaeology of Knowledge* and in *Discipline and Punish*,⁵ to identify Orientalism. My contention is that without examining Orientalism as a discourse one cannot possibly understand the enormously systematic discipline by which European culture was able to manage—and even produce—the Orient politically, sociologically, militarily, ideologically, scientifically, and imaginatively during the post-Enlightenment period. Moreover, so authoritative a position did Orientalism have that I believe no one writing, thinking, or acting on the Orient could do so without taking account of the limitations on thought and action imposed by Orientalism. In brief, because of Orientalism the Orient was not (and is not) a free subject of thought or action. This is not to say that Orientalism unilaterally determines what can be said about the Orient, but that it is the whole network of interests inevitably brought to bear on (and therefore always involved in) any occasion when that peculiar entity "the Orient" is in question. How this happens is what this book tries to demonstrate. It also tries to show that European culture gained in strength and identity by setting itself off against the Orient as a sort of surrogate and even underground self.

3. That is, a difference in their essential being and how they are known.

4. Said names writers not generally viewed as treating the "Oriental": Aeschylus (525–456 B.C.E.), Greek tragedian; Hugo (1802–1885), French Romantic poet, novelist, and dramatist; DANTE ALIGHIERI (1265–1321), Italian poet; and

MARX (1818–1883), German economic, social, and political philosopher.

5. Books published in 1969 and 1975, respectively, by FOUCAULT (1926–1984), French philosopher and historian, who explores the connections between knowledge, discourse, and power.

Historically and culturally there is a quantitative as well as a qualitative difference between the Franco-British involvement in the Orient and—until the period of American ascendancy after World War II—the involvement of every other European and Atlantic power. To speak of Orientalism therefore is to speak mainly, although not exclusively, of a British and French cultural enterprise, a project whose dimensions take in such disparate realms as the imagination itself, the whole of India and the Levant,⁶ the Biblical texts and the Biblical lands, the spice trade, colonial armies and a long tradition of colonial administrators, a formidable scholarly corpus, innumerable Oriental “experts” and “hands,” an Oriental professorate, a complex array of “Oriental” ideas (Oriental despotism, Oriental splendor, cruelty, sensuality), many Eastern sects, philosophies, and wisdoms domesticated for local European use—the list can be extended more or less indefinitely. My point is that Orientalism derives from a particular closeness experienced between Britain and France and the Orient, which until the early nineteenth century had really meant only India and the Bible lands. From the beginning of the nineteenth century until the end of World War II France and Britain dominated the Orient and Orientalism; since World War II America has dominated the Orient, and approaches it as France and Britain once did. Out of that closeness, whose dynamic is enormously productive even if it always demonstrates the comparatively greater strength of the Occident (British, French, or American), comes the large body of texts I call *Orientalist*.

It should be said at once that even with the generous number of books and authors that I examine, there is a much larger number that I simply have had to leave out. My argument, however, depends neither upon an exhaustive catalogue of texts dealing with the Orient nor upon a clearly delimited set of texts, authors, and ideas that together make up the *Orientalist* canon. I have depended instead upon a different methodological alternative—whose backbone in a sense is the set of historical generalizations I have so far been making in this Introduction—and it is these I want now to discuss in more analytical detail.

II

I have begun with the assumption that the Orient is not an inert fact of nature. It is not merely *there*, just as the Occident itself is not just *there* either. We must take seriously Vico's⁷ great observation that men make their own history; that what they can know is what they have made, and extend it to geography: as both geographical and cultural entities—to say nothing of historical entities—such locales, regions, geographical sectors as “Orient” and “Occident” are man-made. Therefore as much as the West itself, the Orient is an idea that has a history and a tradition of thought, imagery, and vocabulary that have given it reality and presence in and for the West. The two geographical entities thus support and to an extent reflect each other.

6. The countries bordering the eastern coast of the Mediterranean Sea from Turkey to Egypt, including present-day Syria, Lebanon, and Israel.

7. GIAMBATTISTA VICO (1668–1744), Italian philosopher and historian.

Having said that, one must go on to state a number of reasonable qualifications. In the first place, it would be wrong to conclude that the Orient was *essentially* an idea, or a creation with no corresponding reality. When Disraeli said in his novel *Tancred*⁸ that the East was a career, he meant that to be interested in the East was something bright young Westerners would find to be an all-consuming passion; he should not be interpreted as saying that the East was *only* a career for Westerners. There were—and are—cultures and nations whose location is in the East, and their lives, histories, and customs have a brute reality obviously greater than anything that could be said about them in the West. About that fact this study of Orientalism has very little to contribute, except to acknowledge it tacitly. But the phenomenon of Orientalism as I study it here deals principally, not with a correspondence between Orientalism and Orient, but with the internal consistency of Orientalism and its ideas about the Orient (the East as career) despite or beyond any correspondence, or lack thereof, with a “real” Orient. My point is that Disraeli’s statement about the East refers mainly to that created consistency, that regular constellation of ideas as the pre-eminent thing about the Orient, and not to its mere being, as Wallace Stevens’s⁹ phrase has it.

A second qualification is that ideas, cultures, and histories cannot seriously be understood or studied without their force, or more precisely their configurations of power, also being studied. To believe that the Orient was created—or, as I call it, “Orientalized”—and to believe that such things happen simply as a necessity of the imagination, is to be disingenuous. The relationship between Occident and Orient is a relationship of power, of domination, of varying degrees of a complex hegemony, and is quite accurately indicated in the title of K. M. Panikkar’s classic *Asia and Western Dominance*.¹ The Orient was Orientalized not only because it was discovered to be “Oriental” in all those ways considered commonplace by an average nineteenth-century European, but also because it *could be*—that is, submitted to being—*made* Oriental. There is very little consent to be found, for example, in the fact that Flaubert’s² encounter with an Egyptian courtesan produced a widely influential model of the Oriental woman; she never spoke of herself, she never represented her emotions, presence, or history. *He* spoke for and represented her. He was foreign, comparatively wealthy, male, and these were historical facts of domination that allowed him not only to possess Kuchuk Hanem physically but to speak for her and tell his readers in what way she was “typically Oriental.” My argument is that Flaubert’s situation of strength in relation to Kuchuk Hanem was not an isolated instance. It fairly stands for the pattern of relative strength between East and West, and the discourse about the Orient that it enabled.

This brings us to a third qualification. One ought never to assume that the structure of Orientalism is nothing more than a structure of lies or of myths which, were the truth about them to be told, would simply blow away.

8. An 1847 novel whose hero leaves 19th-century England for the East, by Benjamin Disraeli (1804–1881), English politician and novelist.

9. American poet (1879–1955); one of his poems is titled “Of Mere Being.”

1. K. M. Panikkar, *Asia and Western Dominance* (London: Allen and Unwin, 1959) [Said’s note].

Panikkar (1895–1963), Indian diplomat and historian.

2. Gustave Flaubert (1821–1880), French novelist; his travels in Egypt and the Orient are recounted in his letters, and his novel *Salammbô* (1862) is set in ancient Carthage (in modern-day Tunisia).

I myself believe that Orientalism is more particularly valuable as a sign of European-Atlantic power over the Orient than it is as a veridic discourse about the Orient (which is what, in its academic or scholarly form, it claims to be). Nevertheless, what we must respect and try to grasp is the sheer knitted-together strength of Orientalist discourse, its very close ties to the enabling socio-economic and political institutions, and its redoubtable durability. After all, any system of ideas that can remain unchanged as teachable wisdom (in academies, books, congresses, universities, foreign-service institutes) from the period of Ernest Renan³ in the late 1840s until the present in the United States must be something more formidable than a mere collection of lies. Orientalism, therefore, is not an airy European fantasy about the Orient, but a created body of theory and practice in which, for many generations, there has been a considerable material investment. Continued investment made Orientalism, as a system of knowledge about the Orient, an accepted grid for filtering through the Orient into Western consciousness, just as that same investment multiplied—indeed, made truly productive—the statements proliferating out from Orientalism into the general culture.

Gramsci⁴ has made the useful analytic distinction between civil and political society in which the former is made up of voluntary (or at least rational and noncoercive) affiliations like schools, families, and unions, the latter of state institutions (the army, the police, the central bureaucracy) whose role in the polity is direct domination. Culture, of course, is to be found operating within civil society, where the influence of ideas, of institutions, and of other persons works not through domination but by what Gramsci calls consent. In any society not totalitarian, then, certain cultural forms predominate over others, just as certain ideas are more influential than others; the form of this cultural leadership is what Gramsci has identified as *hegemony*, an indispensable concept for any understanding of cultural life in the industrial West. It is hegemony, or rather the result of cultural hegemony at work, that gives Orientalism the durability and the strength I have been speaking about so far. Orientalism is never far from what Denys Hay has called the idea of Europe,⁵ a collective notion identifying “us” Europeans as against all “those” non-Europeans, and indeed it can be argued that the major component in European culture is precisely what made that culture hegemonic both in and outside Europe: the idea of European identity as a superior one in comparison with all the non-European peoples and cultures. There is in addition the hegemony of European ideas about the Orient, themselves reiterating European superiority over Oriental backwardness, usually overriding the possibility that a more independent, or more skeptical, thinker might have had different views on the matter.

In a quite constant way, Orientalism depends for its strategy on this flexible *positional* superiority, which puts the Westerner in a whole series of possible relationships with the Orient without ever losing him the relative upper hand. And why should it have been otherwise, especially during the period of

3. French historian (1823–1892), who wrote on the Oriental origins of Christianity.

4. ANTONIO GRAMSCI (1891–1937), Italian Marxist whose concept of cultural hegemony has been

highly influential.

5. Denys Hay, *Europe: The Emergence of an Idea*, 2d ed. (Edinburgh: Edinburgh University Press, 1968) [Said's note].

extraordinary European ascendancy from the late Renaissance to the present? The scientist, the scholar, the missionary, the trader, or the soldier was in, or thought about, the Orient because he *could be there*, or could think about it, with very little resistance on the Orient's part. Under the general heading of knowledge of the Orient, and within the umbrella of Western hegemony over the Orient during the period from the end of the eighteenth century, there emerged a complex Orient suitable for study in the academy, for display in the museum, for reconstruction in the colonial office, for theoretical illustration in anthropological, biological, linguistic, racial, and historical theses about mankind and the universe, for instances of economic and sociological theories of development, revolution, cultural personality, national or religious character. Additionally, the imaginative examination of things Oriental was based more or less exclusively upon a sovereign Western consciousness out of whose unchallenged centrality an Oriental world emerged, first according to general ideas about who or what was an Oriental, then according to a detailed logic governed not simply by empirical reality but by a battery of desires, repressions, investments, and projections. If we can point to great Orientalist works of genuine scholarship like Silvestre de Sacy's *Chrestomathie arabe* or Edward William Lane's *Account of the Manners and Customs of the Modern Egyptians*, we need also to note that Renan's and Gobineau's⁶ racial ideas came out of the same impulse, as did a great many Victorian pornographic novels (see the analysis by Steven Marcus of "The Lustful Turk"⁷).

And yet, one must repeatedly ask oneself whether what matters in Orientalism is the general group of ideas overriding the mass of material—about which who could deny that they were shot through with doctrines of European superiority, various kinds of racism, imperialism, and the like, dogmatic views of "the Oriental" as a kind of ideal and unchanging abstraction?—or the much more varied work produced by almost uncountable individual writers, whom one would take up as individual instances of authors dealing with the Orient. In a sense the two alternatives, general and particular, are really two perspectives on the same material: in both instances one would have to deal with pioneers in the field like William Jones,⁸ with great artists like Nerval or Flaubert. And why would it not be possible to employ both perspectives together, or one after the other? Isn't there an obvious danger of distortion (of precisely the kind that academic Orientalism has always been prone to) if either too general or too specific a level of description is maintained systematically?

My two fears are distortion and inaccuracy, or rather the kind of inaccuracy produced by too dogmatic a generality and too positivistic a localized focus. In trying to deal with these problems I have tried to deal with three main aspects of my own contemporary reality that seem to me to point the way out of the methodological or perspectival difficulties I have been discussing,

6. Joseph Arthur, comte de Gobineau (1816–1882), French diplomat and author of *Essay on the Inequality of the Human Races* (1853–55). The French Orientalist Antoine-Isaac Silvestre de Sacy (1758–1838) published his *Arab Chrestomathy* in 1806; Lane (1801–1876), an English scholar of Arabic, published his *Account* in 1836.

7. Steven Marcus, *The Other Victorians: A Study of Sexuality and Pornography in Mid-Nineteenth-Century England* (New York: Bantam, 1967), pp. 200–219 [Said's note].

8. English philologist and judge (1746–1794); he was the first to observe the close resemblance of Sanskrit to Greek and Latin.

difficulties that might force one, in the first instance, into writing a coarse polemic on so unacceptably general a level of description as not to be worth the effort, or in the second instance, into writing so detailed and atomistic a series of analyses as to lose all track of the general lines of force informing the field, giving it its special cogency. How then to recognize individuality and to reconcile it with its intelligent, and by no means passive or merely dictatorial, general and hegemonic context?

III

I mentioned three aspects of my contemporary reality: I must explain and briefly discuss them now, so that it can be seen how I was led to a particular course of research and writing.

1. *The distinction between pure and political knowledge.* It is very easy to argue that knowledge about Shakespeare or Wordsworth⁹ is not political whereas knowledge about contemporary China or the Soviet Union is. My own formal and professional designation is that of "humanist," a title which indicates the humanities as my field and therefore the unlikely eventuality that there might be anything political about what I do in that field. Of course, all these labels and terms are quite unnuanced as I use them here, but the general truth of what I am pointing to is, I think, widely held. One reason for saying that a humanist who writes about Wordsworth, or an editor whose specialty is Keats,¹ is not involved in anything political is that what he does seems to have no direct political effect upon reality in the everyday sense. A scholar whose field is Soviet economics works in a highly charged area where there is much government interest, and what he might produce in the way of studies or proposals will be taken up by policymakers, government officials, institutional economists, intelligence experts. The distinction between "humanists" and persons whose work has policy implications, or political significance, can be broadened further by saying that the former's ideological color is a matter of incidental importance to politics (although possibly of great moment to his colleagues in the field, who may object to his Stalinism² or fascism or too easy liberalism), whereas the ideology of the latter is woven directly into his material—indeed, economics, politics, and sociology in the modern academy are ideological sciences—and therefore taken for granted as being "political."

Nevertheless the determining impingement on most knowledge produced in the contemporary West (and here I speak mainly about the United States) is that it be nonpolitical, that is, scholarly, academic, impartial, above partisan or small-minded doctrinal belief. One can have no quarrel with such an ambition in theory, perhaps, but in practice the reality is much more problematic. No one has ever devised a method for detaching the scholar from the circumstances of life, from the fact of his involvement (conscious or unconscious) with a class, a set of beliefs, a social position, or from the mere activity of being a member of a society. These continue to bear on what he does

9. WILLIAM WORDSWORTH (1770–1850), English Romantic poet.

1. John Keats (1795–1821), English Romantic poet.

2. That is, hard-line authoritarianism similar to that of the oppressive Soviet regime (1924–53) of Joseph Stalin (1879–1953).

professionally, even though naturally enough his research and its fruits do attempt to reach a level of relative freedom from the inhibitions and the restrictions of brute, everyday reality. For there is such a thing as knowledge that is less, rather than more, partial than the individual (with his entangling and distracting life circumstances) who produces it. Yet this knowledge is not therefore automatically nonpolitical.

Whether discussions of literature or of classical philology are fraught with—or have unmediated—political significance is a very large question that I have tried to treat in some detail elsewhere.³ What I am interested in doing now is suggesting how the general liberal consensus that “true” knowledge is fundamentally nonpolitical (and conversely, that overtly political knowledge is not “true” knowledge) obscures the highly if obscurely organized political circumstances obtaining when knowledge is produced. No one is helped in understanding this today when the adjective “political” is used as a label to discredit any work for daring to violate the protocol of pretended suprapolitical objectivity. We may say, first, that civil society recognizes a gradation of political importance in the various fields of knowledge. To some extent the political importance given a field comes from the possibility of its direct translation into economic terms; but to a greater extent political importance comes from the closeness of a field to ascertainable sources of power in political society. Thus an economic study of long-term Soviet energy potential and its effect on military capability is likely to be commissioned by the Defense Department, and thereafter to acquire a kind of political status impossible for a study of Tolstoi’s⁴ early fiction financed in part by a foundation. Yet both works belong in what civil society acknowledges to be a similar field, Russian studies, even though one work may be done by a very conservative economist, the other by a radical literary historian. My point here is that “Russia” as a general subject matter has political priority over nicer distinctions such as “economics” and “literary history,” because political society in Gramsci’s sense reaches into such realms of civil society as the academy and saturates them with significance of direct concern to it.

I do not want to press all this any further on general theoretical grounds: it seems to me that the value and credibility of my case can be demonstrated by being much more specific, in the way, for example, Noam Chomsky has studied the instrumental connection between the Vietnam War and the notion of objective scholarship as it was applied to cover state-sponsored military research.⁵ Now because Britain, France, and recently the United States are imperial powers, their political societies impart to their civil societies a sense of urgency, a direct political infusion as it were, where and whenever matters pertaining to their imperial interests abroad are concerned. I doubt that it is controversial, for example, to say that an Englishman in India or Egypt in the later nineteenth century took an interest in those countries that was never far from their status in his mind as British colonies. To say this may seem quite different from saying that all academic

knowledge about India and Egypt is somehow tinged and impressed with, violated by, the gross political fact—and yet *that is what I am saying* in this study of Orientalism. For if it is true that no production of knowledge in the human sciences can ever ignore or disclaim its author's involvement as a human subject in his own circumstances, then it must also be true that for a European or American studying the Orient there can be no disclaiming the main circumstances of *his* actuality: that he comes up against the Orient as a European or American first, as an individual second. And to be a European or an American in such a situation is by no means an inert fact. It meant and means being aware, however dimly, that one belongs to a power with definite interests in the Orient, and more important, that one belongs to a part of the earth with a definite history of involvement in the Orient almost since the time of Homer.⁶

Put in this way, these political actualities are still too undefined and general to be really interesting. Anyone would agree to them without necessarily agreeing also that they mattered very much, for instance, to Flaubert as he wrote *Salammbô*, or to H. A. R. Gibb as he wrote *Modern Trends in Islam*.⁷ The trouble is that there is too great a distance between the big dominating fact, as I have described it, and the details of everyday life that govern the minute discipline of a novel or a scholarly text as each is being written. Yet if we eliminate from the start any notion that “big” facts like imperial domination can be applied mechanically and deterministically to such complex matters as culture and ideas, then we will begin to approach an interesting kind of study. My idea is that European and then American interest in the Orient was political according to some of the obvious historical accounts of it that I have given here, but that it was the culture that created that interest, that acted dynamically along with brute political, economic, and military rationales to make the Orient the varied and complicated place that it obviously was in the field I call Orientalism.

Therefore, Orientalism is not a mere political subject matter or field that is reflected passively by culture, scholarship, or institutions; nor is it a large and diffuse collection of texts about the Orient; nor is it representative and expressive of some nefarious “Western” imperialist plot to hold down the “Oriental” world. It is rather a *distribution* of geopolitical awareness into aesthetic, scholarly, economic, sociological, historical, and philological texts; it is an *elaboration* not only of a basic geographical distinction (the world is made up of two unequal halves, Orient and Occident) but also of a whole series of “interests” which, by such means as scholarly discovery, philological reconstruction, psychological analysis, landscape and sociological description, it not only creates but also maintains; it *is*, rather than expresses, a certain *will* or *intention* to understand, in some cases to control, manipulate, even to incorporate, what is a manifestly different (or alternative and novel) world; it is, above all, a discourse that is by no means in direct, corresponding relationship with political power in the raw, but rather is produced and exists in an uneven exchange with various kinds of power, shaped to a degree by the exchange with power political (as with a colonial or imperial establishment), power intellectual (as with reigning sciences like comparative linguistics or

6. Ca. 8th century B.C.E.

7. Published in 1947; Gibb (1895–1971) was an English scholar of Arabic language and history.

anatomy, or any of the modern policy sciences), power cultural (as with orthodoxies and canons of taste, texts, values), power moral (as with ideas about what “we” do and what “they” cannot do or understand as “we” do). Indeed, my real argument is that Orientalism is—and does not simply represent—a considerable dimension of modern political-intellectual culture, and as such has less to do with the Orient than it does with “our” world.

Because Orientalism is a cultural and a political fact, then, it does not exist in some archival vacuum; quite the contrary, I think it can be shown that what is thought, said, or even done about the Orient follows (perhaps occurs within) certain distinct and intellectually knowable lines. Here too a considerable degree of nuance and elaboration can be seen working as between the broad superstructural pressures and the details of composition, the facts of textuality. Most humanistic scholars are, I think, perfectly happy with the notion that texts exist in contexts, that there is such a thing as intertextuality, that the pressures of conventions, predecessors, and rhetorical styles limit what Walter Benjamin once called the “overtaxing of the productive person in the name of . . . the principle of ‘creativity,’” in which the poet is believed on his own, and out of his pure mind, to have brought forth his work.⁸ Yet there is a reluctance to allow that political, institutional, and ideological constraints act in the same manner on the individual author. A humanist will believe it to be an interesting fact to any interpreter of Balzac that he was influenced in the *Comédie humaine*⁹ by the conflict between Geoffroy Saint-Hilaire and Cuvier,¹ but the same sort of pressure on Balzac of deeply reactionary monarchism is felt in some vague way to demean his literary “genius” and therefore to be less worth serious study. Similarly—as Harry Bracken² has been tirelessly showing—philosophers will conduct their discussions of Locke, Hume, and empiricism³ without ever taking into account that there is an explicit connection in these classic writers between their “philosophic” doctrines and racial theory, justifications of slavery, or arguments for colonial exploitation.⁴ These are common enough ways by which contemporary scholarship keeps itself pure.

Perhaps it is true that most attempts to rub culture’s nose in the mud of politics have been crudely iconoclastic; perhaps also the social interpretation of literature in my own field has simply not kept up with the enormous technical advances in detailed textual analysis. But there is no getting away from the fact that literary studies in general, and American Marxist theorists in particular, have avoided the effort of seriously bridging the gap between the superstructural and the base levels in textual, historical scholarship; on another occasion I have gone so far as to say that the literary-cultural establishment as a whole has declared the serious study of imperialism and culture

off limits.⁵ For Orientalism brings one up directly against that question—that is, to realizing that political imperialism governs an entire field of study, imagination, and scholarly institutions—in such a way as to make its avoidance an intellectual and historical impossibility. Yet there will always remain the perennial escape mechanism of saying that a literary scholar and a philosopher, for example, are trained in literature and philosophy respectively, not in politics or ideological analysis. In other words, the specialist argument can work quite effectively to block the larger and, in my opinion, the more intellectually serious perspective.

Here it seems to me there is a simple two-part answer to be given, at least so far as the study of imperialism and culture (or Orientalism) is concerned. In the first place, nearly every nineteenth-century writer (and the same is true enough of writers in earlier periods) was extraordinarily well aware of the fact of empire: this is a subject not very well studied, but it will not take a modern Victorian specialist long to admit that liberal cultural heroes like John Stuart Mill, Arnold, Carlyle, Newman, Macaulay, Ruskin, George Eliot, and even Dickens⁶ had definite views on race and imperialism, which are quite easily to be found at work in their writing. So even a specialist must deal with the knowledge that Mill, for example, made it clear in *On Liberty* and *Representative Government* that his views there could not be applied to India (he was an India Office functionary for a good deal of his life, after all) because the Indians were civilizationally, if not racially, inferior. The same kind of paradox is to be found in Marx, as I try to show in this book. In the second place, to believe that politics in the form of imperialism bears upon the production of literature, scholarship, social theory, and history writing is by no means equivalent to saying that culture is therefore a demeaned or denigrated thing. Quite the contrary: my whole point is to say that we can better understand the persistence and the durability of saturating hegemonic systems like culture when we realize that their internal constraints upon writers and thinkers were *productive*, not unilaterally inhibiting. It is this idea that Gramsci, certainly, and Foucault and Raymond Williams in their very different ways have been trying to illustrate. Even one or two pages by Williams on “the uses of the Empire” in *The Long Revolution* tell us more about nineteenth-century cultural richness than many volumes of hermetic textual analyses.⁷

Therefore I study Orientalism as a dynamic exchange between individual authors and the large political concerns shaped by the three great empires—British, French, American—in whose intellectual and imaginative territory the writing was produced. What interests me most as a scholar is not the gross political verity but the detail, as indeed what interests us in someone

5. In an interview published in *Diacritics* 6, no. 3 (fall 1976): 38 [Said's note]. The terms *superstructure* and *base* allude to the Marxist view that all aspects of a society—literature, arts, politics, and so on—depend on its economic form of production.

6. All major Victorian writers and thinkers: Mill (1806–1873), philosopher and social reformer, who published *On Liberty* in 1859 and *Considerations on Representative Government* in 1861; MATTHEW ARNOLD (1822–1888), poet and critic;

Thomas Carlyle (1795–1881), historian and essayist; John Henry Newman (1801–1890), prelate and theologian; Thomas Babington Macaulay (1800–1859), historian and statesman; John Ruskin (1819–1900), art critic; Eliot (pen name of Marian Evans, 1819–1880), novelist; and Charles Dickens (1812–1870), novelist.

7. Raymond Williams, *The Long Revolution* (London: Chatto and Windus, 1961), pp. 66–67 [Said's note]. WILLIAMS (1921–1988), British Marxist literary critic.

like Lane or Flaubert or Renan is not the (to him) indisputable truth that Occidentals are superior to Orientals, but the profoundly worked over and modulated evidence of his detailed work within the very wide space opened up by that truth. One need only remember that Lane's *Manners and Customs of the Modern Egyptians* is a classic of historical and anthropological observation because of its style, its enormously intelligent and brilliant details, not because of its simple reflection of racial superiority, to understand what I am saying here.

The kind of political questions raised by Orientalism, then, are as follows: What other sorts of intellectual, aesthetic, scholarly, and cultural energies went into the making of an imperialist tradition like the Orientalist one? How did philology, lexicography, history, biology, political and economic theory, novel-writing, and lyric poetry come to the service of Orientalism's broadly imperialist view of the world? What changes, modulations, refinements, even revolutions take place within Orientalism? What is the meaning of originality, of continuity, of individuality, in this context? How does Orientalism transmit or reproduce itself from one epoch to another? In fine, how can we treat the cultural, historical phenomenon of Orientalism as a kind of *willed human work*—not of mere unconditioned ratiocination—in all its historical complexity, detail, and worth without at the same time losing sight of the alliance between cultural work, political tendencies, the state, and the specific realities of domination? Governed by such concerns a humanistic study can responsibly address itself to politics *and* culture. But this is not to say that such a study establishes a hard-and-fast rule about the relationship between knowledge and politics. My argument is that each humanistic investigation must formulate the nature of that connection in the specific context of the study, the subject matter, and its historical circumstances.

2. *The methodological question.* In a previous book I gave a good deal of thought and analysis to the methodological importance for work in the human sciences of finding and formulating a first step, a point of departure, a beginning principle.⁸ A major lesson I learned and tried to present was that there is no such thing as a merely given, or simply available, starting point: beginnings have to be made for each project in such a way as to *enable* what follows from them. Nowhere in my experience has the difficulty of this lesson been more consciously lived (with what success—or failure—I cannot really say) than in this study of Orientalism. The idea of beginning, indeed the act of beginning, necessarily involves an act of delimitation by which something is cut out of a great mass of material, separated from the mass, and made to stand for, as well as be, a starting point, a beginning; for the student of texts one such notion of inaugural delimitation is Louis Althusser's idea of the *problematic*, a specific determinate unity of a text, or group of texts, which is something given rise to by analysis.⁹ Yet in the case of Orientalism (as opposed to the case of Marx's texts, which is what Althusser studies) there is not simply the problem of finding a point of departure, or problematic, but also the question of designating which texts, authors, and periods are the ones best suited for study.

8. In my *Beginnings: Intention and Method* (New York: Basic, 1975) [Said's note].

9. Louis Althusser, *For Marx*, trans. Ben Brewster

(New York: Pantheon Books, 1969), pp. 65–67 [Said's note]. ALTHUSSER (1918–1990), French Marxist philosopher.

It has seemed to me foolish to attempt an encyclopedic narrative history of Orientalism, first of all because if my guiding principle was to be "the European idea of the Orient" there would be virtually no limit to the material I would have had to deal with; second, because the narrative model itself did not suit my descriptive and political interests; third, because in such books as Raymond Schwab's *La Renaissance orientale*, Johann Fück's *Die Arabischen Studien in Europa bis in den Anfang des 20. Jahrhunderts*, and more recently, Dorothee Metlitzki's *The Matter of Araby in Medieval England*¹ there already exist encyclopedic works on certain aspects of the European-Oriental encounter such as make the critic's job, in the general political and intellectual context I sketched above, a different one.

There still remained the problem of cutting down a very fat archive to manageable dimensions, and more important, outlining something in the nature of an intellectual order within that group of texts without at the same time following a mindlessly chronological order. My starting point therefore has been the British, French, and American experience of the Orient taken as a unit, what made that experience possible by way of historical and intellectual background, what the quality and character of the experience has been. For reasons I shall discuss presently I limited that already limited (but still inordinately large) set of questions to the Anglo-French-American experience of the Arabs and Islam, which for almost a thousand years together stood for the Orient. Immediately upon doing that, a large part of the Orient seemed to have been eliminated—India, Japan, China, and other sections of the Far East—not because these regions were not important (they obviously have been) but because one could discuss Europe's experience of the Near Orient, or of Islam, apart from its experience of the Far Orient. Yet at certain moments of that general European history of interest in the East, particular parts of the Orient like Egypt, Syria, and Arabia cannot be discussed without also studying Europe's involvement in the more distant parts, of which Persia and India are the most important; a notable case in point is the connection between Egypt and India so far as eighteenth- and nineteenth-century Britain was concerned. Similarly the French role in deciphering the Zend-Avesta, the pre-eminence of Paris as a center of Sanskrit studies during the first decade of the nineteenth century, the fact that Napoleon's² interest in the Orient was contingent upon his sense of the British role in India: all these Far Eastern interests directly influenced French interest in the Near East, Islam, and the Arabs.

Britain and France dominated the Eastern Mediterranean from about the end of the seventeenth century on. Yet my discussion of that domination and systematic interest does not do justice to (a) the important contributions to Orientalism of Germany, Italy, Russia, Spain, and Portugal and (b) the fact that one of the important impulses toward the study of the Orient in the

1. Raymond Schwab, *La Renaissance orientale* [*The Oriental Renaissance*, French] (Paris: Payot, 1950); Johann W. Fück, *Die Arabischen Studien in Europa bis in den Anfang des 20. Jahrhunderts* [*Arabic Studies in Europe from Its Origins through the Twentieth Century*, German] (Leipzig: Otto Harrassowitz, 1955); Dorothee Metlitzki, *The Matter of Araby in Medieval England* (New Haven: Yale University Press, 1977) [Said's note].

2. Napoléon Bonaparte (1769–1821), general and emperor of France (1804–15), who campaigned in Egypt (1798–99) in an attempt to damage Britain's trade with India. The Zend-Avesta: the Avesta, a book of sacred writings from eastern Iran (begun ca. 600 B.C.E., fixed in form ca. 4th–6th c. C.E.) that collects the teachings of the religious leader and prophet Zoroaster.

eighteenth century was the revolution in Biblical studies stimulated by such variously interesting pioneers as Bishop Lowth, Eichhorn, Herder, and Michaelis.³ In the first place, I had to focus rigorously upon the British-French and later the American material because it seemed inescapably true not only that Britain and France were the pioneer nations in the Orient and in Oriental studies, but that these vanguard positions were held by virtue of the two greatest colonial networks in pre-twentieth-century history; the American Oriental position since World War II has fit—I think, quite self-consciously—in the places excavated by the two earlier European powers. Then too, I believe that the sheer quality, consistency, and mass of British, French, and American writing on the Orient lifts it above the doubtless crucial work done in Germany, Italy, Russia, and elsewhere. But I think it is also true that the major steps in Oriental scholarship were first taken in either Britain and France, then elaborated upon by Germans. Silvestre de Sacy, for example, was not only the first modern and institutional European Orientalist, who worked on Islam, Arabic literature, the Druze religion, and Sassanid Persia; he was also the teacher of Champollion and of Franz Bopp,⁴ the founder of German comparative linguistics. A similar claim of priority and subsequent pre-eminence can be made for William Jones and Edward William Lane.

In the second place—and here the failings of my study of Orientalism are amply made up for—there has been some important recent work on the background in Biblical scholarship to the rise of what I have called modern Orientalism. The best and the most illuminatingly relevant is E. S. Shaffer's impressive "*Kubla Khan*" and *The Fall of Jerusalem*,⁵ an indispensable study of the origins of Romanticism, and of the intellectual activity underpinning a great deal of what goes on in Coleridge, Browning,⁶ and George Eliot. To some degree Shaffer's work refines upon the outlines provided in Schwab, by articulating the material of relevance to be found in the German Biblical scholars and using that material to read, in an intelligent and always interesting way, the work of three major British writers. Yet what is missing in the book is some sense of the political as well as ideological edge given the Oriental material by the British and French writers I am principally concerned with; in addition, unlike Shaffer I attempt to elucidate subsequent developments in academic as well as literary Orientalism that bear on the connection between British and French Orientalism on the one hand and the rise of an explicitly colonial-minded imperialism on the other. Then too, I wish to show how all these earlier matters are reproduced more or less in American Orientalism after the Second World War.

3. Johann David Michaelis (1717–1791), German theologian. Robert Lowth (1710–1787), English grammarian and biblical translator. Johann Gottfried Eichhorn (1752–1827), German biblical scholar and professor of Oriental languages. Johann Gottfried Herder (1744–1803), German critic and philologist.

4. German philologist and Sanskrit scholar (1791–1867). Druze: a Muslim sect (founded in the early 11th c.) whose members live mainly in the mountains of Lebanon and southern Syria. Sassanid Persia: an empire (224–651) founded by Ardashir I, who made Zoroastrianism the official religion. Jean-François Champollion (1790–

1823), French founder of Egyptology, who deciphered the hieroglyphs on the Rosetta Stone.

5. E. S. Shaffer, "*Kubla Khan*" and *The Fall of Jerusalem: The Mythological School in Biblical Criticism and Secular Literature, 1770–1880* (Cambridge: Cambridge University Press, 1975) [Said's note].

6. Robert Browning (1812–1889), English poet. SAMUEL TAYLOR COLERIDGE (1772–1834), English Romantic poet and critic; his works include "*Kubla Khan*" (written 1797; published 1816), while *The Fall of Jerusalem* is an epic that he never wrote.

Nevertheless there is a possibly misleading aspect to my study, where, aside from an occasional reference, I do not exhaustively discuss the German developments after the inaugural period dominated by Sacy. Any work that seeks to provide an understanding of academic Orientalism and pays little attention to scholars like Steinthal, Müller, Becker, Goldziher, Brockelmann, Nöldeke⁷—to mention only a handful—needs to be reproached, and I freely reproach myself. I particularly regret not taking more account of the great scientific prestige that accrued to German scholarship by the middle of the nineteenth century, whose neglect was made into a denunciation of insular British scholars by George Eliot. I have in mind Eliot's unforgettable portrait of Mr. Casaubon in *Middlemarch*. One reason Casaubon cannot finish his *Key to All Mythologies* is, according to his young cousin Will Ladislav, that he is unacquainted with German scholarship. For not only has Casaubon chosen a subject "as changing as chemistry: new discoveries are constantly making new points of view": he is undertaking a job similar to a refutation of Paracelsus because "he is not an Orientalist, you know."⁸

Eliot is not wrong in implying that by about 1830, which is when *Middlemarch* is set, German scholarship had fully attained its European pre-eminence. Yet at no time in German scholarship during the first two-thirds of the nineteenth century could a close partnership have developed between Orientalists and a protracted, sustained *national* interest in the Orient. There was nothing in Germany to correspond to the Anglo-French presence in India, the Levant, North Africa. Moreover, the German Orient was almost exclusively a scholarly, or at least a classical, Orient: it was made the subject of lyrics, fantasies, and even novels, but it was never actual, the way Egypt and Syria were actual for Chateaubriand, Lane, Lamartine, Burton,⁹ Disraeli, or Nerval. There is some significance in the fact that the two most renowned German works on the Orient, Goethe's *Westöstlicher Diwan* and Friedrich Schlegel's *Über die Sprache und Weisheit der Indier*,¹ were based respectively on a Rhine journey and on hours spent in Paris libraries. What German Oriental scholarship did was to refine and elaborate techniques whose application was to texts, myths, ideas, and languages almost literally gathered from the Orient by imperial Britain and France.

Yet what German Orientalism had in common with Anglo-French and later American Orientalism was a kind of intellectual *authority* over the Orient within Western culture. This authority must in large part be the subject of any description of Orientalism, and it is so in this study. Even the name *Orientalism* suggests a serious, perhaps ponderous style of expertise; when I

7. Except for the Hungarian Goldziher (who also wrote in German), all those named are German: Heymann Steinthal (1823–1899), philologist; Friedrich Max Müller (1823–1900), philologist and scholar of Hinduism and Buddhism; Carl Heinrich Becker (1876–1933), politician and scholar of Islamic civilization; Ignác Goldziher (1850–1921), scholar of Islamic civilization; Carl Brockelmann (1868–1956), scholar of Semitic languages and Arabic literature; and Theodor Nöldeke (1836–1930), scholar of Semitic languages and Arabic history.

8. George Eliot, *Middlemarch: A Study of Provincial Life* [1871–72] (Boston: Houghton Mifflin, 1956), p. 164 [Said's note]. Paracelsus: pseudonym

of Theophrastus Bombastus von Hohenheim (1493–1541), German physician and chemist who was obsessed with alchemy.

9. Sir Richard Francis Burton (1821–1890), English explorer and linguist who made a pilgrimage to Mecca in disguise and translated *Arabian Nights* (1885–88). Alphonse de Lamartine (1790–1869), French Romantic poet, historian, and statesman.

1. *On the Language and Wisdom of India* (1808) by the German Romantic critic Friedrich von Schlegel (1772–1829). *West-Eastern Divan* (1819), a volume of lyric poems by the German poet and dramatist Johann Wolfgang von Goethe (1749–1832).

apply it to modern American social scientists (since they do not call themselves Orientalists, my use of the word is anomalous), it is to draw attention to the way Middle East experts can still draw on the vestiges of Orientalism's intellectual position in nineteenth-century Europe.

There is nothing mysterious or natural about authority. It is formed, irradiated, disseminated; it is instrumental, it is persuasive; it has status, it establishes canons of taste and value; it is virtually indistinguishable from certain ideas it dignifies as true, and from traditions, perceptions, and judgments it forms, transmits, reproduces. Above all, authority can, indeed must, be analyzed. All these attributes of authority apply to Orientalism, and much of what I do in this study is to describe both the historical authority in and the personal authorities of Orientalism.

My principal methodological devices for studying authority here are what can be called *strategic location*, which is a way of describing the author's position in a text with regard to the Oriental material he writes about, and *strategic formation*, which is a way of analyzing the relationship between texts and the way in which groups of texts, types of texts, even textual genres, acquire mass, density, and referential power among themselves and thereafter in the culture at large. I use the notion of strategy simply to identify the problem every writer on the Orient has faced: how to get hold of it, how to approach it, how not to be defeated or overwhelmed by its sublimity, its scope, its awful dimensions. Everyone who writes about the Orient must locate himself vis-à-vis the Orient; translated into his text, this location includes the kind of narrative voice he adopts, the type of structure he builds, the kinds of images, themes, motifs that circulate in his text—all of which add up to deliberate ways of addressing the reader, containing the Orient, and finally, representing it or speaking in its behalf. None of this takes place in the abstract, however. Every writer on the Orient (and this is true even of Homer²) assumes some Oriental precedent, some previous knowledge of the Orient, to which he refers and on which he relies. Additionally, each work on the Orient *affiliates* itself with other works, with audiences, with institutions, with the Orient itself. The ensemble of relationships between works, audiences, and some particular aspects of the Orient therefore constitutes an analyzable formation—for example, that of philological studies, of anthologies of extracts from Oriental literature, of travel books, of Oriental fantasies—whose presence in time, in discourse, in institutions (schools, libraries, foreign services) gives it strength and authority.

It is clear, I hope, that my concern with authority does not entail analysis of what lies hidden in the Orientalist text, but analysis rather of the text's surface, its exteriority to what it describes. I do not think that this idea can be overemphasized. Orientalism is premised upon exteriority, that is, on the fact that the Orientalist, poet or scholar, makes the Orient speak, describes the Orient, renders its mysteries plain for and to the West. He is never concerned with the Orient except as the first cause of what he says. What he says and writes, by virtue of the fact that it is said or written, is meant to indicate that the Orientalist is outside the Orient, both as an existential and as a moral fact. The principal product of this exteriority is of course

2. Homer's *Iliad* takes place at Troy, in northwestern Asia Minor (present-day Turkey).

representation: as early as Aeschylus's play *The Persians*³ the Orient is transformed from a very far distant and often threatening Otherness into figures that are relatively familiar (in Aeschylus's case, grieving Asiatic women). The dramatic immediacy of representation in *The Persians* obscures the fact that the audience is watching a highly artificial enactment of what a non-Oriental has made into a symbol for the whole Orient. My analysis of the Orientalist text therefore places emphasis on the evidence, which is by no means invisible, for such representations *as representations*, not as "natural" depictions of the Orient. This evidence is found just as prominently in the so-called truthful text (histories, philological analyses, political treatises) as in the avowedly artistic (i.e., openly imaginative) text. The things to look at are style, figures of speech, setting, narrative devices, historical and social circumstances, *not* the correctness of the representation nor its fidelity to some great original. The exteriority of the representation is always governed by some version of the truism that if the Orient could represent itself, it would; since it cannot, the representation does the job, for the West, and *faute de mieux*,⁴ for the poor Orient. "Sie können sich nicht vertreten, sie müssen vertreten werden,"⁵ as Marx wrote in *The Eighteenth Brumaire of Louis Bonaparte*.

Another reason for insisting upon exteriority is that I believe it needs to be made clear about cultural discourse and exchange within a culture that what is commonly circulated by it is not "truth" but representations. It hardly needs to be demonstrated again that language itself is a highly organized and encoded system, which employs many devices to express, indicate, exchange messages and information, represent, and so forth. In any instance of at least written language, there is no such thing as a delivered presence, but a *represence*, or a representation. The value, efficacy, strength, apparent veracity of a written statement about the Orient therefore relies very little, and cannot instrumentally depend, on the Orient as such. On the contrary, the written statement is a presence to the reader by virtue of its having excluded, displaced, made supererogatory any such *real thing* as "the Orient." Thus all of Orientalism stands forth and away from the Orient: that Orientalism makes sense at all depends more on the West than on the Orient, and this sense is directly indebted to various Western techniques of representation that make the Orient visible, clear, "there" in discourse about it. And these representations rely upon institutions, traditions, conventions, agreed-upon codes of understanding for their effects, not upon a distant and amorphous Orient.

The difference between representations of the Orient before the last third of the eighteenth century and those after it (that is, those belonging to what I call modern Orientalism) is that the range of representation expanded enormously in the later period. It is true that after William Jones and Anquetil-Duperron,⁶ and after Napoleon's Egyptian expedition, Europe came to know the Orient more scientifically, to live in it with greater authority and disci-

4. For want of anything better (French).

5. "They cannot represent themselves; they must

be represented" (German). *Eighteenth Brumaire* was published in 1852. This quotation is also the epigraph of the entire book.

6. Abraham-Hyacinthe Anquetil-Duperron (1731–1805), French scholar of Oriental languages who translated the Avesta into French in 1771.

pline than ever before. But what mattered to Europe was the expanded scope and the much greater refinement given its techniques for receiving the Orient. When around the turn of the eighteenth century the Orient definitively revealed the age of its languages—thus outdating Hebrew's divine pedigree—it was a group of Europeans who made the discovery, passed it on to other scholars, and preserved the discovery in the new science of Indo-European philology. A new powerful science for viewing the linguistic Orient was born, and with it, as Foucault has shown in *The Order of Things*,⁷ a whole web of related scientific interests. Similarly William Beckford, Byron,⁸ Goethe, and Hugo restructured the Orient by their art and made its colors, lights, and people visible through their images, rhythms, and motifs. At most, the "real" Orient provoked a writer to his vision; it very rarely guided it.

Orientalism responded more to the culture that produced it than to its putative object, which was also produced by the West. Thus the history of Orientalism has both an internal consistency and a highly articulated set of relationships to the dominant culture surrounding it. My analyses consequently try to show the field's shape and internal organization, its pioneers, patriarchal authorities, canonical texts, doxological⁹ ideas, exemplary figures, its followers, elaborators, and new authorities; I try also to explain how Orientalism borrowed and was frequently informed by "strong" ideas, doctrines, and trends ruling the culture. Thus there was (and is) a linguistic Orient, a Freudian Orient, a Spenglerian Orient, a Darwinian Orient,¹ a racist Orient—and so on. Yet never has there been such a thing as a pure, or unconditional, Orient; similarly, never has there been a nonmaterial form of Orientalism, much less something so innocent as an "idea" of the Orient. In this underlying conviction and in its ensuing methodological consequences do I differ from scholars who study the history of ideas. For the emphases and the executive form, above all the material effectiveness, of statements made by Orientalist discourse are possible in ways that any hermetic history of ideas tends completely to scant. Without those emphases and that material effectiveness Orientalism would be just another idea, whereas it is and was much more than that. Therefore I set out to examine not only scholarly works but also works of literature, political tracts, journalistic texts, travel books, religious and philological studies. In other words, my hybrid perspective is broadly historical and "anthropological," given that I believe all texts to be worldly and circumstantial in (of course) ways that vary from genre to genre, and from historical period to historical period.

Yet unlike Michel Foucault, to whose work I am greatly indebted, I do believe in the determining imprint of individual writers upon the otherwise anonymous collective body of texts constituting a discursive formation like

7. Published in 1966 (titled *Les Mots et les choses*, or *The Words and the Things*).

8. George Gordon, Lord Byron (1788–1824), English Romantic poet whose works include such "Eastern tales" as *The Giaour* (1814). Beckford (1760–1844), English travel writer and art collector who also wrote the Gothic novel *Vathek*, an *Arabian Tale* (1786).

9. Expressing praise to God in established ways.

1. That is, an Orient as perceived through the

lenses of the psychological theory of SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis; the historical theory of Oswald Spengler (1880–1936), German historian who argued in *The Decline of the West* (1918–22) that cultures grow and decay in a natural cycle (the Eastern having given way to the Western, which he believed was itself in its last stage); and the evolutionary theory of Charles Darwin (1809–1882), English naturalist.

Orientalism. The unity of the large ensemble of texts I analyze is due in part to the fact that they frequently refer to each other: Orientalism is after all a system for citing works and authors. Edward William Lane's *Manners and Customs of the Modern Egyptians* was read and cited by such diverse figures as Nerval, Flaubert, and Richard Burton. He was an authority whose use was an imperative for anyone writing or thinking about the Orient, not just about Egypt: when Nerval borrows passages verbatim from *Modern Egyptians* it is to use Lane's authority to assist him in describing village scenes in Syria, not Egypt. Lane's authority and the opportunities provided for citing him discriminately as well as indiscriminately were there because Orientalism could give his text the kind of distributive currency that he acquired. There is no way, however, of understanding Lane's currency without also understanding the peculiar features of *his* text; this is equally true of Renan, Sacy, Lamartine, Schlegel, and a group of other influential writers. Foucault believes that in general the individual text or author counts for very little; empirically, in the case of Orientalism (and perhaps nowhere else) I find this not to be so. Accordingly my analyses employ close textual readings whose goal is to reveal the dialectic between individual text or writer and the complex collective formation to which his work is a contribution.

Yet even though it includes an ample selection of writers, this book is still far from a complete history or general account of Orientalism. Of this failing I am very conscious. The fabric of as thick a discourse as Orientalism has survived and functioned in Western society because of its richness: all I have done is to describe parts of that fabric at certain moments, and merely to suggest the existence of a larger whole, detailed, interesting, dotted with fascinating figures, texts, and events. I have consoled myself with believing that this book is one installment of several, and hope there are scholars and critics who might want to write others. There is still a general essay to be written on imperialism and culture; other studies would go more deeply into the connection between Orientalism and pedagogy, or into Italian, Dutch, German, and Swiss Orientalism, or into the dynamic between scholarship and imaginative writing, or into the relationship between administrative ideas and intellectual discipline. Perhaps the most important task of all would be to undertake studies in contemporary alternatives to Orientalism, to ask how one can study other cultures and peoples from a libertarian, or a nonrepressive and nonmanipulative, perspective. But then one would have to rethink the whole complex problem of knowledge and power. These are all tasks left embarrassingly incomplete in this study.

The last, perhaps self-flattering, observation on method that I want to make here is that I have written this study with several audiences in mind. For students of literature and criticism, Orientalism offers a marvelous instance of the interrelations between society, history, and textuality; moreover, the cultural role played by the Orient in the West connects Orientalism with ideology, politics, and the logic of power, matters of relevance, I think, to the literary community. For contemporary students of the Orient, from university scholars to policymakers, I have written with two ends in mind: one, to present their intellectual genealogy to them in a way that has not been done; two, to criticize—with the hope of stirring discussion—the often unquestioned assumptions on which their work for the most part depends. For the general

reader, this study deals with matters that always compel attention, all of them connected not only with Western conceptions and treatments of the Other but also with the singularly important role played by Western culture in what Vico called the world of nations. Lastly, for readers in the so-called Third World,² this study proposes itself as a step towards an understanding not so much of Western politics and of the non-Western world in those politics as of the *strength* of Western cultural discourse, a strength too often mistaken as merely decorative or "superstructural." My hope is to illustrate the formidable structure of cultural domination and, specifically for formerly colonized peoples, the dangers and temptations of employing this structure upon themselves or upon others.

The three long chapters and twelve shorter units into which this book is divided are intended to facilitate exposition as much as possible. Chapter One, "The Scope of Orientalism," draws a large circle around all the dimensions of the subject, both in terms of historical time and experiences and in terms of philosophical and political themes. Chapter Two, "Orientalist Structures and Restructures," attempts to trace the development of modern Orientalism by a broadly chronological description, and also by the description of a set of devices common to the work of important poets, artists, and scholars. Chapter Three, "Orientalism Now," begins where its predecessor left off, at around 1870. This is the period of great colonial expansion into the Orient, and it culminates in World War II. The very last section of Chapter Three characterizes the shift from British and French to American hegemony; I attempt there finally to sketch the present intellectual and social realities of Orientalism in the United States.

3. *The personal dimension.* In the *Prison Notebooks* Gramsci says: "The starting-point of critical elaboration is the consciousness of what one really is, and is 'knowing thyself' as a product of the historical process to date, which has deposited in you an infinity of traces, without leaving an inventory." The only available English translation inexplicably leaves Gramsci's comment at that, whereas in fact Gramsci's Italian text concludes by adding, "therefore it is imperative at the outset to compile such an inventory."³

Much of the personal investment in this study derives from my awareness of being an "Oriental" as a child growing up in two British colonies. All of my education, in those colonies (Palestine and Egypt) and in the United States, has been Western, and yet that deep early awareness has persisted. In many ways my study of Orientalism has been an attempt to inventory the traces upon me, the Oriental subject, of the culture whose domination has been so powerful a factor in the life of all Orientals. This is why for me the Islamic Orient has had to be the center of attention. Whether what I have achieved is the inventory prescribed by Gramsci is not for me to judge, although I have felt it important to be conscious of trying to produce one. Along the way, as severely and as rationally as I have been able, I have tried to maintain a critical consciousness, as well as employing those instruments of historical, humanistic, and cultural research of which my education has made me the

2. The "underdeveloped" countries, many of them former colonies, now dominated by highly industrialized "first world" (largely Western) nations in a global economy.

fortunate beneficiary. In none of that, however, have I ever lost hold of the cultural reality of, the personal involvement in having been constituted as, "an Oriental."

The historical circumstances making such a study possible are fairly complex, and I can only list them schematically here. Anyone resident in the West since the 1950s, particularly in the United States, will have lived through an era of extraordinary turbulence in the relations of East and West. No one will have failed to note how "East" has always signified danger and threat during this period, even as it has meant the traditional Orient as well as Russia. In the universities a growing establishment of area-studies programs and institutes has made the scholarly study of the Orient a branch of national policy. Public affairs in this country include a healthy interest in the Orient, as much for its strategic and economic importance as for its traditional exoticism. If the world has become immediately accessible to a Western citizen living in the electronic age, the Orient too has drawn nearer to him, and is now less a myth perhaps than a place crisscrossed by Western, especially American, interests.

One aspect of the electronic, postmodern world is that there has been a reinforcement of the stereotypes by which the Orient is viewed. Television, the films, and all the media's resources have forced information into more and more standardized molds. So far as the Orient is concerned, standardization and cultural stereotyping have intensified the hold of the nineteenth-century academic and imaginative demonology of "the mysterious Orient." This is nowhere more true than in the ways by which the Near East is grasped. Three things have contributed to making even the simplest perception of the Arabs and Islam into a highly politicized, almost raucous matter: one, the history of popular anti-Arab and anti-Islamic prejudice in the West, which is immediately reflected in the history of Orientalism; two, the struggle between the Arabs and Israeli Zionism,⁴ and its effects upon American Jews as well as upon both the liberal culture and the population at large; three, the almost total absence of any cultural position making it possible either to identify with or dispassionately to discuss the Arabs or Islam. Furthermore, it hardly needs saying that because the Middle East is now so identified with Great Power politics, oil economics, and the simple-minded dichotomy of freedom-loving, democratic Israel and evil, totalitarian, and terroristic Arabs, the chances of anything like a clear view of what one talks about in talking about the Near East are depressingly small.

My own experiences of these matters are in part what made me write this book. The life of an Arab Palestinian in the West, particularly in America, is disheartening. There exists here an almost unanimous consensus that politically he does not exist, and when it is allowed that he does, it is either as a nuisance or as an Oriental. The web of racism, cultural stereotypes, political imperialism, dehumanizing ideology holding in the Arab or the Muslim is very strong indeed, and it is this web which every Palestinian has come to feel as his uniquely punishing destiny. It has made matters worse for him to remark that no person academically involved with the Near East—no Orientalist, that is—has ever in the United States culturally and

4. A political movement, originating in central and eastern Europe in the late 19th century, to reestablish and maintain a Jewish national state in Palestine.

politically identified himself wholeheartedly with the Arabs; certainly there have been identifications on some level, but they have never taken an “acceptable” form as has liberal American identification with Zionism, and all too frequently they have been radically flawed by their association either with discredited political and economic interests (oil-company and State Department Arabists, for example) or with religion.

The nexus of knowledge and power creating “the Oriental” and in a sense obliterating him as a human being is therefore not for me an exclusively academic matter. Yet it is an *intellectual* matter of some very obvious importance. I have been able to put to use my humanistic and political concerns for the analysis and description of a very worldly matter, the rise, development, and consolidation of Orientalism. Too often literature and culture are presumed to be politically, even historically innocent; it has regularly seemed otherwise to me, and certainly my study of Orientalism has convinced me (and I hope will convince my literary colleagues) that society and literary culture can only be understood and studied together. In addition, and by an almost inescapable logic, I have found myself writing the history of a strange, secret sharer of Western anti-Semitism. That anti-Semitism and, as I have discussed it in its Islamic branch, Orientalism resemble each other very closely is a historical, cultural, and political truth that needs only to be mentioned to an Arab Palestinian for its irony to be perfectly understood. But what I should like also to have contributed here is a better understanding of the way cultural domination has operated. If this stimulates a new kind of dealing with the Orient, indeed if it eliminates the “Orient” and “Occident” altogether, then we shall have advanced a little in the process of what Raymond Williams has called the “unlearning” of “the inherent dominative mode.”⁵

1978

From Culture and Imperialism

From Chapter Two. Consolidated Vision

II. JANE AUSTEN AND EMPIRE

We are on solid ground with V. G. Kiernan when he says that “empires must have a mould of ideas or conditioned reflexes to flow into, and youthful nations dream of a great place in the world as young men dream of fame and fortunes.”¹ It is, as I have been saying throughout, too simple and reductive to argue that everything in European or American culture therefore prepares for or consolidates the grand idea of empire. It is also, however, historically inaccurate to ignore those tendencies—whether in narrative, political theory, or pictorial technique—that enabled, encouraged, and otherwise assured the West’s readiness to assume and enjoy the experience of empire. If there was cultural resistance to the notion of an imperial mission, there was not much support for that resistance in the main departments of cultural thought.

5. Raymond Williams, *Culture and Society, 1780–1950* (London: Chatto and Windus, 1958), p. 376 [Said’s note].

1. V. G. Kiernan, *Marxism and Imperialism* (New York: St. Martin’s Press, 1974), p. 100 [Said’s note]. Kiernan (1913–2009), British historian.

Liberal though he was, John Stuart Mill—as a telling case in point—could still say, “The sacred duties which civilized nations owe to the independence and nationality of each other, are not binding towards those to whom nationality and independence are certain evil, or at best a questionable good.”² Ideas like this were not original with Mill; they were already current in the English subjugation of Ireland during the sixteenth century and, as Nicholas Canny³ has persuasively demonstrated, were equally useful in the ideology of English colonization in the Americas. Almost all colonial schemes begin with an assumption of native backwardness and general inadequacy to be independent, “equal,” and fit.

Why that should be so, why sacred obligation on one front should not be binding on another, why rights accepted in one may be denied in another, are questions best understood in the terms of a culture well-grounded in moral, economic, and even metaphysical norms designed to approve a satisfying local, that is European, order and to permit the abrogation of the right to a similar order abroad. Such a statement may appear preposterous or extreme. In fact, it formulates the connection between Europe’s well-being and cultural identity on the one hand and, on the other, the subjugation of imperial realms overseas rather too fastidiously and circumspectly. Part of our difficulty today in accepting any connection at all is that we tend to reduce this complicated matter to an apparently simple causal one, which in turn produces a rhetoric of blame and defensiveness. I am *not* saying that the major factor in early European culture was that it *caused* late-nineteenth-century imperialism, and I am not implying that all the problems of the formerly colonial world should be blamed on Europe. I am saying, however, that European culture often, if not always, characterized itself in such a way as simultaneously to validate its own preferences while also advocating those preferences in conjunction with distant imperial rule. Mill certainly did: he always recommended that India *not* be given independence. When for various reasons imperial rule concerned Europe more intensely after 1880, this schizophrenic habit became useful.

The first thing to be done now is more or less to jettison simple causality in thinking through the relationship between Europe and the non-European world, and lessening the hold on our thought of the equally simple temporal sequence. We must not admit any notion, for instance, that proposes to show that Wordsworth, Austen, or Coleridge,⁴ because they wrote *before* 1857, actually caused the establishment of formal British governmental rule over India *after* 1857. We should try to discern instead a counterpoint between overt patterns in British writing about Britain and representations of the world beyond the British Isles. The inherent mode for this counterpoint is not temporal but spatial. How do writers in the period before the great age of explicit, programmatic colonial expansion—the “scramble for Africa,”⁵ say—

2. John Stuart Mill, *Disquisitions and Discussions*, Vol. 3 (London: Longmans, Green, Reader & Dyer, 1875), pp. 167–68. For an earlier version of this see the discussion by Nicholas Canny, “The Ideology of English Colonization: From Ireland to America,” *William and Mary Quarterly* 30 (1973), 575–98 [Said’s note]. 4. SAMUEL TAYLOR COLERIDGE (1772–1834) and WILLIAM WORDSWORTH (1770–1850), major English poets of the Romantic period. Jane Austen (1775–1817), major English novelist whose works include *Pride and Prejudice* (1813) and *Mansfield Park* (1814), discussed below.

5. The competing attempts by more than a half-dozen European powers to lay claim to African territory at the end of the 19th century.

situate and see themselves and their work in the larger world? We shall find them using striking but careful strategies, many of them derived from expected sources—positive ideas of home, of a nation and its language, of proper order, good behavior, moral values.

But positive ideas of this sort do more than validate “our” world. They also tend to devalue other worlds and, perhaps more significantly from a retrospective point of view, they do not prevent or inhibit or give resistance to horrendously unattractive imperialist practices. No, cultural forms like the novel or the opera do not cause people to go out and imperialize—Carlyle did not drive Rhodes⁶ directly, and he certainly cannot be “blamed” for the problems in today’s southern Africa—but it is genuinely troubling to see how little Britain’s great humanistic ideas, institutions, and monuments, which we still celebrate as having the power ahistorically to command our approval, how little they stand in the way of the accelerating imperial process. We are entitled to ask how this body of humanistic ideas co-existed so comfortably with imperialism, and why—until the resistance to imperialism *in the imperial domain*, among Africans, Asians, Latin Americans, developed—there was little significant opposition or deterrence to empire at home. Perhaps the custom of distinguishing “our” home and order from “theirs” grew into a harsh political rule for accumulating more of “them” to rule, study, and subordinate. In the great, humane ideas and values promulgated by mainstream European culture, we have precisely that “mould of ideas or conditioned reflexes” of which Kiernan speaks, into which the whole business of empire later flowed.

The extent to which these ideas are actually invested in geographical distinctions between real places is the subject of Raymond Williams’s richest book, *The Country and the City*.⁷ His argument concerning the interplay between rural and urban places in England admits of the most extraordinary transformations—from the pastoral populism of Langland, through Ben Jonson’s country-house poems and the novels of Dickens’s⁸ London, right up to visions of the metropolis in twentieth-century literature. Mainly, of course, the book is about how English culture has dealt with land, its possession, imagination, and organization. And while he does address the export of England to the colonies, Williams does so, as I suggested earlier, in a less focussed way and less expansively than the practice actually warrants. Near the end of *The Country and the City* he volunteers that “from at least the mid-nineteenth century, and with important instances earlier, there was this larger context [the relationship between England and the colonies, whose effects on the English imagination “have gone deeper than can easily be traced”] within which every idea and every image was consciously and unconsciously affected.”⁹ He goes on quickly to cite “the idea of emigration to the colonies” as one such image prevailing in various novels by Dickens, the

Brontës, Gaskell,¹ and rightly shows that “new rural societies,” all of them colonial, enter the imaginative metropolitan economy of English literature via Kipling, early Orwell, Maugham.² After 1880 there comes a “dramatic extension of landscape and social relations”: this corresponds more or less exactly with the great age of empire.

It is dangerous to disagree with Williams, yet I would venture to say that if one began to look for something like an imperial map of the world in English literature, it would turn up with amazing insistence and frequency well before the mid-nineteenth century. And turn up not only with the inert regularity suggesting something taken for granted, but—more interestingly—threaded through, forming a vital part of the texture of linguistic and cultural practice. There were established English offshore interests in Ireland, America, the Caribbean, and Asia from the sixteenth century on, and even a quick inventory reveals poets, philosophers, historians, dramatists, statesmen, novelists, travel writers, chroniclers, soldiers, and fabulists who prized, cared for, and traced these interests with continuing concern. (Much of this is well discussed by Peter Hulme in *Colonial Encounters*.)³ Similar points may be made for France, Spain, and Portugal, not only as overseas powers in their own right, but as competitors with the British. How can we examine these interests at work in modern England before the age of empire, i.e., during the period between 1800 and 1870?

We would do well to follow Williams's lead, and look first at that period of crisis following upon England's wide-scale land enclosure at the end of the eighteenth century. The old organic rural communities were dissolved and new ones forged under the impulse of parliamentary activity, industrialization, and demographic dislocation, but there also occurred a new process of relocating England (and in France, France) within a much larger circle of the world map. During the first half of the eighteenth century, Anglo-French competition in North America and India was intense, in the second half there were numerous violent encounters between England and France in the Americas, the Caribbean, and the Levant, and of course in Europe itself. The major pre-Romantic literature in France and England contains a constant stream of references to the overseas dominions: one thinks not only of various Encyclopedists, the Abbé Raynal, de Brosses, and Volney, but also of Edmund Burke, Beckford, Gibbon, Johnson, and William Jones.⁴

In 1902 J. A. Hobson described imperialism as the expansion of nationality, implying that the process was understandable mainly by considering *expansion* as the more important of the two terms, since “nationality” was a

1. Elizabeth Gaskell (1810–1865), English writer. “The Brontës”: Williams discusses the English novels *Shirley* (1849) and *Wuthering Heights* (1847) by the sisters Charlotte (1816–1855) and Emily Brontë (1818–1848).

2. William Somerset Maugham (1874–1965), English novelist. Rudyard Kipling (1865–1936), English novelist and poet known for writings set in India. George Orwell (pen name of Eric Blair, 1903–1950), English novelist and essayist who was an imperial police officer in Burma.

Clarendon Press, 1992) [Said's note]. Hulme (b. 1948), British cultural critic.

4. English philologist and judge in India (1746–1794). Encyclopedists: 18th-century French intellectuals who attempted to compile a comprehensive encyclopedia. Abbé Raynal (1713–1796), French historian and philosopher. Charles de Brosses (1709–1777), French scholar. Constantin-François Chassebœuf, comte de Volney (1757–1820), French historian and politician. BURKE (1729–1797), British writer and statesman. William Thomas Beckford (1760–1844), English novelist and dilettante. Edward Gibbon (1737–1794), English historian. SAMUEL JOHNSON (1709–1784), English essayist, poet, and lexicographer; his single novel, *Rasselas* (1759), is set in the Orient.

fully formed, fixed quantity,⁵ whereas a century before it was still in the process of *being formed*, at home and abroad as well. In *Physics and Politics* (1887) Walter Bagehot⁶ speaks with extraordinary relevance of “nation-making.” Between France and Britain in the late eighteenth century there were two contests: the battle for strategic gains abroad—in India, the Nile delta, the Western Hemisphere—and the battle for a triumphant nationality. Both battles contrast “Englishness” with “the French,” and no matter how intimate and closeted the supposed English or French “essence” appears to be, it was almost always thought of as being (as opposed to already) made, and being fought out with the other great competitor. Thackeray’s Becky Sharp,⁷ for example, is as much an upstart as she is because of her half-French heritage. Earlier in the century, the upright abolitionist posture of Wilberforce and his allies developed partly out of a desire to make life harder for French hegemony in the Antilles.⁸

These considerations suddenly provide a fascinatingly expanded dimension to *Mansfield Park* (1814), the most explicit in its ideological and moral affirmations of Austen’s novels. Williams once again is in general dead right: Austen’s novels express an “attainable quality of life,” in money and property acquired, moral discriminations made, the right choices put in place, the correct “improvements” implemented, the finely nuanced language affirmed and classified. Yet, Williams continues,

What [Cobbett] names, riding past on the road, are classes. Jane Austen, from inside the houses, can never see that, for all the intricacy of her social description. All her discrimination is, understandably, internal and exclusive. She is concerned with the conduct of people who, in the complications of improvement, are repeatedly trying to make themselves into a class. But where only one class is seen, no classes are seen.⁹

As a general description of how Austen manages to elevate certain “moral discriminations” into “an independent value,” this is excellent. Where *Mansfield Park* is concerned, however, a good deal more needs to be said, giving greater explicitness and width to Williams’s survey. Perhaps then Austen, and indeed, pre-imperialist novels generally, will appear to be more implicated in the rationale for imperialist expansion than at first sight they have been.

After Lukacs and Proust,¹ we have become so accustomed to thinking of the novel’s plot and structure as constituted mainly by temporality that we have overlooked the function of space, geography, and location. For it is not

GYÖRGY LUKÁCS (1885–1971), Marxist critic and theorist; one of his best-known works is *The Historical Novel* (1955; see above).

only the very young Stephen Dedalus,² but every other young protagonist before him as well, who sees himself in a widening spiral at home, in Ireland, in the world. Like many other novels, *Mansfield Park* is very precisely about a series of both small and large dislocations and relocations in space that occur before, at the end of the novel, Fanny Price, the niece, becomes the spiritual mistress of Mansfield Park.³ And that place itself is located by Austen at the center of an arc of interests and concerns spanning the hemisphere, two major seas, and four continents.

As in Austen's other novels, the central group that finally emerges with marriage and property "ordained" is not based exclusively upon blood. Her novel enacts the disaffiliation (in the literal sense) of some members of a family, and the affiliation between others and one or two chosen and tested outsiders: in other words, blood relationships are not enough to assure continuity, hierarchy, authority, both domestic and international. Thus Fanny Price—the poor niece, the orphaned child from the outlying city of Portsmouth, the neglected, demure, and upright wallflower—gradually acquires a status commensurate with, even superior to, that of most of her more fortunate relatives. In this pattern of affiliation and in her assumption of authority, Fanny Price is relatively passive. She resists the misdemeanors and the importunings of others, and very occasionally she ventures actions on her own: all in all, though, one has the impression that Austen has designs for her that Fanny herself can scarcely comprehend, just as throughout the novel Fanny is thought of by everyone as "comfort" and "acquisition" despite herself. Like Kipling's Kim O'Hara,⁴ Fanny is both device and instrument in a larger pattern, as well as a fully fledged novelistic character.

Fanny, like Kim, requires direction, requires the patronage and outside authority that her own impoverished experience cannot provide. Her conscious connections are to some people and to some places, but the novel reveals other connections of which she has faint glimmerings that nevertheless demand her presence and service. She comes into a situation that opens with an intricate set of moves which, taken together, demand sorting out, adjustment, and rearrangement. Sir Thomas Bertram has been captivated by one Ward sister, the others have not done well, and "an absolute breach" opens up; their "circles were so distinct," the distances between them so great that they have been out of touch for eleven years;⁵ fallen on hard times, the Prices seek out the Bertrams. Gradually, and even though she is not the eldest, Fanny becomes the focus of attention as she is sent to Mansfield Park, there to begin her new life. Similarly, the Bertrams have given up London (the result of Lady Bertram's "little ill health and a great deal of indolence") and come to reside entirely in the country.

3. The estate of the wealthy Sir Thomas Bertram, in a county about 70 miles northwest of London. Fanny Price, his niece, is the novel's heroine; at age 10, she comes to live at Mansfield Park with her 4 older cousins: Tom, Edmund, Maria, and Julia.

4. The protagonist of Kipling's *Kim* (1901), a novel about the orphaned son of an Irish soldier in

India.

5. Jane Austen, *Mansfield Park*, ed. Tony Tanner (1814; rpt. Harmondsworth: Penguin, 1966), p.

42. The best account of the novel is in Tony Tanner's *Jane Austen* (Cambridge, Mass.: Harvard University Press, 1986) [Said's note]. There were three Ward sisters; one married Sir Thomas Bertram, the second his friend the Rev. Mr. Norris (who became minister in a nearby church), and the third an officer in the marines, Mr. Price.

What sustains this life materially is the Bertram estate in Antigua, which is not doing well. Austen takes pains to show us two apparently disparate but actually convergent processes: the growth of Fanny's importance to the Bertrams' economy, including Antigua, and Fanny's own steadfastness in the face of numerous challenges, threats, and surprises. In both, Austen's imagination works with a steel-like rigor through a mode that we might call geographical and spatial clarification. Fanny's ignorance when she arrives at Mansfield as a frightened ten-year-old is signified by her inability to "put the map of Europe together,"⁶ and for much of the first half of the novel the action is concerned with a whole range of issues whose common denominator, misused or misunderstood, is space: not only is Sir Thomas in Antigua to make things better there and at home, but at Mansfield Park, Fanny, Edmund, and her aunt Norris negotiate where she is to live, read, and work, where fires are to be lit; the friends and cousins concern themselves with the improvement of estates, and the importance of chapels (i.e., religious authority) to domesticity is envisioned and debated. When, as a device for stirring things up, the Crawfords⁷ suggest a play (the tinge of France that hangs a little suspiciously over their background is significant), Fanny's discomfort is polarizingly acute. She cannot participate, cannot easily accept that rooms for living are turned into theatrical space, although, with all its confusion of roles and purposes, the play, Kotzebue's *Lovers' Vows*,⁸ is prepared for anyway.

We are to surmise, I think, that while Sir Thomas is away tending his colonial garden, a number of inevitable mismeasurements (explicitly associated with feminine "lawlessness") will occur. These are apparent not only in innocent strolls by the three pairs of young friends through a park, in which people lose and catch sight of one another unexpectedly, but most clearly in the various flirtations and engagements between the young men and women left without true parental authority, Lady Bertram being indifferent, Mrs. Norris unsuitable. There is sparring, innuendo, perilous taking on of roles: all of this of course crystallizes in preparations for the play, in which something dangerously close to libertinage is about to be (but never is) enacted. Fanny, whose earlier sense of alienation, distance, and fear derives from her first uprooting, now becomes a sort of surrogate conscience about what is right and how far is too much. Yet she has no power to implement her uneasy awareness, and until Sir Thomas suddenly returns from "abroad," the rudderless drift continues.

When he does appear, preparations for the play are immediately stopped, and in a passage remarkable for its executive dispatch, Austen narrates the re-establishment of Sir Thomas's local rule:

It was a busy morning with him. Conversation with any of them occupied but a small part of it. He had to reinstate himself in all the wonted concerns of his Mansfield life, to see his steward and his bailiff—to examine and compute—and, in the intervals of business, to walk into his

7. Henry and Mary Crawford, well-off siblings who, as young adults, come to live in Mansfield.

8. A very successful English adaptation (1798) by Elizabeth Inchbald of *Das Kind der Liebe* (1780,

The Child of Love) by the German playwright August von Kotzebue (1761–1819); the play's subject matter (extramarital sex, illegitimacy) made it particularly unsuitable.

stables and his gardens, and nearest plantations; but active and methodical, he had not only done all this before he resumed his seat as master of the house at dinner, he had also set the carpenter to work in pulling down what had been so lately put up in the billiard room, and given the scene painter his dismissal, long enough to justify the pleasing belief of his being then at least as far off as Northampton. The scene painter was gone, having spoilt only the floor of one room, ruined all the coachman's sponges, and made five of the under-servants idle and dissatisfied; and Sir Thomas was in hopes that another day or two would suffice to wipe away every outward memento of what had been, even to the destruction of every unbound copy of 'Lovers' Vows' in the house, for he was burning all that met his eye.⁹

The force of this paragraph is unmistakable. Not only is this a Crusoe¹ setting things in order: it is also an early Protestant eliminating all traces of frivolous behavior. There is nothing in *Mansfield Park* that would contradict us, however, were we to assume that Sir Thomas does exactly the same things—on a larger scale—in his Antigua “plantations.” Whatever was wrong there—and the internal evidence garnered by Warren Roberts suggests that economic depression, slavery, and competition with France were at issue²—Sir Thomas was able to fix, thereby maintaining his control over his colonial domain. More clearly than anywhere else in her fiction, Austen here synchronizes domestic with international authority, making it plain that the values associated with such higher things as ordination, law, and propriety must be grounded firmly in actual rule over and possession of territory. She sees clearly that to hold and rule Mansfield Park is to hold and rule an imperial estate in close, not to say inevitable association with it. What assures the domestic tranquility and attractive harmony of one is the productivity and regulated discipline of the other.

Before both can be fully secured, however, Fanny must become more actively involved in the unfolding action. From frightened and often victimized poor relation she is gradually transformed into a directly participating member of the Bertram household at Mansfield Park. For this, I believe, Austen designed the second part of the book, which contains not only the failure of the Edmund–Mary Crawford romance as well as the disgraceful profligacy of Lydia³ and Henry Crawford, but Fanny Price's rediscovery and rejection of her Portsmouth home, the injury and incapacitation of Tom Bertram (the eldest son), and the launching of William Price's⁴ naval career. This entire ensemble of relationships and events is finally capped with Edmund's marriage to Fanny, whose place in Lady Bertram's household is taken by Susan Price, her sister. It is no exaggeration to interpret the concluding sections of *Mansfield Park* as the coronation of an arguably unnatural (or at very least, illogical) principle at the heart of a desired English order. The audacity

4. Fanny's estimable older brother.

of Austen's vision is disguised a little by her voice, which despite its occasional archness is understated and notably modest. But we should not misconstrue the limited references to the outside world, her lightly stressed allusions to work, process, and class, her apparent ability to abstract (in Raymond Williams's phrase) "an everyday uncompromising morality which is in the end separable from its social basis."⁵ In fact Austen is far less diffident, far more severe.

The clues are to be found in Fanny, or rather in how rigorously we are able to consider her. True, her visit to her original Portsmouth home, where her immediate family still resides, upsets the aesthetic and emotional balance she has become accustomed to at Mansfield Park, and true she has begun to take its wonderful luxuries for granted, even as being essential. These are fairly routine and natural consequences of getting used to a new place. But Austen is talking about two other matters we must not mistake. One is Fanny's newly enlarged sense of what it means to be *at home*; when she takes stock of things after she gets to Portsmouth, this is not merely a matter of expanded space.

Fanny was almost stunned. The smallness of the house, and thinness of the walls, brought every thing so close to her, that, added to the fatigue of her journey, and all her recent agitation, she hardly knew how to bear it. *Within* the room all was tranquil enough, for Susan having disappeared with the others, there were soon only her father and herself remaining; and he taking out a newspaper—the customary loan of a neighbour, applied himself to studying it, without seeming to recollect her existence. The solitary candle was held between himself and the paper, without any reference to her possible convenience; but she had nothing to do, and was glad to have the light screened from her aching head, as she sat in bewildered, broken, sorrowful contemplation.

She was at home. But alas! it was not such a home, she had not such a welcome, as—she checked herself; she was unreasonable. . . . A day or two might shew the difference. *She* only was to blame. Yet she thought it would not have been so at Mansfield. No, in her uncle's house there would have been a consideration of times and seasons, a regulation of subject, a propriety, an attention towards every body which there was not here.⁶

In too small a space, you cannot see clearly, you cannot think clearly, you cannot have regulation or attention of the proper sort. The fineness of Austen's detail ("the solitary candle was held between himself and the paper, without any reference to her possible convenience") renders very precisely the dangers of unsociability, of lonely insularity, of diminished awareness that are rectified in larger and better administered spaces.

That such spaces are not available to Fanny by direct inheritance, legal title, by propinquity, contiguity, or adjacence (Mansfield Park and Portsmouth are separated by many hours' journey) is precisely Austen's point. To earn the right to Mansfield Park you must first leave home as a kind of indentured servant or, to put the case in extreme terms, as a kind of transported commodity—this, clearly, is the fate of Fanny and her brother William—but

5. Williams, *The Country and the City*, p. 116.

6. Austen, *Mansfield Park*, pp. 375–76 [Said's note].

then you have the promise of future wealth. I think Austen sees what Fanny does as a domestic or small-scale movement in space that corresponds to the larger, more openly colonial movements of Sir Thomas, her mentor, the man whose estate she inherits. The two movements depend on each other.

The second more complex matter about which Austen speaks, albeit indirectly, raises an interesting theoretical issue. Austen's awareness of empire is obviously very different, alluded to very much more casually, than Conrad's⁷ or Kipling's. In her time the British were extremely active in the Caribbean and in South America, notably Brazil and Argentina. Austen seems only vaguely aware of the details of these activities, although the sense that extensive West Indian plantations were important was fairly widespread in metropolitan England. Antigua and Sir Thomas's trip there have a definitive function in *Mansfield Park*, which, I have been saying, is both incidental, referred to only in passing, and absolutely crucial to the action. How are we to assess Austen's few references to Antigua, and what are we to make of them interpretatively?

My contention is that by that very odd combination of casualness and stress, Austen reveals herself to be *assuming* (just as Fanny assumes, in both senses of the word) the importance of an empire to the situation at home. Let me go further. Since Austen refers to and uses Antigua as she does in *Mansfield Park*, there needs to be a commensurate effort on the part of her readers to understand concretely the historical valences in the reference; to put it differently, we should try to understand *what* she referred to, why she gave it the importance she did, and why indeed she made the choice, for she might have done something different to establish Sir Thomas's wealth. Let us now calibrate the signifying power of the references to Antigua in *Mansfield Park*; how do they occupy the place they do, what are they doing there?

According to Austen we are to conclude that no matter how isolated and insulated the English place (e.g., Mansfield Park), it requires overseas sustenance. Sir Thomas's property in the Caribbean would have had to be a sugar plantation maintained by slave labor (not abolished until the 1830s): these are not dead historical facts but, as Austen certainly knew, evident historical realities. Before the Anglo-French competition the major distinguishing characteristic of Western empires (Roman, Spanish, and Portuguese) was that the earlier empires were bent on loot, as Conrad puts it,⁸ on the transport of treasure from the colonies to Europe, with very little attention to development, organization, or system within the colonies themselves; Britain and, to a lesser degree, France both wanted to make their empires long-term, profitable, ongoing concerns, and they competed in this enterprise, nowhere more so than in the colonies of the Caribbean, where the transport of slaves, the functioning of large sugar plantations, and the development of sugar markets, which raised the issues of protectionism, monopolies, and price—all these were more or less constantly, competitively at issue.

Far from being nothing much "out there," British colonial possessions in the Antilles and Leeward Islands were during Jane Austen's time a crucial

7. Joseph Conrad (1857–1924), Polish-born English novelist, who worked as a sailor when young and whose novels are almost all set in remote colonies of European powers.

8. In "Geography and Some Explorers" (1924),

Conrad calls the carving up of Africa by Europeans the "vilest scramble for loot that ever disfigured the history of human conscience and geographical exploration."

setting for Anglo-French colonial competition. Revolutionary ideas from France were being exported there, and there was a steady decline in British profits: the French sugar plantations were producing more sugar at less cost. However, slave rebellions in and out of Haiti⁹ were incapacitating France and spurring British interests to intervene more directly and to gain greater local power. Still, compared with its earlier prominence for the home market, British Caribbean sugar production in the nineteenth century had to compete with alternative sugar-cane supplies in Brazil and Mauritius, the emergence of a European beet-sugar industry, and the gradual dominance of free-trade ideology and practice.

In *Mansfield Park*—both in its formal characteristics and in its contents—a number of these currents converge. The most important is the avowedly complete subordination of colony to metropolis. Sir Thomas, absent from Mansfield Park, is never seen as *present* in Antigua, which elicits at most a half dozen references in the novel. There is a passage, a part of which I quoted earlier, from John Stuart Mill's *Principles of Political Economy* that catches the spirit of Austen's use of Antigua. I quote it here in full:

These [outlying possessions of ours] are hardly to be looked upon as countries, carrying on an exchange of commodities with other countries, but more properly as outlying agricultural or manufacturing estates belonging to a larger community. Our West Indian colonies, for example, cannot be regarded as countries with a productive capital of their own . . . [but are rather] the place where England finds it convenient to carry on the production of sugar, coffee and a few other tropical commodities. All the capital employed is English capital; almost all the industry is carried on for English uses; there is little production of anything except for staple commodities, and these are sent to England, not to be exchanged for things exported to the colony and consumed by its inhabitants, but to be sold in England for the benefit of the proprietors there. The trade with the West Indies is hardly to be considered an external trade, but more resembles the traffic between town and country.¹

To some extent Antigua is like London or Portsmouth, a less desirable setting than a country estate like Mansfield Park, but producing goods to be consumed by everyone (by the early nineteenth century every Britisher used sugar), although owned and maintained by a small group of aristocrats and gentry. The Bertrams and the other characters in *Mansfield Park* are a subgroup within the minority, and for them the island is wealth, which Austen regards as being converted to propriety, order, and, at the end of the novel, comfort, an added good. But why "added"? Because, Austen tells us pointedly in the final chapters, she wants to "restore every body, not greatly in fault themselves, to tolerable comfort, and to have done with all the rest."²

This can be interpreted to mean first that the novel has done enough in the way of destabilizing the lives of "every body" and must now set them at rest: actually Austen says this explicitly, in a bit of meta-fictional impatience, the

9. Haiti won its independence from France in 1804, after a bloody revolt by mulattoes and freed blacks.

2. Austen, *Mansfield Park*, p. 446 [Said's note].

novelist commenting on her own work as having gone on long enough and now needing to be brought to a close. Second, it can mean that “every body” may now be finally permitted to realize what it means to be properly at home, and at rest, without the need to wander about or to come and go. (This does not include young William, who, we assume, will continue to roam the seas in the British navy on whatever commercial and political missions may still be required. Such matters draw from Austen only a last brief gesture, a passing remark about William’s “continuing good conduct and rising fame.”) As for those finally resident in Mansfield Park itself, more in the way of domesticated advantages is given to these now fully acclimatized souls, and to none more than to Sir Thomas. He understands for the first time what has been missing in his education of his children, and he understands it in the terms paradoxically provided for him by unnamed outside forces, so to speak, the wealth of Antigua and the imported example of Fanny Price. Note here how the curious alternation of outside and inside follows the pattern identified by Mill of the outside *becoming* the inside by use and, to use Austen’s word, “disposition”:

Here [in his deficiency of training, of allowing Mrs. Norris too great a role, of letting his children dissemble and repress feeling] had been grievous mismanagement; but, bad as it was, he gradually grew to feel that it had not been the most direful mistake in his plan of education. Some thing must have been wanting *within*, or time would have worn away much of its ill effect. He feared that principle, active principle, had been wanting, that they had never been properly taught to govern their inclinations and tempers, by that sense of duty which can alone suffice. They had been instructed theoretically in their religion, but never required to bring it into daily practice. To be distinguished for elegance and accomplishments—the authorized object of their youth—could have had no useful influence that way, no moral effect on the mind. He had meant them to be good, but his cares had been directed to the understanding and manners, not the disposition; and of the necessity of self-denial and humility, he feared they had never heard from any lips that could profit them.³

What was wanting *within* was in fact supplied by the wealth derived from a West Indian plantation and a poor provincial relative, both brought in to Mansfield Park and set to work. Yet on their own, neither the one nor the other could have sufficed; they require each other and then, more important, they need executive disposition, which in turn helps to reform the rest of the Bertram circle. All this Austen leaves to her reader to supply in the way of literal explication.

And that is what reading her entails. But all these things having to do with the outside brought in seem unmistakably *there* in the suggestiveness of her allusive and abstract language. A principle “wanting *within*” is, I believe, intended to evoke for us memories of Sir Thomas’s absences in Antigua, or the sentimental and near-whimsical vagary on the part of the three variously deficient Ward sisters by which a niece is displaced from one household to another. But that the Bertrams did become better if not altogether good, that

3. *Ibid.*, p. 448 [Said’s note].

some sense of duty was imparted to them, that they learned to govern their inclinations and tempers and brought religion into daily practice, that they "directed disposition": all of this did occur because outside (or rather outlying) factors were lodged properly inward, became native to Mansfield Park, with Fanny the niece its final spiritual mistress, and Edmund the second son its spiritual master.⁴

An additional benefit is that Mrs. Norris is dislodged; this is described as "the great supplementary comfort of Sir Thomas's life."⁵ Once the principles have been interiorized, the comforts follow: Fanny is settled for the time being at Thornton Lacey "with every attention to her comfort"; her home later becomes "the home of affection and comfort"; Susan is brought in "first as a comfort to Fanny, then as an auxiliary, and at last as her substitute"⁶ when the new import takes Fanny's place by Lady Bertram's side. The pattern established at the outset of the novel clearly continues, only now it has what Austen intended to give it all along, an internalized and retrospectively guaranteed rationale. This is the rationale that Raymond Williams describes as "an everyday, uncompromising morality which is in the end separable from its social basis and which, in other hands, can be turned against it."

I have tried to show that the morality in fact is not separable from its social basis: right up to the last sentence, Austen affirms and repeats the geographical process of expansion involving trade, production, and consumption that predates, underlies, and guarantees the morality. And expansion, as Gallagher reminds us, whether "through colonial rule was liked or disliked, [its] desirability through one mode or another was generally accepted. So in the event there were few domestic constraints upon expansion."⁷ Most critics have tended to forget or overlook that process, which has seemed less important to critics than Austen herself seemed to think. But interpreting Jane Austen depends on *who* does the interpreting, *when* it is done, and no less important, from *where* it is done. If with feminists, with great cultural critics sensitive to history and class like Williams, with cultural and stylistic interpreters, we have been sensitized to the issues their interests raise, we should now proceed to regard the geographical division of the world—after all significant to *Mansfield Park*—as not neutral (any more than class and gender are neutral) but as politically charged, beseeching the attention and elucidation its considerable proportions require. The question is thus not only how to understand and with what to connect Austen's morality and its social basis, but also *what* to read of it.

Take once again the casual references to Antigua, the ease with which Sir Thomas's needs in England are met by a Caribbean sojourn, the uninflected, unreflective citations of Antigua (or the Mediterranean, or India, which is where Lady Bertram, in a fit of distracted impatience, requires that William should go "that I may have a shawl. I think I will have two shawls."⁸ They stand for a significance "out there" that frames the genuinely important action *here*, but not for a great significance. Yet these signs of "abroad"

4. Fanny and Edmund marry, and at the novel's end they are living in the parsonage in Mansfield (not at Mansfield Park itself).

include, even as they repress, a rich and complex history, which has since achieved a status that the Bertrams, the Prices, and Austen herself would not, could not recognize. To call this “the Third World”⁹ begins to deal with the realities but by no means exhausts the political or cultural history.

We must first take stock of *Mansfield Park*’s prefigurations of a later English history as registered in fiction. The Bertrams’ usable colony in *Mansfield Park* can be read as pointing forward to Charles Gould’s San Tomé mine in *Nostromo*, or to the Wilcoxes’ Imperial and West African Rubber Company in Forster’s *Howards End*, or to any of these distant but convenient treasure spots in *Great Expectations*, Jean Rhys’s *Wide Sargasso Sea*, *Heart of Darkness*¹—resources to be visited, talked about, described, or appreciated for domestic reasons, for local metropolitan benefit. If we think ahead to these other novels, Sir Thomas’s Antigua readily acquires a slightly greater density than the discrete, reticent appearances it makes in the pages of *Mansfield Park*. And already our reading of the novel begins to open up at those points where ironically Austen was most economical and her critics most (dare one say it?) negligent. Her “Antigua” is therefore not just a slight but a definite way of marking the outer limits of what Williams calls domestic improvements, or a quick allusion to the mercantile venturesomeness of acquiring overseas dominions as a source for local fortunes, or one reference among many attesting to a historical sensibility suffused not just with manners and courtesies but with contests of ideas, struggles with Napoleonic France,² awareness of seismic economic and social change during a revolutionary period in world history.

Second, we must see “Antigua” held in a precise place in Austen’s moral geography, and in her prose, by historical changes that her novel rides like a vessel on a mighty sea. The Bertrams could not have been possible without the slave trade, sugar, and the colonial planter class; as a social type Sir Thomas would have been familiar to eighteenth- and early-nineteenth-century readers who knew the powerful influence of the class through politics, plays (like Cumberland’s *The West Indian*³), and many other public activities (large houses, famous parties and social rituals, well-known commercial enterprises, celebrated marriages). As the old system of protected monopoly gradually disappeared and as a new class of settler-planters displaced the old absentee system, the West Indian interest lost dominance: cotton manufacture, an even more open system of trade, and abolition of the slave trade reduced the power and prestige of people like the Bertrams, whose frequency of sojourn in the Caribbean then decreased.

9. The “underdeveloped” countries, many of them former colonies, now dominated by highly industrialized “first world” (largely Western) nations in a global economy.

1. Conrad’s *Heart of Darkness* (1902) is set in the Belgian Congo, from which trading companies extract ivory; his *Nostromo* (1904), set in South America, features a mineral mine controlled by a character named Charles Gould. *Howards End* (1910), by the English novelist E. M. Forster (1879–1970), depicts three families; the richest of them, the Wilcoxes, own the Imperial and West African Rubber Company. The secret benefactor of the protagonist of Dickens’s *Great Expectations*

(1860–61) is an escaped convict who has made his fortune in Australia. *Wide Sargasso Sea* (1966), by Rhys (1890–1979), a novelist born in Dominica, is a prequel to Charlotte Brontë’s *Jane Eyre* (1847); it focuses on a white Creole from Jamaica, the mad first wife of Edward Rochester.

2. That is, France under the rule of Napoléon Bonaparte (1769–1821), who was proclaimed emperor of the French (1804–15); Britain waged war against him from 1803 until his final defeat in 1815.

3. A comedic 1771 play by the English dramatist Richard Cumberland (1732–1811).

Thus Sir Thomas's infrequent trips to Antigua as an absentee plantation owner reflect the diminishment in his class's power, a reduction directly expressed in the title of Lowell Ragatz's⁴ classic *The Fall of the Planter Class in the British Caribbean, 1763–1833* (1928). But is what is hidden or allusive in Austen made sufficiently explicit more than one hundred years later in Ragatz? Does the aesthetic silence or discretion of a great novel in 1814 receive adequate explication in a major work of historical research a full century later? Can we assume that the process of interpretation is fulfilled, or will it continue as new material comes to light?

For all his learning Ragatz still finds it in himself to speak of "the Negro race" as having the following characteristics: "he stole, he lied, he was simple, suspicious, inefficient, irresponsible, lazy, superstitious, and loose in his sexual relations."⁵ Such "history" as this therefore happily gave way to the revisionary work of Caribbean historians like Eric Williams⁶ and C.L.R. James, and more recently Robin Blackburn, in *The Overthrow of Colonial Slavery, 1776–1848*; in these works slavery and empire are shown to have fostered the rise and consolidation of capitalism well beyond the old plantation monopolies, as well as to have been a powerful ideological system whose original connection to specific economic interests may have gone, but whose effects continued for decades.

The political and moral ideas of the age are to be examined in the very closest relation to the economic development. . . .

An outworn interest, whose bankruptcy smells to heaven in historical perspective, can exercise an obstructionist and disruptive effect which can only be explained by the powerful services it had previously rendered and the entrenchment previously gained. . . .

The ideas built on these interests continue long after the interests have been destroyed and work their old mischief, which is all the more mischievous because the interests to which they corresponded no longer exist.⁷

Thus Eric Williams in *Capitalism and Slavery* (1961). The question of interpretation, indeed of writing itself, is tied to the question of interests, which we have seen are at work in aesthetic as well as historical writing, then and now. We must not say that since *Mansfield Park* is a novel, its affiliations with a sordid history are irrelevant or transcended, not only because it is irresponsible to do so, but because we know too much to say so in good faith. Having read *Mansfield Park* as part of the structure of an expanding imperialist venture, one cannot simply restore it to the canon of "great literary masterpieces"—to which it most certainly belongs—and leave it at that. Rather, I think, the novel steadily, if unobtrusively, opens up a broad expanse of domestic imperialist culture without which Britain's subsequent acquisition of territory would not have been possible.

of independent Trinidad (1911–1981).

7. Eric Williams, *Capitalism and Slavery* (New York: Russell & Russell, 1961), p. 211. See also his *From Columbus to Castro: The History of the Caribbean, 1492–1969* (London: Deutsch, 1970), pp. 177–254 [Said's note].

I have spent time on *Mansfield Park* to illustrate a type of analysis infrequently encountered in mainstream interpretations, or for that matter in readings rigorously based in one or another of the advanced theoretical schools. Yet only in the global perspective implied by Jane Austen and her characters can the novel's quite astonishing general position be made clear. I think of such a reading as completing or complementing others, not discounting or displacing them. And it bears stressing that because *Mansfield Park* connects the actualities of British power overseas to the domestic imbroglio within the Bertram estate, there is no way of doing such readings as mine, no way of understanding the "structure of attitude and reference" except by working through the novel. Without reading it in full, we would fail to understand the strength of that structure and the way it was activated and maintained in literature. But in reading it carefully, we can sense how ideas about dependent races and territories were held both by foreign-office executives, colonial bureaucrats, and military strategists and by intelligent novel-readers educating themselves in the fine points of moral evaluation, literary balance, and stylistic finish.

There is a paradox here in reading Jane Austen which I have been impressed by but can in no way resolve. All the evidence says that even the most routine aspects of holding slaves on a West Indian sugar plantation were cruel stuff. And everything we know about Austen and her values is at odds with the cruelty of slavery. Fanny Price reminds her cousin that after asking Sir Thomas about the slave trade, "There was such a dead silence"⁸ as to suggest that one world could not be connected with the other since there simply is no common language for both. That is true. But what stimulates the extraordinary discrepancy into life is the rise, decline, and fall of the British empire itself and, in its aftermath, the emergence of a postcolonial consciousness. In order more accurately to read works like *Mansfield Park*, we have to see them in the main as resisting or avoiding that other setting, which their formal inclusiveness, historical honesty, and prophetic suggestiveness cannot completely hide. In time there would no longer be a dead silence when slavery was spoken of, and the subject became central to a new understanding of what Europe was.

It would be silly to expect Jane Austen to treat slavery with anything like the passion of an abolitionist or a newly liberated slave. Yet what I have called the rhetoric of blame, so often now employed by subaltern,⁹ minority, or disadvantaged voices, attacks her, and others like her, retrospectively, for being white, privileged, insensitive, complicit. Yes, Austen belonged to a slave-owning society, but do we therefore jettison her novels as so many trivial exercises in aesthetic frumpiness? Not at all, I would argue, if we take seriously our intellectual and interpretative vocation to make connections, to deal with as much of the evidence as possible, fully and actually, to read what is there or not there, above all, to see complementarity and interdependence instead of isolated, venerated, or formalized experience that excludes and forbids the hybridizing intrusions of human history.

8. Austen, *Mansfield Park*, p. 213 [Said's note].

9. A term from the Italian Marxist critic and theorist ANTONIO GRAMSCI (1891–1937), referring to

those subordinated by the hegemonic power structure (and, since the 1980s, especially to colonized peoples).

Mansfield Park is a rich work in that its aesthetic intellectual complexity requires that longer and slower analysis that is also required by its geographical problematic, a novel based in an England relying for the maintenance of its style on a Caribbean island. When Sir Thomas goes to and comes from Antigua, where he has property, that is not at all the same thing as coming to and going from Mansfield Park, where his presence, arrivals, and departures have very considerable consequences. But precisely because Austen is so summary in one context, so provocatively rich in the other, precisely because of that imbalance we are able to move in on the novel, reveal and accentuate the interdependence scarcely mentioned on its brilliant pages. A lesser work wears its historical affiliation more plainly; its worldliness is simple and direct, the way a jingoistic ditty during the Mahdist uprising or the 1857 Indian Rebellion¹ connects directly to the situation and constituency that coined it. *Mansfield Park* encodes experiences and does not simply repeat them. From our later perspective we can interpret Sir Thomas's power to come and go in Antigua as stemming from the muted national experience of individual identity, behavior, and "ordination," enacted with such irony and taste at Mansfield Park. The task is to lose neither a true historical sense of the first, nor a full enjoyment or appreciation of the second, all the while seeing both together.

1993

1. Two well-known colonial rebellions: a revolt in Sudan (1882–98) against Anglo-Egyptian rule, initially led by the Muslim religious leader Muham-

mad Ahmad (the Mahdi), and a widespread uprising (1857–58) by Indian soldiers against the British rule of the East India Company.

MONIQUE WITTIG

1935–2003

When the French writer and radical lesbian theorist Monique Wittig concluded "The Straight Mind," her 1978 presentation at the Modern Language Association convention in New York, with the statement that "lesbians are not women," she was greeted with stunned silence. Not all feminists, or all lesbians, were ready to abandon a division between the sexes that has seemed so natural and inevitable. Most feminists, as Wittig notes in "One Is Not Born a Woman" (1981), "still believe that the basis of women's oppression is biological as well as historical." But for a lesbian like Wittig to refuse to be heterosexual means that she refuses to become a "man" or a "woman"—categories that she regards as political, not as natural givens. For this reason, she has been a central figure in the debate between those feminists who see "woman" as a transhistorical and eternal essence (see, for instance, HÉLÈNE CIXOUS) and those who believe that the idea of "woman" is a social construct (see, for instance, JUDITH BUTLER). Although Wittig is better known for her fiction than her theoretical writing, her fiction frequently blurs the distinction between literature and theory. Feminists have read her second novel, *Les Guérillères* (1969), which describes a postholocaust world where Amazon fighters attempt to create a new society, as an important and inspiring source of theory about language and women's writing.

Wittig was born in Alsace, France, and studied Oriental languages, literatures, history, and philosophy at the Sorbonne in Paris. She won the Prix Medici for her first novel, *L'Opoponax* (1964). Her political views were shaped by the left-wing French intellectual milieu of Paris in the 1950s and 1960s; her participation in the May 1968 student-worker uprisings partly inspired *Les Guérillères*. Active in the French women's movement from its inception, Wittig was a co-founder of the Movement de libération des femmes (MLF, the Women's Liberation Movement), the founder of the *Féministes Révolutionnaires* in 1970, and an active member of *Gouines rouges* (Red Dykes) in 1971. In 1976 she relocated to the United States, though she continued to explore her materialist theories of lesbianism as a member of the Parisian Marxist-feminist editorial collective *Questions Féministes* from 1977 until 1980. She received a Ph.D. in literary languages from the Sorbonne in 1986, and she taught at the University of California at Berkeley, the University of Southern California, Vassar College, Duke University, New York University, and the University of Arizona. Wittig served from 1980 to 1991 on the advisory board of *Feminist Issues*, where she published many of her influential essays, including "The Straight Mind" (1980), "The Mark of Gender" (1985), and our selection, "One Is Not Born a Woman." In 1999 she published a collection of stories under the title *Paris-la-politique et autres histoires* (*Paris-Politics and Other Stories*). In 2000, with her partner and collaborator Sande Zieg, she released a film of her English novella "The Girl," her last work before her death in 2003 of a heart attack.

With a nod toward the best-known work of France's most famous feminist, SIMONE DE BEAUVOIR, "One Is Not Born a Woman" rejects biological explanations for inequalities and differences between the sexes. The "immediate given," "the sensible given," even those physical features that appear to constitute the standard categories of sex or race are not, in fact, the result of direct physical perception, as we might intuit; rather they are "mythic constructions," which "reinterpret physical features . . . through the network of relationships in which they are perceived." For this reason, Wittig is critical of feminist speculations about prehistorical matriarchies in which women were the creators of civilization. This approach, she argues, only further imprisons women within the category of sex. From a lesbian vantage point, patriarchy and matriarchy are equally oppressive because equally heterosexist.

All "naturalizing" explanations for the differences between men and women, according to Wittig, presume that the foundation of sex difference is heterosexuality, which she redefines as a tacit, unquestioned, and forced social contract. Because lesbians are not dependent on men, they cannot be "real" women; but because they lack economic, ideological, and political privilege, they cannot be men. Like ADRIENNE RICH, Wittig argues that the very existence of lesbians—a class of individuals who are "not-woman, not-man"—refutes the naturalized division between the sexes that supports institutionalized heterosexuality, thereby exposing the artificiality of the ruling sex/gender system. For this reason, "One Is Not Born a Woman" became a foundational text both for gay and lesbian studies and for queer theory in the 1990s.

The Marxist analysis of class offers, for Wittig, at least a starting point for a nonessentialist feminism in which socioeconomic relations, rather than biological necessity, provide the common ground for political struggle. The Marxist model, however, is not without problems of its own, and Wittig identifies two. First, MARX's analysis of the proletariat (industrial workers) as a class itself depends on an already naturalized sexual division of labor that obscures the class conflict between men and women (constituted not as natural categories but on the basis of their different relations to the economic foundations of society). The subordination of women cannot simply be subsumed under the class conflict between the bourgeoisie and the proletariat; it must rather be understood as an independent, if related, historical development. Second, Marxism has failed to develop a model of subjectivity that might enable women and other oppressed groups to constitute themselves as individual historical subjects. While Marxism allows for class consciousness, it has usefully rejected as idealist the

"transcendental subject" of Western philosophy. Wittig sets feminism the difficult task of defining the individual subject of feminist struggle in materialist terms, though she is less clear about how to coordinate the various—sometimes conflicting—class identifications that women have (different races, social classes, nationalities). Just as Marxism occludes the different investments of men and women in economic class, feminism runs the risk of obscuring the different ways in which women of different races and classes experience gender. Yet despite its problems, Wittig's challenging essay remains a central document in the essentialism debate within feminism that has continued since the 1980s.

"One Is Not Born a Woman" Keywords: The Body, Feminist Theory, Gender, Identity, Ideology, Marxism, Queer Theory, Sexuality, Subjectivity

One Is Not Born a Woman

A materialist feminist¹ approach to women's oppression destroys the idea that women are a "natural group": "a racial group of a special kind, a group perceived as *natural*, a group of men considered as materially specific in their bodies."² What the analysis accomplishes on the level of ideas, practice makes actual at the level of facts: by its very existence, lesbian society destroys the artificial (social) fact constituting women as a "natural group." A lesbian society³ pragmatically reveals that the division from men of which women have been the object is a political one and shows that we have been ideologically rebuilt into a "natural group." In the case of women, ideology goes far since our bodies as well as our minds are the product of this manipulation. We have been compelled in our bodies and in our minds to correspond, feature by feature, with the *idea* of nature that has been established for us. Distorted to such an extent that our deformed body is what they call "natural," what is supposed to exist as such before oppression. Distorted to such an extent that in the end oppression seems to be a consequence of this "nature" within ourselves (a nature which is only an *idea*). What a materialist analysis does by reasoning, a lesbian society accomplishes practically: not only is there no natural group "women" (we lesbians are living proof of it), but as individuals as well we question "woman," which for us, as for Simone de Beauvoir, is only a myth. She said: "One is not born, but becomes a woman. No biological, psychological, or economic fate determines the figure that the human female presents in society: it is civilization as a whole that produces this creature, intermediate between male and eunuch, which is described as feminine."⁴

However, most of the feminists and lesbian-feminists in America and elsewhere still believe that the basis of women's oppression is *biological as well as*

1. Christine Delphy, "Pour un féminisme matérialiste," *L'Arc* 61 (1975). Translated as "For a Materialist Feminism," *Feminist Issues* 1, no. 2 (winter 1981) [except as indicated, all notes are Wittig's].

2. Colette Guillaumin, "Race et Nature: Système des marques, idée de groupe naturel et rapports sociaux," *Pluriel*, no. 11 (1977). Translated as "Race and Nature: The System of Marks, the Idea of a Natural Group and Social Relationships," *Feminist Issues* 8, no. 2 (fall 1988).

3. I use the word *society* with an extended anthropological meaning; strictly speaking, it does not refer to societies, in that lesbian societies do not exist completely autonomously from heterosexual social systems.

4. Simone de Beauvoir, *The Second Sex* [trans. H. M. Parshley] (New York: Bantam, 1952), p. 249. [BEAUVOIR (1908–1986), French novelist, philosopher, and feminist—editor's note.]

historical. Some of them even claim to find their sources in Simone de Beauvoir.⁵ The belief in mother right and in a “prehistory” when women created civilization (because of a biological predisposition) while the coarse and brutal men hunted (because of a biological predisposition) is symmetrical with the biologizing interpretation of history produced up to now by the class of men. It is still the same method of finding in women and men a biological explanation of their division, outside of social facts. For me this could never constitute a lesbian approach to women’s oppression, since it assumes that the basis of society or the beginning of society lies in heterosexuality. Matriarchy is no less heterosexual than patriarchy: it is only the sex of the oppressor that changes. Furthermore, not only is this conception still imprisoned in the categories of sex (woman and man), but it holds onto the idea that the capacity to give birth (biology) is what defines a woman. Although practical facts and ways of living contradict this theory in lesbian society, there are lesbians who affirm that “women and men are different species or races (the words are used interchangeably): men are biologically inferior to women; male violence is a biological inevitability . . .”⁶ By doing this, by admitting that there is a “natural” division between women and men, we naturalize history, we assume that “men” and “women” have always existed and will always exist. Not only do we naturalize history, but also consequently we naturalize the social phenomena which express our oppression, making change impossible. For example, instead of seeing giving birth as a forced production, we see it as a “natural,” “biological” process, forgetting that in our societies births are planned (demography), forgetting that we ourselves are programmed to produce children, while this is the only social activity “short of war”⁷ that presents such a great danger of death. Thus, as long as we will be “unable to abandon by will or impulse a lifelong and centuries-old commitment to child-bearing as *the* female creative act,”⁸ gaining control of the production of children will mean much more than the mere control of the material means of this production: women will have to abstract themselves from the definition “woman” which is imposed upon them.

A materialist feminist approach shows that what we take for the cause or origin of oppression is in fact only the *mark*⁹ imposed by the oppressor: the “myth of woman,”¹ plus its material effects and manifestations in the appropriated consciousness and bodies of women. Thus, this mark does not pre-date oppression: Colette Guillaumin² has shown that before the socioeconomic reality of black slavery, the concept of race did not exist, at least not in its modern meaning, since it was applied to the lineage of families. However, now, race, exactly like sex, is taken as an “immediate given,” a “sensible given,” “physical features,” belonging to a natural order. But what we believe to be a physical and direct perception is only a sophisticated and mythic construction, an “imaginary formation,”³ which reinterprets physical features (in themselves as neutral as any others but marked by the social system) through

the network of relationships in which they are perceived. (They are seen as *black*, therefore they *are* black; they are seen as *women*, therefore, they *are* women. But before being *seen* that way, they first had to be *made* that way.) Lesbians should always remember and acknowledge how “unnatural,” compelling, totally oppressive, and destructive being “woman” was for us in the old days before the women’s liberation movement. It was a political constraint, and those who resisted it were accused of not being “real” women. But then we were proud of it, since in the accusation there was already something like a shadow of victory: the avowal by the oppressor that “woman” is not something that goes without saying, since to be one, one has to be a “real” one. We were at the same time accused of wanting to be men. Today this double accusation has been taken up again with enthusiasm in the context of the women’s liberation movement by some feminists and also, alas, by some lesbians whose political goal seems somehow to be becoming more and more “feminine.” To refuse to be a woman, however, does not mean that one has to become a man. Besides, if we take as an example the perfect “butch,” the classic example which provokes the most horror, whom Proust⁴ would have called a woman/man, how is her alienation different from that of someone who wants to become a woman? Tweedledum and Tweedledee.⁵ At least for a woman, wanting to become a man proves that she has escaped her initial programming. But even if she would like to, with all her strength, she cannot become a man. For becoming a man would demand from a woman not only a man’s external appearance but his consciousness as well, that is, the consciousness of one who disposes by right of at least two “natural” slaves during his life span. This is impossible, and one feature of lesbian oppression consists precisely of making women out of reach for us, since women belong to men. Thus a lesbian *has* to be something else, a not-woman, a not-man, a product of society, not a product of nature, for there is no nature in society.

The refusal to become (or to remain) heterosexual always meant to refuse to become a man or a woman, consciously or not. For a lesbian this goes further than the refusal of the *role* “woman.” It is the refusal of the economic, ideological, and political power of a man. This, we lesbians, and nonlesbians as well, knew before the beginning of the lesbian and feminist movement. However, as Andrea Dworkin emphasizes, many lesbians recently “have increasingly tried to transform the very ideology that has enslaved us into a dynamic, religious, psychologically compelling celebration of female biological potential.”⁶ Thus, some avenues of the feminist and lesbian movement lead us back to the myth of woman which was created by men especially for us, and with it we sink back into a natural group. Having stood up to fight for a sexless society,⁷ we now find ourselves entrapped in the familiar deadlock of “woman is wonderful.” Simone de Beauvoir underlined particularly the false consciousness⁸ which consists of selecting among the

8. Marxist term referring to the tendency to view reality in ways congruent with the interests of the dominant orthodoxy rather than in ways that reflect an individual’s class interest [editor’s note].

features of the myth (that women are different from men) those which look good and using them as a definition for women. What the concept "woman is wonderful" accomplishes is that it retains for defining women the best features (best according to whom?) which oppression has granted us, and it does not radically question the categories "man" and "woman," which are political categories and not natural givens. It puts us in a position of fighting within the class "women" not as the other classes do, for the disappearance of our class, but for the defense of "woman" and its reenforcement. It leads us to develop with complacency "new" theories about our specificity: thus, we call our passivity "nonviolence," when the main and emergent point for us is to fight our passivity (our fear, rather, a justified one). The ambiguity of the term "feminist" sums up the whole situation. What does "feminist" mean? Feminist is formed with the word "femme," "woman," and means: someone who fights for women. For many of us it means someone who fights for women as a class and for the disappearance of this class. For many others it means someone who fights for woman and her defense—for the myth, then, and its reenforcement. But why was the word "feminist" chosen if it retains the least ambiguity? We chose to call ourselves "feminists" ten years ago, not in order to support or reenforce the myth of woman, nor to identify ourselves with the oppressor's definition of us, but rather to affirm that our movement had a history and to emphasize the political link with the old feminist movement.

It is, then, this movement that we can put in question for the meaning that it gave to feminism. It so happens that feminism in the last century could never resolve its contradictions on the subject of nature/culture, woman/society. Women started to fight for themselves as a group and rightly considered that they shared common features as a result of oppression. But for them these features were natural and biological rather than social. They went so far as to adopt the Darwinist theory of evolution. They did not believe like Darwin, however, "that women were less evolved than men, but they did believe that male and female natures had diverged in the course of evolutionary development and that society at large reflected this polarization."⁹ "The failure of early feminism was that it only attacked the Darwinist charge of female inferiority, while accepting the foundations of this charge—namely, the view of woman as 'unique.'"¹ And finally it was women scholars—and not feminists—who scientifically destroyed this theory. But the early feminists had failed to regard history as a dynamic process which develops from conflicts of interests. Furthermore, they still believed as men do that the cause (origin) of their oppression lay within themselves. And therefore after some astonishing victories the feminists of this first front found themselves at an impasse out of a lack of reasons to fight. They upheld the illogical principle of "equality in difference," an idea now being born again. They fell back into the trap which threatens us once again: the myth of woman.

Thus it is our historical task, and only ours, to define what we call oppression in materialist terms, to make it evident that women are a class, which is to say that the category "woman" as well as the category "man" are political

and economic categories not eternal ones. Our fight aims to suppress men as a class, not through a genocidal, but a political struggle. Once the class "men" disappears, "women" as a class will disappear as well, for there are no slaves without masters. Our first task, it seems, is to always thoroughly dissociate "women" (the class within which we fight) and "woman," the myth. For "woman" does not exist for us: it is only an imaginary formation, while "women" is the product of a social relationship. We felt this strongly when everywhere we refused to be called a "woman's liberation movement." Furthermore, we have to destroy the myth inside and outside ourselves. "Woman" is not each one of us, but the political and ideological formation which negates "women" (the product of a relation of exploitation). "Woman" is there to confuse us, to hide the reality "women." In order to be aware of being a class and to become a class we first have to kill the myth of "woman" including its most seductive aspects (I think about Virginia Woolf² when she said the first task of a woman writer is to kill "the angel in the house"). But to become a class we do not have to suppress our individual selves, and since no individual can be reduced to her/his oppression we are also confronted with the historical necessity of constituting ourselves as the individual subjects of our history as well. I believe this is the reason why all these attempts at "new" definitions of woman are blossoming now. What is at stake (and of course not only for women) is an individual definition as well as a class definition. For once one has acknowledged oppression, one needs to know and experience the fact that one can constitute oneself as a subject (as opposed to an object of oppression), that one can become *someone* in spite of oppression, that one has one's own identity. There is no possible fight for someone deprived of an identity, no internal motivation for fighting, since, although I can fight only with others, first I fight for myself.

The question of the individual subject is historically a difficult one for everybody. Marxism, the last avatar of materialism, the science which has politically formed us, does not want to hear anything about a "subject." Marxism has rejected the transcendental subject, the subject as constitutive of knowledge, the "pure" consciousness. All that thinks per se, before all experience, has ended up in the garbage can of history, because it claimed to exist outside matter, prior to matter, and needed God, spirit, or soul to exist in such a way. This is what is called "idealism." As for individuals, they are only the product of social relations, therefore their consciousness can only be "alienated." (Marx,³ in *The German Ideology*, says precisely that individuals of the dominating class are also alienated, although they are the direct producers of the ideas that alienate the classes oppressed by them. But since they draw visible advantages from their own alienation they can bear it without too much suffering.) There exists such a thing as class consciousness, but a consciousness which does not refer to a particular subject, except as participating in general conditions of exploitation at the same time as the other subjects of their class, all sharing the same consciousness. As for the practical class problems—outside of the class problems as traditionally defined—

2. English writer (1882–1941). The reference is to Woolf's "Professions for Women" (lecture, 1931; published 1942); the "Angel" is the Victorian ideal of self-sacrificing womanhood [editor's note].

3. KARL MARX (1818–1883), German economic, social, and political philosopher; *The German Ideology* was written in 1845–46 and published in 1932 [editor's note].

that one could encounter (for example, sexual problems), they were considered “bourgeois” problems that would disappear with the final victory of the class struggle. “Individualistic,” “subjectivist,” “petit bourgeois,” these were the labels given to any person who had shown problems which could not be reduced to the “class struggle” itself.

Thus Marxism has denied the members of oppressed classes the attribute of being a subject. In doing this, Marxism, because of the ideological and political power this “revolutionary science” immediately exercised upon the workers’ movement and all other political groups, has prevented all categories of oppressed peoples from constituting themselves historically as subjects (subjects of their struggle, for example). This means that the “masses” did not fight for themselves but for *the* party or its organizations. And when an economic transformation took place (end of private property, constitution of the socialist state), no revolutionary change took place within the new society, because the people themselves did not change.

For women, Marxism had two results. It prevented them from being aware that they are a class and therefore from constituting themselves as a class for a very long time, by leaving the relation “women/men” outside of the social order, by turning it into a natural relation, doubtless for Marxists the only one, along with the relation of mothers to children, to be seen this way, and by hiding the class conflict between men and women behind a natural division of labor (*The German Ideology*). This concerns the theoretical (ideological) level. On the practical level, Lenin,⁴ *the* party, all the communist parties up to now, including all the most radical political groups, have always reacted to any attempt on the part of women to reflect and form groups based on their own class problem with an accusation of divisiveness. By uniting, we women are dividing the strength of the people. This means that for the Marxists women *belong* either to the bourgeois class or to the proletariat class, in other words, to the men of these classes. In addition, Marxist theory does not allow women any more than other classes of oppressed people to constitute themselves as historical subjects, because Marxism does not take into account the fact that a class also consists of individuals one by one. Class consciousness is not enough. We must try to understand philosophically (politically) these concepts of “subject” and “class consciousness” and how they work in relation to our history. When we discover that women are the objects of oppression and appropriation, at the very moment that we become able to perceive this, we become subjects in the sense of cognitive subjects, through an operation of abstraction. Consciousness of oppression is not only a reaction to (fight against) oppression. It is also the whole conceptual reevaluation of the social world, its whole reorganization with new concepts, from the point of view of oppression. It is what I would call the science of oppression created by the oppressed. This operation of understanding reality has to be undertaken by every one of us: call it a subjective, cognitive practice. The movement back and forth between the levels of reality (the conceptual reality and the material reality of oppression, which are both social realities) is accomplished through language.

4. V. I. Lenin (1870–1924), Marxist revolutionary leader and theorist of the Bolshevik revolution and first head of the new Soviet government [editor’s note].

It is we who historically must undertake the task of defining the individual subject in materialist terms. This certainly seems to be an impossibility since materialism and subjectivity have always been mutually exclusive. Nevertheless, and rather than despairing of ever understanding, we must recognize the *need* to reach subjectivity in the abandonment by many of us to the myth "woman" (the myth of woman being only a snare that holds us up). This real necessity for everyone to exist as an individual, as well as a member of a class, is perhaps the first condition for the accomplishment of a revolution, without which there can be no real fight or transformation. But the opposite is also true; without class and class consciousness there are no real subjects, only alienated individuals. For women to answer the question of the individual subject in materialist terms is first to show, as the lesbians and feminists did, that supposedly "subjective," "individual," "private" problems are in fact social problems, class problems; that sexuality is not for women an individual and subjective expression, but a social institution of violence. But once we have shown that all so-called personal problems are in fact class problems, we will still be left with the question of the subject of each singular woman—not the myth, but each one of us. At this point, let us say that a new personal and subjective definition for all humankind can only be found beyond the categories of sex (woman and man) and that the advent of individual subjects demands first destroying the categories of sex, ending the use of them, and rejecting all sciences which still use these categories as their fundamentals (practically all social sciences).

To destroy "woman" does not mean that we aim, short of physical destruction, to destroy lesbianism simultaneously with the categories of sex, because lesbianism provides for the moment the only social form in which we can live freely. Lesbian is the only concept I know of which is beyond the categories of sex (woman and man), because the designated subject (lesbian) is *not* a woman, either economically, or politically, or ideologically. For what makes a woman is a specific social relation to a man, a relation that we have previously called servitude,⁵ a relation which implies personal and physical obligation as well as economic obligation ("forced residence,"⁶ domestic corvée, conjugal duties, unlimited production of children, etc.), a relation which lesbians escape by refusing to become or to stay heterosexual. We are escapees from our class in the same way as the American runaway slaves were when escaping slavery and becoming free. For us this is an absolute necessity; our survival demands that we contribute all our strength to the destruction of the class of women within which men appropriate women. This can be accomplished only by the destruction of heterosexuality as a social system which is based on the oppression of women by men and which produces the doctrine of the difference between the sexes to justify this oppression.

BENEDICT ANDERSON

1936–2015

Benedict Anderson's *Imagined Communities* (1983) provides a highly influential account of the origins and causes of nationalism. Anderson defines "the nation" as "an imagined political community—and imagined as both inherently limited and sovereign." The book's title has passed into the theoretical lexicon to designate any group of people who, without knowing each other personally or encountering each other physically, still consider themselves members of the same community. Anderson asks, How is this act of imagination possible? And why, from around 1760 onward, did nationalism become the most potent form in the West of shared membership?

Anderson was born in China to an Irish father and English mother, but grew up mainly in California and Ireland. Following his undergraduate studies at Cambridge University in England, in 1958 he came to Cornell University in upstate New York to pursue Ph.D. research on Indonesia. While working on his doctoral dissertation on post–World War II Indonesian politics, Anderson ran afoul of the country's military leader by challenging Suharto's version of the alleged leftist coup attempt in 1965 that led to his rise to power and the deaths of hundreds of thousands of civilians. Anderson was banned from Indonesia and did not return until after Suharto's resignation from the presidency in 1998. After completing his Ph.D. in 1967, Anderson joined the faculty at Cornell, where he remained until his retirement in 2002. His extensive written work fits mainly under the rubric of Southeast Asian studies. *Imagined Communities* is his most notable foray into more general theoretical speculations and transnational historical accounts. His brother Perry Anderson is a noted Marxist intellectual and longtime editor of the *New Left Review*.

Anderson's work on nationalism came in the wake of EDWARD W. SAID's *Orientalism* (1978), and it reflects an engagement with two historical movements: the pre-twentieth-century establishment by Western powers of colonies around the globe and the late twentieth-century end of most colonialism. FRANTZ FANON, in the 1950s, had already identified nationalist feeling as a potent weapon against the colonizer. Anderson begins with the question of how nationalist sentiment is generated in a geographical territory like a colony that has never been a nation. To answer it, he turns from the colonial situation to the origins of nationalism in Europe itself. Not uniquely, but very influentially, Anderson insists that nationalism appeared first in Europe before manifesting itself elsewhere in the world. Equally crucial is his insistence that nationalism is a *modern* phenomenon, which took shape (after various earlier stirrings) in the eighteenth century. He identifies several key elements of nationalism, including the political institution of the centralized nation-state and its citizens' genuinely felt attachment to that nation. Even when critical of their current government or of a particular set of political leaders, citizens of modern nations are emotionally committed to the preservation and success of their nation. Their act of identification makes their membership in that political entity central to how they understand their own individual identities.

In modern times patriotism has proved a remarkably potent emotion, one that often unleashes demons of intolerance and violence. "The nation," Anderson writes, "is always conceived as a deep, horizontal comradeship. Ultimately it is this fraternity that makes it possible, over the past two centuries, for so many millions of people, not so much to kill, as willingly to die for such limited imaginings." Anderson's wide-ranging historical account of the required conditions for the birth of nationalism places affect near the center. For a nation to exist, a sizable group of people must be able to experience themselves *as* "a people," bound together by special ties and distinct from other peoples. As becomes immediately evident to any-

one who tries to identify what “a people” shares, there are some obvious candidates for the unifying principle but no sure winner. In some nations, strong patriotic feelings coexist with ethnic, linguistic, religious, and cultural diversity. No one essential characteristic can be identified that, if missing, makes nationhood impossible. Rather, under different historical, cultural, and geographic circumstances, the shared feeling essential to nationhood can be constructed differently. Likewise, nations can manage to survive while also experiencing considerable racial, regional, religious, ethnic, and class animosities. What does seem crucial is some sense of a common destiny, of the conviction that “we” citizens, for better and for worse, are in the same boat together.

Anderson’s great insight is that however it is constructed, fellow feeling must be *imagined*. To use language that Anderson does not, we can say that a nation is always a virtual community. It is never embodied or instantiated in a real time or a real place. It thus stands in contrast to what RAYMOND WILLIAMS called “knowable communities,” the small groupings where every member knows each other member through face-to-face interactions. In the nation each citizen’s relation to his or her fellow citizens and to the nation as a whole (as an idea) is experienced through an image of simultaneity (I am voting today as millions of my compatriots are) and of shared knowledge and feelings (I vote on the basis of information and a love of country that my compatriots also possess). The nation is an abstraction that is made real only through the actual practices of citizens who imagine those practices as meaningful precisely because of their relation to that abstraction. It is no accident that the broad, often nebulous, concept of culture as a shared way of life dates from the mid-eighteenth century as well. What “culture” struggles to name is individuals’ new sense of participating in something larger than themselves when they act, even though it is difficult to specify what that “something larger” actually is.

In our selection, chapter 3 of *Imagined Communities*, Anderson sets out to explain what makes this act of imagination possible. What needs and what historical innovations call this emotional identification into existence? Part of Anderson’s answer involves the decline of Catholicism as a single religion prevailing throughout most of Europe. Its loss of control makes possible the rise of more localized political power, leads to the replacement of Latin by various vernaculars as the official languages of church and state, and, most importantly, creates a need for a unifying basis for communal identity. During the Renaissance, Latin becomes increasingly rarefied and the province of humanists. Religious unanimity is gone forever from Europe after the Protestant Reformation, and the modern notion of religious tolerance begins to slowly emerge. To maintain the civil peace, a political version of shared identity is needed that can establish communal bonds among fellow citizens who disagree deeply on religious matters. Religion is still important, but modern political communities are organized around shared identifications with secular states.

In Anderson’s view, the mechanism for creating this allegiance to the nation is print capitalism. Europe was a loosely organized congeries of local communities under both the Roman Empire and the Roman Catholic Church; each community was connected hierarchically to Rome, with few ties to one another. Only when aided by print media, Anderson argues, can strangers imagine themselves as partaking simultaneously in the same set of unfolding events. The repetitions and cycles of religious ritual yield to the narrative, linear time of national history. Through the almost instantaneous representation of historical events in newspapers and books, each citizen has the sense of being a participant in the nation’s unfolding destiny. This feeling of connection is “limited”—that is, given specific borders—both geographically and linguistically. Print is connected to the establishment of national languages, as the vernacular replaces Latin in almost all contexts and as widely circulated texts stabilize language use and aid in the emergence of a national, standard

version of the dominant language. Capitalism is also crucial: the technology of printing did not have the same effects in China as in Europe. Books and newspapers transform society only when they are widely circulated and are connected to money-making enterprises that have a stake in expanding their market by increasing literacy. Nationalism—at least prior to radio and television—depends on a literate citizenry that experiences its membership in the nation through the printed word.

By focusing on the central role of media—whether print journalism, novels, or the nonprint forms of our own time—Anderson emphasizes that a nation groups together people who tell a certain story about themselves. Citizens are at once the producers, subjects, and consumers of this story. Their membership consists in their experience of themselves as both the proper agents and the appropriate audience for these tales. These national stories may be (and in fact usually are) shot through with conflicts and disagreements; members of a nation need not agree with each other, just as they need not share a religion or an ethnicity. But they must each experience themselves as fully entitled participants in the ongoing and unfolding history of the nation—and recognize even their antagonists as similarly fully entitled participants. Civil war, the undoing of the nation, results when any subgroup within the nation (whether religious, regional, ethnic, racial, or tribal) tries to exclude other subgroups as citizens or to separate itself by secession from political unity with other groups. Increasingly since 1800, the nation has become the only internationally recognized form of political organization—and when former colonies gain independence they invariably seek to re-create themselves as nation-states. Yet contemporary separatist movements, ranging from the Scots and Catalans in Europe to the Kurds in the Middle East and indigenous peoples in North and South America, suggest that the nation is not necessarily a very stable or successful political form.

Successful or not as a political form, the nation figures prominently in literature as an emotional fact, whether as a national consciousness some writers want to engender or as an emotional roadblock to alternative visions dear to others. The decision to celebrate or denigrate nationalist feeling does not consistently correspond to the writer's political positions, left or right. Current interest in "cosmopolitanism" does register a sense that nationalism's sometimes murderous passions are inappropriate in a world where mobility across national borders continues to grow. Yet the very persistence of strong national feelings makes claims that we now occupy a "transnational" or "postnational" globalized world seem premature. Perhaps our time is witnessing the final gasp of the nation as it developed between 1500 and 1800 in Europe and then solidified across the globe from 1800 onward. But Benedict Anderson's work will remain indispensable to any understanding of the nation as the crucial political form of modernity, a form closely linked to literacy and print media.

From Imagined Communities

Chapter 3. The Origins of National Consciousness

If the development of print-as-commodity is the key to the generation of wholly new ideas of simultaneity, still, we are simply at the point where communities of the type 'horizontal-secular, transverse-time' become possible.¹

1. In the previous chapter, Anderson distinguishes secular societies, where lines of authority must be developed from a starting point in which the members are basically equal (horizontal), from those with a vertical hierarchy grounded in a distinction

between the sacred and the nonsacred. He also contrasts societies that develop a sense of simultaneity as well as continuity extending beyond a single lifetime from societies that lack such time frames.

Why, within that type, did the nation become so popular? The factors involved are obviously complex and various. But a strong case can be made for the primacy of capitalism.

As already noted, at least 20,000,000 books had already been printed by 1500,² signalling the onset of Benjamin's 'age of mechanical reproduction.'³ If manuscript knowledge was scarce and arcane lore, print knowledge lived by reproducibility and dissemination.⁴ If, as Febvre and Martin believe, possibly as many as 200,000,000 volumes had been manufactured by 1600, it is no wonder that Francis Bacon believed that print had changed 'the appearance and state of the world.'⁵

One of the earlier forms of capitalist enterprise, book-publishing felt all of capitalism's restless search for markets. The early printers established branches all over Europe: 'in this way a veritable "international" of publishing houses, which ignored national [sic] frontiers, was created.'⁶ And since the years 1500–1550 were a period of exceptional European prosperity, publishing shared in the general boom. 'More than at any other time' it was 'a great industry under the control of wealthy capitalists.'⁷ Naturally, 'booksellers were primarily concerned to make a profit and to sell their products, and consequently they sought out first and foremost those works which were of interest to the largest possible number of their contemporaries.'⁸

The initial market was literate Europe, a wide but thin stratum of Latin-readers. Saturation of this market took about a hundred and fifty years. The determinative fact about Latin—aside from its sacrality—was that it was a language of bilinguals. Relatively few were born to speak it and even fewer, one imagines, dreamed in it. In the sixteenth century the proportion of bilinguals within the total population of Europe was quite small; very likely no larger than the proportion in the world's population today, and—proletarian internationalism notwithstanding—in the centuries to come. Then and now the bulk of mankind is monoglot. The logic of capitalism thus meant that once the elite Latin market was saturated, the potentially huge markets represented by the monoglot masses would beckon. To be sure, the Counter-Reformation⁹ encouraged a temporary resurgence of Latin-publishing, but by the mid-seventeenth century the movement was in decay, and fervently Catholic libraries replete. Meantime, a Europe-wide shortage of money made printers think more and more of peddling cheap editions in the vernaculars.¹

2. The population of that Europe where print was then known was about 100,000,000. Lucien Febvre and Henri-Jean Martin, *The Coming of the Book: The Impact of Printing, 1450–1800* (1976), pp. 248–49 [Anderson's note].

3. An allusion to "The Work of Art in the Age of Its Technological Reproducibility" (1936–39; see above), by the German cultural critic WALTER BENJAMIN (1892–1940); as translated in its first publication in English, the essay's title ended "Age of Mechanical Reproduction."

4. Emblematic is Marco Polo's *Travels*, which remained largely unknown till its first printing in 1559 [Anderson's note]. Polo (1254–1324), Venetian traveler; his account of his journey to China, usually known as *The Travels of Marco Polo*, was first published in 1299.

5. Quoted in Elizabeth L. Eisenstein, "Some Conjectures about the Impact of Printing on Western Society and Thought," *Journal of Mod-*

ern History 40.1 (March 1968): 56 [Anderson's note]. Bacon (1561–1626), English philosopher and scientist; the quotation is from his *Novum Organum* (1620), book I, aphorism 129.

6. Febvre and Martin, *The Coming of the Book*, p. 122 [Anderson's note].

7. *Ibid.*, p. 187 [Anderson's note].

8. "Hence the introduction of printing was in this respect a stage on the road to our present society of mass consumption and standardization." *Ibid.*, pp. 259–60 [Anderson's note].

9. The 16th-century reform movement within the Catholic Church, undertaken in response to the Protestant Reformation—the movement in western Europe critical of the church that led to religious schism and the establishment of Protestant churches.

1. Febvre and Martin, p. 195 [Anderson's note]. "Vernaculars": native languages or dialects in everyday use.

The revolutionary vernacularizing thrust of capitalism was given further impetus by three extraneous factors, two of which contributed directly to the rise of national consciousness. The first, and ultimately the least important, was a change in the character of Latin itself. Thanks to the labours of the Humanists² in reviving the broad literature of pre-Christian antiquity and spreading it through the print-market, a new appreciation of the sophisticated stylistic achievements of the ancients was apparent among the trans-European intelligentsia. The Latin they now aspired to write became more and more Ciceronian,³ and, by the same token, increasingly removed from ecclesiastical and everyday life. In this way it acquired an esoteric quality quite different from that of Church Latin in mediaeval times. For the older Latin was not arcane because of its subject matter or style, but simply because it was written at all, i.e. because of its status as *text*. Now it became arcane because of what was written, because of the language-in-itself.

Second was the impact of the Reformation, which, at the same time, owed much of its success to print-capitalism. Before the age of print, Rome easily won every war against heresy in Western Europe because it always had better internal lines of communication than its challengers. But when in 1517 Martin Luther⁴ nailed his theses to the chapel-door in Wittenberg, they were printed up in German translation, and 'within 15 days [had been] seen in every part of the country.'⁵ In the two decades 1520–1540 three times as many books were published in German as in the period 1500–1520, an astonishing transformation to which Luther was absolutely central. His works represented no less than one third of *all* German-language books sold between 1518 and 1525. Between 1522 and 1546, a total of 430 editions (whole or partial) of his Biblical translations appeared. 'We have here for the first time a truly mass readership and a popular literature within everybody's reach.'⁶ In effect, Luther became the first best-selling author *so known*. Or, to put it another way, the first writer who could 'sell' his *new* books on the basis of his name.⁷

Where Luther led, others quickly followed, opening the colossal religious propaganda war that raged across Europe for the next century. In this titanic 'battle for men's minds', Protestantism was always fundamentally on the offensive, precisely because it knew how to make use of the expanding vernacular print-market being created by capitalism, while the Counter-Reformation defended the citadel of Latin. The emblem for this is the Vatican's *Index Librorum Prohibitorum*⁸—to which there was no Protestant counterpart—a novel catalogue made necessary by the sheer volume of printed subversion. Nothing gives a better sense of this siege mentality than François I's⁹ panicked

2. The European scholars who, beginning in the late 14th century, emphasized classical Latin and Greek literature, which had been newly rediscovered.

3. That is, with many subordinate clauses, like the complex style of the great Roman orator and statesman Cicero (106–43 B.C.E.).

4. Religious reformer (1483–1546), whose break with the Catholic Church in 1517 set the Protestant Reformation in motion; he also translated the New Testament into German, and collaborated on a translation of the Old Testament.

5. Febvre and Martin, pp. 289–90 [Anderson's note].

6. *Ibid.*, pp. 291–95 [Anderson's note].

7. From this point it was only a step to the situation in 17th-century France where Corneille, Molière, and La Fontaine could sell their manuscript tragedies and comedies directly to publishers, who bought them as excellent investments in view of their authors' market reputations. *Ibid.*, p. 161 [Anderson's note]. PIERRE CORNEILLE (1606–1684), French tragic playwright. Molière (pen name of Jean-Baptiste Poquelin, 1622–1673), French comic playwright and actor. Jean de La Fontaine (1621–1695), French poet best remembered today for his *Fables*.

8. Index of Forbidden Books (Latin).

9. Catholic king of France (1494–1547; reigned 1515–47).

1535 ban on the printing of *any* books in his realm—on pain of death by hanging! The reason for both the ban and its unenforceability was that by then his realm's eastern borders were ringed with Protestant states and cities producing a massive stream of smugglable print. To take Calvin's¹ Geneva alone: between 1533 and 1540 only 42 editions were published there, but the numbers swelled to 527 between 1550 and 1564, by which latter date no less than 40 separate printing-presses were working overtime.²

The coalition between Protestantism and print-capitalism, exploiting cheap popular editions, quickly created large new reading publics—not least among merchants and women, who typically knew little or no Latin—and simultaneously mobilized them for politico-religious purposes. Inevitably, it was not merely the Church that was shaken to its core. The same earthquake produced Europe's first important non-dynastic, non-city states in the Dutch Republic and the Commonwealth of the Puritans.³ (François I's panic was as much political as religious.)

Third was the slow, geographically uneven, spread of particular vernaculars as instruments of administrative centralization by certain well-positioned would-be absolutist monarchs. Here it is useful to remember that the universality of Latin in mediaeval Western Europe never corresponded to a universal political system. The contrast with Imperial China, where the reach of the mandarinal bureaucracy and of painted characters largely coincided,⁴ is instructive. In effect, the political fragmentation of Western Europe after the collapse of the Western Empire⁵ meant that no sovereign could monopolize Latin and make it his-and-only-his language-of-state, and thus Latin's religious authority never had a true political analogue.

The birth of administrative vernaculars predated both print and the religious upheaval of the sixteenth century, and must therefore be regarded (at least initially) as an independent factor in the erosion of the sacred imagined community. At the same time, nothing suggests that any deep-seated ideological, let alone proto-national, impulses underlay this vernacularization where it occurred. The case of 'England'—on the northwestern periphery of Latin Europe—is here especially enlightening. Prior to the Norman Conquest,⁶ the language of the court, literary and administrative, was Anglo-Saxon. For the next century and a half virtually all royal documents were composed in Latin. Between about 1200 and 1350 this state-Latin was superseded by Norman French. In the meantime, a slow fusion between this language of a foreign ruling class and the Anglo-Saxon of the subject population produced Early English. The fusion made it possible for the new language to take its turn, after 1362, as the language of the courts—and for the opening of Parliament. Wycliffe's vernacular *manuscript* Bible followed

1. John Calvin (1509–1564), French Protestant theologian. Followers of Calvin dominated the government of Geneva during the 1540s and 1550s.

2. Febvre and Martin, pp. 310–15 [Anderson's note].

3. The republic established in 1649 in England following the Civil War and the execution of Charles I; it lasted until the monarchy was restored in 1660. Dutch Republic: the precursor state (1581–1795) of the Netherlands, formed from 7 provinces that declared their independence from

Catholic Spain.

4. Beginning in the 7th century, the officials in imperial China (mandarins) were selected by civil examinations that focused on literary and philosophical texts and on knowledge of classical Chinese.

5. The western part of the Roman Empire, whose capital was Rome; the last emperor fell in 476 C.E.

6. The military conquest of England in 1066 by the French (the Normans, or Norsemen, who had earlier conquered Normandy, the northwest region of France).

in 1382.⁷ It is essential to bear in mind that this sequence was a series of 'state,' not 'national,' languages; and that the state concerned covered at various times not only today's England and Wales, but also portions of Ireland, Scotland and France. Obviously, huge elements of the subject populations knew little or nothing of Latin, Norman French, or Early English.⁸ Not till almost a century *after* Early English's political enthronement was London's power swept out of 'France'.

On the Seine,⁹ a similar movement took place, if at a slower pace. As Bloch wryly puts it, 'French, that is to say a language which, since it was regarded as merely a corrupt form of Latin, took several centuries to raise itself to literary dignity',¹ only became the official language of the courts of justice in 1539, when François I issued the Edict of Villers-Cotterêts.² In other dynastic realms Latin survived much longer—under the Habsburgs³ well into the nineteenth century. In still others, 'foreign' vernaculars took over: in the eighteenth century the languages of the Romanov court were French and German.⁴

In every instance, the 'choice' of language appears as a gradual, unselfconscious, pragmatic, not to say haphazard development. As such, it was utterly different from the selfconscious language policies pursued by nineteenth-century dynasts confronted with the rise of hostile popular linguistic-nationalisms. One clear sign of the difference is that the old administrative languages were *just that*: languages used by and for officialdoms for their own inner convenience. There was no idea of systematically imposing the language on the dynasts' various subject populations.⁵ Nonetheless, the elevation of these vernaculars to the status of languages-of-power, where, in one sense, they were competitors with Latin (French in Paris, [Early] English in London), made its own contribution to the decline of the imagined community of Christendom.

At bottom, it is likely that the esotericization of Latin, the Reformation, and the haphazard development of administrative vernaculars are significant, in the present context, primarily in a negative sense—in their contributions to the dethronement of Latin. It is quite possible to conceive of the emergence of the new imagined national communities without any one, perhaps all, of them being present. What, in a positive sense, made the new communities imaginable was a half-fortuitous, but explosive, interaction between a system of production and productive relations (capitalism), a technology of communications (print), and the fatality of human linguistic diversity.⁶

7. The first translation of the Latin Vulgate Bible into English, promoted (and in part carried out) by the English theologian and reformer John Wycliffe (ca. 1328–1384).

8. Hugh Seton-Watson, *Nations and States: An Inquiry into the Origins of Nations and the Politics of Nationalism* (1977), pp. 28–29; Marc Bloch, *Feudal Society*, trans. I. A. Manyon (1961), vol. 1, p. 75 [Anderson's note]. The Welsh, Irish, and Scots had their own languages.

9. River that runs through Paris.

1. Bloch, *Feudal Society*, I, p. 98 [Anderson's note].

2. A law that mandated the use of French, instead of Latin or local dialects, in all official governmental and ecclesiastical documents.

3. The ruling dynasty of Austria from 1282 to 1918.

4. Seton-Watson, *Nations and States*, p. 48 [Anderson's note].

son's note]. The Romanovs were the ruling dynasty of Russia from 1613 to 1917.

5. An agreeable confirmation of this point is provided by François I, who, as we have seen, banned all printing of books in 1535 and made French the language of his courts four years later! [Anderson's note].

6. It was not the first "accident" of its kind. Febvre and Martin note that while a visible bourgeoisie already existed in Europe by the late 13th century, paper did not come into general use until the end of the 14th. Only paper's smooth plane surface made the mass reproduction of texts and pictures possible—and this did not occur for still another 75 years. But paper was not a European invention. It floated in from another history—China's—through the Islamic world. *The Coming of the Book*, pp. 22, 30, and 45 [Anderson's note].

The element of fatality is essential. For whatever superhuman feats capitalism was capable of, it found in death and languages two tenacious adversaries.⁷ Particular languages can die or be wiped out, but there was and is no possibility of humankind's general linguistic unification. Yet this mutual incomprehensibility was historically of only slight importance until capitalism and print created monoglot mass reading publics.

While it is essential to keep in mind an idea of fatality, in the sense of a *general* condition of irremediable linguistic diversity, it would be a mistake to equate this fatality with that common element in nationalist ideologies which stresses the primordial fatality of *particular* languages and their association with *particular* territorial units. The essential thing is the *interplay* between fatality, technology, and capitalism. In pre-print Europe, and, of course, elsewhere in the world, the diversity of spoken languages, those languages that for their speakers were (and are) the warp and woof of their lives, was immense; so immense, indeed, that had print-capitalism sought to exploit each potential oral vernacular market, it would have remained a capitalism of petty proportions. But these varied idiolects were capable of being assembled, within definite limits, into print-languages far fewer in number. The very arbitrariness of any system of signs for sounds facilitated the assembling process.⁸ (At the same time, the more ideographic the signs, the vaster the potential assembling zone. One can detect a sort of descending hierarchy here from algebra through Chinese and English, to the regular syllabaries of French or Indonesian.)⁹ Nothing served to 'assemble' related vernaculars more than capitalism, which, within the limits imposed by grammars and syntaxes, created mechanically reproduced print-languages capable of dissemination through the market.¹

These print-languages laid the bases for national consciousnesses in three distinct ways. First and foremost, they created unified fields of exchange and communication below Latin and above the spoken vernaculars. Speakers of the huge variety of Frenches, Englishes, or Spanishes, who might find it difficult or even impossible to understand one another in conversation, became capable of comprehending one another via print and paper. In the process, they gradually became aware of the hundreds of thousands, even millions, of people in their particular language-field, and at the same time that *only those* hundreds of thousands, or millions, so belonged. These fellow-readers, to whom they were connected through print, formed, in their secular, particular, visible invisibility, the embryo of the nationally imagined community.

7. We still have no great multinationals in the world of publishing [Anderson's note]. Perhaps true when Anderson wrote his book in 1983, but certainly not true in recent years.

8. For a useful discussion of this point, see S. H. Steinberg, *Five Hundred Years of Printing* (1966), chapter 5. That the sign *ough* is pronounced differently in the words *although*, *bough*, *lough*, *rough*, *cough*, and *hiccough*, shows both the idiolectic variety out of which the now-standard spelling of English emerged, and the ideographic quality of the final product [Anderson's note].

9. That is, from the purely symbolic representations of algebra to the ideograms of Chinese writing, which represent syllables but not particular sounds, to English spellings that correspond somewhat unpredictably to sounds to the highly regular

pronunciation of words spelled in such languages as French and Indonesian. Chinese has a potentially vast "assembling zone," because those whose spoken dialects are mutually incomprehensible can nevertheless read the same text.

1. I say "nothing served . . . more than capitalism" advisedly. Both Steinberg and Eisenstein come close to theomorphizing "print" *qua* print as the genius of modern history. Febvre and Martin never forget that behind print stands printers and publishing firms. It is worth remembering in this context that although printing was invented first in China, possibly 500 years before its appearance in Europe, it had no major, let alone revolutionary impact—precisely because of the absence of capitalism there [Anderson's note].

Second, print-capitalism gave a new fixity to language, which in the long run helped to build that image of antiquity so central to the subjective idea of the nation. As Febvre and Martin remind us, the printed book kept a permanent form, capable of virtually infinite reproduction, temporally and spatially. It was no longer subject to the individualizing and 'unconsciously modernizing' habits of monastic scribes. Thus, while twelfth-century French differed markedly from that written by Villon² in the fifteenth, the rate of change slowed decisively in the sixteenth. 'By the 17th century languages in Europe had generally assumed their modern forms.'³ To put it another way, for three centuries now these stabilized print-languages have been gathering a darkening varnish; the words of our seventeenth-century forebears are accessible to us in a way that to Villon his twelfth-century ancestors were not.

Third, print-capitalism created languages-of-power of a kind different from the older administrative vernaculars. Certain dialects inevitably were 'closer' to each print-language and dominated their final forms. Their disadvantaged cousins, still assimilable to the emerging print-language, lost caste, above all because they were unsuccessful (or only relatively successful) in insisting on their own print-form. 'Northwestern German' became Platt Deutsch, a largely spoken, thus sub-standard, German, because it was assimilable to print-German in a way that Bohemian spoken-Czech was not. High German, the King's English, and, later, Central Thai,⁴ were correspondingly elevated to a new politico-cultural eminence. (Hence the struggles in late-twentieth-century Europe by certain 'sub-' nationalities to change their subordinate status by breaking firmly into print—and radio.)

It remains only to emphasize that in their origins, the fixing of print-languages and the differentiation of status between them were largely unself-conscious processes resulting from the explosive interaction between capitalism, technology and human linguistic diversity. But as with so much else in the history of nationalism, once 'there,' they could become formal models to be imitated, and, where expedient, consciously exploited in a Machiavellian spirit.⁵ Today, the Thai government actively discourages attempts by foreign missionaries to provide its hill-tribe minorities with their own transcription-systems and to develop publications in their own languages: the same government is largely indifferent to what these minorities *speak*. The fate of the Turkic-speaking peoples in the zones incorporated into today's Turkey, Iran, Iraq, and the USSR is especially exemplary. A family of spoken languages, once everywhere assemblable, thus comprehensible, within an Arabic orthography, has lost that unity as a result of conscious manipulations. To heighten Turkish-Turkey's national consciousness at the expense of any wider Islamic identification, Atatürk imposed compulsory romanization.⁶ The Soviet authorities followed suit, first with an anti-Islamic,

108. It is probably only fair to add that Kemal also hoped thereby to align Turkish nationalism with the modern, romanized civilization of Western Europe [Anderson's note]. Romanization: use of the Latin alphabet to represent words (Turkish had been written in Arabic script). Kemal Atatürk (1881–1938), Turkish army officer who founded the Republic of Turkey as a secular nation-state after World War I and served as the nation's first prime minister.

anti-Persian compulsory romanization, then, in Stalin's 1930s, with a Russifying compulsory Cyrillicization.⁷

We can summarize the conclusions to be drawn from the argument thus far by saying that the convergence of capitalism and print technology on the fatal diversity of human language created the possibility of a new form of imagined community, which in its basic morphology set the stage for the modern nation. The potential stretch of these communities was inherently limited, and, at the same time, bore none but the most fortuitous relationship to existing political boundaries (which were, on the whole, the high-water marks of dynastic expansionisms).

Yet it is obvious that while today almost all modern self-conceived nations—and also nation-states—have 'national print-languages', many of them have these languages in common, and in others only a tiny fraction of the population 'uses' the national language in conversation or on paper. The nation-states of Spanish America or those of the 'Anglo-Saxon family' are conspicuous examples of the first outcome; many ex-colonial states, particularly in Africa, of the second. In other words, the concrete formation of contemporary nation-states is by no means isomorphic with the determinate reach of particular print-languages. To account for the discontinuity-in-connectedness between print-languages, national consciousness, and nation-states, it is necessary to turn to the large cluster of new political entities that sprang up in the Western hemisphere between 1776 and 1838, all of which selfconsciously defined themselves as nations, and, with the interesting exception of Brazil,⁸ as (non-dynastic) republics. For not only were they historically the first such states to emerge on the world stage, and therefore inevitably provided the first real models of what such states should 'look like,' but their numbers and contemporary births offer fruitful ground for comparative enquiry.

the Cyrillic (Russian) alphabet to represent words. 8. When Brazil gained its independence from Portugal in 1822, it was ruled by an emperor; a republic was not established until 1889.

SANDRA M. GILBERT

b. 1936

SUSAN GUBAR

b. 1944

Sandra M. Gilbert and Susan Gubar's *Madwoman in the Attic* (1979) is a landmark of 1970s American feminism. The book encapsulates both the strengths and limitations of that first decade of "second-wave feminism." (First-wave feminism produced the Declaration of Women's Rights of 1848 and culminated in the ultimately successful campaign for female suffrage during the early twentieth century.) An outgrowth of the civil rights and student protest movements of the 1960s, second-wave feminism has proved to be among the most durable of the sixties' legacies. In its initial phase, contemporary feminists were pulled between its separatist and assimilationist tendencies. They debated whether women were better off disavowing

the given order altogether, choosing instead to form their own communities, or striving for equal treatment within patriarchal institutions while working to reform them. *The Madwoman in the Attic* reflects the pressures from both sides. All parties to the dispute, however, assumed that every woman shares a set of similar experiences and that patriarchy—the male-dominated social order—is everywhere essentially the same. These assumptions became problematic later on, and they have been challenged by feminists such as ADRIENNE RICH, BELL HOOKS, GLORIA ANZALDÚA, and JUDITH BUTLER.

Born in New York City, Sandra M. Gilbert attended Cornell University, where she was active in undergraduate literary circles. She received her M.A. from New York University and her Ph.D. in English literature from Columbia University. The author of nine books of poetry along with her literary criticism, Gilbert has taught at California State University at Hayward, Indiana University, Princeton University, Stanford University, and the University of California at Davis. She and Susan Gubar (who was also born in New York City, and received her Ph.D. from the University of Iowa in 1972) met in 1973; both were young professors at Indiana University, where Gubar taught until her retirement in 2009. *The Madwoman in the Attic* grew out of the course in women's literature that the two team-taught. Gilbert and Gubar continued to collaborate for decades, while also writing single-authored books. They were jointly named *Ms. magazine's* "Woman of the Year" in 1986 for their work as editors of *The Norton Anthology of Literature by Women*. In 2012, they were awarded the Ivan Sandrof Lifetime Achievement Award of the National Book Critics Circle.

Building on the earlier 1970s feminist books by Ellen Moers and Elaine Showalter, *The Madwoman in the Attic* develops the notion that women writers can be understood as a group—and understood as "participat[ing] in a quite different literary subculture from that inhabited by male writers." Such separation is ambiguous: "exhilarating" at its best, "profoundly debilitating" at its worst. Gilbert and Gubar argue that the influential oedipal model developed by HAROLD BLOOM to describe the relation of post-Enlightenment male writers to each other does not fit the entirely different situation of women in a male-dominated literary tradition. The female "anxiety of authorship" described by Gilbert and Gubar was an "isolation that felt like illness, [an] alienation that felt like madness" as women writers of the eighteenth and nineteenth centuries wielded their pens in defiance of the social injunction that writing was not women's work. Each woman writer had to steal (at great risk and great cost to herself) a right to write that society extended only to men—and she looked to earlier women writers to see how such a theft could be pulled off. These "eighteenth- and nineteenth-century foremothers" enable the work of "contemporary women [who] . . . attempt the pen with energy and authority." "We now began to see," Gilbert and Gubar write, that "women of letters from Anne Bradstreet to Anne Brontë and on through Gertrude Stein to Sylvia Plath *had* engaged in a complex, sometimes conspiratorial, sometimes convivial conversation that crossed national as well as temporal boundaries. And that conversation had been far more energetic, indeed far more rebellious, than we had realized."

For the aggression and competitiveness found in Bloom's account of the relation between male authors, Gilbert and Gubar thus substitute "the secret sisterhood" of role models who show that women can write. (Their own collaboration breaks with the model of the isolated, individual scholar.) The connection remains "secret" because the early women writers they discuss still "fear . . . the antagonism of male readers" and "dread" assuming "the patriarchal authority of art." But the tradition of women writers does provide resources for each new woman author.

Gilbert and Gubar famously make evident the high costs women writers pay for success. The madwoman in the attic (a reference to Bertha, Rochester's hidden first wife, in Charlotte Brontë's *Jane Eyre*) stands for everything the woman writer must try to repress—though never with complete success—in order to write books acceptable by male standards. In detailing the various illnesses that women suffer, Gilbert

and Gubar open up questions of bodily experience and mainstream medicine that are also pursued by Elaine Showalter, MICHEL FOUCAULT, and SUSAN BORDO. Employing a psychological approach to literature, they focus on the psychic cost of repression and on bodily symptoms that are interpreted as responses to societal oppression. For Gilbert and Gubar, women need to speak and write, but they must do so in a world that strives to keep them silent. The woman who speaks out is branded “an active monster”; the woman who remains silent risks madness.

As feminism moved into the 1980s, Gilbert and Gubar’s approach was sometimes derided as “Anglo-American” or “liberal” feminism, defined as the effort to achieve equal status for women within existing social institutions. Their treatment of “woman” as a unitary category was also challenged. In placing Anne Sexton, an American poet of the 1960s, alongside Charlotte Brontë, a Victorian novelist, they looked historically naive, while their omission of nonwhite women writers seemed to point to an additional blind spot. Differences of race, class, sexual orientation, ethnicity, and historical period not only meant that not all women had the same fundamental experiences but also suggested that women writers could not be judged and valued according to one universal standard. The intensified exploration of difference challenged the notion of “sisterhood,” the heady 1970s assumption that all women shared certain basic similarities and would gain political unity through their common experience of being oppressed.

But we should not consign *The Madwoman in the Attic* to a now-surpassed moment of feminism, as is sometimes done. Gilbert and Gubar attend to the strategies women have adopted to survive in a male-dominated society, thus focusing on the world that most women inhabit. The recovery of women’s histories and the celebration of women’s successes within that male world have proven useful. Traditions are constructed, not discovered, and Gilbert and Gubar offer one remarkable example of how feminist critics can create a usable past, can uncover the achievements and resistances unrecorded by official histories. By being alert both to what women writers have so gloriously done *and* to the high costs paid for those successes, Gilbert and Gubar offer a nuanced view of what it means to dwell in relatively powerless positions within a world one did not make.

The man who does not know sick women does not know women.

—S. Weir Mitchell

I try to describe this long limitation, hoping that with such power as is now mine, and such use of language as is within that power, this will convince any one who cares about it that this “living” of mine had been done under a heavy handicap. . . .

—Charlotte Perkins Gilman

A Word dropped careless on a Page
May stimulate an eye
When folded in perpetual seam

The Wrinkled Maker lie
 Infection in the sentence breeds
 We may inhale Despair
 At distances of Centuries
 From the Malaria—

—Emily Dickinson

I stand in the ring
 in the dead city
 and tie on the red shoes

 They are not mine,
 they are my mother's,
 her mother's before,
 handed down like an heirloom
 but hidden like shameful letters.

—Anne Sexton¹

What does it mean to be a woman writer in a culture whose fundamental definitions of literary authority are, as we have seen, both overtly and covertly patriarchal? If the vexed and vexing polarities of angel and monster, sweet dumb Snow White and fierce mad Queen, are major images literary tradition offers women, how does such imagery influence the ways in which women attempt the pen? If the Queen's looking glass speaks with the King's voice,² how do its perpetual kingly admonitions affect the Queen's own voice? Since his is the chief voice she hears, does the Queen try to sound like the King, imitating his tone, his inflections, his phrasing, his point of view? Or does she "talk back" to him in her own vocabulary, her own timbre, insisting on her own viewpoint? We believe these are basic questions feminist literary criticism—both theoretical and practical—must answer, and consequently they are questions to which we shall turn again and again, not only in this chapter but in all our readings of nineteenth-century literature by women.

That writers assimilate and then consciously or unconsciously affirm or deny the achievements of their predecessors is, of course, a central fact of literary history, a fact whose aesthetic and metaphysical implications have been discussed in detail by theorists as diverse as T. S. Eliot, M. H. Abrams, Erich Auerbach, and Frank Kermode.³ More recently, some literary theorists have begun to explore what we might call the psychology of literary history—the tensions and anxieties, hostilities and inadequacies writers feel

Epigraphs: *Doctor on Patient* (Philadelphia: Lippincott, 1888), quoted in Ilza Veith, *Hysteria: The History of a Disease* (Chicago: University of Chicago Press, 1965), pp. 219–20; *The Living of Charlotte Perkins Gilman* (1935; reprint, New York: Harper and Row, 1975), p. 104; J. 1261 in *The Poems of Emily Dickinson*, ed. Thomas Johnson, 3 vols. (Cambridge, Mass.: Belknap Press of Harvard University Press, 1955); "The Red Shoes," in *The Book of Folly* (Boston: Houghton Mifflin, 1972), pp. 28–29 [Gilbert and Gubar's note; except as indicated, all subsequent notes are theirs]. Mitchell (1829–1914), American physician and author, specializing in nervous diseases. Gilman (1860–1935), American feminist author and lecturer who underwent and strongly criticized Mitchell's "rest cure." Dickinson (1830–1886), American poet. Sexton (1928–1974),

American feminist poet.

2. Gilbert and Gubar make this argument in chapter 1 of *Madwoman in the Attic*, "The Queen's Looking Glass" [editor's note].

3. In "Tradition and the Individual Talent" [1919], Eliot of course considers these matters; in *Mimesis* [1946] Auerbach traces the ways in which the realist includes what has been previously excluded from art; and in *The Sense of an Ending* [1967] Frank Kermode shows how poets and novelists lay bare the literariness of their predecessors' forms in order to explore the dissonance between fiction and reality. [ELIOT (1888–1965), American-born English poet and critic; for "Tradition and the Individual Talent," see above. ABRAMS (1912–2015), American literary critic. AUERBACH (1892–1957), German literary critic. KERMODE (1919–2010), English literary critic—editor's note.]

when they confront not only the achievements of their predecessors but the traditions of genre, style, and metaphor that they inherit from such "forefathers." Increasingly, these critics study the ways in which, as J. Hillis Miller has put it, a literary text "is inhabited . . . by a long chain of parasitical presences, echoes, allusions, guests, ghosts of previous texts."⁴

As Miller himself also notes, the first and foremost student of such literary psychohistory has been Harold Bloom.⁵ Applying Freudian structures to literary genealogies, Bloom has postulated that the dynamics of literary history arise from the artist's "anxiety of influence," his fear that he is not his own creator and that the works of his predecessors, existing before and beyond him, assume essential priority over his own writings. In fact, as we pointed out in our discussion of the metaphor of literary paternity, Bloom's paradigm of the sequential historical relationship between literary artists is the relationship of father and son, specifically that relationship as it was defined by Freud. Thus Bloom explains that a "strong poet" must engage in heroic warfare with his "precursor," for, involved as he is in a literary Oedipal struggle, a man can only become a poet by somehow invalidating his poetic father.

Bloom's model of literary history is intensely (even exclusively) male, and necessarily patriarchal. For this reason it has seemed, and no doubt will continue to seem, offensively sexist to some feminist critics. Not only, after all, does Bloom describe literary history as the crucial warfare of fathers and sons, he sees Milton's fiercely masculine fallen Satan as *the* type of the poet in our culture, and he metaphorically defines the poetic process as a sexual encounter between a male poet and his female muse. Where, then, does the female poet fit in? Does she want to annihilate a "forefather" or a "foremother"? What if she can find no models, no precursors? Does she have a muse, and what is its sex? Such questions are inevitable in any female consideration of Bloomian poetics.⁶ And yet, from a feminist perspective, their inevitability may be just the point; it may, that is, call our attention not to what is wrong about Bloom's conceptualization of the dynamics of Western literary history, but to what is right (or at least suggestive) about his theory.

For Western literary history *is* overwhelmingly male—or, more accurately, patriarchal—and Bloom analyzes and explains this fact, while other theorists have ignored it, precisely, one supposes, because they assumed literature had to be male. Like Freud, whose psychoanalytic postulates permeate Bloom's literary psychoanalyses of the "anxiety of influence," Bloom has defined processes of interaction that his predecessors did not bother to consider because, among other reasons, they were themselves so caught up in such processes. Like Freud, too, Bloom has insisted on bringing to consciousness assumptions readers and writers do not ordinarily examine. In doing so, he has clarified the implications of the psychosexual and sociosexual contexts

by which every literary text is surrounded, and thus the meanings of the “guests” and “ghosts” which inhabit texts themselves. Speaking of Freud, the feminist theorist Juliet Mitchell has remarked that “psychoanalysis is not a recommendation *for* a patriarchal society, but an analysis of one.”⁷ The same sort of statement could be made about Bloom’s model of literary history, which is not a recommendation for but an analysis of the patriarchal poetics (and attendant anxieties) which underlie our culture’s chief literary movements.

For our purposes here, however, Bloom’s historical construct is useful not only because it helps identify and define the patriarchal psychosexual context in which so much Western literature was authored, but also because it can help us distinguish the anxieties and achievements of female writers from those of male writers. If we return to the question we asked earlier—where does a woman writer “fit in” to the overwhelmingly and essentially male literary history Bloom describes?—we find we have to answer that a woman writer does *not* “fit in.” At first glance, indeed, she seems to be anomalous, indefinable, alienated, a freakish outsider. Just as in Freud’s theories of male and female psychosexual development there is no symmetry between a boy’s growth and a girl’s (with, say, the male “Oedipus complex” balanced by a female “Electra complex”)⁸ so Bloom’s male-oriented theory of the “anxiety of influence” cannot be simply reversed or inverted in order to account for the situation of the woman writer.

Certainly if we acquiesce in the patriarchal Bloomian model, we can be sure that the female poet does not experience the “anxiety of influence” in the same way that her male counterpart would, for the simple reason that she must confront precursors who are almost exclusively male, and therefore significantly different from her. Not only do these precursors incarnate patriarchal authority (as our discussion of the metaphor of literary paternity argued), they attempt to enclose her in definitions of her person and her potential which, by reducing her to extreme stereotypes (angel, monster) drastically conflict with her own sense of her self—that is, of her subjectivity, her autonomy, her creativity. On the one hand, therefore, the woman writer’s male precursors symbolize authority; on the other hand, despite their authority, they fail to define the ways in which she experiences her own identity as a writer. More, the masculine authority with which they construct their literary personae, as well as the fierce power struggles in which they engage in their efforts of self-creation, seem to the woman writer directly to contradict the terms of her own gender definition. Thus the “anxiety of influence” that a male poet experiences is felt by a female poet as an even more primary “anxiety of authorship”—a radical fear that she cannot create, that because she can never become a “precursor” the act of writing will isolate or destroy her.

This anxiety is, of course, exacerbated by her fear that not only can she not fight a male precursor on “his” terms and win, she cannot “beget” art upon the (female) body of the muse. As Juliet Mitchell notes, in a concise summary

7. Juliet Mitchell, *Psychoanalysis and Feminism* (New York: Vintage, 1975), p. xiii.

8. In Greek mythology, Electra wishes to avenge the death of her father, Agamemnon, whom her mother, Clytemnestra, has helped to murder on his return from leading the Greek armies in the

Trojan War. Some psychologists have argued that a girl has an Electra complex that parallels the boy’s Oedipus complex, meaning that she feels aggressive toward her mother and desires her father [editor’s note].

of the implications Freud's theory of psychosexual development has for women, both a boy and a girl, "as they learn to speak and live within society, want to take the father's [in Bloom's terminology the precursor's] place, and *only the boy will one day be allowed to do so*. Furthermore both sexes are born into the desire of the mother, and as, through cultural heritage, what the mother desires is the phallus-turned-baby, *both* children desire to be the phallus for the mother. Again, *only the boy can fully recognize himself in his mother's desire*. Thus *both* sexes repudiate the implications of femininity," but the girl learns (in relation to her father) "that her subjugation to the law of the father entails her becoming the representative of 'nature' and 'sexuality,' a chaos of spontaneous, intuitive creativity."⁹

Unlike her male counterpart, then, the female artist must first struggle against the effects of a socialization which makes conflict with the will of her (male) precursors seem inexpressibly absurd, futile, or even—as in the case of the Queen in "Little Snow White"—self-annihilating. And just as the male artist's struggle against his precursor takes the form of what Bloom calls revisionary swerves, flights, misreadings, so the female writer's battle for self-creation involves her in a revisionary process. Her battle, however, is not against her (male) precursor's reading of the world but against his reading of *her*. In order to define herself as an author she must redefine the terms of her socialization. Her revisionary struggle, therefore, often becomes a struggle for what Adrienne Rich has called "Re-vision—the act of looking back, of seeing with fresh eyes, of entering an old text from a new critical direction . . . an act of survival."¹ Frequently, moreover, she can begin such a struggle only by actively seeking a *female* precursor who, far from representing a threatening force to be denied or killed, proves by example that a revolt against patriarchal literary authority is possible.

For this reason, as well as for the sound psychoanalytic reasons Mitchell and others give, it would be foolish to lock the woman artist into an Electra pattern matching the Oedipal structure Bloom proposes for male writers. The woman writer—and we shall see women doing this over and over again—searches for a female model not because she wants dutifully to comply with male definitions of her "femininity" but because she must legitimize her own rebellious endeavors. At the same time, like most women in patriarchal society, the woman writer does experience her gender as a painful obstacle, or even a debilitating inadequacy; like most patriarchally conditioned women, in other words, she is victimized by what Mitchell calls "the inferiorized and 'alternative' (second sex) psychology of women under patriarchy."² Thus the loneliness of the female artist, her feelings of alienation from male predecessors coupled with her need for sisterly precursors and successors, her urgent sense of her need for a female audience together with her fear of the antagonism of male readers, her culturally conditioned timidity about self-dramatization, her dread of the patriarchal authority of art, her anxiety about the impropriety of female invention—all these phenomena of "inferiorization" mark the woman writer's struggle for artistic self-definition and differentiate her efforts at self-creation from those of her male counterpart.

2. Mitchell, *Psychoanalysis and Feminism*, p. 402.

As we shall see, such sociosexual differentiation means that, as Elaine Showalter has suggested, women writers participate in a quite different literary subculture from that inhabited by male writers, a subculture which has its own distinctive literary traditions, even—though it defines itself *in relation* to the “main,” male-dominated, literary culture—a distinctive history.³ At best, the separateness of this female subculture has been exhilarating for women. In recent years, for instance, while male writers seem increasingly to have felt exhausted by the need for revisionism which Bloom’s theory of the “anxiety of influence” accurately describes, women writers have seen themselves as pioneers in a creativity so intense that their male counterparts have probably not experienced its analog since the Renaissance, or at least since the Romantic era. The son of many fathers, today’s male writer feels hopelessly belated; the daughter of too few mothers, today’s female writer feels that she is helping to create a viable tradition which is at last definitively emerging.

There is a darker side of this female literary subculture, however, especially when women’s struggles for literary self-creation are seen in the psychosexual context described by Bloom’s Freudian theories of patrilineal literary inheritance. As we noted above, for an “anxiety of influence” the woman writer substitutes what we have called an “anxiety of authorship,” an anxiety built from complex and often only barely conscious fears of that authority which seems to the female artist to be by definition inappropriate to her sex. Because it is based on the woman’s socially determined sense of her own biology, this anxiety of authorship is quite distinct from the anxiety about creativity that could be traced in such male writers as Hawthorne or Dostoevsky. Indeed, to the extent that it forms one of the unique bonds that link women in what we might call the secret sisterhood of their literary subculture, such anxiety in itself constitutes a crucial mark of that subculture.

In comparison to the “male” tradition of strong, father-son combat, however, this female anxiety of authorship is profoundly debilitating. Handed down not from one woman to another but from the stern literary “fathers” of patriarchy to all their “inferiorized” female descendants, it is in many ways the germ of a dis-ease or, at any rate, a disaffection, a disturbance, a distrust, that spreads like a stain throughout the style and structure of much literature by women, especially—as we shall see in this study—throughout literature by women before the twentieth century. For if contemporary women do now attempt the pen with energy and authority, they are able to do so only because their eighteenth- and nineteenth-century foremothers struggled in isolation that felt like illness, alienation that felt like madness, obscurity that felt like paralysis to overcome the anxiety of authorship that was endemic to their literary subculture. Thus, while the recent feminist emphasis on positive role models has undoubtedly helped many women, it should not keep us from realizing the terrible odds against which a creative female subculture was established. Far from reinforcing socially oppressive sexual stereotyping, only a full consideration of such problems can reveal the extraordinary strength of women’s literary accomplishments in the eighteenth and nineteenth centuries.

3. See Elaine Showalter, *A Literature of Their Own* (Princeton: Princeton University Press, 1977). [Showalter (b. 1941), American feminist literary critic—editor’s note.]

Emily Dickinson's acute observations about "infection in the sentence," quoted in our epigraphs, resonate in a number of different ways, then, for women writers, given the literary woman's special concept of her place in literary psychohistory. To begin with, the words seem to indicate Dickinson's keen consciousness that, in the purest Bloomian or Millerian sense, pernicious "guests" and "ghosts" inhabit all literary texts. For any reader, but especially for a reader who is also a writer, every text can become a "sentence" or weapon in a kind of metaphorical germ warfare. Beyond this, however, the fact that "infection in the sentence *breeds*" suggests Dickinson's recognition that literary texts are coercive, imprisoning, fever-inducing; that, since literature usurps a reader's interiority, it is an invasion of privacy. Moreover, given Dickinson's own gender definition, the sexual ambiguity of her poem's "Wrinkled Maker" is significant. For while, on the one hand, "we" (meaning especially women writers) "may inhale Despair" from all those patriarchal texts which seek to deny female autonomy and authority, on the other hand "we" (meaning especially women writers) "may inhale Despair" from all those "foremothers" who have both overtly and covertly conveyed their traditional authorship anxiety to their bewildered female descendants. Finally, such traditional, metaphorically matrilineal anxiety ensures that even the maker of a text, when she is a woman, may feel imprisoned within texts—folded and "wrinkled" by their pages and thus trapped in their "perpetual seam[s]" which perpetually tell her how she *seems*.

Although contemporary women writers are relatively free of the infection of this "Despair" Dickinson defines (at least in comparison to their nineteenth-century precursors), an anecdote recently related by the American poet and essayist Annie Gottlieb summarizes our point about the ways in which, for all women, "Infection in the sentence breeds":

When I began to enjoy my powers as a writer, I dreamt that my mother had me sterilized! (Even in dreams we still blame our mothers for the punitive choices our culture forces on us.) I went after the mother-figure in my dream, brandishing a large knife; on its blade was writing. I cried, "Do you know what you are doing? You are destroying my femaleness, my *female power*, which is important to me *because of you*!"⁴

Seeking motherly precursors, says Gottlieb, as if echoing Dickinson, the woman writer may find only infection, debilitation. Yet still she must seek, not seek to subvert, her "*female power*, which is important" to her because of her lost literary matrilineage. In this connection, Dickinson's own words about mothers are revealing, for she alternately claimed that "I never had a mother," that "I always ran Home to Awe as a child. . . . He was an awful Mother but I liked him better than none," and that "a mother [was] a miracle."⁵ Yet, as we shall see, her own anxiety of authorship was a "Despair" inhaled not only from the infections suffered by her own ailing physical mother, and her many tormented literary mothers, but from the literary fathers who spoke to her—even "lied" to her—sometimes near at hand, sometimes "at distances of Centuries," from the censorious looking glasses of literary texts.

Johnson, 3 vols. (Cambridge, Mass.: Belknap Press of Harvard University Press, 1958), 2:475, 518.

It is debilitating to be *any* woman in a society where women are warned that if they do not behave like angels they must be monsters. Recently, in fact, social scientists and social historians like Jessie Bernard, Phyllis Chesler, Naomi Weisstein, and Pauline Bart have begun to study the ways in which patriarchal socialization literally makes women sick, both physically and mentally.⁶ Hysteria, the disease with which Freud so famously began his investigations into the dynamic connections between *psyche* and *soma*,⁷ is by definition a "female disease," not so much because it takes its name from the Greek word for womb, *hyster* (the organ which was in the nineteenth century supposed to "cause" this emotional disturbance), but because hysteria did occur mainly among women in turn-of-the-century Vienna, and because throughout the nineteenth century this mental illness, like many other nervous disorders, was thought to be caused by the female reproductive system, as if to elaborate upon Aristotle's notion that femaleness was in and of itself a deformity.⁸ And, indeed, such diseases of maladjustment to the physical and social environment as anorexia and agoraphobia did and do strike a disproportionate number of women. Sufferers from anorexia—loss of appetite, self-starvation—are primarily adolescent girls. Sufferers from agoraphobia—fear of open or "public" places—are usually female, most frequently middle-aged housewives, as are sufferers from crippling rheumatoid arthritis.⁹

Such diseases are caused by patriarchal socialization in several ways. Most obviously, of course, any young girl, but especially a lively or imaginative one, is likely to experience her education in docility, submissiveness, self-lessness as in some sense sickening. To be trained in renunciation is almost necessarily to be trained to ill health, since the human animal's first and strongest urge is to his/her *own* survival, pleasure, assertion. In addition, each of the "subjects" in which a young girl is educated may be sickening in a specific way. Learning to become a beautiful object, the girl learns anxiety about—perhaps even loathing of—her own flesh. Peering obsessively into the real as well as metaphoric looking glasses that surround her, she desires literally to "reduce" her own body. In the nineteenth century, as we noted earlier, this desire to be beautiful and "frail" led to tight-lacing and vinegar-drinking. In

7. Body (Greek) [editor's note].

8. In *Hints on Insanity* (1861) John Millar wrote that "Mental derangement frequently occurs in young females from Amenorrhoea, especially in those who have any strong hereditary predisposition to insanity," adding that "an occasional warm hipbath or leeches to the pubis will . . . be followed by complete mental recovery." In 1873, Henry Maudsley wrote in *Body and Mind* that "the monthly activity of the ovaries . . . has a notable effect upon the mind and body; wherefore

it may become an important cause of mental and physical derangement." See especially the medical opinions of John Millar, Henry Maudsley, and Andrew Wynter in *Madness and Morals: Ideas on Insanity in the Nineteenth Century*, ed. Vieda Skultans (London: Routledge and Kegan Paul, 1975), pp. 230–35. [See the Greek philosopher ARISTOTLE (384–322 B.C.E.), *On the Generation of Animals*—editor's note.]

9. See Marlene Boskind-Lodahl, "Cinderella's Stepsisters: A Feminist Perspective on Anorexia Nervosa and Bulimia," *Signs* 2, no. 2 (winter 1976): 342–56; Walter Blum, "The Thirteenth Guest" (on agoraphobia), in *California Living, The San Francisco Sunday Examiner and Chronicle*, 17 April 1977, pp. 8–12; Joan Arehart-Treichel, "Can Your Personality Kill You?" (on female rheumatoid arthritis, among other diseases), *New York* 10, no. 48 (28 November 1977): 45: "According to studies conducted in recent years, four out of five rheumatoid victims are women, and for good reason: The disease appears to arise in those unhappy with the traditional female-sex role."

our own era it has spawned innumerable diets and "controlled" fasts, as well as the extraordinary phenomenon of teenage anorexia.¹ Similarly, it seems inevitable that women reared for, and conditioned to, lives of privacy, reticence, domesticity, might develop pathological fears of public places and unconfined spaces. Like the comb, stay-laces, and apple which the Queen in "Little Snow White" uses as weapons against her hated stepdaughter, such afflictions as anorexia and agoraphobia simply carry patriarchal definitions of "femininity" to absurd extremes, and thus function as essential or at least inescapable parodies of social prescriptions.

In the nineteenth century, however, the complex of social prescriptions these diseases parody did not merely urge women to act in ways which would cause them to become ill; nineteenth-century culture seems to have actually admonished women to *be* ill. In other words, the "female diseases" from which Victorian women suffered were not always byproducts of their training in femininity; they were the goals of such training. As Barbara Ehrenreich and Deirdre English have shown, throughout much of the nineteenth century "Upper- and upper-middle-class women were [defined as] 'sick' [frail, ill]; working-class women were [defined as] 'sickening' [infectious, diseased]." Speaking of the "lady," they go on to point out that "Society agreed that she was frail and sickly," and consequently a "cult of female invalidism" developed in England and America. For the products of such a cult, it was, as Dr. Mary Putnam Jacobi wrote in 1895, "considered natural and almost laudable to break down under all conceivable varieties of strain—a winter dissipation, a houseful of servants, a quarrel with a female friend, not to speak of more legitimate reasons. . . . Constantly considering their nerves, urged to consider them by well-intentioned but short-sighted advisors, [women] pretty soon become nothing but a bundle of nerves."²

Given this socially conditioned epidemic of female illness, it is not surprising to find that the angel in the house of literature frequently suffered not just from fear and trembling but from literal and figurative sickness unto death.³ Although her hyperactive stepmother dances herself into the grave, after all, beautiful Snow White has just barely recovered from a cataleptic trance in her glass coffin. And if we return to Goethe's Makarie, the "good" woman of *Wilhelm Meister's Travels* whom Hans Eichner has described as incarnating her author's ideal of "contemplative purity," we find that this "model of selflessness and of purity of heart . . . this embodiment of *das Ewig-Weibliche*, suffers from migraine headaches."⁴ Implying ruthless self-suppression, does the "eternal feminine" necessarily imply illness?

1. More recent discussions of the etiology and treatment of anorexia are offered in Hilde Bruch, M.D., *The Golden Cage: The Enigma of Anorexia Nervosa* (Cambridge, Mass.: Harvard University Press, 1978), and in Salvador Minuchin, Bernice L. Rosman, and Lester Baker, *Psychosomatic Families: Anorexia Nervosa in Context* (Cambridge, Mass.: Harvard University Press, 1978). [Gilbert and Gubar discuss "tight-lacing and vinegar-drinking" in chapter 1—editor's note.]

2. Quoted in Ehrenreich and English, *Complaints and Disorders*, p. 19.

3. *Fear and Trembling* (1843) and *The Sickness unto Death* (1849) are works on religious faith and despair by the Danish philosopher Søren Kierke-

gaard; "the angel in the house" is the heroine of the long poem of that title (1854–63), celebrating domesticity, by Coventry Patmore and is the fictional figure whom VIRGINIA WOOLF, in her talk "Professions for Women" (1931; published 1942), declared that she had to kill in order to be free to write [editor's note].

4. Eichner, "The Eternal Female," in *Faust*, ed. Cyrus Hamlin, Norton Critical Edition (New York: W. W. Norton, 1976), p. 620. [Johann Wolfgang von Goethe (1749–1832), German poet, novelist, and playwright, author of *Faust* (1808, 1832) and *Wilhelm Meister's Travels* (1829). *Das Ewig-Weibliche*: the eternal feminine (German)—editor's note.]

If so, we may have found yet another meaning for Dickinson's assertion that "Infection in the sentence breeds." The despair we "inhale" even "at distances of centuries" may be the despair of a life like Makarie's, a life that *"has no story."*

At the same time, however, the despair of the monster-woman is also real, undeniable, and infectious. The Queen's mad tarantella is plainly unhealthy and metaphorically the result of too much storytelling. As the Romantic poets feared, too much imagination may be dangerous to anyone, male or female, but for women in particular patriarchal culture has always assumed mental exercises would have dire consequences. In 1645 John Winthrop, the governor of the Massachusetts Bay Colony, noted in his journal that Anne Hopkins "has fallen into a sad infirmity, the loss of her understanding and reason, which had been growing upon her divers years, by occasion of her giving herself wholly to reading and writing, and had written many books," adding that "if she had attended her household affairs, and such things as belong to women . . . she had kept her wits."⁵ And as Wendy Martin has noted

in the nineteenth century this fear of the intellectual woman became so intense that the phenomenon . . . was recorded in medical annals. A thinking woman was considered such a breach of nature that a Harvard doctor reported during his autopsy on a Radcliffe graduate he discovered that her uterus had shrivelled to the size of a pea.⁶

If, then, as Anne Sexton suggests (in a poem parts of which we have also used here as an epigraph), the red shoes passed furtively down from woman to woman are the shoes of art, the Queen's dancing shoes, it is as sickening to be a Queen who wears them as it is to be an angelic Makarie who repudiates them. Several passages in Sexton's verse express what we have defined as "anxiety of authorship" in the form of a feverish dread of the suicidal tarantella of female creativity:

And those girls,
who wore red shoes,
each boarded a train that would not stop.
.....
They tore off their ears like safety pins.
Their arms fell off them and became hats.
Their heads rolled off and sang down the street.
And their feet—oh God, their feet in the market place—
. . . the feet went on.
The feet could not stop.
.....
They could not listen.
They could not stop.
What they did was the death dance.
What they did would do them in.

Certainly infection breeds in these sentences, and despair: female art, Sexton suggests, has a "hidden" but crucial tradition of uncontrollable madness.

5. John Winthrop, *The History of New England from 1630 to 1649*, ed. James Savage (Boston, 1826), 2:216.

6. Wendy Martin, "Anne Bradstreet's Poetry: A

Study of Subversive Piety," in *Shakespeare's Sisters*, ed. Sandra M. Gilbert and Susan Gubar (Bloomington: Indiana University Press, 1979), pp. 19–31.

Perhaps it was her semi-conscious perception of this tradition that gave Sexton herself "a secret fear" of being "a reincarnation" of Edna Millay,⁷ whose reputation seemed based on romance. In a letter to DeWitt Snodgrass she confessed that she had "a fear of writing as a woman writes," adding, "I wish I were a man—I would rather write the way a man writes."⁸ After all, dancing the death dance, "all those girls / who wore the red shoes" dismantle their own bodies, like anorexics renouncing the guilty weight of their female flesh. But if their arms, ears, and heads fall off, perhaps their wombs, too, will "shrive" to "the size of a pea"?

In this connection, a passage from Margaret Atwood's⁹ *Lady Oracle* acts almost as a gloss on the conflict between creativity and "femininity" which Sexton's violent imagery embodies (or dis-embodies). Significantly, the protagonist of Atwood's novel is a writer of the sort of fiction that has recently been called "female gothic," and even more significantly she too projects her anxieties of authorship into the fairy-tale metaphor of the red shoes. Stepping in glass, she sees blood on her feet, and suddenly feels that she has discovered

The real red shoes, the feet punished for dancing. You could dance, or you could have the love of a good man. But you were afraid to dance, because you had this unnatural fear that if you danced they'd cut your feet off so you wouldn't be able to dance. . . . Finally you overcame your fear and danced, and they cut your feet off. The good man went away too, because you wanted to dance.¹

Whether she is a passive angel or an active monster, in other words, the woman writer feels herself to be literally or figuratively crippled by the debilitating alternatives her culture offers her, and the crippling effects of her conditioning sometimes seem to "breed" like sentences of death in the bloody shoes she inherits from her literary foremothers.

Surrounded as she is by images of disease, traditions of disease, and invitations both to disease and to dis-ease, it is no wonder that the woman writer has held many mirrors up to the discomforts of her own nature. As we shall see, the notion that "Infection in the sentence breeds" has been so central a truth for literary women that the great artistic achievements of nineteenth-century novelists and poets from Austen and Shelley to Dickinson and Barrett Browning² are often both literally and figuratively concerned with disease, as if to emphasize the effort with which health and wholeness were won from the infectious "vapors" of despair and fragmentation. Rejecting the poisoned apples her culture offers her, the woman writer often becomes in some sense anorexic, resolutely closing her mouth on silence (since—in the words of Jane Austen's Henry Tilney—"a woman's only power is the power of refusal"³), even while she complains of starvation.

7. Edna St. Vincent Millay (1892–1950), American poet [editor's note].

8. "The Uncensored Poet: Letters of Anne Sexton," *Ms.* 6, no. 5 (November 1977): 53.

9. Canadian novelist and poet (b. 1939) [editor's note].

1. Margaret Atwood, *Lady Oracle* (New York: Simon and Schuster, 1976), p. 335.

2. Elizabeth Barrett Browning (1806–1861), English poet. Jane Austen (1775–1817), English novelist. Mary Shelley (1797–1851), English novelist [editor's note].

3. See *Northanger Abbey* [1818], chapter 10: "You will allow, that in both [matrimony and dancing], man has the advantage of choice, woman only the power of refusal."

Thus both Charlotte and Emily Brontë⁴ depict the travails of starved or starving anorexic heroines, while Emily Dickinson declares in one breath that she “had been hungry, all the Years,” and in another opts for “Sumptuous Destitution.” Similarly, Christina Rossetti⁵ represents her own anxiety of authorship in the split between one heroine who longs to “suck and suck” on goblin fruit and another who locks her lips fiercely together in a gesture of silent and passionate renunciation. In addition, many of these literary women become in one way or another agoraphobic. Trained to reticence, they fear the vertiginous openness of the literary marketplace and rationalize with Emily Dickinson that “Publication—is the Auction / Of the Mind of Man” or, worse, punningly confess that “Creation seemed a mighty Crack— / To make me visible.”⁶

As we shall also see, other diseases and dis-eases accompany the two classic symptoms of anorexia and agoraphobia. Claustrophobia, for instance, agoraphobia’s parallel and complementary opposite, is a disturbance we shall encounter again and again in women’s writing throughout the nineteenth century. Eye “troubles,” moreover, seem to abound in the lives and works of literary women, with Dickinson matter-of-factly noting that her eye got “put out,” George Eliot⁷ describing patriarchal Rome as “a disease of the retina,” Jane Eyre and Aurora Leigh⁸ marrying blind men, Charlotte Brontë deliberately writing with her eyes closed, and Mary Elizabeth Coleridge writing about “Blindness” that came because “Absolute and bright, / The Sun’s rays smote me till they masked the Sun.”⁹ Finally, aphasia and amnesia—two illnesses which symbolically represent (and parody) the sort of intellectual incapacity patriarchal culture has traditionally required of women—appear and reappear in women’s writings in frankly stated or disguised forms. “Foolish” women characters in Jane Austen’s novels (Miss Bates in *Emma*, for instance) express Malapropish confusion about language, while Mary Shelley’s monster¹ has to learn language from scratch and Emily Dickinson herself childishly questions the meanings of the most basic English words: “Will there really be a ‘Morning’? / Is there such a thing as ‘Day’?”² At the same time, many women writers manage to imply that the reason for such ignorance of language—as well as the reason for their deep sense of alienation and inescapable feeling of anomie—is that they have *forgotten* something. Deprived of the power that even their pens don’t seem to confer, these women resemble Doris Lessing’s³ heroines, who have to fight their internalization of patriarchal strictures for even a faint trace memory of what they might have become.

4. English poet and novelist (1818–1848). Charlotte Brontë (1816–1855), English novelist [editor’s note].

5. English poet (1830–1894) [editor’s note].

7. English novelist (pen name of Marian Evans, 1819–1880) [editor’s note].

8. Heroine of Elizabeth Barrett Browning’s “novel in verse” *Aurora Leigh* (1856). Jane Eyre: heroine of Charlotte Brontë’s novel *Jane Eyre* (1847) [editor’s note].

9. See Dickinson, *Poems*, J. 327 (“Before I got my eye put out”), George Eliot, *Middlemarch* [1871–72], book 2, chapter 20, and M. E. Coleridge, “Doubt,” in *Poems by Mary E. Coleridge* (London: Elkin Mathews, 1908), p. 40. [Coleridge (1861–1907), English poet and novelist—editor’s note.]

1. That is, the monster created in Shelley’s novel *Frankenstein* (1818). Malapropish: like Mrs. Malaprop, a character in Richard Sheridan’s comic play *The Rivals* (1775), who humorously and unintentionally misuses language [editor’s note].

2. See Dickinson, *Poems*, J. 101.

3. Rhodesian and later English novelist (1919–2013) [editor’s note].

"Where are the songs I used to know, / Where are the notes I used to sing?" writes Christina Rossetti in "The Key-Note," a poem whose title indicates its significance for her. "I have forgotten everything / I used to know so long ago."⁴ As if to make the same point, Charlotte Brontë's Lucy Snowe⁵ conveniently "forgets" her own history and even, so it seems, the Christian name of one of the central characters in her story, while Brontë's orphaned Jane Eyre seems to have lost (or symbolically "forgotten") her family heritage. Similarly, too, Emily Brontë's Heathcliff⁶ "forgets" or is made to forget who and what he was; Mary Shelley's monster is "born" without either a memory or a family history; and Elizabeth Barrett Browning's Aurora Leigh is early separated from—and thus induced to "forget"—her "mother land" of Italy. As this last example suggests, however, what all these characters and their authors really fear they have forgotten is precisely that aspect of their lives which has been kept from them by patriarchal poetics: their matrilineal heritage of literary strength, their "female power" which, as Annie Gottlieb wrote, is important to them *because of* (not in spite of) their mothers. In order, then, not only to understand the ways in which "Infection in the sentence breeds" for women but also to learn how women have won through disease to artistic health we must begin by redefining Bloom's seminal definitions of the revisionary "anxiety of influence." In doing so, we will have to trace the difficult paths by which nineteenth-century women overcame their "anxiety of authorship," repudiated debilitating patriarchal prescriptions, and recovered or remembered the lost foremothers who could help them find their distinctive female power.

E. ANN KAPLAN

b. 1936

In the 2009 film *Brothers*, the main character, played by Tobey Maguire, is a Marine captain who returns home to the United States after being captured and tortured by the Taliban in Afghanistan. In the climactic scene, he destroys a new kitchen, holds a gun to his wife and his brother, and threatens suicide. We immediately understand that he suffers from post-traumatic stress disorder (PTSD), a syndrome formally recognized by the American Psychiatric Association only in 1980. Now most often associated with combat, PTSD can also be spurred by other severe events, such as accidents or physical and sexual abuse. While doctors diagnosed some soldiers in World War I with "shell shock," and early psychologists identified "hysteria" in some patients, researchers and scholars from various fields began to explore the effects of trauma more deeply in the aftermath of World War II and the Holocaust. Their

work prepared for the emergence in the 1990s of trauma theory, a new field that draws particularly on psychology and psychoanalysis in forming interdisciplinary links between humanists, social scientists, and scientists. In *Trauma Culture: The Politics of Terror and Loss in Media and Literature* (2005), E. Ann Kaplan takes for her point of departure the origins of trauma studies in the writings of SIGMUND FREUD, the founder of psychoanalysis. In our selection, she develops via Freud both an account of trauma and a critique of trauma theory.

Best known for her books in film and cultural studies, Kaplan earned a B.A. in English literature from the University of Birmingham in England (1958), a post-graduate diploma in English from the University of London (1959), and a Ph.D. in comparative literature from Rutgers University (1970). She taught first in England, including as a lecturer in film at London's British Film Institute, before moving to the United States in 1980; she has held positions at Monmouth College, Rutgers University, and the State University of New York at Stony Brook, where since 2005 she has been Distinguished Professor of English and Cultural Analysis and Theory and was also the founding director of the Humanities Institute at Stony Brook (1987–2014). From 2003 to 2005, Kaplan served as president of the Society for Cinema and Media Studies, and she received its Distinguished Career Award in 2009. Much of Kaplan's early work focuses on cinema and feminism; her scope later broadened to popular culture (publishing the first academic study of MTV) and especially trauma in various forms.

Trauma, the Greek word meaning "wound," was at first strictly a specialists' term for an external injury or the condition caused by such an injury, cited by *The Oxford English Dictionary* (OED) in a medical dictionary of 1693; the adjective "traumatic" appeared in 1656. It is not included in SAMUEL JOHNSON's great dictionary, published in 1755, but in the nineteenth century its application expanded not just to an internal brain injury, which may result in behavioral change, but also to a psychic injury—cited by the OED in this sense ("traumatic psychosis") first in an 1889 translation of the French neurologist Jean-Martin Charcot, with whom Freud briefly studied. The word soon came to refer especially to a psychic injury caused by an "emotional shock the memory of which is repressed and remains unhealed." Trauma is thus a wound either external or internal, as well as the deep distress and disturbance that accompany it. When that disturbance lingers, it can become what we now call PTSD. "The idea," according to the historian Ruth Leys, "is that, owing to the emotions of terror and surprise caused by certain events, the mind is split or dissociated: it is unable to register the wound to the psyche because the ordinary mechanisms of awareness and cognition are destroyed. . . . The experience of the trauma, fixed or frozen in time, refuses to be represented as past, but is perpetually re-experienced in a painful, dissociated, traumatic present." As a result, individuals can suffer nightmares, flashbacks, changes in physical and emotional reactions, periods of extreme depression, suicidal impulses, and worse.

The serious theorizing of trauma is a modern phenomenon. But it is tempting simply to say at the outset that the experience of trauma is as old as the human race, with traces everywhere in world literature: for instance, in the combat and aftermath of Homer's *Iliad* and the masterpieces of Greek tragedy. And what could be more traumatic than the experiences of Hamlet and King Lear? In our time, examples abound, both in memoirs—such as the Holocaust testimonies of Eli Wiesel and Primo Levi and the horrifying account of sexual assault recounted by Alice Sebold in *Lucky* (1999)—and in fiction, from Kurt Vonnegut's *Slaughterhouse-Five* (1969), about the firebombing of Dresden in World War II, to TONI MORRISON's *Beloved* (1987), on the ramifications of slavery and the murder of a two-year-old child by her mother.

The range of materials is so extensive and deep, and offers so many perspectives, that the historian Andreas Killen sees trauma as "becoming institutionalized. . . . The aftermath of trauma is being researched in laboratories and analyzed by historians, literary critics and experts in media, law and psychiatry." It is at once pro-

foundly personal, registering its impact on individuals, and also collective, as the brutal history of the twentieth and twenty-first centuries attests—world wars, genocides, atomic bombs, famines, migrations, and natural disasters. Not surprisingly, trauma is collective even when it is personal, because it is so implicated in and woven into familial, social, and political contexts and dependent for its understanding on the interpretive categories brought to it.

Among the theorists and critics who have been active in developing the contemporary field of trauma studies are Cathy Caruth, Shoshana Felman, and Dominick LaCapra. But the inevitable point of departure is much earlier, with Sigmund Freud, as Kaplan indicates in our selection from her *Trauma Culture*, an interdisciplinary study in which she analyzes the artistic, literary, and cinematic forms through which individuals and collectives undergo, represent, and describe the experience of trauma.

Opening her book with a discussion of the terrorist attacks of September 11, 2001, and reflecting on research about the Holocaust, Kaplan proceeds to consider a number of case studies: Freud's *Moses and Monotheism* (1939), Marguerite Duras's *La Douleur* (1985; trans. as *The War: A Memoir*, 1986), Sarah Kofman's *Rue Ordener, Rue Labat* (1994; trans. 1996), Alfred Hitchcock's postwar melodrama *Spellbound* (1945), and Tracey Moffatt's short film *Night Cries: A Rural Tragedy* (1989). Her use of the tools and techniques of literary criticism, media studies, feminist psychoanalysis, and neuroscience in examining them helps to suggest the wide-ranging, interdisciplinary nature of research in this field. Kaplan also devotes attention to media images of Iraq and Rwanda and to films that show the "diverse traumas" experienced by indigenous peoples in the United States and Australia. Yet her primary concern, she explains, is not "the huge catastrophes" that have been extensively and eloquently reported and studied but rather "traumas of loss, abandonment, rejection, betrayal" in specific films and texts.

Kaplan emphasizes the complexity of the term "trauma." In her view, it should be attached not only to victims and survivors but also to those who "suffer terror." Trauma is crucially related to the position of the affected individuals, to social and political contexts, and to institutions (above all, the media) that represent and circulate catastrophe and disaster nationally and internationally. Kaplan speaks of trauma as being "registered" consciously and unconsciously, and she stresses the difficulty—so affected are our lives by all forms of media, social and other—of separating and making distinctions between trauma and vicarious trauma, primary and secondary trauma.

Invoking her own response to 9/11, Kaplan asks whether this event was for her a new trauma or was rather a trigger that recalled her frightening childhood memories of growing up in London during the Blitz. Kaplan also experienced 9/11 directly, as did all Americans—"everyone was in shock": the trauma, in all of its dimensions and reverberations, was at once personal and communal, local and national. It was depicted in stories, commentaries, symbols, and images on TV and radio, in newspapers and magazines, and on the Internet. It was unprecedented, but then again it was not, because for countless people it reverberated with the memories of prior traumas that they had experienced and that remained painfully immediate to them.

The selection below is excerpted from Kaplan's first chapter, "'Why Trauma Now?': Freud and Trauma Studies," where she gives a critical overview of Freud's work on trauma as it emerged gradually from his explorations of sexuality, unconscious motivation, and neurosis. Kaplan reminds us that Freud and his followers were students first of hysteria and that their work on trauma developed from it—or, rather, that the concept of trauma was already implicit in it. Freud and others saw that the symptoms of trauma may arise belatedly, well after the event; and in their studies of women, they connected traumatic memory, repression, fantasy, and hysteria to sexuality and sexual abuse. One of the limitations of their work done in the 1890s and early 1900s, Kaplan observes, is its lack of attention to social constructions of gender, which in cases of sexual trauma lead to different neuroses. We can see a shift in Freud's

thinking during World War I and later, when he and others began to study the trauma suffered by soldiers.

Kaplan raises other criticisms of trauma theory. She conceives each case of trauma to be individual—that is, rooted in the singular experience, sensitivity, and unconscious of each afflicted person. Thus one size does not fit all, and in her view diagnoses and treatments have to be individualized. Like Freud, Kaplan is skeptical of the early general application of electric shock therapy and brain surgery and more sympathetic to highly personalized talk cures. Still, Freud comes in for direct critique, for being “wary of mentioning the codes of his social, medical, and political milieu.” Kaplan’s point is that historical context shapes the experience of trauma, which is why she emphasizes the impacts of the Victorian-era middle-class patriarchal family, the industrial revolution, large-scale mechanized war, and the different social positions of men and women. For all his pioneering insights into trauma, Freud is not immune to this broad criticism—nor is subsequent trauma theory.

To extend her discussion, Kaplan cites the Regeneration Trilogy by the English writer Pat Barker—*Regeneration* (1991), *The Eye in the Door* (1993), and *The Ghost Road* (1995)—an exemplary series of novels that focus on the aftermath of trauma through exploring the history of World War I. Kaplan closes by reflecting on the theory of trauma that Freud articulates in a late work, *Moses and Monotheism*, published in the year of his death. That year also marked the beginning of World War II, whose events remain present in cultural memory and have been extended and reinforced by the traumatic events of subsequent decades.

As much or more than any other field of theory and criticism, trauma studies arises from and is always connected to real-world experiences—the victimization and pain of human beings who have endured and witnessed events which discourse cannot fully express and to which it can never do complete justice. We are more than a century beyond Freud’s investigations of trauma, yet in a sense we are still confronting the fundamental questions that he articulated and engaged: what is trauma, how is it experienced, and how do those who suffer from trauma, and who treat the traumatized, speak and write about it? As these questions imply, at the center of trauma studies are issues of and debates about authority and power, the persons who claim to possess the knowledge (and the right) to speak and write about trauma and those living with it, and the institutions where this study, interpretation, and treatment occur.

From Chapter 1. “Why Trauma Now?”: Freud and Trauma Studies

FREUD AND TRAUMA

It all begins with Freud, of course. And the more I read of contemporary trauma theories, the more I believe that Freud had already said a great deal.¹

1. I am not alone in thinking that Freud indeed had anticipated much that is being “discovered” by neuroscientists today. See Fred Gutерil’s essay, “What Freud Got Right,” *Newsweek*, November 11, 2002: 50–52. The subheading reads: “His the-

ories, long discredited, are finding support from neurologists using modern brain imaging,” and an insert reads: “Unconscious drives, similar to libido and aggression, have now been located in the most primitive parts of the brain” (50). There is even a

At least, along with Freud's contemporaries and the pioneering clinicians who preceded him, nineteenth- and early twentieth-century thinkers had discovered the basic phenomena and structures of trauma. It took the more sophisticated scientific technologies of the late twentieth century to prove what these pioneers could only theorize about brain circuitry and mechanisms, sometimes, though, at the cost of Freud's insistence on unconscious fantasy as also involved in traumatic effects.

The phenomena of trauma, particularly hysteria, that interested clinicians did not arise in a vacuum. The phenomena were closely linked to modernity, especially to the industrial revolution and its dangerous new machines (the railway, the factory), as well as to the linked growth of the bourgeois family. This family became the site for female hysteria (caused partly by that family's patriarchal and puritanical codes), while industrialization (that required the bourgeois class and was, circularly, produced by that class) provided the social conditions for the train and machine accidents, and for large-scale wars. These in turn prompted attention to the traumatic symptoms such accidents and wars produced in men.²

What's interesting is that unlike psychologists and others writing today, Freud and his peers did not set out to write a *theory* of trauma. The concept of trauma emerges in their work on hysteria as if already assumed. It is used to explain processes in hysteria, rather than as a concept that has itself to be theorized. French clinicians, mainly J. M. Charcot and his student Pierre Janet,³ pioneered research on hysteria and hypnosis. Charcot's research in neuropathology at his Salpêtrière clinic (significantly, most of the patients were women, although Charcot argued that men also suffered from hysteria) produced students such as Janet whose case studies were central to ideas of hysteria at the time. Charcot and Janet inspired Freud and Breuer,⁴ who visited the Salpêtrière in 1890 (see Freud's 1893 moving obituary to Charcot who died soon after), although Breuer, a noted Viennese physician, had already begun research on hysteria in his treatment of Fräulein Anna O. Following the practices developed by Charcot and Janet, Freud and Breuer used hypnosis in their work with their hysterical patients, although shortly thereafter Freud began to experiment with his "talking cure," and in many ways was already moving beyond Charcot.

The influence of French theories and experiments is cited in an essay, "On the Psychical Mechanism of Hysterical Phenomena," written in collabora-

journal, *Neuropsychanalysis*, and in Guteril's essay Antonio Damasio is quoted as saying that "Freud's insights on the nature of consciousness are consonant with the most advanced contemporary neuroscience views" [Kaplan's note]. Damasio (b. 1944), renowned neuroscientist and director of the Brain and Creativity Institute at the University of Southern California. For SIGMUND FREUD (1856–1939), the Austrian founder of psychoanalysis, see above.

2. Freud developed his theories of trauma from studying female hysteria and then the impact of train accidents and wars. Late in life, he also hypothesized that a violent historical act can remain in cultural consciousness and continue to have a traumatic impact. For more discussion of the history and development of the concept of trauma by Freud, see Cathy Caruth, *Unclaimed*

Experience: Trauma, Narrative, and History (Baltimore: Johns Hopkins University Press, 1986). See also essays in Cathy Caruth, ed., *Trauma and Experience: Explorations in Trauma and Memory* (Ithaca, NY: Cornell University Press, 1985) [Kaplan's note].

3. French psychologist, philosopher, and psychotherapist (1859–1947), who focused on dissociation and traumatic memory. Jean-Martin Charcot (1825–1893), French neurologist and professor of anatomical pathology, whose work included research at the Salpêtrière Hospital in Paris.

4. Josef Breuer (1842–1925), Austrian physician; while working with a patient known as Anna O. in the 1880s, he developed the talking cure and helped establish the basis of Freudian psychoanalysis.

tion with Breuer and published in their joint volume, *Studies in Hysteria*.⁵ Here the clinicians distinguish between ordinary hysteria and traumatic neuroses, and introduce the concept of “traumatic hysteria.” Already the doctors understand that whether a person experiencing a distressing affect “of fright, shame or psychical pain” will be traumatized depends on the particular sensitivity of the person—something even now not sufficiently recognized. In addition, they hint at the belatedness of the onset of symptoms, attributing this to the fact that traumatic memories are not available to the patient in the way his commonplace ones are, but act “as a kind of foreign body” in the psyche, “an affective agent in the present even long after it first penetrated” (6). The famous statement that “hysterics suffer mainly from reminiscences” appears in this essay.

In this work, Freud and Breuer specifically note that the symptoms of hysteria are the result of trauma. The physical phenomena they cite, including what happens to memory in trauma, anticipate by many years the now so familiar litany of effects labeled in American Psychiatric Association’s *Diagnostic and Statistical Manual of Mental Disorders: III-R*⁶ as Post-Traumatic Stress Disorder (or PTSD). In the same essay in *Studies in Hysteria*, the clinicians note the way in which other ideas including fantasies get attached to the traumatic event. “A memory,” they say, “of such a trauma . . . enter[s] the great complex of associations, it comes alongside other experiences, which may contradict it, and is subjected to rectification by other ideas” (9). They note that after an accident, memory of the danger and repetition of the fright “becomes associated with the memory of what happened afterwards—rescue and the consciousness of present safety.”

Freud and Breuer implicitly gender trauma in accordance with the way the bourgeois family in Europe was organized in their day: Males largely have traumatic effects from accidents, women from watching by the bedside of sick parents or children, or (at first only implied) from extreme sexual repression. The three early case studies published in *Studies in Hysteria*—those of Anna O. (Breuer), Emily von N. (Freud), and Miss Lucy (Freud)—set the stage for Freud’s later case studies while still revealing the legacy of Charcot (especially in Breuer’s text) in focusing on detailed descriptions of the women’s physical symptoms and treatments with massage, hydrotherapy, and electrotherapy, and in insisting on dissociation as a major symptom. Freud does indicate traumatic sexual origins for the hysteria in his cases, but it was not until the Dora⁷ case history that Freud provided a detailed investigation into female hysteria and its traumatic symptoms as occasioned by sexual incidents in an environment of rigid sexual repression such as characterized Freud’s nineteenth-century Austria.⁸ In the case of Dora, Freud concludes that the hysteria was due to shame triggered by her arousal in response to

5. This volume, published only in German in 1895, was later translated by James Strachey and published in volume 2 of the Standard Edition in 1955. A separate English volume, *Studies in Hysteria*, of the SE section, was published in 1957 [Kaplan’s note].

6. Published in 1987 (the current edition is the 5th, 2013).

7. The pseudonym given by Freud to Ida Bauer (1882–1945), a patient whom he treated for hysteria for nearly three months in 1900. He pub-

lished her “case history” as *An Analysis of a Case of Hysteria* (1905).

8. As the editors of the Standard Edition point out, Freud mentioned in a letter to Fliess at the time that he had omitted reference to the father’s abuse of the women in his and Breuer’s *Studies in Hysteria* [Kaplan’s note]. Wilhelm Fliess (1858–1928), one of Freud’s colleagues and an important figure in the history of psychoanalysis.

inappropriate advances of a friend of her father, and further stimulation by attraction to, including sexual discussion with, this man's wife. In Dora's case, hysterical phenomena result from both "seduction" and fantasies.

In their essay introducing *Studies in Hysteria*, Freud and Breuer only mention sexuality as a precipitating cause for traumatic hysteria, asserting that "the determining causes which lead to the *acquisition* of neuroses, their aetiology . . . is to be looked for in *sexual factors*" (257). But a few years later in several papers written in 1894 and 1896 Freud baldly states that sexual abuse lies behind female hysteria. In his paper on "Heredity and the Aetiology of the Neuroses," Freud is fully aware that his audience would find this provocative.⁹ He argues that hysteria comes from "memory relating to a sexual life," stating further that "the subject has retained an unconscious memory of a *precocious experience of sexual relations with actual excitement of the genitals, resulting from sexual abuse committed by another person; and the period of life* at which this fatal event takes place is *earliest youth*—the years up to the age of eight to ten, before the child has reached sexual maturity" (154, italics in original).

While these early essays deal mainly with trauma's processes and symptoms rather than their causes, and often imply female patients and situations, they sometimes include examples of male trauma but not hysteria. In "Heredity and the Aetiology of the Neuroses," Freud suggests why women resort to hysteria while men manifest obsessional neuroses by distinguishing the kinds of infantile sexual abuse boys and girls receive (women receive it "passively," males "actively"). Yet he does not realize the implicit acceptance of prevailing concepts of gender in this statement. That is, Freud does not go on to ask how cultural, political, and social roles laid down for men and women produce different neuroses in the case of sexual trauma. Indeed, Freud and others of his time rarely ask if trauma impacts differently on males and females. When the war neuroses force attention to male hysteria, as we'll see, clinicians do not ask if hysteria in men and women is the same. Yet, how the contrasting positions for men and women within national imaginaries result in different traumatic syndromes is important. These are questions I return to throughout this volume.

Trauma, then, was at first closely linked to the sexual experiences of young women within a close-knit bourgeois family and circle of friends such as was common at the turn of the nineteenth century. However, Freud soon questioned the degree to which the trauma depended on actual sexual abuse (not necessarily out of fear of offending his male friends and colleagues whose children he was treating, as is often assumed),¹ and theorized that fantasies of forbidden sexual desires could produce the same symptoms.²

9. After stating his notion that all major neuroses "have as their common source the subject's sexual life," he comments: "I am quite sure that this theory will call up a storm of contradictions from contemporary physicians" (Freud, "Heredity," 151) [Kaplan's note].

1. In his essay on "Heredity and the Aetiology of the Neuroses," Freud mentions siblings, other children, and nannies as the figures involved in genital activity with small children. However, this does not prove, as Richard McNally suggests, that Freud was not protecting his colleagues in his

later abandoning of the seduction theory, for in a letter to Fliess discussing his patients at the same time, as the editors of the Standard Edition point out, Freud noted that "in every case it was the father who had to be held responsible (for perverse acts with children)" (SE 1: 160). Freud later admitted to suppressing the father's abuse in cases in *Studies in Hysteria* (see SE 1: 164) [Kaplan's note]. McNally (b. 1954), American clinical psychologist who studies anxiety disorders.

2. As most readers will know, a huge bibliography surrounds this move by Freud—a bibliography

Freud moved on to develop other aspects of his psychoanalytic theories, and when he returned to trauma, it was now in relation to the symptoms of soldiers in World War I. At this point, interest in trauma focused on men involved in public catastrophes, such as defending the nation at war. A great deal of research and debate in Europe followed the increasing number of soldiers reporting paralysis and other hysterical symptoms preventing them from fighting. Doctors in England, France, and Germany studied these symptoms of soldiers unable to continue in battle (they were often termed "malingerers"). Articles published in the *Lancet*, a British medical journal, between 1895 and 1915 amply reveal the different hypotheses advanced about the soldiers' symptoms, and show how debates drew upon research carried out earlier in regard to industrial accidents and factory workers also described as malingerers.³

British doctors faced with traumatized soldiers, apparently applied theories of female hysteria caused by sexual trauma to battle trauma.⁴ It is unclear whether they arrived independently at their conclusions about war trauma as hysteria or simply did not mention Freud's views on hysteria because it would require discussion of female sexuality. Elaine Showalter quotes W. H. Rivers⁵ in 1917, also in the *Lancet*, noting the "correspondence between Freudian theory and his [Rivers's] clinical practice, and especially the ideas of the unconscious." Rivers concluded that "the advent of the war presented psychiatry with an extraordinary demonstration of the validity of Freudian theory in general" (Showalter, *The Female Malady* 188–189).⁶

that reentered public consciousness when issues relating to child abuse surfaced in the United States around highly visible cases in the late 1980s. Trauma theory and PTSD were central to these debates, since the cases relied on traumatic phenomena as evidence of abuse. Many case studies take up other kinds of family traumas, but readers can find a thorough survey of Freud's theories and writings, as well as discussion of the recent so-called "false memory syndrome" in Richard J. McNally's *Remembering Trauma* (Cambridge: Harvard University Press, 2003) [Kaplan's note].

3. War trauma greatly stimulated medical doctors and those interested in psychoanalysis in World War I. While concepts of trauma were first investigated in regard to industrial agents and accidents, it was the research opportunity afforded by traumatized soldiers that impelled work on trauma forward. Indeed, the work done in regard to World War I set the stage for concern about traumatic reactions in World War II, and then most recently and in its most elaborated form, in relation to the Vietnam War, as noted earlier.

See articles dealing with war trauma in the *Lancet*, such as Dr. David Forsyth's essay reviewing ongoing debates, i.e., "Functional Nerve Disease and the Shock of Battle: The So-Called Traumatic Neuroses Arising in Connexion with the War," (*Lancet* 2 [December 25, 1915]: 1399) [Kaplan's note].

4. Since *Studies in Hysteria* was published in 1909 in English, the doctors writing in the *Lancet* were no doubt drawing on Freud and Breuer's ideas (significantly, the English edition, translated by A. A. Brill, omitted the case histories of

Anna O., Emmy Von N., and Katharina, as well as Breuer's theoretical chapter). But they were also drawing on much earlier research on railway and industrial accidents, such as 1864 research by J. Eric Erichsen, "On the Concussion of the Spine," mentioned in an article by Thomas R. Glynn, "The Traumatic Neuroses," in the *Lancet* 2 (November 5, 1910): 1332. Glynn awards to two American physicians the insight that since the symptoms of railway spine were cerebral more than spinal disturbances, the term "railway brain" would be more appropriate [Kaplan's note].

5. English anthropologist and psychologist (1864–1922); he treated World War I officers suffering from shell shock. Showalter (b. 1941), American feminist literary critic.

6. In a series of novels, Pat Barker (1991, 1995, 1996) has written convincing fictional accounts of Rivers's psychotherapy with soldiers suffering what was then called "shell shock" in the military hospital in Craiglockhart, Scotland. Doctors were supposed to get these men ready to return to the battlefield, and the soldiers knew this, but Barker shows the very difficult position doctors found themselves in, since their empathy for the men went deep, and they did not necessarily believe in the war. No man wanted to be accused of "malin-gering." Freud found himself having to judge just such a case, as I go on to show [Kaplan's note]. The three novels by the English writer Pat Barker (b. 1943) are *Regeneration* (1991), *The Ghost Road* (1995), and *The Eye in the Door* (1996). The full title of Showalter's book is *The Female Malady: Women, Madness and English Culture, 1830–1980* (London: Virago, 1987).

It is significant that Freud's development of his ideas about trauma was only belatedly prompted by what happened to soldiers in World War I. His first writings on World War I, namely "Thoughts for the Times on War and Death" and "Why War?" deal with man's binary instincts for love and hate.⁷ It is not surprising that both essays reflect the broader cultural and social thinking that Freud developed in his 1920 *Civilization and Its Discontents*, rather than relating to his clinical and more technical research. The essays were written for a broad audience, after all, and one of them was directly addressed to Albert Einstein. Freud often implicitly (if not explicitly) relates his patients' symptoms to the larger cultural (implicitly ideological) thinking that these general essays reveal. Such insights appear in short parentheses (such as reference to the social repression of sexuality). But Freud was wary of mentioning the codes of his social, medical, and political milieu, not wanting to hamper acceptance of his theories by challenging social mores of the day.

Toward the end of World War I Freud and his colleagues published papers that Sandor Ferenczi, Karl Abraham, and Ernst Simmel⁸ had presented on war neuroses at the proceedings of the Fifth International Psycho-Analytical Congress, held in Budapest on September 28 and 29, 1918, with an introduction by Freud. The congress was concerned about the treatment of soldiers and, not knowing the war was about to end, wanted to set up special psychoanalytically oriented clinics for traumatized men.

In his short introduction to the volume, Freud observes what essays in the *Lancet* had already observed, namely that war conditions had "an important influence on the spread of psycho-analysis." Freud goes on to note that "medical men who had hitherto held back from any approach to psychoanalytic theories were brought into closer contact with them when, in the course of their duties as army doctors, they were obliged to deal with war neuroses" (Freud, Standard Edition 17: 207). Indeed, Freud takes the opportunity to communicate his irritation with doctors (he may well have some of those in the *Lancet* in mind) who are only ready to use psychoanalysis when it is a matter of the war neuroses, which do not (at least obviously) involve sexuality. In his words, war neuroses do not appear to involve "the conflict between the ego and the sexual instincts which it repudiates" that Freud has been arguing is the basis of "the ordinary neuroses of peace-time" (208).

In the rest of the essay, Freud is at pains to find a link between the traumatic neuroses of war and of peacetime (also termed transference neuroses), which he does by arguing that in both cases there is a conflict in the ego. In the case of war, it is between the soldier's "old peaceful ego and his new war-like one, and it becomes acute as soon as the peace-ego realizes what danger it runs of losing its life owing to the rashness of its newly formed, parasitic double" (209). But Freud does not want to relinquish the possibility that even war trauma has something to do with sexuality, while at the same time fully understanding that he does not have evidence yet of "the relations which

7. "Thoughts for the Times on War and Death" (1915) was written six months after the war began. "Why War?" was part of a 1933 exchange of letters between Freud and Albert Einstein (1879–1955), the German-born theoretical physicist who also was a strong advocate for peace

and social justice.

8. All psychoanalysts: Ferenczi (1873–1933), a Hungarian who worked closely with Freud; Abraham (1877–1925), a German; and Simmel (1882–1947), a German who was also a neurologist.

undoubtedly exist between fright, anxiety and narcissistic libido" (210).⁹ He tantalizingly ends his essay by asserting that, in the case of both the war and peacetime neuroses, "what is feared is nevertheless an internal enemy" (210). He asserts that it is possible that repression underlies all reaction to trauma, whether sexual or external.

Freud's statements here are "tantalizing" in that he begs the question of whether there is any difference between ordinary neurosis and trauma—a difference that involves the difference between neurotic repression and traumatic dissociation that has plagued recent trauma theorists. But these same comments by Freud are important in linking so-called peacetime neuroses and war neuroses, and in challenging his theory of female hysteria as about repressed fantasies, not *memories*. If hysteria is the result of *fantasies*, then it cannot be the same phenomenon as war trauma, which has a clear external cause. War trauma seemed to be of an entirely different order than female hysteria—closer to the delayed impact of train accidents Freud was later to theorize, and not involving fantasies as such. Yet Freud's early theory that hysterical women suffered from memories of sexual abuse (not fantasies as he later claimed) did match the traumatic phenomenon of soldiers, namely that they too suffered from memories of an overwhelming event that they had been unable to cognitively register at the time it happened.¹

Freud cannot in the short space of such an introduction go further into the complexities of his thought about links between the peacetime and war neuroses, neatly gendered as they are in Freud's account. There is no evidence that Freud had ever treated any patients suffering from war neuroses (as had Simmel and the others contributing full papers to the volume), but he was nevertheless called upon to be an "Expert Witness" about such neuroses at the investigation of his renowned colleague, Professor Wagner-Jauregg (at the time of the investigation director of the clinic at the Allgemeine Krankenhaus in Vienna).² This investigation came about as a result of allegations in a newspaper, *Der Freie Soldat*,³ about military abuses as World War I came to an end. A commission, presided over by Professor Löffler,⁴ was set up to investigate neglect of military duty during the war. Several articles accused the medical profession of "knowingly supporting the army's harsh and inhumane treatment of soldiers during the war" (Eissler 14). Extracts from a diary by Walter Kauders,⁵ who was treated by Wagner-Jauregg, had been published, and an investigation began.

Freud's 1915 essay "Thoughts for the Times on War and Death," perhaps, taken together with the introduction discussed above and his status as the

9. Pat Barker's novels are interesting in light of this. More than one of Barker's major characters describe sexual arousal in moving out to a dangerous confrontation with German troops in trenches across from the British ones. Some characters are gay, others bisexual. While Rivers appears to leave such sexual themes unexplored in his therapy sessions, the "data" is there for readers to see [Kaplan's note].

1. Pat Barker's novels, again, dramatize clearly the ways in which traumatic battle events haunt the soldiers in dreams and hallucinations. While sometimes the men can recall the dreams and precipitating events, they prefer not to. Others suffer from total amnesia as a symptom. Partial dissociation, then, is observed in Barker's repre-

senting of Rivers's cases in her fiction [Kaplan's note].

2. For full details of this investigation, see Kurt R. Eissler, *Freud as an Expert Witness: The Discussion of War Neuroses Between Freud and Wagner-Jauregg* (Madison, WI: International University Press, 1986) [Kaplan's note]. Julius Wagner-Jauregg (1857–1940), Austrian physician.

3. *The Free Soldier*, an Austrian Social Democratic weekly.

4. Alexander Löffler (1866–1929), an Austrian criminologist.

5. An Austrian officer who suffered a head injury early in the war and charged that he was subsequently severely mistreated by Wagner-Jauregg and his assistants at a psychological clinic.

"inventor" of psychoanalysis, evidently was seen to qualify him to be an "Expert Witness" in this case. But Freud was in a delicate position in testifying since he could not say anything that would harm the career of this renowned medical man, and yet he also could not agree with the nonpsychoanalytic treatment (usually electrical charges and isolation) that Wagner-Jauregg (like most of his colleagues) used for traumatized soldiers. Freud's "Memorandum on the Electrical Treatment of War Neurotics," submitted to Professor Lofler, allows us to see Freud treading elegantly around similar issues to those that had preoccupied the doctors writing in the *Lancet*. The debate was over whether the soldier's symptoms resulted from organic injuries to the nervous system or were caused by psychic changes such as we understand happens in trauma. Freud comes down clearly on the latter side, noting that "what is known as the psychoanalytic school of psychiatry, which was brought into being by me, had taught for the last twenty-five years that the neuroses of peace could be traced back to disturbances of emotional life. . . . It was therefore easy to infer that the immediate cause of all war neuroses was an unconscious inclination in the soldier to withdraw from the demands, dangerous or outrageous to his feelings, made upon him by active service" (Freud in Eissler 24–25). Freud insists, against claims by Wagner-Jauregg, that only a very small proportion of soldiers with traumatic symptoms were "malingerers." He is careful to note that the physician had a conflict, namely between his duty as a medical man and his military duty to get the soldiers back on the front line, in giving electrical treatment for a "fast fix," as we might say. "Medicine," says Freud, "was serving purposes foreign to its essence" (27). Deaths resulted from the treatment, although Freud will not say that Wagner-Jauregg's clinic used dangerous levels of electrical current. He concludes by referring to Ernst Simmel's success with psychotherapeutic methods ("introduced by me," Freud has to add) in treating war neuroses.

Significantly, Freud found himself returning to the issue of war neuroses in the year following his appearance as an Expert Witness in the Wagner-Jauregg investigation as he was writing *Beyond the Pleasure Principle*.⁶ In attempting to understand how the mental apparatus produces pleasure and unpleasure, he began to distinguish between unpleasure from the pressure of internal unsatisfied instincts and unpleasure from an external perception recognized by the mental apparatus as a danger (*Beyond* 28). This leads him to mention the "mechanical concussions, railway disasters and other accidents involving risk to life," that have been given the name of "traumatic neurosis" (28). But his thought immediately turns to the war, as he notes, "The terrible war that has just ended gave rise to a great number of illnesses of this kind," and he footnotes the introduction noted above. Freud continues to reflect on similarities between the traumatic neurosis of war and that of hysteria, as if he continues to be puzzled by these similarities. Referring back to his earliest work with Breuer on female hysteria, Freud notes that war neurotics too "suffer mainly from reminiscences" (29).

6. A 1920 work in which Freud describes the struggle in human beings between eros (sexual love; Greek) and thanatos (death; Greek). It is a revision of his earlier theories.

But at this point he makes a sharp break to discuss child's play and the famous *fort-da* game⁷ of his grandson. However, he returns later in the volume to the issue of internal versus external assault on the ego that had led him to the war neuroses in the first place. He is still trying to understand the different kinds of unpleasure involved in the different contexts, only now he theorizes that trauma results from a breach in a protective shield that the mental apparatus sets up to ward against overviolent stimuli. It seems throughout this discussion (52–61) that he has in mind the situation of war for the external assault on the mental apparatus and hysteria for the internal “assault” being theorized. This assumption seems to be valid since Freud refers explicitly again to the war neuroses and to his idea in the 1919 introduction that war neuroses result from a conflict in the ego, as much as from fear or, as he now notes is a more correct term “fright” (62).⁸

But Freud's most significant, and most complete discussion of trauma occurs, not incidentally, at the end of his life, in *Moses and Monotheism*,⁹ when Freud was forced to leave his homeland and take up exile in England. At the end of *Moses*, Freud repeats his well-known theories about the etiology of the neuroses, only now in a way never quite articulated before he specifically includes the issue of trauma. He likens the latency of the man who walks away from the train accident apparently unharmed, only later to develop psychical and motor symptoms, to the “forgetting” of monotheism in the Jewish religion, only to have it return later as something insistent. But more importantly, he links common infant traumata to the latency phenomenon. He summarizes: “These three points—early happenings, within the first five years of life, the forgetting, and the characteristic of sexuality and aggressiveness—belong close together. The traumata are either bodily experiences or perceptions, especially those heard or seen.” But not everyone responds in the same way to similar experiences, so Freud conceives of a sliding scale and slow series of developments that result in trauma symptoms.¹ It is not too much to infer from what Freud says here that the difference in how soldiers react to similar war traumas may depend on how far the war situation triggered prior psychic conflicts. In war, such internal conflicts, together with intense fear for his life or that of close ones, threatened the soldier's

7. Literally, “there-gone game” (German). In chapter 2 of *Beyond the Pleasure Principle*, Freud describes his 18-month-old grandson throwing a wooden reel out of his cot while exclaiming “o-o-o-” (interpreted as “fort”), then pulling it back by a string with a joyful “da.” This game illustrates the impetus behind repetition compulsions.

8. One of the problems with *Beyond the Pleasure Principle* is that Freud is trying to do too many things. The entire discussion involves Freud's working out of differences among anxiety, fear, and fright (something he will take up later on) and he is also continuing an earlier discussion of the compulsion to repeat. Most significantly, *Beyond* is also where Freud begins to theorize the death drive. However, his introduction of the traumatic war neuroses, when these neuroses are not the main discussion, highlights how bothered Freud was about the challenge to his prior theories that the existence of war neuroses had produced [Kaplan's note].

9. Published in 1939.

1. Juliet Mitchell makes a similar point, perhaps expanding on Freud's insight. Focusing on trauma from the perspective of the person who experiences it, she says: “This means both that the same event will not always be traumatic for different people, and that the experience of different events, if they are experienced as trauma, will be the same whatever the event and whoever the sufferer.” Mitchell also seems to agree with Freud's later ideas about trauma when she says that trauma represents a breach in consciousness: “A trauma, whether physical or psychical, must create a breach in a protective covering of such severity that it cannot be coped with by the usual mechanisms by which we deal with pain or loss. . . . In trauma, we are untimely ripped” (121). See her “Trauma, Recognition, and the Place of Language,” in *Diacritics* 28, no. 4 (winter 1998): 121–133 [Kaplan's note]. In Shakespeare's play *Macbeth* (1606), Macduff is “from his mother's womb/untimely ripped” (5.8.15–16).

identity and hence the dizzy panic or paralysis that followed, and that is described by many treating such neuroses.

Central to this Freudian theory of trauma is a motivated unconscious. In this case, the traumatic event may trigger early traumatic happenings, already perhaps mingled with fantasy, and shape how the current event is experienced. There may, for instance, in the case of battle trauma, be unconscious guilt at surviving an attack; or events in battle may unconsciously recall childhood violence where the victim wished for a sibling's death, etc. The events may in this case fall into the arena of repression and be recoverable in therapy.²

Thus, Freud's ideas about trauma gradually grew in complexity and preciseness from the early *Studies in Hysteria* to *Moses and Monotheism*, the latter work bringing together finally the long nurturing of his early concepts into a theory that anticipates much that clinicians working on combat fatigue and PTSD are now researching. We see Freud, especially in *Beyond the Pleasure Principle*, struggling to develop models of the brain that neuroscientists have only recently been able to produce through new technologies and lab experiments unavailable in Freud's day. Indeed, I have discussed Freud's ideas at such length because they seem to me to still be valuable for the work in this book. The specific complexities of brain circuitry, discussed below in the context of vicarious trauma, Freud could not know, since it has taken intricate modern neuroscience research to determine such circuitry. But he anticipated such circuits without the knowledge new technologies have made possible.

2005

2. Fictional psychotherapy interviews in Pat Barker's novels between a character modeled on William H. Rivers, the British World War I analyst who treated traumatized soldiers including the poet Siegfried Sassoon, demonstrate precisely this intermixture of fantasy with the traumatic battle happening. Her characters suffer PTSD, and again Barker is able to represent the flashbacks and intrusive memories brilliantly.

See, for example, *The Eye in the Door* (Penguin, 1993): 67–76, for an example of such an interview. Following pages provide for examples of PTSD, as does also the earlier novel, *Regeneration* (Viking, 1991), where much of the action takes place in Craiglockhart, the military hospital to which soldiers suffering from war neurosis were sent to be treated by Rivers [Kaplan's note].

HÉLÈNE CIXOUS

b. 1937

"I have nothing to write except what I don't know," says Hélène Cixous in her essay "Coming to Writing" (1977). And in her autobiographical *Rootprints* (1994), she declares: "No sooner do I write . . . it is not true. And yet, I write hanging on to Truth." Like Socrates, Cixous claims to know only that she does not know. Unlike Socrates, she *writes* what she does not know. Transgressing the laws of genre, Cixous's writing defies categorization, but it nevertheless reinvigorates and reexamines many of the conventions of critical essays, novels, plays, and memoirs. In both form

and content, Cixous has attempted to put in practice the freedom from any *givenness* that such radical ignorance (“uncovery”) entails.

Cixous (pronounced “seek-soo”) is known in the English-speaking world primarily as a mid-1970s feminist theorist, a leading practitioner of what is called *écriture féminine*—feminine writing. The word *féminine* has been subject to energetic debates among feminists, nonfeminists, and antifeminists ever since Cixous first published her celebrated manifesto, “The Laugh of the Medusa,” in 1975 in a special issue of *L’Arc* magazine devoted to SIMONE DE BEAUVOIR and the women’s movement (Cixous’s text was translated in a 1976 issue of *Signs: Journal of Women in Culture and Society*, and has been reprinted many times since). Those debates, central to feminist criticism, will be summarized below. But with all the interrogation of the word *féminine*, one sometimes forgets that in France in the late 1960s, it was the word *écriture* (writing) that was the common denominator for a wide range of explosive new practices and publications.

Écriture may be the best name for what distinguishes contemporary “French theory” from “German idealism” or “Anglo-American pragmatism.” It describes everything about writing that can neither be subsumed into an idea nor made to correspond exactly to empirical reality. In the late 1960s, a number of important thinkers in France—JACQUES DERRIDA, JULIA KRISTEVA, and ROLAND BARTHES among them—began to investigate what would happen to Western thought if the fact that it exists mainly in *writing* were taken seriously. Philippe Sollers, editor of the journal *Tel Quel*, proclaimed that a new “science of *écriture*,” concentrating on the “textuality” of all discourses and inflected by Marxism, promised revolutionary change. The year was 1968, a time of social and political revolt on all levels of French society.

Hélène Cixous, a young English professor, was at the very heart of the intellectual and institutional ferment. Born in Oran, Algeria, to a multicultural, diasporic Jewish family that spoke German and French, she was surrounded by Spanish and Arabic, experienced anti-Semitism during the Vichy regime of the early 1940s, and saw French colonialism firsthand from a position neither French nor Arab. When her father died in 1948, her mother (appropriately named Eve) studied to become a midwife, and was often accompanied by her daughter as she performed her tasks. Hélène, married at eighteen to Guy Berger, with whom she had two children and whom she divorced in 1964, moved to Paris during the Algerian War of Independence, in which her husband was conscripted on the French side while her brother fought for the Algerian side. Pursuing her studies in English, a language not spoken in her family, she became *agrégée* (received the advanced teaching degree) in 1959 and started to teach at the University of Bordeaux, while beginning work on a doctoral dissertation on James Joyce.

Joyce’s late style is perhaps the closest thing in the English tradition to *écriture*. As Cixous was writing her dissertation (published in 1969; trans. 1976, *The Exile of James Joyce*), she often discussed Joyce with Derrida, whom she had met in 1962, and with JACQUES LACAN, who was looking for a tutor on Joyce. She went on to teach at the Sorbonne, and then obtained a chair in English literature at the University of Nanterre near Paris, all before having completed her doctorate.

When protests and strikes erupted both within and outside the university in May 1968, Cixous was charged by the minister of education to head a committee to create an experimental branch of the University of Paris (so-called Paris VIII) in the outlying Bois de Vincennes. Many of the country’s most innovative writers and thinkers in literature and philosophy came to teach there, including TZVETAN TODOROV, MICHEL FOUCAULT, and GILLES DELEUZE. The first department of psychoanalysis in France was also established there (a department in which the psychoanalytic feminist Luce Irigaray taught until 1974, when she was expelled by the Lacanians for her book *Speculum of the Other Woman*). With Gérard Genette and Todorov, Cixous created the influential journal *Poétique*. At the University of Paris

VIII, first at Vincennes and then at St. Denis, she went on to create and run the only doctoral program in France in *Études Féminines* (Women's Studies), a program that was abolished in the late 1970s by the Barre government and reestablished in the 1980s by the Socialists. But in 1968, she was in the process of completing her *doctorat d'état* in English. She became the youngest "doctor" in France.

So what was this *écriture* that was so much a part of the 1968 moment, and how did it lead to *écriture féminine*?

Ever since Socrates (who did not write) was described in the works of PLATO (who did), writing had been considered a secondary notation of a primary activity, speech. The theory of *écriture*—developed especially in Derrida's *Of Grammatology* (1967) and *Writing and Difference* (1967), where it has come to be known as deconstruction—did not simply reverse the hierarchy between speech and writing; it redefined the terms of that hierarchy. Whereas "speech" had been made to stand for immediacy, presence, truth, Logos (i.e., the "Word"), God, and Oneness (and "writing" had stood for deferral, difference, absence, lack, lawlessness, multiplicity, and heterogeneity), Derrida argued that speech itself had never actually manifested Truth directly; instead, like writing, it was structured through the difference, first named by FERDINAND DE SAUSSURE (1857–1913), between the signifier (the word) and the signified (the meaning). In any act of language, there was a lag, a discrepancy, between a sign and what it meant. To the extent that there was meaning at all, the two things could not be the same. Thus, to the extent that philosophy existed in language (spoken or written), it was structured like "writing." No actual language could achieve the simultaneity of signifier and signified, an idealization that was a consequence of the way in which Platonism and Christianity characterized the divine.

Western philosophy after Plato was centered around the impossible but irresistible search for a fundamental Truth or Logos. Derrida calls this search "logocentrism." Brought to clearest conceptualization in the philosophical work of G. W. F. HEGEL in the early nineteenth century, logocentric structures were organized through a series of binary oppositions (mind/matter, light/darkness, presence/absence, nature/culture, good/evil, etc.), the first term of each being desirable and the other shunned. KARL MARX had already claimed to turn Hegel on his head by reversing the relations between materiality and spirituality. But language was neither exactly material nor exactly spiritual. Theorists of *écriture* thus had to find new ways of making readable everything that had been repressed, obscured, or unacknowledged in Western thought.

In the course of that project, many male writers made use of figures of femininity to bring out what had been marginalized from traditional philosophical discourse. These *figures*—veils, shadows, enigmas, figurative language itself—represented resistance to the One, the Light, the Truth, and, implicitly, the idealization of the Male itself. In a way, therefore, we could say that *all écriture* was already *écriture féminine*—it was just being theorized mainly by men.

In part, Cixous aimed at rendering literal the figures of femininity in the theory of *écriture* and exploring the consequences of that literalization. She did not simply privilege the "female" half of an existing binary opposition between "male" and "female"; like other theorists of *écriture*, she questioned the very adequacy of either/or logics to name the complexity of cultural realities. But while Derrida did so by demystifying the "metaphysics of presence" involved in the notion of "voice," Cixous did so by describing the physical (as opposed to metaphysical) sensations of a woman who is speaking for the first time in public. Structuralism had analyzed the fundamental importance of binary oppositions; it now seemed urgent for poststructuralists to analyze all the things that those oppositions had obscured—and not only to analyze them but also to perform them, to transform them.

The real scandal of Cixous's work lay in her insistence on its two incompatible logics. On the one hand, she claimed that *écriture féminine* was characterized by

the explicitly female body parts that had been repressed by traditional discourse and were being expressed by the woman writer: "There is always within her at least a little of that good mother's milk. She writes in white ink." Yet on the other hand, she claimed that both men and women could write *écriture féminine*. How can both claims be true at the same time?

The binary logic that structures the opposition between "male" and "female" is set up as a relation not between "A" and "B" but between "A" and "not-A." SIGMUND FREUD's geometrical concept of castration, refined but not substantially changed by Lacan, defines "woman" not in terms of what she *has* but in terms of what she *lacks*—that is, a penis. "Is the fact that Logocentrism subjects thought—all concepts, codes, and values—to a binary system, related to 'the' couple, man/woman?" Cixous asks in "Sorties," published the same year as "The Laugh of the Medusa." Yes, she answers, and the consequences for the structure of *all* thought, not just thought having to do with sexual difference, are far-reaching. One half of the opposition is essentially destroyed for the other half to make "sense." If this is so, then *both* sides of an opposition are defined in terms of *one* of its elements. Thus anyone simply trying to un-repress the obscured term—here, the feminine—is likely to reproduce the very structures he or she is resisting. This is why Cixous declares, "I am not a feminist." Feminism, for her, participates in the same logic of opposition as traditional logocentrism or its companion, phallogentrism (the description of sexual difference as a difference between *having* and *lacking* the phallus).

Nonetheless, she acknowledges, the female body *has* been repressed. Indeed, *any* transgressive, desiring body—and perhaps *the body itself*—has been repressed. But maybe there is no "body itself," only bodies that have had power and bodies that haven't. Granted, power and authority and law have presupposed the male body—but on the condition that no actual body be represented at all. Thus, both men and women would have everything left to say about the body, and that "everything" would no longer fall neatly into any given category. By writing *as if* the female body could be asserted, Cixous's *écriture féminine* frees it from invisibility and, at the same time, does *not* make it into a new model for the universal human being. The new opposition is not between male and female, but between a logic of the One and a logic of heterogeneity and multiplicity.

The incompatibility between *écriture féminine* as assertion of the female body and *écriture féminine* as capable of being written by men creates an impossible logic that is *écriture féminine*. Such a writing practice is bound to seem outrageous almost all the time. Responding mainly to "The Laugh of the Medusa," many Anglo-American feminists have accused Cixous of promoting "essentialism"—that is, of equating female writing with an idealized and unhistoricized "femininity." And by making such claims as "women are multiple," "women are open to the other," "women write in white ink," she does seem to be affirming some sort of "essence" of woman. It could be argued that these claims are mythic, performative, and critical rather than descriptive. In her puns (*voler* as "steal" and "fly," *dépenser* as "spend" and "unthink," and *blanc* as both "white" and "blank"), she works on and in language, not in the empirical world. "Essentialism" or "anatomical destiny" is in one sense exactly what Cixous is arguing against.

"The Laugh of the Medusa" Keywords: The Body, Feminist Theory, Gender, Identity, Language, Psychoanalysis, Representation, Sexuality, Subjectivity

The Laugh of the Medusa¹

I shall speak about women's writing: about *what it will do*. Woman must write her self: must write about women and bring women to writing, from which they have been driven away as violently as from their bodies—for the same reasons, by the same law, with the same fatal goal. Woman must put herself into the text—as into the world and into history—by her own movement.

The future must no longer be determined by the past. I do not deny that the effects of the past are still with us. But I refuse to strengthen them by repeating them, to confer upon them an irremovability the equivalent of destiny, to confuse the biological and the cultural. Anticipation is imperative.

Since these reflections are taking shape in an area just on the point of being discovered, they necessarily bear the mark of our time—a time during which the new breaks away from the old, and, more precisely, the (feminine) new from the old (*la nouvelle de l'ancien*).² Thus, as there are no grounds for establishing a discourse, but rather an arid millennial ground to break, what I say has at least two sides and two aims: to break up, to destroy; and to foresee the unforeseeable, to project.

I write this as a woman, toward women. When I say “woman,” I’m speaking of woman in her inevitable struggle against conventional man; and of a universal woman subject who must bring women to their senses and to their meaning in history. But first it must be said that in spite of the enormity of the repression that has kept them in the “dark”—that dark which people have been trying to make them accept as their attribute—there is, at this time, no general woman, no one typical woman. What they have *in common* I will say. But what strikes me is the infinite richness of their individual constitutions: you can’t talk about a female sexuality, uniform, homogeneous, classifiable into codes—any more than you can talk about one unconscious resembling another. Women’s imaginary is inexhaustible, like music, painting, writing: their stream of phantasms is incredible.

I have been amazed more than once by a description a woman gave me of a world all her own which she had been secretly haunting since early childhood. A world of searching, the elaboration of a knowledge, on the basis of a systematic experimentation with the bodily functions, a passionate and precise interrogation of her erotogeneity. This practice, extraordinarily rich and inventive, in particular as concerns masturbation, is prolonged or accompanied by a production of forms, a veritable aesthetic activity, each stage of rapture inscribing a resonant vision, a composition, something beautiful. Beauty will no longer be forbidden.

I wished that that woman would write and proclaim this unique empire so that other women, other unacknowledged sovereigns, might exclaim: I, too, overflow; my desires have invented new desires, my body knows unheard-of songs. Time and again I, too, have felt so full of luminous torments that I could burst—burst with forms much more beautiful than those

1. Translated by Keith Cohen and Paula Cohen, who occasionally include the original French in parentheses.

2. In French *la nouvelle* (the new, the news) is grammatically feminine, while *l'ancien* (the old, the former) is masculine.

which are put up in frames and sold for a stinking fortune. And I, too, said nothing, showed nothing; I didn't open my mouth, I didn't repaint my half of the world. I was ashamed. I was afraid, and I swallowed my shame and my fear. I said to myself: You are mad! What's the meaning of these waves, these floods, these outbursts? Where is the ebullient, infinite woman who, immersed as she was in her naiveté, kept in the dark about herself, led into self-disdain by the great arm of parental-conjugal phallogocentrism,³ hasn't been ashamed of her strength? Who, surprised and horrified by the fantastic tumult of her drives (for she was made to believe that a well-adjusted normal woman has a . . . divine composure), hasn't accused herself of being a monster? Who, feeling a funny desire stirring inside her (to sing, to write, to dare to speak, in short, to bring out something new), hasn't thought she was sick? Well, her shameful sickness is that she resists death, that she makes trouble.

And why don't you write? Write! Writing is for you, you are for you; your body is yours, take it. I know why you haven't written. (And why I didn't write before the age of twenty-seven.) Because writing is at once too high, too great for you, it's reserved for the great—that is, for “great men”; and it's “silly.” Besides, you've written a little, but in secret. And it wasn't good, because it was in secret, and because you punished yourself for writing, because you didn't go all the way; or because you wrote, irresistibly, as when we would masturbate in secret, not to go further, but to attenuate the tension a bit, just enough to take the edge off. And then as soon as we come, we go and make ourselves feel guilty—so as to be forgiven; or to forget, to bury it until the next time.

Write, let no one hold you back, let nothing stop you: not man; not the imbecilic capitalist machinery, in which publishing houses are the crafty, obsequious relayers of imperatives handed down by an economy that works against us and off our backs; and not *yourself*. Smug-faced readers, managing editors, and big bosses don't like the true texts of women—female-sexed texts. That kind scares them.

I write woman: woman must write woman. And man, man. So only an oblique consideration will be found here of man; it's up to him to say where his masculinity and femininity are at: this will concern us once men have opened their eyes and seen themselves clearly.⁴

Now women return from afar, from always: from “without,” from the heath where witches are kept alive; from below, from beyond “culture”; from their

3. The psychoanalytic system in which sexual difference is defined as the difference between having and lacking the phallus; the term has come to refer to the patriarchal cultural system as a whole insofar as that system privileges the phallus as the symbol and source of power. It is closely related to *logocentrism*, a term coined by the French philosopher JACQUES DERRIDA (1930–2004); the two are sometimes combined as *phallogocentrism*.

4. Men still have everything to say about their sexuality, and everything to write. For what they have said so far, for the most part, stems from the opposition activity/passivity, from the power relation between a fantasized obligatory virility meant to invade, to colonize, and the consequential phantasm of woman as a “dark continent” to penetrate and to “pacify.” (We know what “pacify”

means in terms of scotomizing the other and misrecognizing the self.) Conquering her, they've made haste to depart from her borders, to get out of sight, out of body. The way man has of getting out of himself and into her whom he takes not for the other but for his own, deprives him, he knows, of his own bodily territory. One can understand how man, confusing himself with his penis and rushing in for the attack, might feel resentment and fear of being “taken” by the woman, of being lost in her, absorbed, or alone [Cixous's note]. “Dark continent”: a metaphor used by SIGMUND FREUD in his essay “The Question of Lay Analysis” (1926) to describe woman as unexplored and mysterious. “Scotomizing”: forming a mental blind spot about (a psychoanalytic term).

childhood which men have been trying desperately to make them forget, condemning it to "eternal rest." The little girls and their "ill-mannered" bodies immured, well-preserved, intact unto themselves, in the mirror. Frigidified. But are they ever seething underneath! What an effort it takes—there's no end to it—for the sex cops to bar their threatening return. Such a display of forces on both sides that the struggle has for centuries been immobilized in the trembling equilibrium of a deadlock.

Here they are, returning, arriving over and again, because the unconscious is impregnable. They have wandered around in circles, confined to the narrow room in which they've been given a deadly brainwashing. You can incarcerate them, slow them down, get away with the old Apartheid⁵ routine, but for a time only. As soon as they begin to speak, at the same time as they're taught their name, they can be taught that their territory is black: because you are Africa, you are black. Your continent is dark. Dark is dangerous. You can't see anything in the dark, you're afraid. Don't move, you might fall. Most of all, don't go into the forest. And so we have internalized this horror of the dark.

Men have committed the greatest crime against women. Insidiously, violently, they have led them to hate women, to be their own enemies, to mobilize their immense strength against themselves, to be the executants of their virile needs. They have made for women an antinarcissism! A narcissism which loves itself only to be loved for what women haven't got! They have constructed the infamous logic of antilove.

We the precocious, we the repressed of culture, our lovely mouths gagged with pollen, our wind knocked out of us, we the labyrinths, the ladders, the trampled spaces, the bevvies—we are black and we are beautiful.⁶

We're stormy, and that which is ours breaks loose from us without our fearing any debilitation. Our glances, our smiles, are spent; laughs exude from all our mouths; our blood flows and we extend ourselves without ever reaching an end; we never hold back our thoughts, our signs, our writing; and we're not afraid of lacking.⁷

What happiness for us who are omitted, brushed aside at the scene of inheritances; we inspire ourselves and we expire without running out of breath, we are everywhere!

From now on, who, if we say so, can say no to us? We've come back from always.

It is time to liberate the New Woman from the Old by coming to know her—by loving her for getting by, for getting beyond the Old without delay, by going out ahead of what the New Woman will be, as an arrow quits the bow with a movement that gathers and separates the vibrations musically, in order to be more than her self.

I say that we must, for, with a few rare exceptions, there has not yet been any writing that inscribes femininity; exceptions so rare, in fact, that, after

5. Apartness (Afrikaans), the former official policy of racial segregation and discrimination in South Africa (1948–93).

6. A reference to the Song of Solomon (1.5) and, perhaps, to a slogan of the U.S. black power movement of the 1960s.

7. A reference to the reinterpretation of Freud's

theory of sexual difference by the French psychoanalyst JACQUES LACAN (1901–1981). For Freud, men have a penis, and women don't. For Lacan, men and women are both structured through a fundamental "lack," but that lack is first perceived on the body of the mother.

plowing through literature across languages, cultures, and ages,⁸ one can only be startled at this vain scouting mission. It is well known that the number of women writers (while having increased very slightly from the nineteenth century on) has always been ridiculously small. This is a useless and deceptive fact unless from their species of female writers we do not first deduct the immense majority whose workmanship is in no way different from male writing, and which either obscures women or reproduces the classic representations of women (as sensitive—intuitive—dreamy, etc.).⁹

Let me insert here a parenthetical remark. I mean it when I speak of male writing. I maintain unequivocally that there is such a thing as *marked* writing; that, until now, far more extensively and repressively than is ever suspected or admitted, writing has been run by a libidinal and cultural—hence political, typically masculine—economy;¹ that this is a locus where the repression of women has been perpetuated, over and over, more or less consciously, and in a manner that's frightening since it's often hidden or adorned with the mystifying charms of fiction; that this locus has grossly exaggerated all the signs of sexual opposition (and not sexual difference), where woman has never *her* turn to speak—this being all the more serious and unpardonable in that writing is precisely *the very possibility of change*, the space that can serve as a springboard for subversive thought, the precursory movement of a transformation of social and cultural structures.

Nearly the entire history of writing is confounded with the history of reason, of which it is at once the effect, the support, and one of the privileged alibis. It has been one with the phallogentric tradition. It is indeed that same self-admiring, self-stimulating, self-congratulatory phallogentrism.

With some exceptions, for there have been failures—and if it weren't for them, I wouldn't be writing (I-woman, escapee)—in that enormous machine that has been operating and turning out its "truth" for centuries. There have been poets who would go to any lengths to slip something by at odds with tradition—men capable of loving love and hence capable of loving others and of wanting them, of imagining the woman who would hold out against oppression and constitute herself as a superb, equal, hence "impossible" subject, untenable in a real social framework. Such a woman the poet could desire only by breaking the codes that negate her. Her appearance would necessarily bring on, if not revolution—for the bastion was supposed to be immutable—at least harrowing explosions. At times it is in the fissure caused by an earthquake, through that radical mutation of things brought on by a material up-heaval when every structure is for a moment thrown off

8. I am speaking here only of the place "reserved" for women by the Western world [Cixous's note].

9. Which works, then, might be called feminine? I'll just point out some examples: one would have to give them full readings to bring out what is pervasively feminine in their significance. Which I shall do elsewhere. In France (have you noted our infinite poverty in this field?—the Anglo-Saxon countries have shown resources of distinctly greater consequence), leafing through what's come out of the 20th century—and it's not much—the only inscriptions of femininity that I have seen were by Colette, Marguerite Duras, . . .

and Jean Genet [Cixous's note]. Genet (1910–1986), male French novelist and playwright. Sidonie Gabrielle Colette (1873–1954), French novelist. Duras (pseudonym of Marguerite Donnadieu, 1914–1996), French novelist, screenwriter, playwright, and film director.

1. The "libidinal economy" is the system of exchanges having to do with sexual desire (libido), which Freud characterized as inherently masculine to the extent that it was active, not passive; in this view, only one desire can function at a time.

balance and an ephemeral wildness sweeps order away, that the poet slips something by, for a brief span, of woman. Thus did Kleist² expend himself in his yearning for the existence of sister-lovers, maternal daughters, mother-sisters, who never hung their heads in shame. Once the palace of magistrates is restored, it's time to pay: immediate bloody death to the uncontrollable elements.

But only the poets—not the novelists, allies of representationalism. Because poetry involves gaining strength through the unconscious and because the unconscious, that other limitless country, is the place where the repressed manage to survive: women, or as Hoffmann³ would say, fairies.

She must write her self, because this is the invention of a *new insurgent* writing which, when the moment of her liberation has come, will allow her to carry out the indispensable ruptures and transformations in her history, first at two levels that cannot be separated.

(a) Individually. By writing her self, woman will return to the body which has been more than confiscated from her, which has been turned into the uncanny stranger on display—the ailing or dead figure, which so often turns out to be the nasty companion, the cause and location of inhibitions. Censor the body and you censor breath and speech at the same time.

Write your self. Your body must be heard. Only then will the immense resources of the unconscious spring forth. Our naphtha⁴ will spread, throughout the world, without dollars—black or gold—nonassessed values that will change the rules of the old game.

To write. An act which will not only “realize” the decensored relation of woman to her sexuality, to her womanly being, giving her access to her native strength; it will give her back her goods, her pleasures, her organs, her immense bodily territories which have been kept under seal; it will tear her away from the superegoized structure⁵ in which she has always occupied the place reserved for the guilty (guilty of everything, guilty at every turn: for having desires, for not having any; for being frigid, for being “too hot”; for not being both at once; for being too motherly and not enough; for having children and for not having any; for nursing and for not nursing . . .)—tear her away by means of this research, this job of analysis and illumination, this emancipation of the marvelous text of her self that she must urgently learn to speak. A woman without a body, dumb, blind, can't possibly be a good fighter. She is reduced to being the servant of the militant male, his shadow. We must kill the false woman who is preventing the live one from breathing. Inscribe the breath of the whole woman.

(b) An act that will also be marked by woman's *seizing* the occasion to *speak*, hence her shattering entry into history, which has always been based *on her suppression*. To write and thus to forge for herself the antilogos weapon. To become *at will* the taker and initiator, for her own right, in every symbolic system, in every political process.

2. Heinrich von Kleist (1777–1811), German dramatist and poet.

3. E. T. A. Hoffmann (1776–1822), German writer known especially for his fantastic tales (Freud discusses “The Sandman” in his influential 1919 essay “The ‘Uncanny’”; see above).

4. A volatile petroleum product; the term was

used by alchemists to refer to liquids with low boiling points.

5. The superego, according to Freud, is the part of the psyche that develops through the incorporation of the moral standards of the child's parents and community.

It is time for women to start scoring their feats in written and oral language.

Every woman has known the torment of getting up to speak. Her heart racing, at times entirely lost for words, ground and language slipping away—that's how daring a feat, how great a transgression it is for a woman to speak—even just open her mouth—in public. A double distress, for even if she transgresses, her words fall almost always upon the deaf male ear, which hears in language only that which speaks in the masculine.

It is by writing, from and toward women, and by taking up the challenge of speech which has been governed by the phallus, that women will confirm women in a place other than that which is reserved in and by the symbolic,⁶ that is, in a place other than silence. Women should break out of the snare of silence. They shouldn't be conned into accepting a domain which is the margin or the harem.

Listen to a woman speak at a public gathering (if she hasn't painfully lost her wind). She doesn't "speak," she throws her trembling body forward; she lets go of herself, she flies; all of her passes into her voice, and it's with her body that she vitally supports the "logic" of her speech. Her flesh speaks true. She lays herself bare. In fact, she physically materializes what she's thinking; she signifies it with her body. In a certain way she *inscribes* what she's saying, because she doesn't deny her drives the intractable and impassioned part they have in speaking. Her speech, even when "theoretical" or political, is never simple or linear or "objectified," generalized: she draws her story into history.

There is not that scission, that division made by the common man between the logic of oral speech and the logic of the text, bound as he is by his antiquated relation—servile, calculating—to mastery. From which proceeds the niggardly lip service which engages only the tiniest part of the body, plus the mask.

In women's speech, as in their writing, that element which never stops resonating, which, once we've been permeated by it, profoundly and imperceptibly touched by it, retains the power of moving us—that element is the song: first music from the first voice of love which is alive in every woman. Why this privileged relationship with the voice? Because no woman stockpiles as many defenses for countering the drives as does a man. You don't build walls around yourself, you don't forego pleasure as "wisely" as he. Even if phallic mystification has generally contaminated good relationships, a woman is never far from "mother" (I mean outside her role functions: the "mother" as nonname and as source of goods). There is always within her at least a little of that good mother's milk. She writes in white ink.

Woman for women.—There always remains in woman that force which produces/is produced by the other—in particular, the other woman. In her, matrix, cradler; herself giver as her mother and child; she is her own sister-daughter. You might object, "What about she who is the hysterical offspring of a bad mother?" Everything will be changed once woman gives woman to the other woman. There is hidden and always ready in woman the source; the

6. A reference to Lacan's theory of the psyche. "The Symbolic" is the dimension of language, law, and the father; in contrast, "the Imaginary" is

modeled on the mother-child dyad, or on the relation between an infant and its mirror image.

locus for the other. The mother, too, is a metaphor. It is necessary and sufficient that the best of herself be given to woman by another woman for her to be able to love herself and return in love the body that was "born" to her. Touch me, caress me, you the living no-name, give me my self as myself. The relation to the "mother," in terms of intense pleasure and violence, is curtailed no more than the relation to childhood (the child that she was, that she is, that she makes, remakes, undoes, there at the point where, the same, she others herself). Text: my body—shot through with streams of song; I don't mean the overbearing, clutchy "mother" but, rather, what touches you, the equivocal that affects you, fills your breast with an urge to come to language and launches your force; the rhythm that laughs you; the intimate recipient who makes all metaphors possible and desirable; body (body? bodies?), no more describable than god, the soul, or the Other; that part of you that leaves a space between yourself and urges you to inscribe in language your woman's style. In women there is always more or less of the mother who makes everything all right, who nourishes, and who stands up against separation; a force that will not be cut off but will knock the wind out of the codes. We will rethink womankind beginning with every form and every period of her body. The Americans remind us, "We are all Lesbians";⁷ that is, don't denigrate woman, don't make of her what men have made of you.

Because the "economy" of her drives is prodigious, she cannot fail, in seizing the occasion to speak, to transform directly and indirectly *all* systems of exchange based on masculine thrift. Her libido will produce far more radical effects of political and social change than some might like to think.

Because she arrives, vibrant, over and again, we are at the beginning of a new history, or rather of a process of becoming in which several histories intersect with one another. As subject for history, woman always occurs simultaneously in several places. Woman un-thinks⁸ the unifying, regulating history that homogenizes and channels forces, herding contradictions into a single battlefield. In woman, personal history blends together with the history of all women, as well as national and world history. As a militant, she is an integral part of all liberations. She must be farsighted, not limited to a blow-by-blow interaction. She foresees that her liberation will do more than modify power relations or toss the ball over to the other camp; she will bring about a mutation in human relations, in thought, in all praxis: hers is not simply a class struggle, which she carries forward into a much vaster movement. Not that in order to be a woman-in-struggle(s) you have to leave the class struggle or repudiate it; but you have to split it open, spread it out, push it forward, fill it with the fundamental struggle so as to prevent the class struggle, or any other struggle for the liberation of a class or people, from operating as a form of repression, pretext for postponing the inevitable, the staggering alteration in power relations and in the production of individualities. This alteration is already upon us—in the United States, for example, where millions of night crawlers are in the process of undermining the family and disintegrating the whole of American sociality.

7. Compare the American feminist slogan attributed to Ti-Grace Atkinson (b. 1938), "Feminism is the theory, lesbianism is the practice"; see also the opening of the Radicalesbians' manifesto, "The Woman-Identified Woman" (1970): "A lesbian is

the rage of all women condensed to the point of explosion."

8. "*Dé-pense*," a neologism formed on the verb *penser* [to think], hence "unthinks," but also "spends" (from *dépenser*) [translators' note].

The new history is coming; it's not a dream, though it does extend beyond men's imagination, and for good reason. It's going to deprive them of their conceptual orthopedics,⁹ beginning with the destruction of their enticement machine.

It is impossible to *define* a feminine practice of writing, and this is an impossibility that will remain, for this practice can never be theorized, enclosed, coded—which doesn't mean that it doesn't exist. But it will always surpass the discourse that regulates the phallogentric system; it does and will take place in areas other than those subordinated to philosophico-theoretical domination. It will be conceived of only by subjects who are breakers of automatisms, by peripheral figures that no authority can ever subjugate.

Hence the necessity to affirm the flourishes of this writing, to give form to its movement, its near and distant byways. Bear in mind to begin with (1) that sexual opposition, which has always worked for man's profit to the point of reducing writing, too, to his laws, is only a historico-cultural limit. There is, there will be more and more rapidly pervasive now, a fiction that produces irreducible effects of femininity. (2) That it is through ignorance that most readers, critics, and writers of both sexes hesitate to admit or deny outright the possibility or the pertinence of a distinction between feminine and masculine writing. It will usually be said, thus disposing of sexual difference: either that all writing, to the extent that it materializes, is feminine; or, inversely—but it comes to the same thing—that the act of writing is equivalent to masculine masturbation (and so the woman who writes cuts herself out a paper penis); or that writing is bisexual, hence neuter, which again does away with differentiation. To admit that writing is precisely working (in) the in-between, inspecting the process of the same and of the other without which nothing can live, undoing the work of death—to admit this is first to want the two, as well as both, the ensemble of the one and the other, not fixed in sequences of struggle and expulsion or some other form of death but infinitely dynamized by an incessant process of exchange from one subject to another. A process of different subjects knowing one another and beginning one another anew only from the living boundaries of the other: a multiple and inexhaustible course with millions of encounters and transformations of the same into the other and into the in-between, from which woman takes her forms (and man, in his turn; but that's his other history).

In saying "bisexual, hence neuter," I am referring to the classic conception of bisexuality, which, squashed under the emblem of castration fear¹ and along with the fantasy of a "total" being (though composed of two halves), would do away with the difference experienced as an operation incurring loss, as the mark of dreaded sectility.

To this self-effacing, merger-type bisexuality, which would conjure away castration (the writer who puts up his sign: "bisexual written here, come and see," when the odds are good that it's neither one nor the other), I oppose the *other bisexuality* on which every subject not enclosed in the false

9. An allusion to Lacan's term *orthopedic*, which refers to any training process that "corrects" the infant's imagination.

1. The fear that Freud attributes to every male child imagining the punishment for desiring his

mother; more generally, the fear of losing something, of not being "whole," that leads men to cling to masculinity for fear of becoming "castrated" like women.

theater of phallogocentric representationalism has founded his/her erotic universe. Bisexuality; that is, each one's location in self (*répérage en soi*) of the presence—variously manifest and insistent according to each person, male or female—of both sexes, nonexclusion either of the difference or of one sex, and, from this “self-permission,” multiplication of the effects of the inscription of desire, over all parts of my body and the other body.

Now it happens that at present, for historico-cultural reasons, it is women who are opening up to and benefiting from this vatic bisexuality which doesn't annul differences but stirs them up, pursues them, increases their number. In a certain way, “woman is bisexual”;² man—it's a secret to no one—being poised to keep glorious phallic monosexuality in view. By virtue of affirming the primacy of the phallus and of bringing it into play, phallogocentric ideology has claimed more than one victim. As a woman, I've been clouded over by the great shadow of the scepter and been told: idolize it, that which you cannot brandish. But at the same time, man has been handed that grotesque and scarcely enviable destiny (just imagine) of being reduced to a single idol with clay balls. And consumed, as Freud and his followers note, by a fear of being a woman! For, if psychoanalysis was constituted from woman, to repress femininity (and not so successful a repression at that—men have made it clear), its account of masculine sexuality is now hardly refutable; as with all the “human” sciences, it reproduces the masculine view, of which it is one of the effects.

Here we encounter the inevitable man-with-rock, standing erect in his old Freudian realm, in the way that, to take the figure back to the point where linguistics is conceptualizing it “anew,” Lacan preserves it in the sanctuary of the phallos (ϕ)³ “sheltered” from *castration's lack*! Their “symbolic” exists, it holds power—we, the sowers of disorder, know it only too well. But we are in no way obliged to deposit our lives in their banks of lack, to consider the constitution of the subject in terms of a drama manglingly restaged, to reinstate again and again the religion of the father. Because we don't want that. We don't fawn around the supreme hole. We have no womanly reason to pledge allegiance to the negative. The feminine (as the poets suspected) affirms: “. . . And yes,” says Molly, carrying *Ulysses* off beyond any book and toward the new writing; “I said yes, I will Yes.”⁴

The Dark Continent is neither dark nor unexplorable.⁵—It is still unexplored only because we've been made to believe that it was too dark to be explorable. And because they want to make us believe that what interests us is the white continent, with its monuments to Lack. And we believed. They riveted us between two horrifying myths: between the Medusa⁶ and the

2. Freud claimed that because the mother was the first object of desire for both sexes, women (who had to change their object of desire) were more inherently bisexual than men.

3. The symbol (the Greek letter phi) representing the phallic function, in Lacanian terminology.

4. The final words of James Joyce's *Ulysses* (1922), spoken by Molly Bloom.

5. Qualities suggested by Freud, who also saw female sexuality (the “dark continent”) as a “riddle” (see “Femininity,” 1932).

6. In Greek mythology, the most famous of the monstrous Gorgon sisters; her head was covered

with snakes, and anyone who looked at her was turned to stone (Perseus looked at her reflection in his shield to decapitate her). Freud, in his short essay “Medusa's Head” (1922), associates Medusa with castration (= decapitation) and analyzes the ambiguity of the image: the snakes on her head are a denial of the castration she represents, while the notion of being turned to stone represents both castration and arousal. Cixous may also be referring to Lacan as Perseus, capable of looking at things only in a mirror (see above his famous essay “The Mirror Stage,” 1949).

abyss. That would be enough to set half the world laughing, except that it's still going on. For the phallogocentric sublation⁷ is with us, and it's militant, regenerating the old patterns, anchored in the dogma of castration. They haven't changed a thing: they've theorized their desire for reality! Let the priests tremble, we're going to show them our sexts!¹⁸

Too bad for them if they fall apart upon discovering that women aren't men, or that the mother doesn't have one. But isn't this fear convenient for them? Wouldn't the worst be, isn't the worst, in truth, that women aren't castrated, that they have only to stop listening to the Sirens⁹ (for the Sirens were men) for history to change its meaning? You only have to look at the Medusa straight on to see her. And she's not deadly. She's beautiful and she's laughing.¹

Men say that there are two unrepresentable things: death and the feminine sex. That's because they need femininity to be associated with death; it's the jitters that gives them a hard-on! for themselves! They need to be afraid of us. Look at the trembling Perseuses moving backward toward us, clad in apotropaes.² What lovely backs! Not another minute to lose. Let's get out of here.

Let's hurry: the continent is not impenetrably dark. I've been there often. I was overjoyed one day to run into Jean Genet. It was in *Pompes funèbres*.³ He had come there led by his Jean. There are some men (all too few) who aren't afraid of femininity.

Almost everything is yet to be written by women about femininity: about their sexuality, that is, its infinite and mobile complexity, about their eroticization, sudden turn-ons of a certain minuscule-immense area of their bodies; not about destiny, but about the adventure of such and such a drive, about trips, crossings, trudges, abrupt and gradual awakenings, discoveries of a zone at one time timorous and soon to be forthright. A woman's body, with its thousand and one thresholds of ardor—once, by smashing yokes and censors, she lets it articulate the profusion of meanings that run through it in every direction—will make the old single-grooved mother tongue reverberate with more than one language.

We've been turned away from our bodies, shamefully taught to ignore them, to strike them with that stupid sexual modesty; we've been made victims of the old fool's game: each one will love the other sex. I'll give you your body and you'll give me mine. But who are the men who give women the body that women blindly yield to them? Why so few texts? Because so few women have as yet won back their body. Women must write through their bodies, they must invent the impregnable language that will wreck partitions, classes, and rhetorics, regulations and codes, they must submerge, cut through, get beyond the ultimate reserve-discourse, including the one that laughs at the very idea of pronouncing the word "silence," the

7. The standard English translation of *Aufhebung*, a term used by the German philosopher GEORG WILHELM FRIEDRICH HEGEL (1770–1831) to refer to the dialectical progression from a contradiction to a higher synthesis. Here, "woman" has been sublated into the general category "man," and "man," at first *opposed* to "woman," has risen up to become the generic name for all of humankind.

8. "Showing our sexts" represents a new articulation of sex and text (as does *écriture féminine*), as women who no longer repress their sexuality

can talk about everything.

9. In Greek mythology, nymphs with a woman's head and a bird's body who lived on an island surrounded by rocks; the Sirens' enchanting song lured sailors to their death.

1. In redescribing Medusa as beautiful rather than horrible, Cixous is revising the notion of femininity itself.

2. Charms with the power to turn away evil.

3. Jean Genet, *Pompes funèbres* [Funeral Rites] (Paris, 1948), p. 185 [Cixous's note].

one that, aiming for the impossible, stops short before the word “impossible” and writes it as “the end.”

Such is the strength of women that, sweeping away syntax, breaking that famous thread (just a tiny little thread, they say) which acts for men as a surrogate umbilical cord, assuring them—otherwise they couldn’t come—that the old lady is always right behind them,⁴ watching them make phallus, women will go right up to the impossible.

When the “repressed” of their culture and their society returns, it’s an explosive, *utterly* destructive, staggering return, with a force never yet unleashed and equal to the most forbidding of suppressions. For when the Phallic period comes to an end, women will have been either annihilated or borne up to the highest and most violent incandescence. Muffled throughout their history, they have lived in dreams, in bodies (though muted), in silences, in aphonic⁵ revolts.

And with such force in their fragility; a fragility, a vulnerability, equal to their incomparable intensity. Fortunately, they haven’t sublimated; they’ve saved their skin, their energy. They haven’t worked at liquidating the impasse of lives without futures. They have furiously inhabited these sumptuous bodies: admirable hysterics who made Freud succumb to many voluptuous moments impossible to confess, bombarding his Mosaic statue⁶ with their carnal and passionate body words, haunting him with their inaudible and thundering denunciations, dazzling, more than naked underneath the seven veils of modesty. Those who, with a single word of the body, have inscribed the vertiginous immensity of a history which is sprung like an arrow from the whole history of men and from biblico-capitalist society, are the women, the supplicants of yesterday, who come as forebears of the new women, after whom no intersubjective relation will ever be the same. You, Dora, you the indomitable, the poetic body, you are the true “mistress” of the Signifier.⁷ Before long your efficacy will be seen at work when your speech is no longer suppressed, its point turned in against your breast, but written out over against the other.

In body.—More so than men who are coaxed toward social success, toward sublimation, women are body. More body, hence more writing. For a long time it has been in body that women have responded to persecution, to the familial-conjugal enterprise of domestication, to the repeated attempts at castrating them. Those who have turned their tongues 10,000 times seven times before not speaking are either dead from it or more familiar with their tongues and their mouths than anyone else. Now, I-woman am going to blow

4. An allusion to two Greek myths: the story of Theseus, led out of the Minotaur’s labyrinth by Ariadne’s thread, and the story of the poet Orpheus, who won the release of his dead wife from the underworld on the condition (which he does not keep) that he not turn around and look at her as they ascended.

5. Speechless; an allusion to Freud’s patient Dora, one of whose symptoms was aphonia (loss of voice); she is often considered an exemplary case of the misunderstood hysterical woman (Dora left Freud before the end of the analysis).

6. Michelangelo’s statue of Moses (ca. 1515), which fascinated Freud, who here stands as the patriarchal Lawgiver himself.

7. The capitalization of the term, coined by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913) to explain the functioning of signs (divided into *signifier*, the form a sign takes, and *signified*, the concept it represents), indicates that Cixous is here referring specifically to Lacan’s designation of the phallus as privileged Signifier within the field of sexuality.

up the Law: an explosion henceforth possible and ineluctable; let it be done, right now, *in* language.

Let us not be trapped by an analysis still encumbered with the old automatisms. It's not to be feared that language conceals an invincible adversary, because it's the language of men and their grammar. We mustn't leave them a single place that's any more theirs alone than we are.

If woman has always functioned "within" the discourse of man, a signifier that has always referred back to the opposite signifier which annihilates its specific energy and diminishes or stifles its very different sounds, it is time for her to dislocate this "within," to explode it, turn it around, and seize it; to make it hers, containing it, taking it in her own mouth, biting that tongue with her very own teeth to invent for herself a language to get inside of. And you'll see with what ease she will spring forth from that "within"—the "within" where once she so drowsily crouched—to overflow at the lips she will cover the foam.

Nor is the point to appropriate their instruments, their concepts, their places, or to begrudge them their position of mastery. Just because there's a risk of identification doesn't mean that we'll succumb. Let's leave it to the worriers, to masculine anxiety and its obsession with how to dominate the way things work—knowing "how it works" in order to "make it work." For us the point is not to take possession in order to internalize or manipulate, but rather to dash through and to "fly."⁸

Flying is woman's gesture—flying in language and making it fly. We have all learned the art of flying and its numerous techniques; for centuries we've been able to possess anything only by flying; we've lived in flight, stealing away, finding, when desired, narrow passageways, hidden crossovers. It's no accident that *voler* has a double meaning, that it plays on each of them and thus throws off the agents of sense. It's no accident: women take after birds and robbers just as robbers take after women and birds. They (*illes*)⁹ go by, fly the coop, take pleasure in jumbling the order of space, in disorienting it, in changing around the furniture, dislocating things and values, breaking them all up, emptying structures, and turning propriety upside down.

What woman hasn't flown/stolen? Who hasn't felt, dreamt, performed the gesture that jams sociality? Who hasn't crumbled, held up to ridicule, the bar of separation?¹ Who hasn't inscribed with her body the differential, punctured the system of couples and opposition? Who, by some act of transgression, hasn't overthrown successiveness, connection, the wall of circumfusion?

A feminine text cannot fail to be more than subversive. It is volcanic; as it is written it brings about an upheaval of the old property crust, carrier of masculine investments; there's no other way. There's no room for her if she's not a he. If she's a her-she, it's in order to smash everything, to shatter the framework of institutions, to blow up the law, to break up the "truth" with laughter.

8. Also, "to steal." Both meanings of the verb *voler* are played on, as the text itself explains in the following paragraph [translators' note].

9. *Illes* is a fusion of the masculine pronoun *ils*, which refers back to birds and robbers, with the feminine pronoun *elles*, which refers to women

[translators' note].

1. An allusion to Lacan's revision of Saussure in "The Agency of the Letter in the Unconscious" (1957; see above): the "bar" between signifier and signified is identical with the structuring function of civilization.

For once she blazes *her* trail in the symbolic, she cannot fail to make of it the chaosmos² of the “personal”—in her pronouns, her nouns, and her clique of referents. And for good reason. There will have been the long history of gynocide.³ This is known by the colonized peoples of yesterday, the workers, the nations, the species off whose backs the history of men has made its gold; those who have known the ignominy of persecution derive from it an obstinate future desire for grandeur; those who are locked up know better than their jailers the taste of free air. Thanks to their history, women today know (how to do and want) what men will be able to conceive of only much later. I say woman overturns the “personal,” for if, by means of laws, lies, blackmail, and marriage, her right to herself has been extorted at the same time as her name, she has been able, through the very movement of mortal alienation, to see more closely the inanity of “propriety,” the reductive stinginess of the masculine-conjugal subjective economy, which she doubly resists. On the one hand she has constituted herself necessarily as that “person” capable of losing a part of herself without losing her integrity. But secretly, silently, deep down inside, she grows and multiplies, for, on the other hand, she knows far more about living and about the relation between the economy of the drives and the management of the ego than any man. Unlike man, who holds so dearly to his title and his titles, his pouches of value, his cap, crown, and everything connected with his head, woman couldn’t care less about the fear of decapitation (or castration), adventuring, without the masculine temerity, into anonymity, which she can merge with without annihilating herself: because she’s a giver.

I shall have a great deal to say about the whole deceptive problematic of the gift.⁴ Woman is obviously not that woman Nietzsche dreamed of who gives only in order to.⁵ Who could ever think of the gift as a gift-that-takes? Who else but man, precisely the one who would like to take everything?

If there is a “propriety of woman,” it is paradoxically her capacity to depropriate unselfishly: body without end, without appendage, without principal “parts.” If she is a whole, it’s a whole composed of parts that are wholes, not simple partial objects but a moving, limitlessly changing ensemble, a cosmos tirelessly traversed by Eros, an immense astral space not organized around any one sun that’s any more of a star than the others.

This doesn’t mean that she’s an undifferentiated magma, but that she doesn’t lord it over her body or her desire. Though masculine sexuality gravitates around the penis, engendering that centralized body (in political anatomy) under the dictatorship of its parts, woman does not bring about the same regionalization which serves the couple head/genitals and which is inscribed only within boundaries. Her libido is cosmic, just as her unconscious is worldwide. Her writing can only keep going, without ever inscribing

2. A coinage from James Joyce’s *Finnegans Wake* (1939) blending *chaos* and *cosmos*.

3. The killing of women.

4. As explored by the French anthropologist Marcel Mauss in *Essay on the Gift* (1924). A key concept in Cixous’s critique of ownership, property, and exchange, the gift functions as excess, as spending, and as abundance—which all become, for Cixous, women’s attributes.

5. Reread Derrida’s text, “Le Style de la femme,” in *Nietzsche aujourd’hui* (Paris: Union Générale

d’Editions, Coll. 10/18, [1973]), where the philosopher can be seen operating an *Aufhebung* of all philosophy in its systematic reducing of woman to the place of seduction: she appears as the one who is taken for; the bait in person, all veils unfurled, the one who doesn’t give but who gives only in order to (take) [Cixous’s note]. Translated in Jacques Derrida, *Spurs: Nietzsche’s Styles* (1978). FRIEDRICH NIETZSCHE (1844–1900), German philosopher.

or discerning contours, daring to make these vertiginous crossings of the other(s) ephemeral and passionate sojourns in him, her, them, whom she inhabits long enough to look at from the point closest to their unconscious from the moment they awaken, to love them at the point closest to their drives; and then further, impregnated through and through with these brief, identificatory embraces, she goes and passes into infinity. She alone dares and wishes to know from within, where she, the outcast, has never ceased to hear the resonance of fore-language. She lets the other language speak—the language of 1,000 tongues which knows neither enclosure nor death. To life she refuses nothing. Her language does not contain, it carries; it does not hold back, it makes possible. When *id*⁶ is ambiguously uttered—the wonder of being several—she doesn't defend herself against these unknown women whom she's surprised at becoming, but derives pleasure from this gift of alterability. I am spacious, singing flesh, on which is grafted no one knows which I, more or less human, but alive because of transformation.

Write! and your self-seeking text will know itself better than flesh and blood, rising, insurrectionary dough kneading itself, with sonorous, perfumed ingredients, a lively combination of flying colors, leaves, and rivers plunging into the sea we feed. "Ah, there's her sea," he will say as he holds out to me a basin full of water from the little phallic mother⁷ from whom he's inseparable. But look, our seas are what we make of them, full of fish or not, opaque or transparent, red or black, high or smooth, narrow or bankless; and we are ourselves sea, sand, coral, seaweed, beaches, tides, swimmers, children, waves. . . . More or less wavyly sea, earth, sky—what matter would rebuff us? We know how to speak them all.

Heterogeneous, yes. For her joyous benefit she is erogenous; she is the erotogeneity of the heterogeneous: airborne swimmer, in flight, she does not cling to herself; she is dispersible, prodigious, stunning, desirous and capable of others, of the other woman that she will be, of the other woman she isn't, of him of you.

Woman be unafraid of any other place, of any same, or any other. My eyes, my tongue, my ears, my nose, my skin, my mouth, my body-for-(the)-other—not that I long for it in order to fill up a hole, to provide against some defect of mine, or because, as fate would have it, I'm spurred on by feminine "jealousy"; not because I've been dragged into the whole chain of substitutions that brings that which is substituted back to its ultimate object. That sort of thing you would expect to come straight out of "Tom Thumb," out of the *Penisneid*⁸ whispered to us by old grandmother ogresses, servants to their father-sons. If they believe, in order to muster up some self-importance, if they really need to believe that we're dying of desire, that we are this hole fringed with desire for their penis—that's their immemorial business. Undeniably (we verify it at our own expense—but also to our amusement), it's their

6. The first of three components of the infant's psyche (the others being the ego and superego), as theorized by Freud; it is governed by the most primitive unconscious urges for gratification, ruled by no laws of logic, and unconstrained by external reality.

7. The child's fantasy of what the mother must

have been like before she was castrated, theorized by both Freud and Lacan.

8. Penis envy (German); Freud's name for the lifelong wish to have a penis, which he attributed to women. "Tom Thumb": the old nursery tale featuring the diminutive hero of the same name.

business to let us know they're getting a hard-on, so that we'll assure them (we the maternal mistresses of their little pocket signifier) that they still can, that it's still there—that men structure themselves only by being fitted with a feather.⁹ In the child it's not the penis that the woman desires, it's not that famous bit of skin around which every man gravitates. Pregnancy cannot be traced back, except within the historical limits of the ancients, to some form of fate, to those mechanical substitutions brought about by the unconscious of some eternal "jealous woman"; not to penis envies; and not to narcissism or to some sort of homosexuality linked to the ever-present mother! Begetting a child doesn't mean that the woman or the man must fall ineluctably into patterns or must recharge the circuit of reproduction. If there's a risk there's not an inevitable trap: may women be spared the pressure, under the guise of consciousness-raising, of a supplement of interdictions. Either you want a kid or you don't—that's *your business*.¹ Let nobody threaten you; in satisfying your desire, let not the fear of becoming the accomplice to a sociality succeed the old-time fear of being "taken." And man, are you still going to bank on everyone's blindness and passivity, afraid lest the child make a father and, consequently, that in having a kid the woman land herself more than one bad deal by engendering all at once child—mother—father—family? No; it's up to you to break the old circuits. It will be up to man and woman to render obsolete the former relationship and all its consequences, to consider the launching of a brand-new subject, alive, with defamilialization. Let us demater-paternalize rather than deny woman, in an effort to avoid the co-optation of procreation, a thrilling era of the body. Let us defetishize. Let's get away from the dialectic which has it that the only good father is a dead one, or that the child is the death of his parents. The child is the other, but the other without violence, bypassing loss, struggle. We're fed up with the reuniting of bonds forever to be severed, with the litany of castration that's handed down and genealogized. We won't advance backward anymore; we're not going to repress something so simple as the desire for life. Oral drive, anal drive, vocal drive—all these drives are our strengths, and among them is the gestation drive—just like the desire to write: a desire to live self from within, a desire for the swollen belly, for language, for blood. We are not going to refuse, if it should happen to strike our fancy, the unsurpassed pleasures of pregnancy which have actually been always exaggerated or conjured away—or cursed—in the classic texts. For if there's one thing that's been repressed here's just the place to find it: in the taboo of the pregnant woman. This says a lot about the power she seems invested with at the time, because it has always been suspected, that, when pregnant, the woman not only doubles her market value, but—what's more important—takes on intrinsic value as a woman in her own eyes and, undeniably, acquires body and sex.

There are thousands of ways of living one's pregnancy; to have or not to have with that still invisible other a relationship of another intensity. And if you don't have that particular yearning, it doesn't mean that you're in any way lacking. Each body distributes in its own special way, without model or

246a–252a.

1. Abortion was legalized in France in 1974, a year before this essay was published.

norm, the nonfinite and changing totality of its desires. Decide for yourself on your position in the arena of contradictions, where pleasure and reality embrace. Bring the other to life. Women know how to live detachment; giving birth is neither losing nor increasing. It's adding to life an other. Am I dreaming? Am I mis-recognizing? You, the defenders of "theory," the sacrosanct yes-men of Concept, enthroners of the phallus (but not of the penis):

Once more you'll say that all this smacks of "idealism," or what's worse, you'll splutter that I'm a "mystic."

And what about the libido? Haven't I read the "Signification of the Phallus"?² And what about separation, what about that bit of self for which, to be born, you undergo an ablation—an ablation, so they say, to be forever commemorated by your desire?

Besides, isn't it evident that the penis gets around in my texts, that I give it a place and appeal? Of course I do. I want all. I want all of me with all of him. Why should I deprive myself of a part of us? I want all of us. Woman of course has a desire for a "loving desire" and not a jealous one. But not because she is gelded; not because she's deprived and needs to be filled out, like some wounded person who wants to console herself or seek vengeance: I don't want a penis to decorate my body with. But I do desire the other for the other,³ whole and entire, male or female; because living means wanting everything that is, everything that lives, and wanting it alive. Castration? Let others toy with it. What's a desire originating from a lack? A pretty meager desire.

The woman who still allows herself to be threatened by the big dick, who's still impressed by the commotion of the phallic stance, who still leads a loyal master to the beat of the drum: that's the woman of yesterday. They still exist, easy and numerous victims of the oldest of farces: either they're cast in the original silent version in which, as titanesses lying under the mountains they make with their quivering, they never see erected that theoretic monument to the golden phallus looming, in the old manner, over their bodies. Or, coming today out of their *infans*⁴ period and into the second, "enlightened" version of their virtuous debasement, they see themselves suddenly assaulted by the builders of the analytic empire and, as soon as they've begun to formulate the new desire, naked, nameless, so happy at making an appearance, they're taken in their bath by the new old men, and then, whoops! Luring them with flashy signifiers, the demon of interpretation—oblique, decked out in modernity—sells them the same old handcuffs, baubles, and chains. Which castration do you prefer? Whose degrading do you like better, the father's or the mother's? Oh, what pwetty eyes, you pwetty little girl. Here, buy my glasses and you'll see the Truth-Me-Myself⁵ tell you everything you should know. Put them on your nose and take a fetishist's look (you are me, the other analyst—that's what I'm telling you) at your body and the body of the other. You see? No? Wait, you'll have everything explained to you, and you'll know at last which sort of neurosis you're related to. Hold still, we're going to do your portrait, so that you can begin looking like it right away.

2. A 1958 essay by Jacques Lacan (see above).

3. The non-me, the non-self. In *The Second Sex* (1949), SIMONE DE BEAUVOIR was the first to analyze how society positions woman as man's other.

4. Incapable of speech (Latin). Lacan uses the word to describe the child at the mirror stage.

5. A reference to Lacan, who had written in his essay "The Freudian Thing" (1955), "Moi, la vérité, je parle" (I, the Truth, speak). "My glasses" alludes to the sinister eyeglass salesman in Hoffmann's "Sandman" (1816) whom Freud analyzes in "The 'Uncanny.'"

Yes, the naives to the first and second degree are still legion. If the New Women, arriving now, dare to create outside the theoretical, they're called in by the cops of the signifier, fingerprinted, remonstrated, and brought into the line of order that they are supposed to know; assigned by force of trickery to a precise place in the chain that's always formed for the benefit of a privileged signifier. We are pieced back to the string which leads back, if not to the Name-of-the-Father, then, for a new twist, to the place of the phallic-mother.⁶

Beware, my friend, of the signifier that would take you back to the authority of a signified! Beware of diagnoses that would reduce your generative powers. "Common" nouns are also proper nouns that disparage your singularity by classifying it into species. Break out of the circles; don't remain within the psychoanalytic closure. Take a look around, then cut through!

And if we are legion, it's because the war of liberation has only made as yet a tiny breakthrough. But women are thronging to it. I've seen them, those who will be neither dupe nor domestic, those who will not fear the risk of being a woman; will not fear any risk, any desire, any space still unexplored in themselves, among themselves and others or anywhere else. They do not fetishize, they do not deny, they do not hate. They observe, they approach, they try to see the other woman, the child, the lover—not to strengthen their own narcissism or verify the solidity or weakness of the master, but to make love better, to invent.

Other love.—In the beginning are our differences. The new love dares for the other, wants the other, makes dizzying, precipitous flights between knowledge and invention. The woman arriving over and over again does not stand still; she's everywhere, she exchanges, she is the desire-that-gives. (Not enclosed in the paradox of the gift that takes nor under the illusion of unitary fusion. We're past that.) She comes in, comes-in-between herself me and you, between the other me where one is always infinitely more than one and more than me, without the fear of ever reaching a limit; she thrills in our becoming. And we'll keep on becoming! She cuts through defensive loves, mother-ages, and devourations: beyond selfish narcissism, in the moving, open, transitional space, she runs her risks. Beyond the struggle-to-the-death that's been removed to the bed, beyond the love-battle that claims to represent exchange, she scorns at an Eros dynamic that would be fed by hatred. Hatred: a heritage, again, a remainder, a duping subservience to the phallus. To love, to watch-think-see the other in the other, to despecularize, to unhoard. Does this seem difficult? It's not impossible, and this is what nourishes life—a love that has no commerce with the apprehensive desire that provides against the lack and stultifies the strange; a love that rejoices in the exchange that multiplies. Wherever history still unfolds as the history of death, she does not tread. Opposition, hierarchizing exchange, the struggle for mastery which can end only in at least one death (one master—one slave, or two non-masters \neq two dead)⁷—all that comes from a period in time governed by phallogocentric values. The fact that this period extends into the present doesn't

6. In his seminars of the 1970s, Lacan had attempted to demonstrate the relations among the Imaginary, the Symbolic, and the Real by means of knots made of string. Name-of-the-Father: the Lacanian term for the function of the father in

the Symbolic.

7. In the Master-Slave dialectic described by Hegel in *Phenomenology of Spirit* (1807; see above), the master is the one who is willing to fight to the death for freedom; the slave chooses life.

prevent woman from starting the history of life somewhere else. Elsewhere, she gives. She doesn't "know" what she's giving, she doesn't measure it; she gives, though, neither a counterfeit impression nor something she hasn't got. She gives more, with no assurance that she'll get back even some unexpected profit from what she puts out. She gives that there may be life, thought, transformation. This is an "economy" that can no longer be put in economic terms. Wherever she loves, all the old concepts of management are left behind. At the end of a more or less conscious computation, she finds not her sum but her differences. I am for you what you want me to be at the moment you look at me in a way you've never seen me before: at every instant. When I write, it's everything that we don't know we can be that is written out of me, without exclusions, without stipulation, and everything we will be calls us to the unflagging, intoxicating, unappeasable search for love. In one another we will never be lacking.

1975, 1976

GERALD GRAFF

b. 1937

In "Taking Cover in Coverage" (1986), Gerald Graff turns a theoretical eye on the institutional structures within English departments. Why divide literature into separate fields? How do subspecialties affect the way professors work and students learn? Worried, as he declares in *Literature against Itself: Literary Ideas in Modern Society* (1979), that academic approaches to literature have undermined "the power of language to connect us with the world," Graff recommends a novel and subsequently influential method for bringing coherence to what he sees as an increasingly disjointed curriculum, a method he calls "teaching the conflicts."

Born in Chicago, Graff received his B.A. from the University of Chicago in 1959. He did graduate work at Stanford University, where he studied with the New Critic Yvor Winters and the New York Intellectual Irving Howe, receiving his Ph.D. in 1963. He taught at the University of New Mexico from 1963 to 1966, then returned to Illinois to teach at Northwestern University (1966–91) and at the University of Chicago (1991–98). In 1999 he took a deanship at the University of Illinois at Chicago to develop undergraduate curricula and coordinate teacher education programs, retiring in 2016. Among other honors, he served as president of the Modern Language Association in 2008.

In his writing, Graff is an iconoclast. While he has been a prominent participant in debates on contemporary theory, he does not readily fit into any definable camp. He is also an unapologetic polemicist, persistently arguing against literary criticism's disconnection from society. In his early work, he attacked the New Critical axiom that "a poem, as a poem, does not say anything about the world." In his provocative *Literature against Itself*, Graff turned his sights on a range of contemporary theories and claimed that their excessive focus on language fostered the ineffectuality of literary intellectuals. Overall, Graff shows a consistent concern with the social dimensions of intellectual work, without advocating a particular approach and avoiding orthodoxy.

"Taking Cover in Coverage" looks at the ways in which the university institutionally and historically has shaped intellectual work. Graff begins with a defense of theory. His argument is tacitly directed at antitheorists, ranging from traditionalists who believe, in the phrase of the New Critic René Wellek, that contemporary theory is "destroying literary studies" to neopragmatists such as STANLEY FISH, who claims that theory has no consequences. Despite Graff's earlier rough handling of theory, he here sees it as enriching our thought and thus advocates putting it at the center of the curriculum. Although Graff had been an opponent of deconstruction, his defense of theory parallels that in PAUL DE MAN's "Resistance to Theory" (1982), which similarly responds to antitheorists and argues for the importance of theory. However, Graff takes to task much contemporary theory for failing to reflect on its own institutional location, willing to "apply theory within the existing structure but . . . fail[ing] to make a theoretical examination of the structure itself."

Moving to his main topic, Graff gives thumbnail sketches of the history of U.S. English departments (born in the late nineteenth and early twentieth centuries) and the "field coverage" model on which they rely. Specialized fields both engender disconnections and insularities that thwart intellectual community and encourage efficiency, innovation, and autonomy—the benefits that led to the model's success. While institutional structures in English departments have given faculty a relative degree of freedom to pursue new topics (including contemporary theory), they have also essentially quarantined individual scholars in their particular fields; as a result, there is no common ground for discussion, conflicts are suppressed, the curriculum is incoherent, and students lose out. Graff's recommendation to faculty, which has since become something of a slogan, is to "teach the conflicts" and make such divisions the organizing basis of curriculum.

Graff fleshed out his argument about English departments and field coverage in an important book, *Professing Literature: An Institutional History* (1987; 20th anniv. ed., 2007), which traces the discipline's history from the nineteenth century to the 1980s. He sees contemporary conflicts over theory as part of a historical process often alternating between traditionalism and new approaches. In the 1990s Graff focused increasingly on pedagogy. He has responded to public debates over the canon, theory, and "political correctness" by extolling their potential as a resource for teaching. Continuing his argument from "Taking Cover in Coverage," particularly in his popular *Beyond the Culture Wars: How Teaching the Conflicts Can Revitalize Higher Education* (1992), Graff advocates foregrounding critical controversies in the classroom rather than hiding them from students. Citing his own experience as a student, he admits that class discussions of literature bored him until he discovered that literature was something to argue over.

Graff's consistent attention to teaching is unusual among contemporary theorists. It culminated in his coauthoring a textbook, *They Say/I Say: The Moves That Matter in Academic Writing*, (3d ed., 2016), for basic writing classes. His prose style also sets his work apart. Graff argues for theory in plain, colloquial language (such as "literature departments should stop kidding themselves," in our selection) rarely seen in contemporary theory. His book *Clueless in Academe: How Schooling Obscures the Life of the Mind* (2003) emphasizes not conflict but making criticism more comprehensible.

Although Graff's conflictual model has been widely accepted as a productive teaching method and as a useful account of theoretical change, several critics have noted its limitations. Some criticize Graff's nostalgia for a vibrant literary culture outside the university, even as he supplies prescriptions that apply only to the academy. Others note the reductiveness of seeing all change in terms of a repeated conflict between tradition and new movements. Some feminists call for cooperation rather than confrontation and see Graff's embrace of conflict as reflecting a masculinist bias—perhaps making the discipline akin to a contact sport. From a postcolonial perspective, critics like NGUGI WÄ THIONG'o argue that "English" departments propagate imperialism, and therefore call for their abolition. Graff mentions that the division of

departments by language is arbitrary, but he does not continue this analysis to critique the nationalistic origins and purposes of English departments. Nevertheless, Graff's history of English departments is a pathbreaking investigation showing how our institutions shape literary thought and proposing how they might be changed.

"Taking Cover in Coverage" Keywords: The Canon/Tradition, Defense of Criticism, Institutional Studies, Rhetoric

Taking Cover in Coverage

In addressing the topic "The Value of Theory in English Studies,"¹ I want to say at the outset that the antagonism usually presumed to exist between literary theory and humanistic tradition has been exaggerated. It is perfectly possible to defend the infusion of theory into the curriculum on traditional grounds, namely, that students need theoretical frameworks in order to conceptualize, and talk about, literature. Until recently, in fact, it was traditionalists like Irving Babbitt and Norman Foerster² who called for more "theory," in opposition to the disconnected empiricism of positivist literary history and formalist explication, where the faith seemed to be that "the facts, once in, would of themselves mean something."³ Most scholars "have left virtually uninspected the theory upon which their practice rests" or have proceeded "as if that theory were an absolute good for all time."⁴ While a great deal of current theory does radically attack the premises and values of traditional literary humanism, that attack revives the kinds of questions about literature and its cultural functions that used to concern traditional humanistic critics.

The real enemy of tradition has been the established form of literary study, which has neglected traditional theoretical questions about the ends and social functions of literature and criticism. There is something strange about the belief that we are being traditional when we isolate literary works from their contexts and explicate them in a vacuum or with a modicum of background information. Matthew Arnold⁵ would have recognized little traditional or humanistic in these established forms of pedagogy. Obviously I am not saying that recent literary theory is nothing more than the application of Arnoldian culture by other means. What I am saying is that recent theory has reawakened some of the large questions that Arnold raised, while rejecting the Arnoldian answers as no longer sufficient.

In fact, it was the breakdown of agreement on the Arnoldian answers that inspired the current popularity of theory and ensures, I think, that this interest will not be a passing fad. By one definition that seems to me valid, "literary theory" is simply the kind of discourse that is generated when pre-

1. The essay was originally presented at a 1986 seminar run by the Association of Departments of English on this topic.

2. Literary critics and Harvard University professors who espoused the humanistic value of studying literature: Foerster (1887–1972) was a protégé of Babbitt's (1865–1933).

3. Norman Foerster, "The Study of Letters," in

Literary Scholarship: Its Aims and Methods, by Norman Foerster et al. (Chapel Hill: University of North Carolina Press, 1941), 11–12 [Graff's note].

4. Norman Foerster et al., introduction, in *ibid.*, v [Graff's note].

5. Leading Victorian poet and critic (1822–1888; see above).

suppositions that were once tacitly shared about literature, criticism, and culture become open to question. Theory is what breaks out when agreement about such terms as *text*, *reading*, *history*, *interpretation*, *tradition*, and *literature* can no longer be taken for granted, so that their meanings have to be formulated and debated. Admittedly, the term *theory* is used here in a very broad sense, denoting an examination of legitimating presuppositions, beliefs, and ideologies. By this definition, even antitheorists like Arnold and F. R. Leavis⁶ qualify as theorists, having theorized about the premises of literature and culture and the place of literature and culture in modern societies. And in this sense all teachers of literature operate on theories, whether they choose to examine these theories or not.

Clearly, we need to reserve another sense of *theory* to denote the technical, abstruse, and systematic speculation typical of recent Continental thought. But here is another misconception—that theory is necessarily obscure, technical and abstruse, and therefore too advanced or esoteric for the average college or high school student of literature. This belief fails to recognize that all teaching involves popularization and that even the most difficult current theories are not intrinsically more resistant to popularization than the New Criticism, which had its own abstruse conceptual origins in Kant, Coleridge, and Croce.⁷

It is the average-to-poor student who suffers most from the established curriculum's poverty of theory, for such a student lacks command of the conceptual contexts that make it possible to integrate perceptions and generalize from them. All the close concentration in the world on the particularities of literary texts will not help a student make sense of these particularities without the categories that give them meaning.

Current antitheorists have things exactly backward when they oppose theory to tradition and to close literary analysis and demand that we minister to the ills of literary studies by desisting from theoretical chatter and getting back to teaching literature itself. It was the isolation of "literature itself" in a conceptual vacuum that stranded students without a context for talking about literature and that still forces many of them to resort to *Cliffs Notes* and other such cribs. It is easy to disdain these cribs, but marketing pressures have actually forced their producers to think through the problems facing the average literature student more realistically than have many department curricular planners. *Cliffs Notes* supply students with the generalized things to say about literary works that the literature program takes for granted they will somehow get on their own.

The irony of the current cry of "back to literature itself" is that it was the exclusive concentration on literature itself that helped create a situation in which the *Cliffs Notes* on given works of literature are more readily available in campus bookstores than are the works themselves. Perhaps I am naive to suggest that a more theoretically contextualized curriculum would cause such

6. Influential English literary critic (1895–1978; see above), who extolled "the great tradition."

7. Three important and sometimes abstruse writers on aesthetics: IMMANUEL KANT (1724–1804), a German philosopher; SAMUEL TAYLOR COLERIDGE (1772–1834), a British Romantic poet and theorist; and Benedetto Croce (1866–1952), an Italian

philosopher and literary critic. The New Criticism: an approach (championed by CLEANTH BROOKS, WILLIAM K. WIMSATT JR., and others) that emphasizes close reading of the text considered as an autonomous whole; it has greatly influenced teaching from the mid-20th century onward.

cribs to wither away. I can certainly imagine a *Cliffs Notes* on deconstruction, supplementing the ones on Keats and Dickens.⁸ But for the moment I think we should view this eventuality as a possibility to be recognized and avoided rather than as an inevitability.

These opening reflections will probably persuade only those who agree with them. My purpose here, however, is not to make a case for theory in the literature program but to point up some difficulties that arise once we have decided that such a goal is desirable. In addressing the pedagogical uses of recent literary theory, we tend to treat the issue as if it were primarily a matter of figuring out how to integrate this theory into individual classrooms. We form conference "workshops," which concentrate on technical questions like how to use reader-response criticism to teach *Hamlet*, or poststructuralist theory to teach the romantic lyric, or feminist critiques of the established canon to restructure the nineteenth-century-novel course. Such reforms can be useful and necessary, but if we do not go beyond them we will limit theory to its instrumental uses, making it into a means of sprucing up ritualized procedures of explication. We will apply theory within the existing structure but will fail to make a theoretical examination of the structure itself.

I want to suggest that one of the first things we need to do with literary theory is to train it on the literature department itself, particularly on the way that the department and other departments and the university are organized. Insofar as a literature department represents a certain organization of literature, it is itself a kind of theory, though it has been largely an incoherent theory, and this incoherence in fact has reinforced the impression that the department has no theory.

In deciding to call ourselves departments of English, French, and German—rather than of literature, cultural studies, or something else—and in subdividing these national units into periods and genres, we have already made significant theoretical choices. But we do not see these choices as choices, much less as theoretical ones, because the categories that mark them—English, eighteenth century, poetry, novel—operate as administrative conveniences and eventually as facts of nature that we can take for granted. We need to recognize that the way we organize and departmentalize literature is not only a crucial theoretical choice but one that largely determines our professional activity and the way students and the laity see it or fail to see it.

To make this statement is not to agree with those who think that the departmentalization of literature itself was a kind of original sin and who look back nostalgically to the days before the creative imagination was bureaucratized. Anyone seriously committed to the idea of democratic mass education has to acknowledge the obvious necessity for some form of bureaucratic departmental organization and the specialized division of labor that that entails. But the form that organization takes is neither self-evident nor inevitable, and it will have a lot to do with considerations of theory.

I use the term *field coverage* as a convenient description of the model of organization that has governed literature departments since the dawn of the modern university, in the last two decades of the nineteenth century. According to the field-coverage model, a department considers itself adequately

8. Charles Dickens (1812–1870), Victorian novelist. John Keats (1795–1821), English Romantic poet.

staffed when it has acquired the personnel to "cover" an adequate number of designated fields of literature, and it assumes that the core of the curriculum will consist of the student's coverage of some portion of those fields. The field-coverage model arose as an adaptation to the modern university's ideal of research specialization, for dividing the territory of literature into fields supervised by specialists imitated the organizational form that had made the sciences efficient in producing advanced research. But the field-coverage principle had a humanistic justification as well, the argument that a student who covered the fields represented by the average department would get a reasonably balanced exposure to the literary-humanistic tradition.

It was the operational advantages, however, that made the field-coverage model irresistible, especially in a newly expanding university where short-term expediency rarely afforded leisure for discussion of first principles and where first principles in any case were becoming increasingly open to dispute. One of the most conspicuous operational advantages was the way field coverage made the department virtually self-regulating. By assigning instructors the roles predetermined by their literary fields, the model created a system in which the job of instruction could proceed as if on automatic pilot, with no need for instructors to confer with their peers or superiors. Assuming that individual instructors had been competently trained—and by about 1900 or so the American system of graduate study had matured sufficiently to see to that—they could be left on their own to carry out their teaching and research jobs without elaborate supervision and management.

A second advantage of the field-coverage model was that it made the department immensely flexible to innovation. By making individuals functionally independent of one another in carrying out their tasks, the model enabled the department to assimilate new subjects, ideas, and methodologies without risking the conflicts that would otherwise have had to be debated and worked through. It thus allowed the modern university to overcome the chronic stagnation that had beset the old nineteenth-century college, where new ideas that challenged the established Christian orthodoxy were usually excluded or suppressed. The coverage model solved the problem of how to make the university open to innovation and diverse viewpoints without incurring paralyzing conflicts.

Unfortunately, these advantages came at a severe cost that we have been paying ever since. The same arrangements that allowed instructors to do their jobs efficiently and independently also relieved them of the need to discuss and reflect on the values and implications of their practices. This form of organization left literature departments without any need to discuss matters of fundamental direction either with their own members or with members of other departments, and it is a rule of bureaucratic organizations that whatever these organizations are not structurally required to do they will tend not to do. Moral exhortation unaccompanied by structural change will be largely wasted. The department was open to innovation as the college had not been before, but under circumstances that were almost as effective in muffling the confrontations provoked by innovation as the old system of repressive control had been. Previously there had been little open debate over first principles because dissenters had been excluded. Now dissenters were invited in, but the departmental structure kept them too isolated from their colleagues for open debate to take place.

Vigorous controversy did arise, but usually only behind the scenes of education, in specialized journals, department meetings, or private gossip—all places where students derived little benefit from it, usually knew nothing of its existence, and certainly did not participate in it. Instructors were freer than they had been from administrative tyranny, but at the sacrifice of certain possibilities of intellectual community.

To put it another way, the field-coverage model solved the problem of theory. Departmental organization took the place of theory, for the presence of an ordered array of fields, fully staffed, made it unnecessary for anyone to have a theory about what the department should do to permit the work of teaching and research to go on. The theoretical choices had already been taken care of in the grid of periods, genres, and other catalog rubrics, which embodied a clear and seemingly uncontroversial conceptualization of what the department was about. With literature courses ranged in periods and genres, instructors did not need to ask what “period” or “genre” meant or what justified the established demarcations. The connections and contrasts between periods and genres, so important for understanding these categories, fell between the cracks, as did other large issues in the university, such as the relation between the sciences and the humanities, which was the responsibility of neither the sciences nor the humanities.

Latent conflicts of method and ideology that had divided the faculty from the outset and the cultural conflicts that these often exemplified did not have to be confronted and taught. Fundamental disagreements over the study of literature were embodied, for example, in the conflict between the research “scholar,” who adhered to a positivistic methodology, and the generalist man or woman of letters, who scorned this methodology, and, later, in the conflict between both these types and the hyperanalytical New Critic. But while the department enacted these conflicts, it did not explicitly foreground and engage them. As long as scholars, generalists, and critics covered their turfs within self-enclosed classrooms, the average student did not need to be aware of the clashes of principle, much less use them as a larger context for literary study.

This explanation accounts for the otherwise inexplicable persistence of the fiction of shared humanistic values and purposes during a period when conflicts in method and ideology were becoming progressively more frequent and antagonistic. Since the official premise that humanistic values governed the department did not have to be theorized or subjected to periodical review and discussion, there was no particular reason to acknowledge that the premise was wearing increasingly thin. Not only did the structure provide no necessary occasion for questioning the content of that humanism which, according to the catalog, theoretically held the diverse and conflicting viewpoints of departments together, but the illusion could be maintained that nobody even had a theory.

And of course it was true that the department did not have a theory, for it harbored many theories without any clear way to integrate them. Here we arrive at the central problem: How does a department institutionalize theory when there is no agreement on what the theory is to be? The question becomes unanswerable, however, only if it is assumed that a department must achieve theoretical *consensus* before it can achieve theoretical coherence.

The perennial assumption seems to have been that professional and cultural conflicts have to be *resolved* before they can be presented to the

students: students, apparently, must be exposed only to the results of the conflicts dividing their teachers, not to the process of conflict itself, which presumably would confuse or demoralize them. Surely one reason why we tend, as I noted earlier, to reduce pedagogical questions to questions about workshop techniques for individual courses is that we doubt the possibility of agreement on larger collective goals. Our doubts are well founded in experience, but why need we assume that we have to agree in order to integrate our activities? Must we have consensus to have coherence?

The unfortunate thing is not that our conflicts of method and ideology have often proved unresolvable but that we have been able to exploit so little of the potential educational value of our unresolved conflicts. Part of the reason stems from the literary mind's temperamental resistance to airing differences; the old-fashioned version of this attitude held that open debate is unseemly, while the more up-to-date version holds that there are no privileged metalanguages, or no fact-of-the-matter outside interpretations, or no "decidable" answers to questions, so that there is nothing to argue about anyway. But even if these sources of resistance to debate were to disappear, there would remain a problem of structure. Our structure prevents exemplary differences of method, ideology, and value from emerging into view even when we want them to.

The literature curriculum mirrors and reproduces the evasion of conflict characteristic of the departmental structure. Hypothetically, the curriculum expresses a unified humanistic tradition, yet anyone who looks at it can see that in every era down to the present it has never expressed a unity of humanistic values but always a set of political trade-offs and compromises among competing professional factions. We need not enter into the now disputed question of whether the curriculum can or should be determined by any more lofty principle than political trade-offs, for again this is precisely the type of theoretical and cultural question that does not have to be resolved in order to play an effective part in education. If the curriculum is going to continue to express political trade-offs, as it seems likely to do unless one faction in the current disciplinary conflict can wholly liquidate its opposition, then why not bring students in on whatever may be instructive in the conflict of political principles involved?

Instead of confronting such conflicts and building them into the curriculum, however, the department (and the university at large) has always responded to pressures by adding new subjects and keeping them safely sealed off from one another. This practice can be justified educationally only on the increasingly hollow pretense that exposure to an aggregate of teachers, periods, genres, methods, and points of view figures to come together in the student's mind as a coherent humanistic experience. The tacit faith is that students will make sense of the aggregate even if their instructors cannot. The surprising thing is that some students manage to do just that, but most do not. Recognition of this failure stimulates further curricular innovation, which in turn, however, is assimilated to the cycle of accretion and marginalization. So we beat on, boats against the current,⁹ etc., etc.

9. The last sentence of *The Great Gatsby* (1925), by F. Scott Fitzgerald (it ends, "borne back ceaselessly into the past").

Over the hundred-year span of our institutional history we have had a succession of methodological models, each with a corresponding pedagogy, from linguistic philology to positivist literary history to New Critical explication, all of which now remain as geological strata overlaid by the new theories and methodologies. Each of these revisions has marked a paradigm shift in which the conception of what counts as “literature,” “scholarship,” and “criticism” altered radically. Yet, as I attempt to show in a forthcoming institutional history of academic literary studies in the United States,¹ the one constant through all this change has been the field-coverage model. The contents have been radically reshuffled, but the envelope has remained the same, and with it the method of assimilating innovation. Arguably the changes represent considerable progress in critical sophistication and cultural range, but if I am correct the benefits for the average student have been less than they might have been.

Nor is it just the students who have paid a price under the field-coverage system, it is the faculty as well. The principles of selection for amassing a literature faculty have systematically screened out intellectual commonality and programmed professional loneliness. A self-destructive principle is built into the mighty effort departments make to achieve a balanced spread of interests. If the interests of candidate X overlap those of faculty member Y, their shared ground is an argument for not hiring X—“We already have Y who does that.” The calculus of needs determining appointment priorities thus tends to preselect exactly those instructors who have the least basis for talking to one another. In compensation the department gets a salutary diversity, but the potential benefits of diversity are not really exploited. Nor is the problem merely abstract: the recent proliferation of humanities conferences and symposia suggests that these gatherings have become substitutes for the kind of general discussion that does not take place at home.

The moral is that if the introduction of theory is to make a real difference at the average student’s level, we must find some way to modify the field-coverage model, if not to scrap it entirely. Otherwise, theory will be institutionalized as yet another field, equivalent to literary periods and genres—which is to say, it will become one more option that can safely be ignored. We will lose theory’s potential for drawing the disconnected parts of the literature curriculum into relation and providing students with the needed contexts. So, I would argue, the real threat that theory faces today comes not from its outright opponents, some of whom are at least willing to argue with it, but from those who are perfectly willing to grant theory an honored place in the scheme of departmental coverage so that they can then forget about it.

This pattern seems to be establishing itself now, as departments clamor to hire theorists to get the new field covered, after which they sit back and assume that the relation of theory to the interests of the rest of the department will take care of itself. In practice, this policy passes the buck to the students, leaving them to figure out how theory courses correlate with the others. And of course as long as theory is conceived as a special field, the rest of the department can go on thinking that its work has no connection with theory.

1. *Professing Literature: An Institutional History* (Chicago: University of Chicago Press, 1987).

Offering students doses of theory in individual courses without helping them make the requisite connections and relations between courses will tend to produce a confused response, which antitheorists will quickly take as proof that theory is inherently over the head of the average student. For the average student to profit from theory, especially from recent theory, the courses that incorporate it must be not only linked with other courses, both theoretical and untheoretical, but also positioned to operate as a central means of correlation and contextualization.

In other words, literature departments should stop kidding themselves. They should stop pretending that, as long as individual courses are reasonably well conceived and well taught, the aggregate can be counted on to take care of itself. If they are serious about incorporating theory, they should not let it remain an option but should make it central to all their activities, not by putting theory specialists in charge but by recognizing that all their members are theorists.

To put it another way, introducing more theory will only compound our problems unless we rethink the assumption that the essential unit of all teaching has to be the single, self-sufficient course that the students correlate with other courses on their own. We can fail just as badly teaching a new canon in a theoretical way as we have failed in teaching an old canon in a nontheoretical way. Unless literature teachers change their means of connecting institutionally with one another, I am afraid that even the most radical theories and canon revisions will not significantly affect the way most students take in what is put before them.

To close, then, I offer a few schematic suggestions:

1. In relation to other courses in the department, theory courses should be central, not peripheral; their function should be to contextualize and pull together the students' work in other courses (outside as well as inside the literature department). Wherever possible, therefore, they should be required courses rather than electives.
2. In taking stock of its strengths, a department should evaluate not just how well it is covering standard fields and approaches but also what potential conflicts of ideological and methodological perspectives it harbors; it should then ask itself what curricular arrangements might exploit these conflicts. There need be no single way of doing this—but one idea (suggested by Brook Thomas²) is to couple courses to bring out conceptual relations and contrasts—between, say, views of literature in earlier and modern literary periods or between competing and complementary methodologies of interpretation.
3. A department harboring a conflict between theorists and antitheorists should look for ways to build this conflict into its courses, so that students can situate themselves in relation to the controversy and eventually participate in it. The department should also look for ways such disputes can be used to complicate and challenge period and genre distinctions without necessarily eliminating them.
4. A department should consider the unit of teaching to be the issue or context, not the isolated text; texts to be taught should be chosen not

2. American New Historicist critic (b. 1947).

only for their intrinsic value but for their usefulness in illustrating exemplary problems and issues.

5. As a means of accomplishing goal 4 on a structural scale, the university should subsume literary studies under cultural studies and cultural history, conceived not as a privileged approach but as a framework that encourages ideological dialectic while retaining enough chronological structure to keep focus and continuity from being lost.

The point is that theory is not only a field to be covered, though it is that at one level. It is something that all teachers of literature and all readers practice and that all have a stake in. The worst thing we could do would be to institutionalize theory in a compartmentalized way that would keep theorists and antitheorists from having to hear what they are saying about each other—and would keep students from observing and joining in the battle.

1986

STANLEY E. FISH

b. 1938

Stanley Fish has been the agent provocateur of contemporary American literary theory. The leading critic of John Milton of his generation, the self-proclaimed inventor of reader-response theory, the progenitor of antifoundationalism and neo-pragmatism in literary studies, a pioneer of critical legal studies, and a spirited defender of the humanities amid public attacks over political correctness, Fish is perhaps best known for the brio of his intellectual style, which he practices with the energy of a sport. Debunking standard notions of interpretation, Fish's essay "How to Recognize a Poem When You See One" (1980) argues for his seminal concept, "interpretive communities," which radically revises interpretive theory by locating meaning not in texts but in readers, and not in individual response but in the protocols of communities.

Fish was born in Providence, Rhode Island, where his father was a plumbing contractor. He attended the University of Pennsylvania, receiving his B.A. in 1959, and went on to do graduate work at Yale University, then the bastion of the American New Critics (such as CLEANTH BROOKS and WILLIAM K. WIMSATT JR.), quickly completing an M.A. and Ph.D., in 1960 and 1962. He taught at the University of California at Berkeley from 1962 to 1974 and published two books before he was thirty, most notably a touchstone of Milton criticism, *Surprised by Sin: The Reader in "Paradise Lost"* (1967; 2d ed., 1999). While at Berkeley, he also wrote *Self-Consuming Artifacts: The Experience of Seventeenth-Century Literature* (1972), which was nominated for a National Book Award. From 1974 to 1985 he was Kenan Professor of English at Johns Hopkins University, publishing another pioneering reader-response work, *Is There a Text in This Class? The Authority of Interpretive Communities* (1980), which includes our selection. Concerned with interpretation and its consequences, at Johns Hopkins he also began to teach in the law school, pursuing an interest in legal theory that became more central to his work through the next two decades.

In 1985 Fish moved to Duke University as Arts and Sciences Distinguished Professor of English and Law and as chair of the English department. As chair, he was instrumental in building the most famous—if sometimes controversial—department of its time. In 1998 he took a position as dean of Arts and Sciences at the University of Illinois at Chicago, where he was again an institutional catalyst, helping to build its programs and reputation. In part because he was both an administrator and a prominent critic, through this latter part of his career Fish became a public spokesperson for the humanities, writing opinion pieces in the *New York Times* and elsewhere, and occasionally appearing on television. Meanwhile he also published several notable books on theory, professionalism, law, and politics. In 2005 he moved to Florida International University as Davidson-Kahn Distinguished University Professor of Humanities and Professor of Law, retiring in 2013.

A formative factor of Fish's work was his response to the New Criticism. Like other theorists who were trained under its auspices, he rebelled against its belief in the autonomy of the text and its sole focus on literary form and language. HAROLD BLOOM, for instance, asserted the centrality of the author and the author's "anxiety of influence" in the face of the New Critical prohibition of the "intentional fallacy"; STEPHEN GREENBLATT, who like Fish and Bloom received his graduate training at Yale University, asserted the significance of historical context against the New Critical view of texts as self-sufficient "verbal icons." Countering Wimsatt and MONROE BEARDSLEY's declaration in "The Affective Fallacy" (1949) that the audience of a literary work is irrelevant, Fish declared that declaration to be a fallacy itself. An abiding concern throughout Fish's work is the rhetorical force of texts and their effects on readers.

In *Surprised by Sin*, Fish focuses on the experience of the reader as he or she encounters Milton's *Paradise Lost*. He upends conventional interpretations of Milton, arguing that the poem's meaning is located not in our final assessment but in the process of struggling through Milton's difficult grammar and rhetoric, which didactically makes readers repeat the Fall. Though he continued to write about literature (and Milton remained a constant point of reference), through the late 1970s and 1980s Fish engaged in broader theoretical speculations on interpretation and rhetoric, exemplified by *Is There a Text in This Class?* In it, he introduces his concept of interpretive communities to explain how readers come to their views—not in idiosyncratic ways, but through social and institutional conventions. He reverses the customary model of interpretation, arguing that we do not discern the inherent features of a literary work but instead construct it through the strategies of our interpretive community.

In "How to Recognize a Poem When You See One," he offers one illustration of this process: he provides students with a list of names, and following his direction they interpret it as a religious poem. A perennial question of literary theory has been what makes a work literary, which is usually thought to be some aspect of literary language or form, distinct from ordinary language, that the critic then explicates. Fish turns this thinking on its head: in his view, literariness stems not from an inherent quality but from the premises that readers bring to a text. Fish's list of names is seemingly unliterary, but it resembles a "found poem"—that is, a poem that comes from language in everyday life, like William Carlos Williams's "This Is Just to Say" (1934), which begins: "I have eaten / the plums / that were in / the icebox." If we see the lines as a poem rather than a personal note, we understand them differently, and Williams's poem is in fact acknowledged as a modern American classic. Literariness arises because of our interpretive conventions, not because it is an innate quality. One can see how this approach might extend to contemporary genres like science fiction: formerly disparaged as a trash genre, it now includes some works that are considered literary.

Claiming the contrary of a standard view, and laying out its argument clearly and step-by-step, "How to Recognize a Poem" epitomizes Fish's style. While some

poststructuralist theory can be obscure, Fish uses plain, straightforward terms as he argues almost like a lawyer. He also anticipates a standard attack on reader response, that it relies too much on the subjective and thereby opens the door to allowing anything and everything. Instead, Fish grounds his version of response in interpretive communities, which are social, not individual; institutional, not psychological. Fish does not fully work out how the institution operates—for instance, how many communities exist at any one time, how they form, and how institutions adjudicate among themselves—but he does provide a powerful challenge to formalist theory. Fish also heads off charges of radical relativism: while communities may be variously constituted, they are not arbitrary, and in fact they enact constraints as well as fostering productivity. Interpretation enables a multitude of plays in the sport, but a known number of teams participate in the league of interpretation.

In his later work Fish takes on the perennial problem of the relation of theory to practice. He persistently attacks the assumption that we generate our interpretations from the principles or theories we hold. Instead, in a trademark reversal, he argues that theory stems from our practices, occurs only after the fact, and has no consequences. Extending this notion to law, Fish makes a characteristically provocative claim that judges do not derive their decisions from legal principles, such as the doctrine of free speech, but accrue legal precedents to justify their practical judgments. This view is called antifoundationalism: the denial that practice derives from a predetermined foundation of theory or principle.

Probably because of his contrarian style as well as the nature of his claims, Stanley Fish has prompted both admiration and ire. Traditionalists have denounced him as a relativist who believes in nothing. Leftist critics have attacked him for espousing a circular position that makes principled political action impossible. Defenders of theory have countered that Fish's argument itself has consequences in delegitimizing the study of theory in the academy. Critics of his concept of interpretive communities note that it does not explain one's entrance into or departure from a particular community; there are social and political factors that influence what community one might enter. Within the reader-response camp itself, WOLFGANG ISER poses the question: "It is quite true that membership of the community helps to prevent arbitrary ideation, but if there is no subjectivist element in reading, how on earth does Professor Fish account for different interpretations of one and the same text?" Rather than troubling Fish, such rebuttals spur his further argument. His work has indelibly marked contemporary literary theory, especially the concept of interpretation.

From Is There a Text in This Class? The Authority of Interpretive Communities

Chapter 14. How to Recognize a Poem When You See One

Last time¹ I sketched out an argument by which meanings are the property neither of fixed and stable texts nor of free and independent readers but of

1. This was the second of four talks that Fish delivered in April 1979 as part of the John Crowe Ransom Memorial Lectures series at Kenyon College; ironically, RANSOM was a leader of the

New Critics, who advocated formalism, whereas Fish argues that meaning resides not in form but in the interpretive conventions that we bring to texts.

interpretive communities that are responsible both for the shape of a reader's activities and for the texts those activities produce. In this lecture I propose to extend that argument so as to account not only for the meanings a poem might be said to have but for the fact of its being recognized as a poem in the first place. And once again I would like to begin with an anecdote.

In the summer of 1971 I was teaching two courses under the joint auspices of the Linguistic Institute of America and the English Department of the State University of New York at Buffalo. I taught these courses in the morning and in the same room. At 9:30 I would meet a group of students who were interested in the relationship between linguistics and literary criticism. Our nominal subject was stylistics² but our concerns were finally theoretical and extended to the presuppositions and assumptions which underlie both linguistic and literary practice. At 11:00 these students were replaced by another group whose concerns were exclusively literary and were in fact confined to English religious poetry of the seventeenth century. These students had been learning how to identify Christian symbols and how to recognize typological patterns³ and how to move from the observation of these symbols and patterns to the specification of a poetic intention that was usually didactic or homiletic. On the day I am thinking about, the only connection between the two classes was an assignment given to the first which was still on the blackboard at the beginning of the second. It read:

Jacobs–Rosenbaum
Levin
Thorne
Hayes
Ohman (?)

I am sure that many of you will already have recognized the names on this list, but for the sake of the record, allow me to identify them. Roderick Jacobs and Peter Rosenbaum are two linguists who have coauthored a number of textbooks and co-edited a number of anthologies. Samuel Levin is a linguist who was one of the first to apply the operations of transformational grammar to literary texts. J. P. Thorne is a linguist at Edinburgh who, like Levin, was attempting to extend the rules of transformational grammar to the notorious irregularities of poetic language. Curtis Hayes is a linguist who was then using transformational grammar in order to establish an objective basis for his intuitive impression that the language of Gibbon's *Rise and Fall of the Roman Empire* is more complex than the language of Hemingway's novels.⁴ And Richard Ohmann⁵ is the literary critic who, more than any other, was responsible for introducing the vocabulary of transformational

2. A form of literary criticism that draws on developments in linguistics. In the 1960s, it looked especially to Noam Chomsky's recent theory of transformational grammar (language rests on a deep structure, from which sentences in specific languages are generated by processes or transformations).

3. That is, the prefiguration of New Testament persons, objects, or events in the Old Testament, or Hebrew Bible.

4. The American writer Ernest Hemingway (1899–1961) is known for his spare and direct sentences, whereas the British historian Edward Gibbon (1737–1794) has a brilliant but elaborate style. *The History of the Decline and Fall of the Roman Empire* (6 vols., 1776–88) is Gibbon's masterpiece.

5. American critic (b. 1931; see above), whose early work focused on linguistics; he later shifted to institutional studies.

grammar to the literary community. Ohmann's name was spelled as you see it here because I could not remember whether it contained one or two n's. In other words, the question mark in parenthesis signified nothing more than a faulty memory and a desire on my part to appear scrupulous. The fact that the names appeared in a list that was arranged vertically, and that Levin, Thorne, and Hayes formed a column that was more or less centered in relation to the paired names of Jacobs and Rosenbaum, was similarly accidental and was evidence only of a certain compulsiveness if, indeed, it was evidence of anything at all.

In the time between the two classes I made only one change. I drew a frame around the assignment and wrote on the top of that frame "p. 43." When the members of the second class filed in I told them that what they saw on the blackboard was a religious poem of the kind they had been studying and I asked them to interpret it. Immediately they began to perform in a manner that, for reasons which will become clear, was more or less predictable. The first student to speak pointed out that the poem was probably a hieroglyph, although he was not sure whether it was in the shape of a cross or an altar. This question was set aside as the other students, following his lead, began to concentrate on individual words, interrupting each other with suggestions that came so quickly that they seemed spontaneous. The first line of the poem (the very order of events assumed the already constituted status of the object) received the most attention: Jacobs was explicated as a reference to Jacob's ladder,⁶ traditionally allegorized as a figure for the Christian ascent to heaven. In this poem, however, or so my students told me, the means of ascent is not a ladder but a tree, a rose tree or rosenbaum.⁷ This was seen to be an obvious reference to the Virgin Mary who was often characterized as a rose without thorns, itself an emblem of the immaculate conception.⁸ At this point the poem appeared to the students to be operating in the familiar manner of an iconographic riddle. It at once posed the question, "How is it that a man can climb to heaven by means of a rose tree?" and directed the reader to the inevitable answer: by the fruit of that tree, the fruit of Mary's womb, Jesus. Once this interpretation was established it received support from, and conferred significance on, the word "thorne," which could only be an allusion to the crown of thorns, a symbol of the trial suffered by Jesus and of the price he paid to save us all. It was only a short step (really no step at all) from this insight to the recognition of Levin as a double reference, first to the tribe of Levi,⁹ of whose priestly function Christ was the fulfillment, and second to the unleavened bread carried by the children of Israel on their exodus from Egypt, the place of sin, and in response to the call of Moses,¹ perhaps the most familiar of the old testament types of Christ. The final word of the poem was given at least three complementary readings: it could be "omen," especially since so much of the poem is concerned with foreshadowing and prophecy; it could be Oh Man, since it is man's story as it intersects with the divine plan that is the poem's subject; and it could, of course, be simply

6. The ladder to heaven of which Jacob dreams in the Hebrew Bible (Genesis 28.12–15).

7. In German, "rose tree."

8. The Christian doctrine that Mary, mother of Jesus, was uniquely born free from the stain of original sin.

9. One of the 12 biblical tribes of ancient Israel,

descended from Jacob's son Levi; traditionally, the Levites performed religious functions (members of the priesthood were descendants of Moses's brother Aaron, himself a descendant of Levi).

1. Hebrew prophet who led the exodus; his "call" is his address by God from the burning bush (see Exodus 3.1–4.17).

"amen," the proper conclusion to a poem celebrating the love and mercy shown by a God who gave his only begotten son so that we may live.

In addition to specifying significances for the words of the poem and relating those significances to one another, the students began to discern larger structural patterns. It was noted that of the six names in the poem three—Jacobs, Rosenbaum, and Levin—are Hebrew, two—Thorne and Hayes—are Christian, and one—Ohman—is ambiguous, the ambiguity being marked in the poem itself (as the phrase goes) by the question mark in parenthesis. This division was seen as a reflection of the basic distinction between the old dispensation and the new, the law of sin and the law of love. That distinction, however, is blurred and finally dissolved by the typological perspective which invests the old testament events and heroes with new testament meanings. The structure of the poem, my students concluded, is therefore a double one, establishing and undermining its basic pattern (Hebrew vs. Christian) at the same time. In this context there is finally no pressure to resolve the ambiguity of Ohman since the two possible readings—the name is Hebrew, the name is Christian—are both authorized by the reconciling presence in the poem of Jesus Christ. Finally, I must report that one student took to counting letters and found, to no one's surprise, that the most prominent letters in the poem were S, O, N.

Some of you will have noticed that I have not yet said anything about Hayes. This is because of all the words in the poem it proved the most recalcitrant to interpretation, a fact not without consequence, but one which I will set aside for the moment since I am less interested in the details of the exercise than in the ability of my students to perform it. What is the source of that ability? How is it that they were able to do what they did? What is it that they did? These questions are important because they bear directly on a question often asked in literary theory, What are the distinguishing features of literary language? Or, to put the matter more colloquially, How do you recognize a poem when you see one? The commonsense answer, to which many literary critics and linguists are committed, is that the act of recognition is triggered by the observable presence of distinguishing features. That is, you know a poem when you see one because its language displays the characteristics that you know to be proper to poems. This, however, is a model that quite obviously does not fit the present example. My students did not proceed from the noting of distinguishing features to the recognition that they were confronted by a poem; rather, it was the act of recognition that came first—they knew in advance that they were dealing with a poem—and the distinguishing features then followed.

In other words, acts of recognition, rather than being triggered by formal characteristics, are their source. It is not that the presence of poetic qualities compels a certain kind of attention but that the paying of a certain kind of attention results in the emergence of poetic qualities. As soon as my students were aware that it was poetry they were seeing, they began to look with poetry-seeing eyes, that is, with eyes that saw everything in relation to the properties they knew poems to possess. They knew, for example (because they were told by their teachers), that poems are (or are supposed to be) more densely and intricately organized than ordinary communications; and that knowledge translated itself into a willingness—one might even say a determination—to see connections between one word and another and between

every word and the poem's central insight. Moreover, the assumption that there is a central insight is itself poetry-specific, and presided over its own realization. Having assumed that the collection of words before them was unified by an informing purpose (because unifying purposes are what poems have), my students proceeded to find one and to formulate it. It was in the light of that purpose (now assumed) that significances for the individual words began to suggest themselves, significances which then fleshed out the assumption that had generated them in the first place. Thus the meanings of the words and the interpretation in which those words were seen to be embedded emerged together, as a consequence of the operations my students began to perform once they were told that this was a poem.

It was almost as if they were following a recipe—if it's a poem do this, if it's a poem, see it that way—and indeed definitions of poetry *are* recipes, for by directing readers as to what to look for in a poem, they instruct them in ways of looking that will produce what they expect to see. If your definition of poetry tells you that the language of poetry is complex, you will scrutinize the language of something identified as a poem in such a way as to bring out the complexity you know to be "there." You will, for example, be on the lookout for latent ambiguities; you will attend to the presence of alliterative and consonantal patterns (there will always be some), and you will try to make something of them (you will always succeed); you will search for meanings that subvert, or exist in a tension with the meanings that first present themselves; and if these operations fail to produce the anticipated complexity, you will even propose a significance for the words that are *not* there, because, as everyone knows, everything about a poem, including its omissions, is significant. Nor, as you do these things, will you have any sense of performing in a willful manner, for you will only be doing what you learned to do in the course of becoming a skilled reader of poetry. Skilled reading is usually thought to be a matter of discerning what is there, but if the example of my students can be generalized, it is a matter of knowing how to *produce* what can thereafter be said to be there. Interpretation is not the art of construing but the art of constructing. Interpreters do not decode poems; they make them.

To many, this will be a distressing conclusion, and there are a number of arguments that could be mounted in order to forestall it. One might point out that the circumstances of my students' performance were special. After all, they had been concerned exclusively with religious poetry for some weeks, and therefore would be uniquely vulnerable to the deception I had practiced on them and uniquely equipped to impose religious themes and patterns on words innocent of either. I must report, however, that I have duplicated this experiment any number of times at nine or ten universities in three countries, and the results were always the same, even when the participants know from the beginning that what they are looking at was originally an assignment. Of course this very fact could itself be turned into an objection: doesn't the reproducibility of the exercise prove that there is something about these words that leads everyone to perform in the same way? Isn't it just a happy accident that names like Thorne and Jacobs have counterparts or near counterparts in biblical names and symbols? And wouldn't my students have been unable to do what they did if the assignment I gave to the first class had been made up of different names? The answer to all of these questions is no.

Given a firm belief that they were confronted by a religious poem, my students would have been able to turn any list of names into the kind of poem we have before us now, because they would have read the names within the assumption that they were informed with Christian significances. (This is nothing more than a literary analogue to Augustine's rule of faith.²) You can test this assertion by replacing Jacobs-Rosenbaum, Levin, Thorne, Hayes, and Ohman with names drawn from the faculty of Kenyon College—Temple, Jordan, Seymour, Daniels, Star, Church.³ I will not exhaust my time or your patience by performing a full-dress analysis, which would involve, of course, the relation between those who saw the River Jordan and those who saw *more* by seeing the Star of Bethlehem,⁴ thus fulfilling the prophecy by which the temple of Jerusalem was replaced by the inner temple or church built up in the heart of every Christian. Suffice it to say that it could easily be done (you can take the poem home and do it yourself) and that the shape of its doing would be constrained not by the names but by the interpretive assumptions that gave them a significance even before they were seen. This would be true even if there were no names on the list, if the paper or blackboard were blank; the blankness would present no problem to the interpreter, who would immediately see in it the void out of which God created the earth, or the abyss into which unregenerate sinners fall, or, in the best of all possible poems, both.

Even so, one might reply, all you've done is demonstrate how an interpretation, if it is prosecuted with sufficient vigor, can impose itself on material which has its own proper shape. Basically, at the ground level, in the first place, when all is said and done, "Jacobs-Rosenbaum Levin Thorne Hayes Ohman(?)" is an assignment; it is only a trick that allows you to transform it into a poem, and when the effects of the trick have worn off, it will return to its natural form and be seen as an assignment once again. This is a powerful argument because it seems at once to give interpretation its due (as an act of the will) and to maintain the independence of that on which interpretation works. It allows us, in short, to preserve our commonsense intuition that interpretation must be interpretation of *something*. Unfortunately, the argument will not hold because the assignment we all see is no less the product of interpretation than the poem into which it was turned. That is, it requires just as much work, and work of the same kind, to see this as an assignment as it does to see it as a poem. If this seems counterintuitive, it is only because the work required to see it as an assignment is work we have already done, in the course of acquiring the huge amount of background knowledge that enables you and me to function in the academic world. In order to know what an assignment is, that is, in order to know what to do with something identified as an assignment, you must first know what a class is (know that it isn't an economic grouping) and know that classes meet at specified times for so many weeks, and that one's performance in a class is largely a matter of performing between classes.

2. The early Christian theologian and philosopher AUGUSTINE (354–430 C.E.) defined faith as belief in "things not seen."

3. Faculty members of Kenyon College at the time of Fish's lecture.

4. The star whose appearance signified the birth

of Jesus and later led the Magi to him (Matthew 2.2, 7–9). The Jordan was the river that the Israelites crossed to enter the land promised to them by God (Deuteronomy 34.1–4; Joshua 1.13–17). This is presented as another example of typological interpretation.

Think for a moment of how you would explain this last to someone who did not already know it. "Well," you might say, "a class is a group situation in which a number of people are instructed by an informed person in a particular subject." (Of course the notion of "subject" will itself require explanation.) "An assignment is something you do when you're not in class." "Oh, I see," your interlocutor might respond, "an assignment is something you do to take your mind off what you've been doing in class." "No, an assignment is a part of a class." "But how can that be if you only do it when the class is not meeting?" Now it would be possible, finally, to answer that question, but only by enlarging the horizons of your explanation to include the very concept of a university, what it is one might be doing there, why one might be doing it instead of doing a thousand other things, and so on. For most of us these matters do not require explanation, and indeed, it is hard for us to imagine someone for whom they do; but that is because our tacit knowledge of what it means to move around in academic life was acquired so gradually and so long ago that it doesn't seem like knowledge at all (and therefore something someone else might *not* know) but a part of the world. You might think that when you're on campus (a phrase that itself requires volumes) that you are simply walking around on the two legs God gave you; but your walking is informed by an internalized awareness of institutional goals and practices, of norms of behavior, of lists of do's and don't's, of invisible lines and the dangers of crossing them; and, as a result, you see everything as *already* organized in relation to those same goals and practices. It would never occur to you, for example, to wonder if the people pouring out of that building are fleeing from a fire; you *know* that they are exiting from a class (what could be more obvious?) and you know that because your perception of their action occurs within a knowledge of what people in a university could possibly be doing and the reasons they could have for doing it (going to the next class, going back to the dorm, meeting someone in the student union). It is within that same knowledge that an assignment becomes intelligible so that it appears to you immediately as an obligation, as a set of directions, as something with parts, some of which may be more significant than others. That is, it is a proper question to ask of an assignment whether some of its parts might be omitted or slighted, whereas readers of poetry know that no part of a poem can be slighted (the rule is "everything counts") and they do not rest until every part has been given a significance.

In a way this amounts to no more than saying what everyone already knows: poems and assignments are different, but my point is that the differences are a result of the different interpretive operations we perform and not of something inherent in one or the other. An assignment no more compels its own recognition than does a poem; rather, as in the case of a poem, the shape of an assignment emerges when someone looks at something identified as one with assignment-seeing eyes, that is, with eyes which are capable of seeing the words as already embedded within the institutional structure that makes it possible for assignments to have a sense. The ability to see, and therefore to make, an assignment is no less a learned ability than the ability to see, and therefore to make, a poem. Both are constructed artifacts, the products and not the producers of interpretation, and while the differences between them are real, they are interpretive and do not have their source in some bedrock level of objectivity.

Of course one might want to argue that there is a bedrock level at which these names constitute neither an assignment or a poem but are merely a list. But that argument too falls because a list is no more a natural object—one that wears its meaning on its face and can be recognized by anyone—than an assignment or a poem. In order to see a list, one must already be equipped with the concepts of seriality, hierarchy, subordination, and so on, and while these are by no mean esoteric concepts and seem available to almost everyone, they are nonetheless learned, and if there were someone who had not learned them, he or she would not be able to see a list. The next recourse is to descend still lower (in the direction of atoms) and to claim objectivity for letters, paper, graphite, black marks on white spaces, and so on; but these entities too have palpability and shape only because of the assumption of some or other system of intelligibility, and they are therefore just as available to a deconstructive dissolution as are poems, assignments, and lists.

The conclusion, therefore, is that all objects are made and not found, and that they are made by the interpretive strategies we set in motion. This does not, however, commit me to subjectivity because the means by which they are made are social and conventional. That is, the “you” who does the interpretative work that puts poems and assignments and lists into the world is a communal you and not an isolated individual. No one of us wakes up in the morning and (in French fashion) reinvents poetry⁵ or thinks up a new educational system or decides to reject seriality in favor of some other, wholly original, form of organization. We do not do these things because we could not do them, because the mental operations we can perform are limited by the institutions in which we are *already* embedded. These institutions precede us, and it is only by inhabiting them, or being inhabited by them, that we have access to the public and conventional senses they make. Thus while it is true to say that we create poetry (and assignments and lists), we create it through interpretive strategies that are finally not our own but have their source in a publicly available system of intelligibility. Insofar as the system (in this case a literary system) constrains us, it also fashions us, furnishing us with categories of understanding, with which we in turn fashion the entities to which we can then point. In short, to the list of made or constructed objects we must add ourselves, for we no less than the poems and assignments we see are the products of social and cultural patterns of thought.

To put the matter in this way is to see that the opposition between objectivity and subjectivity is a false one because neither exists in the pure form that would give the opposition its point. This is precisely illustrated by my anecdote in which we do *not* have free-standing readers in a relationship of perceptual adequacy or inadequacy to an equally free-standing text. Rather, we have readers whose consciousnesses are constituted by a set of conventional notions which when put into operation constitute in turn a conventional, and conventionally seen, object. My students could do what they did, and do it in unison, because as members of a literary community they knew what a poem was (their knowledge was public), and that knowledge led them to look in such a way as to populate the landscape with what they knew to be poems.

5. Probably an allusion to Arthur Rimbaud (1854–1891), who was the first important French poet to write in free verse.

Of course poems are not the only objects that are constituted in unison by shared ways of seeing. Every object or event that becomes available within an institutional setting can be so characterized. I am thinking, for example, of something that happened in my classroom just the other day. While I was in the course of vigorously making a point, one of my students, William Newlin by name, was just as vigorously waving his hand. When I asked the other members of the class what it was that Mr. Newlin was doing, they all answered that he was seeking permission to speak. I then asked them how they knew that. The immediate reply was that it was obvious; what else could he be thought to be doing? The meaning of his gesture, in other words, was right there on its surface, available for reading by anyone who had the eyes to see. That meaning, however, would not have been available to someone without any knowledge of what was involved in being a student. Such a person might have thought that Mr. Newlin was pointing to the fluorescent lights hanging from the ceiling, or calling our attention to some object that was about to fall ("the sky is falling," "the sky is falling"⁶). And if the someone in question were a child of elementary or middle-school age, Mr. Newlin might well have been seen as seeking permission not to speak but to go to the bathroom, an interpretation or reading that would never occur to a student at Johns Hopkins or any other institution of "higher learning" (and how would we explain to the uninitiated the meaning of *that* phrase).

The point is the one I have made so many times before: it is neither the case that the significance of Mr. Newlin's gesture is imprinted on its surface where it need only be read off, or that the construction put on the gesture by everyone in the room was individual and idiosyncratic. Rather, the source of our interpretive unanimity was a structure of interests and understood goals, a structure whose categories so filled our individual consciousnesses that they were rendered as one, immediately investing phenomena with the significance they *must* have, given the already-in-place assumptions about what someone could possibly be intending (by word or gesture) in a classroom. By seeing Mr. Newlin's raised hand with a single shaping eye, we were demonstrating what Harvey Sacks has characterized as "the fine power of a culture. It does not, so to speak, merely fill brains in roughly the same way, it fills them so that they are alike in fine detail."⁷ The occasion of Sacks's observation was the ability of his hearers to understand a sequence of two sentences—"The baby cried. The mommy picked it up."—exactly as he did (assuming, for example that "the 'mommy' who picks up the 'baby' is the mommy of that baby"), despite the fact that alternative ways of understanding were demonstrably possible. That is, the mommy of the second sentence could well have been the mommy of some other baby, and it need not even have been a baby that this "floating" mommy was picking up. One is tempted to say that in the absence of a specific context we are authorized to take the words literally, which is what Sacks's hearers do; but as Sacks observes, it is within the assumption of a context—one so deeply assumed that we are unaware of it—that the words acquire what seems to be their literal meaning. There is nothing

6. A phrase from the folktale "Henny Penny" (better known in the United States as "Chicken Little"), whose title character warns that the world is ending, panicking because some natural object fell on it.

7. "On the Analysability of Stories by Children," in *Ethnomethodology*, ed. Roy Turner (Baltimore: Penguin, 1974), p. 218 [Fish's note]. Sacks (1935–1975), American sociologist.

ing *in the words* that tells Sacks and his hearers how to relate the mommy and the baby of this story, just as there is nothing *in the form* of Mr. Newlin's gesture that tells his fellow students how to determine its significance. In both cases the determination (of relation and significance) is the work of categories of organization—the family, being a student—that are from the very first giving shape and value to what is heard and seen.

Indeed, these categories are the very shape of seeing itself, in that we are not to imagine a perceptual ground more basic than the one they afford. That is, we are not to imagine a moment when my students “simply see” a physical configuration of atoms and *then* assign that configuration a significance, according to the situation they happen to be in. To be in the situation (this or any other) is to “see” with the eyes of its interests, its goals, its understood practices, values, and norms, and so to be conferring significance *by* seeing, not after it. The categories of my students' vision are the categories by which they understand themselves to be functioning as students (what Sacks might term “doing studenting”), and objects will appear to them in forms related to that way of functioning rather than in some objective or preinterpretive form. (This is true even when an object is seen as not related, since nonrelation is not a pure but a differential category—the specification of something by enumerating what it is not; in short, nonrelation is merely one form of relation, and its perception is always situation-specific.)

Of course, if someone who was not functioning as a student was to walk into my classroom, he might very well see Mr. Newlin's raised hand (and “raised hand” is already an interpretation-laden description) in some other way, as evidence of a disease, as the salute of a political follower, as a muscle-improving exercise, as an attempt to kill flies; but he would always see it in *some* way, and never as purely physical data waiting for his interpretation. And, moreover, the way of seeing, whatever it was, would never be individual or idiosyncratic, since its source would always be the institutional structure of which the “see-er” was an extending agent. This is what Sacks means when he says that a culture fills brains “so that they are alike in fine detail”; it fills them so that no one's interpretive acts are exclusively his own but fall to him by virtue of his position in some socially organized environment and are therefore always shared and public. It follows, then, that the fear of solipsism, of the imposition by the unconstrained self of its own prejudices, is unfounded because the self does not exist apart from the communal or conventional categories of thought that enable its operations (of thinking, seeing, reading). Once one realizes that the conceptions that fill consciousness, including any conception of its own status, are culturally derived, the very notion of an unconstrained self, of a consciousness wholly and dangerously free, becomes incomprehensible.

But without the notion of the unconstrained self, the arguments of Hirsch, Abrams,⁸ and the other proponents of objective interpretation are deprived of their urgency. They are afraid that in the absence of the controls

8. M. H. Abrams (1912–2015), American literary critic and founding editor of *The Norton Anthology of English Literature*; in a preface to his lectures, Fish reports that he was responding to Abrams's essay “How to Do Things with Texts” (1978; published 1979). E. D. Hirsch (b. 1928),

American educational and literary theorist who elaborated on objective standards in *Validity in Interpretation* (1967); he later became more widely known for his arguments promoting the canon and “cultural literacy.”

afforded by a normative system of meanings, the self will simply substitute its own meanings for the meanings (usually identified with the intentions of the author) that texts bring with them, the meanings that texts “have”; however, if the self is conceived of not as an independent entity but as a social construct whose operations are delimited by the systems of intelligibility that inform it, then the meanings it confers on texts are not its own but have their source in the interpretive community (or communities) of which it is a function. Moreover, these meanings will be neither subjective nor objective, at least in the terms assumed by those who argue within the traditional framework: they will not be objective because they will always have been the product of a point of view rather than having been simply “read off”; and they will not be subjective because that point of view will always be social or institutional. Or by the same reasoning one could say that they are *both* subjective and objective: they are subjective because they inhere in a particular point of view and are therefore not universal; and they are objective because the point of view that delivers them is public and conventional rather than individual or unique.

To put the matter in either way is to see how unhelpful the terms “subjective” and “objective” finally are. Rather than facilitating inquiry, they close it down, by deciding in advance what shape inquiry can possibly take. Specifically, they assume, without being aware that it is an assumption and therefore open to challenge, the very distinction I have been putting into question, the distinction between interpreters and the objects they interpret. That distinction in turn assumes that interpreters and their objects are two different kinds of *acontextual* entities, and within these twin assumptions the issue can only be one of control: will texts be allowed to constrain their own interpretation or will irresponsible interpreters be allowed to obscure and overwhelm texts. In the spectacle that ensues, the spectacle of Anglo-American critical controversy, texts and selves fight it out in the persons of their respective champions, Abrams, Hirsch, Reichert, Graff on the one hand, Holland, Bleich, Slatoff, and (in some characterizations of him) Barthes⁹ on the other. But if selves are constituted by the ways of thinking and seeing that inhere in social organizations, and if these constituted selves in turn constitute texts according to these same ways, then there can be no adversary relationship between text and self because they are the necessarily related products of the same cognitive possibilities. A text cannot be overwhelmed by an irresponsible reader and one need not worry about protecting the purity of a text from a reader’s idiosyncracies. It is only the distinction between subject and object that gives rise to these urgencies, and once the distinction is blurred they simply fall away. One can respond with a cheerful yes to the question “Do readers make meanings?” and commit oneself to very little because it would be equally true to say that meanings, in the form of culturally derived interpretive categories, make readers.

9. Those in the latter group focused on the reader and subjectivity in some of their writings: Norman Holland (1927–2017), psychoanalytic and reader-response theorist; David Bleich (b. 1940), American literary critic whose works include *Subjective Criticism* (1978); Walter Slatoff (1922–1991), American reader-response critic; and ROLAND BARTHES (1915–1980), French liter-

ary critic. In different ways, Abrams, Hirsch, the American cultural critic GERALD GRAFF (b. 1937), and John Reichert (1935–2004), an American literary critic who argued against Fish’s view of interpretive communities in “But That Was in Another Ball Park: A Reply to Stanley Fish” (1979), were invested in defending objective standards in criticism.

Indeed, many things look rather different once the subject–object dichotomy is eliminated as the assumed framework within which critical discussion occurs. Problems disappear, not because they have been solved but because they are shown never to have been problems in the first place. Abrams, for example, wonders how, in the absence of a normative system of stable meanings, two people could ever agree on the interpretation of a work or even of a sentence; but the difficulty is only a difficulty if the two (or more) people are thought of as isolated individuals whose agreement must be compelled by something external to them. (There is something of the police state in Abrams's vision, complete with posted rules and boundaries, watchdogs to enforce them, procedures for identifying their violators as criminals.) But if the understandings of the people in question are informed by the same notions of what counts as a fact, of what is central, peripheral, and worthy of being noticed—in short, by the same interpretive principles—then agreement between them will be assured, and its source will not be a text that enforces its own perception but a way of perceiving that results in the emergence to those who share it (or those whom it shares) of the same text. That text might be a poem, as it was in the case of those who first “saw” “Jacobs-Rosenbaum Levin Hayes Thorne Ohman(?),” or a hand, as it is every day in a thousand classrooms; but whatever it is, the shape and meaning it appears immediately to have will be the “ongoing accomplishment”¹ of those who agree to produce it.

1980

1. A phrase used by the ethnomethodologists to characterize the interpretive activities that create and maintain the features of everyday life.

See, for example, Don H. Zimmerman, “Fact as Practical Accomplishment,” in *Ethnomethodology*, pp. 128–143 [Fish's note].

1933–1992

English departments are a relatively recent historical development, arising only in the late nineteenth and early twentieth century. Before that, academic literary study in the West centered on the Greek and Latin classics and focused on elements of rhetoric and philology. During the Victorian era in England, as TERRY EAGLETON points out in the first chapter of *Literary Theory* (1983; see below), English arose as a discipline to foster an appreciation for culture in the less educated classes, who were not trained in Greek and Latin. But as Eagleton also argues, English was enmeshed with nationalism and designed to instill national pride—hence the subject was “English” rather than simply “literature”—particularly in

the face of European conflicts (such as World War I) and competition for colonies. Moreover, the teaching of English language and literature was a prominent part of the administration of the British Empire in its many colonies around the globe—in India, Africa, and elsewhere. “On the Abolition of the English Department” (1968), our selection here, stages a revolt against this vestige of British colonial rule: it depicts English not as a neutral or natural subject but as an instrument of imperialism, and promotes the study of indigenous national literatures and languages. Originally a university memorandum, it today is seen as an important inaugural statement of postcolonial literary criticism.

Its lead author, Ngugi wā Thiong’o (James Ngugi), is an internationally renowned novelist, dramatist, and critic. Born in Kenya, which was under British rule from 1895 until 1963, Ngugi witnessed the effects of colonialism firsthand. He attended an independent mission school where the teachers were native Kenyans; but in 1954, in response to the Mau Mau uprising against colonial rule, the British government took control of it and made instruction in English mandatory. In the political turmoil leading to independence, one of his stepbrothers was killed and his mother tortured, and an older brother joined the Mau Mau rebellion. In 1959 Ngugi entered Makerere University in Uganda, receiving his B.A. in 1964; there he also began his writing career, publishing the acclaimed novel *Weep Not, Child* (1964) about the Mau Mau war and East African culture. After attending Leeds University on a British council scholarship (1964–67), he returned to Africa to take a position at Nairobi University, but soon resigned in protest over governmental interference in the university. He rejoined the faculty in 1971, becoming in 1973 head of the Department of Literature, newly formed in response to his and his colleagues’ criticism of English. He also renounced his anglicized name, James Ngugi, which he held to be a sign of colonialism; taking his name in his native Kikuyu language, he thereafter wrote first in Kikuyu and then translated his own work into English. In 1977 he was arrested by Kenyan police after the production of one of his plays that was critical of the government. Protests from international literary groups led to his release after he had been imprisoned for a year without being charged. Ngugi eventually left the country, taking professorships at Yale University, New York University, and, since 2004, the University of California at Irvine, where he is now Distinguished Professor of Comparative Literature.

Born in northern Uganda, which was under British rule from 1896 until 1962, Taban lo Liyong received his B.A. from the Ugandan National Teachers College in 1962. He traveled to the United States to study political science, but changed paths in 1965 to attend the prestigious writers’ workshop at the University of Iowa; in 1968 he became its first African graduate. He was an important early critic of the paucity of African literature, attributing it to British colonial rule: “I blame the British. The education they came to offer was aimed at recruiting candidates for a Christian Heaven” and at “produc[ing] clerks, teachers, servants.” In 1968 he returned to Africa on a fellowship offered by the Institute for African Studies at Nairobi University, where he also lectured in the English department and joined forces with Ngugi and Owuor-Anyumba. Since 1978 he has held positions at the University of Juba in the Sudan.

Born in Kenya, Henry Owuor-Anyumba received a degree in education from the University of East Africa and his B.A. from Cambridge University in 1966. Thereafter he taught at Nairobi University until his death in 1992. Less widely known than his coauthors, he was a folklorist, especially of African music.

After World War II, almost all of the many colonies of the European powers gained their national independence, sometimes through negotiation and sometimes through revolt and war. But political independence did not necessarily entail economic or cultural autonomy, and the effects of colonialism lingered in language, education, and religion, as well as in economic and political structures. The residual effects of

imperialism are variously called "postcolonial," "neo-colonial" (the term that Ngugi most frequently uses), or simply "colonial" (the term favored by the celebrated Nigerian novelist CHINUA ACHEBE). Inaugurated as a critique of the results of decolonization, postcolonial studies addresses the perennial theoretical issue of the relation of culture and society, particularly the role that culture—notably language, literature, and education—plays in furthering imperialism. In "Literature and Society" (1973), Ngugi views culture as a central vehicle for continued colonial control, or "cultural imperialism," "which during classical colonialism supplemented direct military and political occupation [but now] becomes the major agency of control under neo-colonialism."

"On the Abolition of the English Department" deals with how literary education and academic institutions have helped implement cultural imperialism in Africa. As Ngugi elaborates in "Literature and Society," "the content of our literature syllabus, its presentation, the machinery for determining the choice of texts and their interpretation were all an integral part of imperialism and domination in the colonial phase, and they are today an integral part of the imperialism and domination in the neo-colonial phase." To remedy this, "On the Abolition of the English Department" offers a straightforward set of proposals for African universities: first, dismantle departments centered on English language and literature; second, create departments centered on the study of indigenous African languages and literature, as well as relevant foreign ones; third, study neglected topics such as the African oral tradition; and, fourth, study modern African literature, which includes Caribbean and African American literature. Ngugi, Liyong, and Owuor-Anyumba are careful not to discredit English or European literature, but argue for the benefits of opening literary study to wider currents. Within the debate over the literary canon, they take an expansionist position, recommending that the canon encompass more texts from different cultures rather than be artificially limited, and that we study representative rather than "classic" texts.

A contentious issue among writers and critics during the early days of decolonization was whether to write in native languages or in the dominant colonial language, usually English or French. European authors similarly had to grapple with the status of vernacular languages in the early Renaissance, when Latin was the dominant language of learning (for example, see JOACHIM DU BELLAY, above). In his other work, Ngugi argues for the primary use of native traditions and languages; in contrast, his coauthor Liyong contends that African writers must write in a European language to capture a wide readership—with the qualification that "we will not have to stick to Queen's English[;] . . . we have to tame the shrew and naturalize her," a point also made by Achebe.

Since the 1980s postcolonial and cultural critics have questioned the nationalistic character of such struggles for independence, arguing that nationalism participates in the logic of imperialism and that it rests on a fictive construct, an "imagined community," without an essential core. Set amid debates over decolonization and Afrocentrism, "On the Abolition of the English Department" provides a glimpse into the political effects of literature and the seemingly neutral institutions of education. Ngugi challenges us to consider such questions more closely, declaring, "Every writer is a writer in politics. The only question is what and whose politics."

"On the Abolition of the English Department" Keywords: The Canon/Tradition, Institutional Studies, Nationhood, Postcolonial Theory, Vernacular Language

On the Abolition of the English Department¹

1. This is a comment on the paper presented by the Acting Head of the English Department at the University of Nairobi² to the 42nd meeting of the Arts Faculty Board on the 20th September, 1968.

2. (a) That paper was mainly concerned with possible developments within the Arts Faculty and their relationship with the English Department, particularly:

- (i) The place of modern languages, especially French;
- (ii) The place and role of the Department of English;
- (iii) The emergence of a Department of Linguistics and Languages;
- (iv) The place of African languages, especially Swahili.

(b) In connection with the above, the paper specifically suggested that a department of Linguistics and Languages, to be closely related to English, be established.

(c) A remote possibility of a Department of African literature, or alternatively, that of African literature and culture, was envisaged.

3. The paper raised important problems. It should have been the subject of a more involved debate and discussion, preceding the appointment of a committee with specific tasks, because it raises questions of value, direction and orientation.

4. For instance, the suggestions, as the paper itself admits, question the role and status of an English Department in an African situation and environment. To quote from his paper:

The English Department has had a long history at this College and has built up a strong syllabus which by its study of the *historic continuity of a single culture throughout the period of emergence of the modern west*, makes it an important companion to History and to Philosophy and Religious Studies. However, *it is bound to become less 'British', more open to other writing in English (American, Caribbean, African, Commonwealth) and also to continental writing, for comparative purposes.*

5. Underlying the suggestions is a basic assumption that the English tradition and the emergence of the modern west is the central root of our consciousness and cultural heritage. Africa becomes an extension of the west, an attitude which, until a radical reassessment, used to dictate the teaching and organization of History in our University.³ Hence, in fact, the assumed centrality of the English Department, into which other cultures can be admitted from time to time, as fit subjects for study, or from which other satellite departments can

1. This debate resulted in the establishment of two departments: Languages and Literature. In both, African languages and literature were to form the core. In the case of the Literature Department, Caribbean and black American literature were to be emphasized. It thus represents a radical departure in the teaching of literature in Africa [Ngugi, Liyong, and Owuor-Anyumba's note].

2. A focal point of the political tension that con-

tinued to beset Kenya after independence was gained in 1964.

3. Then the University of East Africa with three constituent colleges at Makerere, Dar es Salaam, and Nairobi. Since then the three have become autonomous universities [Ngugi, Liyong, and Owuor-Anyumba's note]. Makerere is in Uganda; Dar es Salaam is the capital of Tanzania.

spring as time and money allow. A small example is the current, rather apologetic attempt to smuggle African writing into an English syllabus in our three colleges.

6. Here then, is our main question: If there is need for a 'study of the historic continuity of a single culture', why can't this be African? Why can't African literature be at the centre so that we can view other cultures in relationship to it?

This is not mere rhetoric: already African writing, with the sister connections in the Caribbean and the Afro-American literatures, has played an important role in the African renaissance, and will become even more and more important with time and pressure of events. Just because for reasons of political expediency we have kept English as our official language, there is no need to substitute a study of English culture for our own. We reject the primacy of English literature and culture.

7. The aim, in short, should be to orientate ourselves towards placing Kenya, East Africa, and then Africa in the centre. All other things are to be considered in their relevance to our situation, and their contribution towards understanding ourselves.

8. We therefore suggest:

A. That the English Department be abolished;

B. That a Department of African Literature and Languages be set up in its place.

The primary duty of any literature department is to illuminate the spirit animating a people, to show how it meets new challenges, and to investigate possible areas of development and involvement.

In suggesting this name, we are not rejecting other cultural streams, especially the western stream. We are only clearly mapping out the directions and perspectives the study of culture and literature will inevitably take in an African university.

9. We know that European literatures constitute one source of influence on modern African literatures in English, French, and Portuguese; Swahili,⁴ Arabic, and Asian literatures constitute another, an important source, especially here in East Africa; and the African tradition, a tradition as active and alive as ever, constitutes the third and the most significant. This is the stuff on which we grew up, and it is the base from which we make our cultural take-off into the world.

10. Languages and linguistics should be studied in the department because in literature we see the principles of languages and linguistics in action. Conversely, through knowledge of languages and linguistics we can get more from literature. For linguistics not to become eccentric, it should be studied in the Department of African Literature and Languages.

In addition to Swahili, French, and English, whenever feasible other languages such as Arabic, Hindustani, Kikuyu, Luo, Akamba,⁵ etc., should be introduced into the syllabus as optional subjects.

4. One of the official languages of Kenya and Tanzania.

5. Some of the diverse languages of the different ethnic groups in and around Kenya.

11. On the literature side, the Department ought to offer roughly:

- (a) The oral tradition, which is our primary root;
- (b) Swahili literature (with Arabic and Asian literatures): this is another root, especially in East Africa;
- (c) A selected course in European literature: yet another root;
- (d) Modern African literature.

For the purposes of the Department, a knowledge of Swahili, English, and French should be compulsory. The largest body of writing by Africans is now written in the French language. Africans writing in the French language have also produced most of the best poems and novels. In fact it makes no sense to talk of modern African literature without French.

12. *The Oral Tradition*

The Oral tradition is rich and many-sided. In fact 'Africa is littered with Oral Literature'. But the art did not end yesterday; it is a living tradition. Even now there are songs being sung in political rallies, in churches, in night clubs by guitarists, by accordion players, by dancers, etc. Another point to be observed is the interlinked nature of art forms in traditional practice. Verbal forms are not always distinct from dance, music, etc. For example, in music there is close correspondence between verbal and melodic tones; in 'metrical lyrics' it has been observed that poetic text is inseparable from tune; and the 'folk tale' often bears an 'operatic' form, with sung refrain as an integral part. The distinction between prose and poetry is absent or very fluid.

Though tale, dance, song, myth, etc. can be performed for individual aesthetic enjoyment, they have other social purposes as well. Dance, for example, has been studied 'as symbolic expression of social reality reflecting and influencing the social, cultural and personality systems of which it is a part'. The oral tradition also comments on society because of its intimate relationship and involvement.

The study of the oral tradition at the University should therefore lead to a multi-disciplinary outlook: literature, music, linguistics, Sociology, Anthropology, History, Psychology, Religion, Philosophy. Secondly, its study can lead to fresh approaches by making it possible for the student to be familiar with art forms different in kind and historical development from Western literary forms. Spontaneity and liberty of communication inherent in oral transmission—openness to sounds, sights, rhythms, tones, in life and in the environment—are examples of traditional elements from which the student can draw. More specifically, his familiarity with oral literature could suggest new structures and techniques; and could foster attitudes of mind characterized by the willingness to experiment with new forms, so transcending 'fixed literary patterns' and what that implies—the preconceived ranking of art forms.

The study of the Oral Tradition would therefore supplement (not replace) courses in Modern African Literature. By discovering and proclaiming loyalty to indigenous values, the new literature would on the one hand be set in the stream of history to which it belongs and so be better appreciated; and on the other be better able to embrace and assimilate other thoughts without losing its roots.

13. *Swahili Literature*

There is a large amount of oral and written classical Swahili Literature of high calibre. There is also a growing body of modern Swahili literature: both written and oral.

14. *European Literature*

Europe has influenced Africa, especially through English and French cultures. In our part of Africa there has been an over-concentration on the English side of European life. Even the French side, which is dominant in other countries of Africa, has not received the importance it deserves. We therefore urge for freedom of choice so that a more representative course can be drawn up. We see no reason why English literature should have priority over and above other European literatures where we are concerned. The Russian novel of the nineteenth century should and must be taught. Selections from American, German, and other European literatures should also be introduced. In other words English writings will be taught in their European context and only for their relevance to the East African perspective.

15. *Modern African Literature*

The case for the study of Modern African Literature is self-evident. Its possible scope would embrace:

- (a) The African novel written in French and English;
- (b) African poetry written in French and English, with relevant translations of works written by Africans in Portuguese and Spanish;
- (c) The Caribbean novel and poetry: the Caribbean involvement with Africa can never be over-emphasized. A lot of writers from the West Indies have often had Africa in mind. Their works have had a big impact on the African renaissance—in politics and literature. The poetry of Negritude⁶ indeed cannot be understood without studying its Caribbean roots. We must also study Afro-American literature.

16. *Drama*

Since drama is an integral part of literature, as well as being its extension, various dramatic works should be studied as parts of the literature of the people under study. Courses in play-writing, play-acting, directing, lighting, costuming, etc. should be instituted.

17. *Relationship with other Departments*

From things already said in this paper, it is obvious that African Oral and Modern literatures cannot be fully understood without some understanding of social and political ideas in African history. For this, we propose that either with the help of other departments, or within the department, or both, courses on mutually relevant aspects of African thought be offered. For instance, an introductory course on African art—sculpture, painting—could be offered in co-operation with the Department of Design and Architecture. 18. The 3.1.1⁷ should be abolished. We think an undergraduate should be exposed to as many general ideas as possible. Any specialization

6. A literary movement of the 1930s through 1950s that began in Paris among black French-speaking African and Caribbean writers; protesting French colonist rule and assimilationist policies, they declared the value of black African

identity, culture, and traditions.

7. This is a course for those who want to specialize in literature: 1st year—three subjects; 2d and 3d years—literature only [Ngugi, Liyong, and Owuor-Anyumba's note].

should come in a graduate school where more specialized courses can be offered.

19. In other words we envisage an active Graduate School will develop, which should be organized with such departments as the Institute for Development studies.

20. *Conclusion*

One of the things which has been hindering a radical outlook in our study of literature in Africa is the question of literary excellence; that only works of undisputed literary excellence should be offered. (In this case it meant virtually the study of disputable 'peaks' of English literature.) The question of literary excellence implies a value judgment as to what is literary and what is excellence, and from whose point of view. For any group it is better to study representative works which mirror their society rather than to study a few isolated 'classics', either of their own or of a foreign culture.

To sum up, we have been trying all along to place values where they belong. We have argued the case for the abolition of the present Department of English in the College, and the establishment of a Department of African Literature and Languages. This is not a change of names only. We want to establish the centrality of Africa in the department. This, we have argued, is justifiable on various grounds, the most important one being that education is a means of knowledge about ourselves. Therefore, after we have examined ourselves, we radiate outwards and discover peoples and worlds around us. With Africa at the centre of things, not existing as an appendix or a satellite of other countries and literatures, things must be seen from the African perspective. The dominant object in that perspective is African literature, the major branch of African culture. Its roots go back to past African literatures, European literatures, and Asian literatures. These can only be studied meaningfully in a Department of African Literature and Languages in an African University.

We ask that this paper be accepted in principle; we suggest that a representative committee be appointed to work out the details and harmonize the various suggestions into an administratively workable whole.

1968

TZVETAN TODOROV

1939–2017

A central figure in French structuralism, Tzvetan Todorov is best known for advocating the scientific study of narrative, modeled on linguistics, for which he coined the now-standard term *narratology*. He was responsible for renewing attention to the narrative theory put forth in the early twentieth century by the Russian formalists, such as Boris Eichenbaum and Viktor Shklovsky, and for an effort, with his mentor ROLAND BARTHES, to establish a universal "grammar" of narrative. In "Structural Analysis of Narrative" (1969), Todorov presents a condensed manifesto for the narratological approach.

Born in Bulgaria, Todorov emigrated to France in 1963 to study literature and language at the University of Paris, where he did his doctoral dissertation under the direction of Barthes. From 1968 until his death he held an appointment at the Centre National de la Recherche Scientifique (National Center for Scientific Research) in Paris. His writing was prolific and varied. From the late 1960s through the 1970s, he focused on questions of literary structure; he later turned to questions of interpretation and social history.

The 1960s witnessed a flourishing of structuralism in fields as diverse as anthropology, psychology, philosophy, and literature. Influenced by FERDINAND DE SAUSSURE (1857–1913) as well as by contemporary linguists, structuralists applied the scientific model of linguistics to other aspects of human culture, seeking to chart their underlying structures and rules. For instance, fashion or courtship rituals might be seen as operating according to their own distinctive codes. The Saussurean model treats words and other minimal linguistic elements not as freestanding units but as components of a larger, abstract system; the overall system of language rather than individual speech utterances thus becomes the primary object of analysis. The anthropologist CLAUDE LÉVI-STRAUSS became famous for applying structuralist methods to the analysis of the myths and rituals of the primitive societies he observed, and his “Structural Analysis of Myth” (1958) provided an influential early example for work in literary studies. Defining literary study as one of the “human sciences” instead of a humanistic pursuit, structuralist critics aimed to describe and categorize the systematic operation of literature, whose general codes were exhibited and instantiated in individual literary works.

Encapsulating the tenets of Todorov’s books *Grammaire du Décaméron* (1969, *Grammar of the Decameron*) and *Poetics of Prose* (1971; trans. 1977), “Structural Analysis of Narrative” seeks to develop a “poetics,” that is, a theoretical study of literary techniques and categories. Todorov is quick to distinguish his version of structural analysis from the New Criticism, the predominant Anglo-American critical approach of the mid-twentieth century. While both focus on internal literary features of works rather than on external concerns such as historical context, he notes that the New Criticism deals only with the individual work itself. The structuralist method proposes instead to understand the overall system in which the work is a part. In his analyses of BOCCACCIO’s *Decameron* (1351–53), for example, Todorov’s interest is not in any individual tale, but in the general and abstract plot structures that govern all the tales. For Todorov, the New Critical method results only in paraphrase and thus does not create new knowledge; the structuralist method, in contrast, charts the systematic laws and patterns that generate literary works. It therefore yields a scientific knowledge of literature, as physics yields a scientific knowledge of the laws of nature, or as linguistics yields a scientific knowledge of the laws of language.

Following ARISTOTLE’S view of plot as the prime category of tragedy, Todorov (and narratology in general) takes plot as the central abstract structure of narrative, analyzing the hundred tales in the *Decameron* on the basis of the similarity of their plots. They lead him to the insight that plot moves from an equilibrium to a disequilibrium—hence the action of the narrative—and concludes in a new equilibrium, which displays either “avoided punishment” or “conversion.” As he states, “All of the stories of the *Decameron* can be entered into this very broad schema.” In privileging and schematizing plot, Todorov also shows the influence of the Russian formalists, particularly the folklorist Vladimir Propp, whose *Morphology of the Folktale* (1928) charts basic plot motifs or patterns common to folktales. Todorov designates the specific elements of each plot, on the model of the sentence, as subject, predicate, and adjective. In an effort to adopt the technical precision of linguistics, he discerns the “grammar” rather than semantic meaning of narrative.

With the critiques of structuralism and the development of poststructuralism by thinkers such as JACQUES DERRIDA through the 1970s, structuralism waned as a vanguard theoretical approach. However, the structuralist theory of narrative has been less discredited than displaced, supplanted by more socially engaged approaches—among them, Marxism, feminism, the New Historicism, and cultural studies. Todorov's own work broadened to consider larger cultural and interpretive issues, as did that of Barthes, who in the 1970s became a leading proponent of poststructuralist literary criticism, extolling the richness of textual interpretation. Yet as Todorov notes in "Structural Analysis of Narrative," poetics does not deny "the relation between literature and . . . social life"; therefore it does not contradict "external" approaches, but serves a different purpose. Narratology remains an active though technical subfield in literary studies, and Todorov's work is still regarded as foundational.

"Structural Analysis of Narrative" Keywords: Narrative Theory, The Novel, Structuralism

Structural Analysis of Narrative¹

The theme I propose to deal with is so vast that the few pages which follow will inevitably take the form of a resumé. My title, moreover, contains the word "structural," a word more misleading than enlightening today. To avoid misunderstandings as much as possible, I shall proceed in the following fashion. First, I shall give an abstract description of what I conceive to be the structural approach to literature. This approach will then be illustrated by a concrete problem, that of narrative, and more specifically, that of plot. The examples will all be taken from the *Decameron* of Boccaccio.² Finally, I shall attempt to make several general conclusions about the nature of narrative and the principles of its analysis.

First of all, one can contrast two possible attitudes toward literature: a theoretical attitude and a descriptive attitude. The nature of structural analysis will be essentially theoretical and non-descriptive; in other words, the aim of such a study will never be the description of a concrete work. The work will be considered as the manifestation of an abstract structure, merely one of its possible realizations; an understanding of that structure will be the real goal of structural analysis. Thus, the term "structure" has, in this case, a logical rather than spatial significance.

Another opposition will enable us to focus more sharply on the critical position which concerns us. If we contrast the internal approach to a literary work with the external one, structural analysis would represent an internal approach. This opposition is well known to literary critics, and Wellek and Warren have used it as the basis for their *Theory of Literature*.³ It is necessary, however, to recall it here, because, in labeling all structural analysis "theoretical," I clearly come close to what is generally termed an "external" approach (in imprecise usage, "theoretical" and "external," on the one hand,

1. Translated by Arnold Weinstein.

2. GIOVANNI BOCCACCIO (1313–1375), Italian writer; the *Decameron* (1351–53), his major achievement, is a collection of 100 tales.

3. First published in 1949 and for decades a stan-

dard introduction to literary criticism; the coauthors, Austrian-born René Wellek (1903–1995) and Austin Warren (1899–1986), were two American literary critics.

and "descriptive" and "internal," on the other, are synonyms). For example, when Marxists or psychoanalysts deal with a work of literature, they are not interested in a knowledge of the work itself, but in the understanding of an abstract structure, social or psychic, which manifests itself through that work. This attitude is therefore both theoretical and external. On the other hand, a New Critic⁴ (imaginary) whose approach is obviously internal, will have no goal other than an understanding of the work itself; the result of his efforts will be a paraphrase of the work, which is supposed to reveal the meaning better than the work itself.

Structural analysis differs from both of these attitudes. Here we can be satisfied neither by a pure description of the work nor by its interpretation in terms that are psychological or sociological or, indeed, philosophical. In other words, structural analysis coincides (in its basic tenets) with theory, with poetics of literature. Its object is the literary discourse rather than works of literature, literature that is virtual rather than real. Such analysis seeks no longer to articulate a paraphrase, a rational resumé of the concrete work, but to propose a theory of the structure and operation of the literary discourse, to present a spectrum of literary possibilities, in such a manner that the existing works of literature appear as particular instances that have been realized.

It must immediately be added that, in practice, structural analysis will also refer to real works: the best stepping-stone toward theory is that of precise, empirical knowledge. But such analysis will discover in each work what it has in common with others (study of genres, of periods, for example), or even with all other works (theory of literature); it would be unable to state the individual specificity of each work. In practice, it is always a question of going continually back and forth, from abstract literary properties to individual works and vice versa. Poetics and description are in fact two complementary activities.

On the other hand, to affirm the internal nature of this approach does not mean a denial of the relation between literature and other homogeneous series, such as philosophy or social life. It is rather a question of establishing a hierarchy: literature must be understood in its specificity, as literature, before we seek to determine its relation with anything else.

It is easily seen that such a conception of literary analysis owes much to the modern notion of science. It can be said that structural analysis of literature is a kind of propaedeutic⁵ for a future science of literature. This term "science," used with regard to literature, usually raises a multitude of protests. It will therefore perhaps be fitting to try to answer some of those protests right now.

Let us first of all reread that page from Henry James's⁶ famous essay on "The Art of Fiction," which already contains several criticisms: "Nothing, for instance, is more possible than that he [the novelist] be of a turn of mind for which this odd, literal opposition of description and dialogue, incident and description, has little meaning and light. People often talk of these

4. An adherent of the dominant Anglo-American academic approach to literary study in the mid-20th century, which focuses on the text itself and stresses close reading. Prominent New Critics include CLEANTH BROOKS (1906–1994) and WILLIAM K. WIMSATT JR. (1907–1975); Warren and

Wellek were loosely associated with the movement.

5. Analysis preliminary to some other study.

6. American novelist and critic (1843–1916); for his programmatic "Art of Fiction" (1884), see above.

things as if they had a kind of internecine distinctness, instead of melting into each other at every breath, and being intimately associated parts of one general effort of expression. I cannot imagine composition existing in a series of blocks, nor conceive, in any novel worth discussing at all, of a passage of description that is not in its intention narrative, a passage of dialogue that is not in its intention descriptive, a touch of truth of any sort that does not partake of the nature of incident, or an incident that derives its interest from any other source than the general and only source of the success of a work of art—that of being illustrative. A novel is a living thing, all one and continuous, like any other organism, and in proportion as it lives will it be found, I think, that in each of the parts there is something of each of the other parts. The critic who over the close texture of a finished work shall pretend to trace a geography of items will mark some frontiers as artificial, I fear, as any that have been known to history.”

In this excerpt, the critic who uses such terms as “description,” “narration,” “dialogue,” is accused by Henry James of committing two sins. First, there will never be found, in a real text, a pure dialogue, a pure description, and so on. Secondly, the very use of these terms is unnecessary, even harmful, since the novel is “a living thing, all one and continuous.”

The first objection loses all its weight as soon as we put ourselves in the perspective of structural analysis; although it does aim at an understanding of concepts like “description” or “action,” there is no need to find them in a pure state. It seems rather natural that abstract concepts cannot be analyzed directly, at the level of empirical reality. In physics, for example, we speak of a property such as temperature although we are unable to isolate it by itself and are forced to observe it in bodies possessing many other qualities also, like resistance and volume. Temperature is a theoretical concept, and it does not need to exist in a pure state; such is also true for description.

The second objection is still more curious. Let us consider the already dubious comparison between a work and a living thing. We all know that any part of our body will contain blood, nerves, muscles—all at the same time; we nonetheless do not require the biologist to abandon these misleading abstractions, designated by the words: blood, nerves, muscles. The fact that we find them together does not prevent us from distinguishing them. If the first argument of James had a positive aspect (it indicated that our objective should be composed of abstract categories and not concrete works), the second represents an absolute refusal to recognize the existence of abstract categories, of whatever is not visible.

There is another very popular argument against the introduction of scientific principles in literary analysis. We are told in this instance that science must be objective, whereas the interpretation of literature is always subjective. In my opinion this crude opposition is untenable. The critic’s work can have varying degrees of subjectivity; everything depends on the perspective he has chosen. This degree will be much lower if he tries to ascertain the properties of the work rather than seeking its significance for a given period or milieu. The degree of subjectivity will vary, moreover, when he is examining different strata of the same work. There will be very few discussions concerning the metrical or phonic scheme of a poem; slightly more concerning the nature of its images; still more with regard to the more complex semantic patterns.

On the other hand there is no social science (or science whatsoever) which is totally free of subjectivity. The very choice of one group of theoretical concepts instead of another presupposes a subjective decision; but if we do not make this choice, we achieve nothing at all. The economist, the anthropologist, and the linguist must be subjective also; the only difference is that they are aware of it and they try to limit this subjectivity, to make allowance for it within the theory. One can hardly attempt to repudiate the subjectivity of the social sciences at a time when even the natural sciences are affected by it.

It is now time to stop these theoretical speculations and to give an example of the structural approach to literature. This example will serve as illustration rather than proof: the theories which I have just exposed will not be necessarily contested if there are some imperfections in the concrete analysis based on them.

The abstract literary concept I would like to discuss is that of plot. Of course, that does not mean that literature, for me, is reduced to plot alone. I do think, however, that plot is a notion that critics undervalue and, hence, often disregard. The ordinary reader, however, reads a book above all as the narration of a plot; but this naive reader is uninterested in theoretical problems. My aim is to suggest a certain number of useful categories for examining and describing plots. These categories can thus implement the meager vocabulary at our command with regard to the analysis of narrative; it consists of such terms as action, character, recognition.

The literary examples that I shall use are taken from the *Decameron* of Boccaccio. I do not intend, however, to give an analysis of the *Decameron*: these stories will be used only to display an abstract literary structure, that is, plot. I shall begin by stating the plots of several of the tales.

A monk introduces a young girl into his cell and makes love to her. The abbot detects this misbehavior and plans to punish him severely. But the monk learns of the abbot's discovery and lays a trap for him by leaving his cell. The abbot goes in and succumbs to the charms of the girl, while the monk tries his turn at watching. At the end when the abbot intends to punish him, the monk points out that he has just committed the same sin. Result: the monk is not punished (I,4).⁷

Isabetta, a young nun, is with her lover in her cell. Upon discovering this, the other nuns become jealous and go to wake up the abbess and have Isabetta punished. But the abbess was in bed with an abbot; because she has to come out quickly, she puts the under-shorts of the abbot on her head instead of her coif. Isabetta is led into the church; as the abbess begins to lecture her, Isabetta notices the garment on her head. She brings this evidence to everyone's attention and thus escapes punishment (IX,2).

Peronnella receives her lover while her husband, a poor mason, is absent. But one day he comes home early. Peronnella hides the lover in a cask; when the husband comes in, she tells him that somebody wanted to buy the cask and that this somebody is now in the process of examining it. The husband believes her and is delighted with the sale. The lover pays and leaves with the cask (VII,2).

7. There are 10 characters in the *Decameron*, and each in turn tells one story a day for 10 days; "I,4" refers to the 4th story on the 1st day.

A married woman meets her lover every night in the family's country house, where she is usually alone. But one night the husband returns from town; the lover has not come yet; he arrives a little later and knocks at the door. The wife asserts that this is a ghost who comes to annoy her every night and must be exorcised. The husband pronounces the formula which the wife has improvised; the lover figures out the situation and leaves, pleased with the ingenuity of his mistress (VII,1).

It is easy to recognize that these four plots (and there are many others like them in the *Decameron*) have something in common. In order to express that, I shall use a schematic formulation which retains only the common elements of these plots. The sign \rightarrow will indicate a relation of entailment between two actions.

X violates a law $\rightarrow Y$ must punish $X \rightarrow X$ tries to avoid being punished \rightarrow
 $\rightarrow \begin{cases} Y \text{ violates a law} \\ Y \text{ believes that } X \text{ is not violating the law} \end{cases} \rightarrow Y \text{ does not punish } X$

This schematic representation requires several explanations.

1. We first notice that the minimal schema of the plot can be shown naturally by a clause. Between the categories of language and those of narrative there is a profound analogy which must be explored.

2. Analysis of this narrative clause leads us to discover the existence of two entities which correspond to the "parts of speech." (a) The agents, designated here by X and Y , correspond to proper nouns. They serve as subject or object of the clause; moreover, they permit identification of their reference without its being described. (b) The predicate, which is always a verb here: violate, punish, avoid. The verbs have a semantic characteristic in common: they denote an action which modifies the preceding situation. (c) An analysis of other stories would have shown us a third part of narrative speech, which corresponds to quality and does not alter the situation in which it appears: the adjective. Thus in I,8: at the beginning of the action Ermino is stingy, whereas Guillaume is generous. Guillaume finds a way to ridicule Ermino's stinginess, and since then Ermino is "the most generous and pleasant of gentlemen." The qualities of the two characters are examples of adjectives.

3. Actions (violate, punish) can have a positive or a negative form; thus, we shall also need the category of status, negation being one possible status.

4. The category of modality⁸ is also relevant here. When we say " X must punish Y ," we denote thereby an action which has not yet taken place (in the imaginary universe of the story) but which is nonetheless present in a virtual state. André Jolles⁹ suggested that entire genres could be characterized by their mood; legends would be the genre of the imperative, to the extent that they offer us an example to follow; the fairy tale is, as is often said, the genre of the optative, of the fulfilled wish.

5. When we write " Y believes that X is not violating the law," we have an example of a verb ("believe") which differs from the others. It is not a ques-

8. That is, the determination of whether a sentence expresses a fact, a command, a wish, and so on, as set by the form (the mood) of the verb and its auxiliaries.

9. Dutch literary and art historian (1874–1946); the reference is to his *Einfache Formen* (1930, *Simple Forms*).

tion of a different action here but of a different perception of the same action. We could therefore speak of a kind of "point of view" which refers not only to the relation between reader and narrator, but also to the characters.

6. There are also relations between the clauses; in our example this is always a causal relation; but a more extensive study would distinguish at least between entailment and presupposition (for example, the relation introducing modal punishment). Analysis of other stories shows that there are also purely temporal relations (succession) and purely spatial ones (parallelism).

7. An organized succession of clauses forms a new syntagmatic pattern,¹ sequence. Sequence is perceived by the reader as a finished story; it is the minimal narrative in a completed form. This impression of completion is caused by a modified repetition of the initial clause; the first and the last clause will be identical but they will either have a different mood or status, for instance, or they will be seen from different points of view. In our example it is punishment which is repeated: first changed in modality, then denied. In a sequence of temporal relations, repetition can be total.

8. We might also ask: is there a way back? How does one get from the abstract, schematic representation to the individual tale? Here, there are three answers:

(a) The same kind of organization can be studied at a more concrete level: each clause of our sequence could be rewritten as an entire sequence itself. We would not thereby change the nature of the analysis, but rather the level of generality.

(b) It is also possible to study the concrete actions that incorporate our abstract pattern. For instance, we may point out the different laws that become violated in the stories of the *Decameron* or the different punishments that are meted out. That would be a thematic study.

(c) Finally, we can examine the verbal medium which composes our abstract patterns. The same action can be expressed by means of dialogue or description, figurative or literal discourse; moreover, each action can be seen from a different point of view. Here we are dealing with a rhetorical study.

These three directions correspond to the three major categories of narrative analysis: study of narrative syntax, study of theme, study of rhetoric.

At this point we may ask: what is the purpose of all this? Has this analysis taught us anything about the stories in question? But that would be a bad question. Our goal is not a knowledge of the *Decameron* (although such analysis will also serve that purpose), but rather an understanding of literature or, in this specific instance, of plot. The categories of plot mentioned here will permit a more extensive and precise description of other plots. The object of our study must be narrative mood, or point of view, or sequence, and not this or that story in and for itself.

From such categories we can move forward and inquire about the possibility of a typology of plots. For the moment it is difficult to offer a valid hypothesis; therefore I must be content to summarize the results of my research on the *Decameron*.

1. The relationship between linguistic items that combine to form a meaningful whole (e.g., the words in a given sentence); in contrast, paradigmatic

relationships obtain between items that can be substituted for one another in a given context (e.g., two adverbs).

The minimal complete plot can be seen as the shift from one equilibrium to another. This term “equilibrium,” which I am borrowing from genetic psychology, means the existence of a stable but not static relation between the members of a society; it is a social law, a rule of the game, a particular system of exchange. The two moments of equilibrium, similar and different, are separated by a period of imbalance, which is composed of a process of degeneration and a process of improvement.

All of the stories of the *Decameron* can be entered into this very broad schema. From that point, however, we can make a distinction between two kinds of stories. The first can be labeled “avoided punishment”; the four stories I mentioned at the beginning are examples of it. Here we follow a complete cycle: we begin with a state of equilibrium which is broken by a violation of the law. Punishment would have restored the initial balance; the fact that punishment is avoided establishes a new equilibrium.

The other type of story is illustrated by the tale about Ermino (I,8), which we may label “conversion.” This story begins in the middle of a complete cycle, with a state of imbalance created by a flaw in one of the characters. The story is basically the description of an improvement process—until the flaw is no longer there.

The categories which help us to describe these types tell us much about the universe of a book. With Boccaccio, the two equilibriums symbolize (for the most part) culture and nature,² the social and the individual; the story usually consists in illustrating the superiority of the second term over the first.

We could also seek even greater generalizations. It is possible to contrast a specific plot typology with a game typology and to see them as two variants of a common structure. So little has been done in this direction that we do not even know what kinds of questions to ask.

I would like to return now to the beginning argument and to look at the initial question again: what is the object of structural analysis of literature (or, if you wish, of poetics)? At first glance, it is literature or, as Jakobson³ would have said, literariness. But let us look more closely. In our discussion of literary phenomena, we have had to introduce a certain number of notions and to create an image of literature; this image constitutes the constant preoccupation of all research on poetics. “Science is concerned not with things but with the system of signs it can substitute for things,” wrote Ortega y Gasset.⁴ The virtualities which make up the object of poetics (as of all other sciences), these abstract qualities of literature exist only in the discourse of poetics itself. From this perspective, literature becomes only a mediator, a language, which poetics uses for dealing with itself.

We must not, however, conclude that literature is secondary for poetics or that it is not, in a certain sense, the object of poetics. Science is characterized precisely by this ambiguity concerning its object, an ambiguity that need not be resolved, but rather used as the basis for analysis. Poetics, like literature, consists of an uninterrupted movement back and forth between the two poles: the first is auto-reference, preoccupation with itself; the second is what we usually call its object.

2. The opposition between nature and culture is foundational in structuralism, notably in the work of the French anthropologist CLAUDE LÉVISTRAUSS (1908–2009).

3. ROMAN JAKOBSON (1896–1982), Russian-born American linguist and literary theorist.

4. José Ortega y Gasset (1883–1955), Spanish philosopher and critic.

There is a practical conclusion to be drawn from these speculations. In poetics as elsewhere, discussions of methodology are not a minor area of the larger field, a kind of accidental by-product: they are rather its very center, its principal goal. As Freud⁵ said, “The important thing in a scientific work is not the nature of the facts with which it is concerned, but the rigor, the exactness of the method which is prior to the establishment of these facts, and the research of a synthesis as large as possible.”

1969

5. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis.

KARATANI KŌJIN

b. 1941

Karatani Kōjin is widely regarded as the most influential critic and philosopher of contemporary Japan. His major theme is alterity—understood as a necessarily elusive realm of otherness that can be glimpsed only rarely through ruptures in a world tightly enclosed within the formal systems of signs, Western metaphysics, and capitalism. This pursuit has led to Karatani’s engagements with a wide range of disciplines: literature, art and art history, architecture, city planning, linguistics, cultural anthropology, psychoanalysis, mathematics, philosophy, and political economy. From his literary criticism to his rereadings of IMMANUEL KANT and KARL MARX, Karatani’s work has been guided by the conviction that true insight derives solely from confrontation with that which is external to the thinking self, to the degree that it is not subsumed by that self. The key is to “see things neither from one’s own viewpoint, nor from the viewpoint of others, but to face the reality that is exposed through the difference between the two.”

Karatani Yoshio (Karatani is his family name) was born in 1941 in Amagasaki City, midway between the major urban centers of Kobe and Osaka. In 1960, during his freshman year at Tokyo University, he joined a student group called the Communist League, popularly known as the Bund. One of many such groups in Japan in an era of widespread student activism, the Bund disavowed Japanese Communist Party orthodoxy. It was actively supported by the New Left poet and literary critic Yoshimoto Takaaki (1924–2012), whom Karatani has cited as one of the inspirations for his decision to pursue a career as a critic. The year 1960 is pivotal in postwar Japanese history, marked by large-scale but unsuccessful demonstrations against the renewal of the U.S.-Japan Security Treaty of 1951. Karatani’s experience of these events and their aftermath forms the basis for his later insights into the relationships between political defeat, the formation of interiority, and the institutionalization of discourse.

Eventually withdrawing from the arena of student political activism, Karatani completed a B.A. in economics in 1964; he continued his studies at Tokyo University, earning an M.A. in English literature in 1967. His career as a public intellectual was launched in 1969, when he was awarded the prestigious Gunzō Literary Prize for an essay on the status of consciousness and nature in the work of Natsume Sōseki (1867–1916), a key figure in modern Japanese literature. Along with Kant, Marx, FRIEDRICH NIETZSCHE, and SIGMUND FREUD, Sōseki would become one of Karatani’s

major reference points; he took the name “Kōjin” from the title of a Sōseki novel (translated into English as *The Wayfarer*). Karatani taught at Hōsei University in Tokyo from 1970 to 1997, and at Kinki University in Osaka from 1997 until his retirement in 2006. From 1975 to 1977, he was invited to Yale University as a visiting professor of modern Japanese literature, where he met JACQUES DERRIDA, PAUL DE MAN, and FREDRIC JAMESON. Between 1990 and 2004 Karatani also taught regularly at Columbia University as a visiting professor of comparative literature.

It was during his two-year residence at Yale that Karatani initially conceived of *Origins of Modern Japanese Literature* (1980; trans. 1993), the work from which we draw our selection. One of the most widely read and frequently cited texts in Japanese literary studies today, *Origins* was published in translation by Duke University Press in the Post-Contemporary Interventions Series, whose editors include STANLEY FISH and Jameson. Karatani has likened his “existence as a stranger in the United States” to that of Sōseki, who lived in London from 1900 to 1903. This sojourn initiated both a wide-ranging critical inquiry into the meaning of “literature” and a literary practice that, in Karatani’s view, resisted the dominant modern epistemological paradigm in which the exterior space of “landscape” and the interior space of “the self” had come to be taken as self-evident realities. Karatani launched his own revisionist account of the origins of modern Japanese literature while reconsidering Sōseki’s theoretical work, which had long been dismissed as a “failure” abandoned for the actual writing of literature itself. By resuscitating Sōseki’s work as an early twentieth-century Japanese theorist, Karatani implicitly overturned two widespread assumptions: that “theory” is exclusive to “the West” and that “literature” has always existed everywhere in much the same form.

Japan’s encounter with the modern West in the late nineteenth century occasioned a profound reorganization of knowledge that affected all fields of intellectual inquiry and cultural practice. It was during this time that the modern Western categories of “literature,” “self-expression,” and “external object” became firmly established, effacing earlier concepts and practices of writing that were very different. In Europe these categories emerged gradually over two centuries, and thus came to seem completely natural and inevitable. By contrast, Japan’s rapid transition threw into doubt the assumed universality of “literature,” “self,” and “object” in both European and Japanese contexts. It also opened to question the Eurocentric notion of linear historical development that typifies narrative accounts of “modernity.”

Origins of Modern Japanese Literature employs the genealogical method of Nietzsche and MICHEL FOUCAULT to expose the historicity of these concepts. In an ironic reversal of the rhetoric of Western expansion—according to which, for instance, Christopher Columbus is said to have “discovered” the Americas—*Origins* presents a series of traumatic discoveries that incorporated the Japanese people into modernity: its chapter titles include “The Discovery of Landscape,” “The Discovery of Interiority,” and “The Discovery of the Child,” implying that these concepts were new to Japan.

In our selection Karatani Kōjin depicts correspondences between a wide array of phenomena occurring during the Meiji era (1868–1912). He establishes links between contact with the West, a changing political system in Japan, the emergence of the isolated individual endowed with an inner life, the rise of psychology, the appearance of landscape painting (an external tableau seen from an individual viewpoint), and new concepts of literature. The subject-object dichotomy of modern (post-1650) Western philosophy sets a self-expressive subject against an inert and measurable external world. This division brought about a new mode of perception—what T. S. ELIOT once called a “dissociation of sensibility”—which displaced the holistic, ordered world of the Middle Ages and Renaissance. Analogous shifts occurred during the late Meiji period, when Japanese seasonal paintings (*shiki-e* and *tsukinami*) became landscapes; written classical language (*gabun*) lost ground to vernacular spoken language (*genbun itchi*); and literature narrowed. In the last

case, a broad, varied corpus of texts and styles written in classical Chinese with many Japanese permutations (*kanbungaku*) changed to a smaller, national canon of works in Japanese (*kokubungaku*). What counts as “literature” prior to and after the Meiji era is quite different—but before Karatani, most critics had overlooked this transformation.

While drawing numerous, often unexpected parallels with and contrasts between European and Japanese cultural formations, Karatani does more than simply hold up a Japanese mirror to Western modernity. In “The Discovery of Landscape,” our selection, the term *landscape* refers to the notion of “objective description” that has played a central role in modern definitions of literature. The use of a term primarily associated with (Western) painting enables Karatani to identify an overarching structure of modern perception, premised on the split between an interiorized “self” and an exteriorized “outside” from which that self has already been alienated. Once they accepted this split, the general public could see “landscape” as nothing more or less than that which exists outside of themselves. Surprisingly, this modern Western view is contrasted with medieval European and pre-twentieth-century Japanese perceptions of place, which valued the general, often transcendental meanings attached to a location rather than any putatively empirical impressions of it. Karatani thus uses *landscape* deconstructively to signify both a representational practice (the “realistic representation” of “nature”) and the transformation of perception that made the practice possible. This transformation, once established, represses its own “origins” or historicity and comes to seem natural.

One of Karatani’s signal contributions to the discourse on non-Western modernity is his focus on the ideological role of “literature”—its simultaneous production of the expressing self and of the external objects that the self describes. In the process, he attempts to expose the modern nation-state of Japan itself as a construct, in whose production this aesthetic apparatus played a role. His account connects the origins of landscape in Japan to the emergence of the inner self in the 1890s, not long after the complete suppression of the People’s Rights movement by the Japanese state. Both citing and historicizing Freud’s theory that consciousness derives from an experience of trauma that redirects the libido inward, Karatani suggests that this political defeat helped create the necessary conditions for a new structure of perception, within which both landscape and the inner self of literature suddenly appeared as *a priori* givens.

Though modern Japan has been shaped since the late nineteenth century by the threat of Western domination, it was also the first Asian country to join the exclusive club of modern nation-states. This development led to a reversal in its relations with China (regarded by Japan for more than a millennium as the center of civilization); it also led to Japan’s aggressive participation in the originally Western project of colonizing Asia, which finally culminated in its disastrous defeat in World War II. During the 1930s and 1940s, Japanese expansion in Asia, China included, was ideologically justified as the liberation of Asia from Western domination, a discursive strategy made possible by Japanese attacks on (Western) modernity. Karatani’s steadfast refusal to offer a non-Western alternative to modernity stems from his keen awareness of the ease with which the critique of (Western) modernity—as necessary as it is—can be appropriated by reactionary politics.

Because of its insights into the nature and formation of modern literature in a non-Western context, *Origins* has enjoyed a broad international readership; it has been translated into Korean, Chinese, German, and Turkish in addition to English. The work presents a critical challenge to the story of a gradual, if always somehow incomplete, development of “Western-style” realism and the literary self in Japan—a historiographical approach previously standard on both sides of the Pacific. Indeed, contrary to the author’s intentions, this text now serves as the new “standard history” in Japanese literary studies, shaping the work of today’s younger critics.

Karatani explicitly defines himself as a critic and not a theorist—a distinction that locates his writings in the context of, and as a critical response to, the present moment, rather than in a purely hypothetical or timeless objective vantage point from which the present and past might be considered. In this regard, Karatani's inquiry into the relationship between landscape, self, literature, and politics in 1890s Japan constitutes his critical response to the discursive space of 1970s Japan, an era that repeats the same "pattern of retreat to interiority and literature after political setback." After he wrote *Origins*, Karatani's own trajectory would move in the opposite direction, away from interiority and literature and toward exteriority and political action. His *Transcritique: On Kant and Marx* (2001; trans. 2003) laid the philosophical groundwork for the ethico-economic New Association Movement (NAM), which he founded in 2000. Boldly proclaiming that "Communism without economic basis is empty, while communism without moral basis is blind," *Transcritique* garnered much attention, particularly in radical philosophy circles, for its alternative vision of Kant and Marx, and for the possibility it raises of superseding capitalism, nation, and state. Although NAM was dissolved in 2003, Karatani has continued his engagement with political activism, most notably in the antinuclear movement that emerged in response to the nuclear disaster that followed Japan's massive earthquake and tsunami of March 11, 2011. A more recent work available in English, *The Structure of World History: From Modes of Production to Modes of Exchange* (2010; trans. with revisions, 2014), builds on core aspects of *Transcritique* by proposing that "rethinking the history of social formations from the perspective of modes of exchange" rather than that of Marx's modes of production is crucial to any attempt to "move beyond the present-day Capital-Nation-State system."

Some scholars have taken issue with Karatani's characterization of Japanese modernity as a fundamental break from the past, citing continuities over Japan's long cultural history. Behind this general objection are two complicated questions. First, does a sharp focus on the rise of modern epistemological constellations in a late-developing nation-state underplay or efface the co-presence of other modes of perception and practice, in effect reproducing the same universalism and homogenization that it seeks to undermine? And second, can the notion of cultural continuity itself be separated from the ideology of modern, linear historiography, with its political interest in locating the origins of modern nations in the distant past?

Because Karatani conceives of history as a series of ruptures that immediately repress their own origins, and because, like Foucault, he characterizes modernity as a system that has "no outside," his work has also been subject to a general epistemological criticism. If a structure of perception is thoroughly ensconced within the epistemological constellation that produced it, then how can anyone within that constellation gain critical insight into it or break from it? Whereas Foucault denies that the individual subject can be a locus of such insight, Karatani privileges the writer Sōseki as the rare example of someone who, caught between historical paradigms, became "aware that the structure of his perceptions had been fundamentally altered." He thus treats Sōseki as an exception to the general rule that epistemological reversals, such as the one that produced the modern concept of "literature," hide themselves as soon as they are established. EDWARD W. SAID also allows such creative individuals to be rare exceptions. In an implicit critique of the Foucauldian approach, Karatani defends this apparent inconsistency by asserting that "it was not my aim to write about the construction of modern Japanese literature from a position of historical transcendence."

From Origins of Modern Japanese Literature¹

From Chapter 1. The Discovery of Landscape

2

The strongly personal tone of Sōseki's² preface to the *Theory of Literature* suggests that the role of theoretician was something he embraced reluctantly and as if perforce. He explains how he came to entertain the question "What is the nature of literature?"

As a child I enjoyed studying the Chinese classics.³ Although the time I spent in this kind of study was not long, it was from the Chinese classics that I learned, however vaguely and obscurely, what literature was. In my heart, I hoped that it would be the same way when I read English literature, and that I would not necessarily begrudge giving my whole life, if that were necessary, to its study. I had years ahead of me. I cannot say that I lacked the time to study English literature. But what I resent is that despite my study I never mastered it. When I graduated I was plagued by the fear that somehow I had been cheated by English literature.⁴

There was a basis for Sōseki's fear that he had been "cheated" by English literature. Only those who have come to accept "literature" as natural cannot detect this "cheating." Nor should we invoke vague generalizations about the identity crisis of one who confronts an alien culture. To do this would be to assume there was something self-evident about "literature" and to lose sight of its ideological nature. Sōseki had some inkling of the ideological nature of literature because of his familiarity with *kanbungaku*.⁵ Of course, *kanbungaku* as Sōseki knew it was not simply the "literature of China," nor was he attempting to compare it with Western literature. Sōseki was in no position to pursue idle comparisons between *kanbungaku* and Western literature. In point of fact, Sōseki himself could not even grasp *kanbungaku* as a tangible existence, for by his own time it had already become something uncertain and irretrievable, something which could only be imagined on the other shore, as it were, of "literature."

Sōseki uses the term *kanbungaku* in a manner very similar to the way in which the word *sansuiga* (literally, "mountain-water pictures" or "landscape paintings") was used in Meiji Japan⁶ to denote paintings of natural scenes done in traditional styles. It was only after the Japanese had been introduced

1. Translated by Brett de Bary, who occasionally retains the Japanese words or adds information in parentheses.

2. Natsume Sōseki (1867–1916), one of the most important novelists of his time; *Theory of Literature* (1906) is based on his lectures on English literature at Tokyo University.

3. Foundational works of history, philosophy, ethics, and poetry, which constituted the core syllabus of elite education in Japan for more than a millennium.

4. Natsume Sōseki, *Bungakuron*, in *Natsume*

Sōseki zenshū, vol. 16, pp. 8–9 [translator's note].

5. Both the techniques used to make classical Chinese works accessible to Japanese readers and writing in Japanese that imitates those works. Hence the term neither corresponds to the 19th-century European concept of "literature" nor supports a sharp distinction between "Chinese" and "Japanese" texts.

6. The years of the reign of Mutsuhito (as emperor, he took the reign name Meiji), 1868–1912, which ended Japan's feudalism and began its rise as a modern nation-state.

to Western landscape painting that the word *sansuiga* became widely used. As Usami Keiji⁷ wrote in an essay on a recent exhibit of such paintings:

The word *sansuiga* was not actually used in the period when the works exhibited here were painted. At that time they were referred to as *shiki-e* or *tsukinami* (seasonal paintings). Ernest Fenollosa,⁸ who played a leading role in Japan's modernization during the Meiji period, coined the term *sansuiga* and established it as a descriptive category for paintings. The very concept of traditional "landscape paintings" arose out of the disjuncture between Japanese culture and modern Western consciousness.⁹

The same may be said of *kanbungaku*. Although Sōseki uses the term to differentiate certain practices from those of modern literature, it is itself rooted in the consciousness that produced the category "literature" and has no existence apart from it. Literature makes the objectification of *kanbungaku* possible. In this sense to compare *kanbungaku* and English literature is to ignore the historicity of literature itself—of "literature" as a kind of "landscape." It is to fail to take into account the fact that, through the emergence of "literature" and "landscape," the very structure of our perceptions has been transformed.

I would like to propose that the notion of "landscape" developed in Japan sometime during the third decade of the Meiji period.¹ Of course, there were landscapes long before they were "discovered." But "landscapes" as such did not exist prior to the 1890s, and it is only when we think about it in this way that the layers of meaning entailed in the notion of a "discovery of landscape" become apparent.

It was precisely this period of transition that Sōseki lived through. Yet to invoke the concept of a "transitional period" is merely to fall back on a construct of linear history. It was only after Sōseki had already decided to study English literature that he became aware that the structure of his perceptions had been fundamentally altered. Nor was there a kind of static triangular relationship established in Sōseki's mind between himself, English literature, and *kanbungaku*. As with his character Daisuke in the novel *Sore Kara*,² it would dawn on Sōseki unpredictably at certain moments that he had already made a decision. Similarly, we cannot describe the Japanese discovery of "landscape" as a process that unfolded in a linear pattern from past to present. "Time" has been refracted and turned upside down.

A person who sees landscape as natural will not perceive this reversal. But it is here that we can find the origin of Sōseki's doubt. Sōseki's fear that he had been cheated by English literature expresses the anxiety of a man who suddenly finds himself in the midst of a "landscape."

It is interesting that Sōseki referred to his native literature as *kanbungaku* rather than *Nihon no bungaku* (Japanese literature). The protests of eigh-

7. Prominent Japanese oil painter (1940–2012), author of several works of art theory and criticism.

8. American poet and art scholar (1853–1908), who served as curator for the Imperial Museum of Japan from 1888 to 1890. He profoundly affected how the concept of "fine art" developed and was institutionalized in Japan.

9. Usami Keiji, "Sansuiga ni zetsubō o miru" (The despair of Japanese landscape painting), *Gendai shisō*, May 1977 [Karatani's note].

2. Published in 1909 (translated into English as *And Then*, 1978).

teenth century nativist³ scholars notwithstanding, *kanbungaku* has surely been the orthodox literature of Japan. As Yoshimoto Takaaki⁴ has pointed out, even the existence of the first imperial poetry anthology, the *Manyōshū*, in the mid-eighth century can be traced to the impact on Japan of Chinese characters and literature in Chinese.⁵ We all recognize that it was in Chinese literature that we were introduced to “flowers, birds, wind, and moon” (*kachō fūgetsu*),⁶ yet even those things which nativist scholars posited as purely indigenous were intimately related to the structure of perception we refer to as *kanbungaku*. It was only after this structure of perception crystallized that Japanese in the classical period began to compose *jokei*⁷ (敘景 compositions about places)—their equivalent of discovering “landscape.” Our search for the origins of writing will never take us beyond writing, beyond *écriture*.⁸

My discussion is complicated by the fact that the discovery of “landscape” in the third decade of the Meiji period is similar to the premodern discovery of Chinese literature, so that we now confront successive layers of inversions.⁹ Just as nativist scholars, when they posited the existence of a literature that existed before Chinese literature, could only do so from *within* the epistemological constellation we now call *kanbungaku*, Meiji Japanese who searched for a landscape that predated “landscape” faced the contradiction of being able to envision it only in relation to “landscape.” The very question “What is a Japanese landscape painting?” is by definition predicated on an inversion.

The following remarks by Usami Keiji express a profound awareness of this difficulty:

We must investigate the nature of “time” and place in *sansuiga* in order to understand its spatial dimension. For the depiction of place in this Japanese landscape painting cannot be reduced to the notion of “position” as defined by European principles of perspective. Position, as established by these principles, is the totality of what can be apprehended by a single person with a fixed point of vision. The relationships between all the things that can be apprehended from this point of view at one instant in time are determined objectively on a grid of coordinates. These are the laws of perspective which have conditioned the modern visual sensibility.

3. The term nativism, or *kokugaku* (often translated as National Learning), refers to the broad-ranging 18th-century discourse which sought to define a distinct Japanese identity while contesting the influence of Chinese culture on Japan [translator's note].

4. Japanese poet and literary critic (1924–2012).

5. The anthology of Japanese poetry (*Collection of a Myriad Ages* or *Myriad Leaves*) was originally written entirely in Chinese characters or ideograms, chosen sometimes for their correspondence to the poem's ideas and sometimes to represent its sounds.

6. A classical Chinese term, used when a speaker of English might say “the beauty of nature.”

7. Description of place (Modern Japanese).

Karatani gives the term a double meaning by making it also refer to the convention in classical (7th- to 19th-c.) Japanese poetry of alluding to famous places (*meisho*), which in his view displayed greater concern with the figures of writing than with the representation of actual places.

8. An allusion to the inversion of the conventional hierarchy of speech and writing by the French philosopher JACQUES DERRIDA (1930–2004), who showed that *écriture* (any and all forms of inscription) precedes speech.

9. Karatani uses the term *inversion* to signify the reversal of an epistemological or semiotic constellation that, once established, represses its own historicity and assumes an appearance of naturalness or inevitability.

By contrast to this, *place* in the landscape paintings we now call *sansuiga* is not concerned with the relationship between the individual and “things,” but presents a transcendental metaphysical “model.” This mode of existence of place, and its transcendental nature, is something *sansuiga* has in common with medieval European painting. In the former, the transcendental place is an ideal realm to which the enlightened sages awakened; in the latter, it is the realm of Scripture and the divine.¹

In *sansuiga* the painter is not looking at an object but envisioning the transcendental. Similarly, poets like Bashō and Sanetomo² were not looking at “landscapes.” As Yanagita Kunio³ has said, there is not a single line of description in Bashō’s *Oku no hosomichi* (Narrow road to the deep north, 1694).⁴ Even what looks like description is not. If we can follow the subtle yet crucial distinction Yanagita has drawn here, we will be able to see both the process of the Japanese discovery of “landscape” and the literary “history” that paralleled that transformation of perception.

In literature, for example, it was only when Japanese naturalism⁵ (and the rejection of Bakin⁶) had become a mainstream trend that Saikaku⁷ was discovered to be a “realist.” But it is doubtful that Saikaku’s writing conformed to our contemporary definition of realism. Saikaku did not “see things as they are” any more than did Shakespeare, whose dramas were based on classical models and written within the framework of the morality play. Similarly, the Meiji poet Shiki praised Buson’s⁸ haiku for being almost like paintings. But Buson’s haiku were in no way related to the sensibility of Shiki and his “sketches”; they were closer in spirit to his own *sansuiga*. This is not to deny that Buson was different from Bashō. But what differentiated them was not what we perceive it to be today. Shiki himself acknowledged this. He described, for example, the “painterly” quality of the poetry produced by Buson’s bold incorporation of Chinese compounds into his poetry.⁹ The following poem, Shiki held, is enlivened by an intense dynamism because the characters (大河) are not given their Japanese reading (*ōkawa*) but the Sini-

1. Usami Keiji, *ibid.* [Karatani’s note].

2. Minamoto no Sanetomo (1192–1219), third shogun of the Kamakura shogunate (1185–1333) and renowned poet. Matsuo Bashō (1644–1694), Japanese poet, critic, and essayist, best known for his major role in the development of the Japanese genre of poetry called haiku (a 3-unit form, with the syllabic pattern 5-7-5).

3. Bureaucrat and scholar (1875–1962), a major figure in Japanese ethnology and folklore studies.

4. This text is the travel diary recording the poet Matsuo Bashō’s journey to the remote northern provinces of the island of Honshu in 1689. The text includes, along with its narrative sections, many famous haiku about sites associated with Japanese literature and history and, allusively, with Chinese poetic and historical texts [translator’s note].

5. Naturalism was introduced to Japan from Europe in the early 20th century, when Japanese proponents of the movement dominated both literary criticism and production. Japanese naturalism has been seen as culminating in the dominance of the prose narrative over previously privileged poetic literary forms, of the modern vernacular style over classical written styles, and of conventions of realism [translator’s note].

6. Takizawa Bakin (1767–1848), author of fiction that remained highly popular into the early Meiji period; his rejection was signaled by attacks on his work in Tsubouchi Shōyō’s *Essence of the Novel* (1885–86), which introduced Western realism to Japan.

7. Ihara Saikaku (1642–1693), influential and prolific writer best known for his *ukiyo zōshi* (literally, “tales of the floating world”), entertaining prose that focused on the lives of merchants and samurai, especially their activities in the pleasure quarters. In the late 19th century, his fiction was championed by Japanese naturalists for its “realistic” depiction of the “nature” of sexuality.

8. Yosa Buson (1716–1783), Japanese painter and master of haiku poetry rich in visual detail. Masaoki Shiki (1867–1902), Japanese poet and author of influential treatises that advocated a realistic, descriptive style of poetry; he attacked the work of Bashō, argued in favor of *shasei* (copying life, sketching), and helped modernize both haiku and tanka (a 5-unit form, in the syllabic pattern 5-7-5-7-7).

9. For centuries, classical Japanese poetic conventions had strictly limited the poetic lexicon to “Japanese” words.

cized reading “taiga.”¹ But what this example really reveals is that Buson was fascinated, not so much by landscape, as by the written word.

The concept of Japanese literature (*kokubungaku*)² took firm root during the third decade of the Meiji period. Needless to say, this was both made possible by and interpreted in terms of the newly institutionalized literature. It is not my aim in this essay to discuss the concept of “the history of Japanese literature.” But I do want to point out that this very concept of a history of Japanese literature, which seems so self-evident to us today, took shape in the midst of our discovery of landscape. Perhaps it was only Sōseki who regarded this development with suspicion. Yet it is precisely because our discovery of landscape was the type of phenomenon I have described that I cannot refer to it in terms of the chronological sequence of a so-called “history of Japanese literature.” “Meiji literary history” certainly appears to progress according to a temporal sequence. But it is only by distorting this temporal sequence that we can perceive the inversion we have repressed from our memories: our discovery of landscape.

* * *

6

Once a landscape has been established, its origins are repressed from memory. It takes on the appearance of an “object” which has been there, outside us, from the start. An “object,” however, can only be constituted within a landscape. The same may be said of the “subject” or self. The philosophical standpoint which distinguishes between subject and object came into existence within what I refer to as “landscape.” Rather than existing prior to landscape, subject and object emerge from within it.³

It has been said that Edo painting⁴ had no concept of landscape, since it lacked techniques for creating depth and perspective. Yet this is also true of medieval European painting (despite the fact that, as I have already suggested, the differences between these two types of painting are more salient.) In both cases developments in painting were paralleled by developments in philosophy. Cartesian philosophy, for example, can be seen as a product of principles of perspective. For the subject of Descartes’s “cogito ergo sum”⁵ is

1. Many Chinese characters can be given either a Japanese or a Chinese-style (Sinicized) pronunciation; the latter emphasizes the written derivation of the word.

2. Writings in the Japanese language without connections to Chinese (thus a national literature, and distinct from *kanbungaku*).

3. Karatani’s assertion rests on his discussion of European landscape painting earlier in the chapter, where the new view of landscape as pure object

was described as marking an alienation from the external world—which was also the very precondition for the emergence of the “inner self.”

4. That is, painting during the rule of the Tokugawa shogunate, 1603–1867.

5. I think, therefore I am (Latin), the foundational statement of the French philosopher René Descartes (1596–1650)—that is, the occurrence of thought guarantees the existence of the thinker.

confined, ineluctably, within the schema established by the conventions of perspective. It was in precisely the same period that the “object” of thought came to be conceived of as a homogeneous, scientifically measurable entity—that is, as an extension of the principles of perspective. All of these developments paralleled the emergence of “background” as a dehumanized “landscape” in the *Mona Lisa*.⁶

In her work, *Philosophy in a New Key*, Suzanne Langer⁷ described the cul-de-sac of modern European philosophy, which is still preoccupied with the philosophical issues posed by “landscape.”

After several centuries of sterile tradition, logic-chopping, and partisanship in philosophy, the wealth of nameless, heretical, often inconsistent notions born of the Renaissance crystallized into general and ultimate problems. A new outlook on life challenged the human mind to make sense out of its bewildering world; and the Cartesian age of “natural and mental” philosophy succeeded to the realm.

This new epoch had a mighty and revolutionary generative idea: the dichotomy of all reality into *inner experience and outer world*, subject and object, private reality and public truth. The very language of what is now traditional epistemology betrays this basic notion; when we speak of “the given,” of “sense data,” “the phenomenon,” or “other selves,” we take for granted the immediacy of an internal experience and the continuity of the external world. Our fundamental questions are framed in these terms: What is actually given to the mind? What guarantees the truth of sense-data? What lies behind the observable order of phenomena? What is the relation of the mind to the brain? How can we know other selves?—All these are familiar problems of today. Their answers have been elaborated into whole systems of thought: empiricism, idealism, realism, phenomenology, *Existenz Philosophie*, and logical positivism. The most complete and characteristic of all these doctrines are the earliest ones: empiricism and idealism. They are the full, unguarded, vigorous formulations of the new generative notion, Experience: their proponents were the enthusiasts inspired by the Cartesian method, and their doctrines are the obvious implications derived by that principle, from such a starting point. Each school in its turn took the intellectual world by storm. Not only universities, but all the literary circles, felt the liberation from time-worn, oppressive concepts, from baffling limits of inquiry, and hailed the new world-picture with a hope of truer orientation in life, art, and action.

After a while, the confusion and shadows inherent in the new vision became apparent, and subsequent doctrines sought in various ways to escape between the horns of the dilemma created by the subject-object dichotomy, which Professor Whitehead⁸ has called the “bifurcation of nature.” Since then our theories have become more and more refined, circumspect, and clever; no one can be quite frankly an idealist, or go the whole way with empiricism; the early forms of realism are now known as

6. The painting (ca. 1504) by Leonardo da Vinci; earlier in the chapter, Karatani quotes the Dutch psychiatrist Jan Hendrik Van den Berg, who sees the work as breaking sharply with the old view of landscape (*The Changing Nature of Man: Introduction to Historical Psychology, Metabletica*, 1956).

7. American philosopher and aesthetician (1895–1985); *Philosophy in a New Key* (1941) is her best-known work.

8. Alfred North Whitehead (1861–1947), English mathematician and philosopher; the quotation is from *The Concept of Nature* (1920).

the "naive" varieties, and have been superseded by "critical" or "new" realisms. Many philosophers vehemently deny any systematic *Weltanschauung*, and repudiate metaphysics in principle.⁹

But will contemporary philosophers, who are trying to break out of a Cartesian *weltanschauung* even as they operate within it, really succeed in making their escape? Modern artists, when they studied primitive art, or thinkers like Claude Lévi-Strauss,¹ in his work on the "savage mind," faced the same dilemma. Sophisticated technology and Rousseauian romanticism² are paradoxically intertwined in Lévi-Strauss's thought. But both these elements had their origins in the modern "landscape." It is the historicity of that landscape that must be exposed.

In Western Europe it was Marx, Nietzsche, and Freud³ who, albeit from differing perspectives, first exposed the problematic nature of the European conception of landscape. Nietzsche, for example, claimed that European epistemology itself was "an illusion based on the principles of linear perspective." As a product of interiorization, according to Nietzsche, the very notion of linear perspective was "an illusion of itself." The "self," the "inner," "consciousness," and "cogito" in Cartesian philosophy were all based on an inversion of subjectivity.

In order to expose the historicity of European culture Sōseki did not need to look back to ancient Greece, as Nietzsche did. Rather, he maintained within himself a certain attitude toward life that had existed prior to "landscape" and "modern Japanese literature." Sōseki was able to do this because he lived through the discovery of "landscape." We Japanese witnessed with our own eyes and within a limited period of time the occurrence in condensed form of a process which, because it had extended over many centuries, had been repressed from memory in the West.

Various institutions of the modern nation-state were consolidated, in preliminary form, during the third decade of the Meiji period, starting with the promulgation of the Meiji constitution.⁴ As Nakamura Mitsuo⁵ has written, "if we see the second decade of the Meiji period as one of turbulence, the third was one of unification and stability." In the eyes of those born after the Meiji Restoration,⁶ this order appeared to be something that had already solidified. What had been malleable possibilities just after the Restoration now appeared shut off to them. In his *Meiji Literature*, Nakamura Mitsuo describes the People's Rights movement⁷ of the 1880s as follows:

For the movement was a logical extension of that great reform which was the Meiji Restoration, and it had been entrusted with the great hope that this social revolution had awakened in the people. It was

9. Suzanne Langer, *Philosophy in a New Key* (New York: New American Library, 1951), pp. 11–12 [translator's note].

1. French anthropologist (1908–2009; see above); *The Savage Mind* was published in 1962.

2. The philosophy of the Swiss-born French political philosopher Jean-Jacques Rousseau (1712–1778), which idealized the concept of the "noble savage."

3. All figures with enormous influence on modern Western thought: KARL MARX (1818–1883), German economic, social, and political philosopher; FRIEDRICH NIETZSCHE (1844–1900), German phi-

losopher; and SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis.

4. Japan's first constitution (1889), intended to define Japan as a modern nation on the model of Prussia's constitutional monarchy (it remained in force until 1947).

5. Literary critic and playwright (1911–1988).

6. The revolution (1867–68) that restored the emperor to power and ended the rule of the Tokugawa shogunate.

7. A political movement launched in 1874 that agitated for civil rights, reduced taxes, and an elected legislature.

through the People's Rights movement that the spirit of the Restoration which until that time had been the sole possession of the warrior class⁸ gradually came to infiltrate the popular consciousness. The setback of the movement, therefore, meant the destruction of that vital component of all revolutions, the idealism which is contained within them and which can be transformed into something else at any point in the revolutionary process. The straitened circumstances of the warrior class became a grave social problem in the early years of Meiji. For the few who found themselves in an advantageous situation there were many who had fallen into despair, yet this very fact meant that control of political and cultural life remained the uncontested prerogative of that class. But by 1885 or so, the dissolution of the warrior class became a pronounced trend, the children of commoners began to swell the ranks of students, and Meiji society began to show its true face as a mercantile state created by the offspring of the warrior class.

Vis-à-vis this emerging militarist state dominated by pragmatism and the pursuit of worldly success, the phantoms of freedom and people's rights became the last ideals for which young men who were heirs of the Restoration could risk their lives. The loss of these ideals created a spiritual vacuum which could not be banished and which found expression in a form which was completely different from the political novel.⁹

This insight may also be applied to Sōseki. While contemporary writers like Masaoka Shiki, Futabatei Shimei, Kitamura Tōkoku, and Kunikida Doppo¹ were agonizing over questions of artistic practice, Sōseki stood at the head of the Meiji government's corps of students of the West constantly pursued by a desire to flee from their ranks. What he wrote while he was in their midst had to be "theoretical," for it represented certain conclusions he had reached with reference to the English literature which he had already decided to study. Later, as a novelist, Sōseki appeared obsessed with the phenomenon of the "belated" nature of choice, a problem which he had confronted during this period. In this sense, *kanbungaku* probably symbolized for Sōseki not so much a corpus of texts as a certain atmosphere that existed prior to the establishment of various modern systems. This was during the same period when the political novel was at the height of its popularity. Sōseki's sense that he had been "cheated" by English literature may have corresponded to his observation that the institutions which were set up in the third decade of Meiji were nothing but a sham.

But such interpretive notions as "political disillusionment" or "the influence of Christianity" cannot be interjected into our consideration of the Japanese discovery of "landscape." These ideas suggest a psychological motivation for the process, but the concept of human psychology itself appeared at precisely this time. To treat the psychological as an autonomous sphere, as the science

8. The gentry (samurai), who had ruled Japan during the shogunate (1185–1867).

9. Nakamura Mitsuo, "Meiji bungakushi" (History of Meiji literature), in *Nakamura Mitsuo zenshū* (Tokyo: Chikuma Shobō, 1973), pp. 169–70 [translator's note]. Political novels, extremely popular throughout the 1880s, disseminated the ideas of the People's Rights movement.

1. Influential modern figures: Futabatei (1864–1909), literary critic, translator of Russian fiction, and novelist who pioneered the style known as *genbun itchi* (discussed below); Kitamura (1868–1894), free-verse poet and major theorist of Meiji romanticism; and Kunikida (1871–1908), a writer of poetry and short fiction who was a forerunner of naturalism in Japan.

of psychology does, is a historical, not a timeless, phenomenon. The most significant development in the third decade of the Meiji period was rather the consolidation of modern systems and the emergence of "landscape," not so much as a phenomenon contesting such systems, but as itself a system.

Academic historians of modern literature write of the "modern self" as if it were something that existed purely within the mind. But certain conditions are necessary for the production of this "self." Freud, like Nietzsche, viewed consciousness not as something which existed from the start, but as a derivative of "introjection."² According to Freud, it is at a stage when there is no distinction between inner and outer, when the outer is purely a projection of the inner, that the experience of trauma results in a redirection of the libido inward. With this, for the first time, outer and inner are separated. As Freud wrote in *Totem and Taboo*, "It is only after abstract language and thought come into existence that the perceptual residue of language links up with subjective material in such a way that we first become aware of subjective phenomena."

To speak in Freudian terms, the libido³ which was once directed toward the People's Rights movement and the writing of political novels lost its object and was redirected inward, at which point "landscape" and "the inner life" appeared. Let me repeat, however, that Freud himself was not aware of the historicity of psychology and of the fact that, like "landscape," it was the product of a specific historical order. The Meiji novelist Mori Ōgai,⁴ for example, created characters that appear "a-psychological" in his historical fiction. Toward the end of his life, Ōgai tried as much as possible to return to an awareness that predated modern conceptions of psychology and landscape. We may legitimately use a psychological approach in dealing with writers who emerged after the third decade of the Meiji period, but we must keep in mind that such an approach will not expose the conditions which produced the science of psychology itself.

However, what I find most significant in Freud's thought is the notion of the simultaneous emergence in the human being of the capacity for "abstract thought and language" and of "interiority" (accompanied by an awareness of the external as external). What does "abstract thought and language" correspond to in the Japanese context? Perhaps to the conception of writing which evolved in the Meiji period, known as *genbun itchi*.⁵ For *genbun itchi* was a manifestation in the linguistic realm of the establishment, around 1890, of the various institutions of the modern state. It goes without saying that the meaning of this concept was hardly that of bringing "writing" (*bun*) into conformity with "speech" (*gen*), or speech into conformity with writing, as is usually maintained. *Genbun itchi* represented the invention of a new conception of writing as equivalent with speech.⁶

2. The unconscious process by which the outside world is taken into the self and represented in its internal structure; Freud defines this psychoanalytic term in *Totem and Taboo* (1912–13).

3. Instinctual psychic energy that drives all behavior.

4. Writer of criticism, plays, and poetry as well as fiction (1862–1922).

5. Literally, the unification (*itchi*) of speech (*gen*) and writing (*bun*); a neologism widely used by lan-

guage reform activists, who saw vernacular writing as critical to the spread of literacy and modern education.

6. In chapter 2, "The Discovery of Interiority," Karatani argues that *genbun itchi* is premised on an inversion in the conception of language. Whereas *kanbungaku* placed supreme value in the written word, *genbun itchi* assumed that written language is derivative of, and therefore secondary to, spoken language.

Of course, insofar as *genbun itchi* was an effort towards modernization similar to the Meiji constitution, it could not be a purely “inner” speech. Writers considered to be introverts in the third decade of the Meiji period—Ōgai and Tōkoku, for example—preferred to write in the classical style,⁷ and the *genbun itchi* movement quickly lost momentum. Interest did not revive until the end of the decade, which was already the era of Kunikida Doppo and Takahama Kyoshi.⁸

Of course, Futabatei Shimei’s novel *Ukigumo* (Drifting clouds),⁹ which appeared between 1886 and 1889, may be cited as an exception to this trend. Notions of landscape and the inner self which Futabatei could elaborate when he was writing in Russian,¹ however, seemed to slip through his fingers when he tried to write about them in Japanese, when somehow the language of Shikitei Samba and other *kokkeibon*² writers took possession of him. The agony of Futabatei was to have discovered “landscape” without being able to locate it in the Japanese language. By Doppo’s time this dilemma had disappeared. What influenced Doppo was not the style of *Ukigumo* but the translation of Turgenev’s *Rendez-vous*.³

For Doppo the “inner” was the word (the voice), and expression was the projection outward of that voice. In Doppo’s work the concept of “expression” came into being for the first time in Japanese literature. Before this time, no one spoke of literature in terms of expression. It was the identification of writing with speech which made such a concept possible. But it was only because Doppo, unlike Futabatei, was oblivious to the fact that *genbun itchi* was a modern system that he was spared the dilemma of Futabatei. That the “inner self” was historical, that it was a system, had by that time been forgotten. Needless to say, we live today on the same soil that Doppo did. In order to know what holds us there, we must uncover its source; we must investigate further this historical period when language was simultaneously exposed and hidden.

1980

7. A style that adhered to ancient models of writing and thus bore little resemblance to spoken Japanese.

8. Novelist and poet (1874–1959), best known for his haiku.

9. One of the first attempts (1887–89) to write fiction in the *genbun itchi* style.

1. An allusion to Futabatei’s claim that when he reached an impasse in composing *Ukigumo*, he would write in Russian and then translate the

draft into Japanese.

2. Comic or funny book, a genre of fiction popular during the Edo period. Shikitei (1776–1822), writer of popular fiction, including *kokkeibon*.

3. “Svidanie” (1850, “Tryst”), a short story by the Russian novelist and dramatist Ivan Turgenev (1818–1883); Futabatei’s 1887 version was the first Japanese literary translation to employ the *genbun itchi* style.

JULIA KRISTEVA

b. 1941

Linguist, literary critic, cultural theorist, and psychoanalyst, Julia Kristeva has been one of the central figures of French intellectual life in the late twentieth and early twenty-first century. Kristeva's main contribution to contemporary theory resides in her elucidation of the processes by which preverbal experience—bodily drives and affects—enters into language and activates creative, transformative, and at times revolutionary modes of cultural production. Like other structuralist and poststructuralist theorists—most notably JACQUES LACAN, ROLAND BARTHES, and JACQUES DERRIDA—Kristeva has a long-standing interest in the relationship of subjectivity to language, in how the speaking subject is both constituted through and threatened by the logic of signification. But Kristeva diverges from other contemporary theorists in her insistence on the corporeal origins of subjectivity and of artistic practice. In contrast to the Saussurean linguistic models of Lacanian psychoanalysis, for instance, Kristeva has emphasized the importance of prelinguistic, instinctual, and sensory components of both subjectivity and signification. Indeed, while Kristeva's thinking has undergone major transformations over the past four decades, progressively moving away from abstract linguistics and toward more classically psychoanalytic concerns, her writings nevertheless exhibit a remarkable degree of continuity insofar as they have consistently sought to articulate—without completely departing from language—the force of the body and its drives.

Born in Bulgaria in 1941, Kristeva arrived in France on a doctoral research fellowship in December 1965. Since her francophone parents were not members of Bulgaria's ruling Communist Party, she had been excluded from the foreign-language schools available to the children of the "red bourgeoisie." Nevertheless, she acquired a French as well as a Bulgarian education from an early age by attending two schools—Bulgarian in the morning and French in the afternoon. In Paris she became a student of Roland Barthes and quickly established herself as a major participant in the lively avant-garde milieu of the late 1960s. By the spring of 1967, Kristeva's articles were being published in such leading journals as *Critique*, *Langages*, and *Tel Quel*, and in 1970 she was appointed to the editorial board of *Tel Quel*, the intellectual venue for the young generation of structuralist and poststructuralist theorists. *Tel Quel* was edited by the charismatic writer and theorist Philippe Sollers, whom she later married and with whom she had a son. In 1974 she was appointed professor of linguistics at the University of Paris VII, where she is now professor emerita and, co-directs the interdisciplinary Centre Roland Barthes, which she created in 2000. In 2004 she was awarded Norway's prestigious Holberg International Memorial Prize for outstanding scholarly work, and in 2008 she was named an Officer of the Legion of Honor.

Besides Barthes, Lucien Goldmann (an influential sociological critic), and CLAUDE LÉVI-STRAUSS, who were her teachers, Kristeva acknowledges intellectual debts to other twentieth-century figures: MIKHAIL BAKHTIN, Émile Benveniste (an important linguist), Jacques Lacan, Melanie Klein (a theorist of pre-oedipal development), and, of course, SIGMUND FREUD. With TZVETAN TODOROV, Kristeva brought the work of Bakhtin into prominence in the French context. In 1970 she published an introduction to the French translation of Bakhtin's work on Dostoyevsky, and she combined his concept of "dialogism" (the idea that a text contains language from more than one "world") with FERDINAND DE SAUSSURE's notebooks on anagrams in poetry (which had recently been discovered and were being published by Jean Starobinski in *Tel Quel*) into a general theory of "intertextuality."

The intertextual sense of the multiplicity of origins and meanings in language informs the theory of the sign set forth in Kristeva's first book, *Σημειωτική*

(*Sémeiótiké*): *Recherches pour une Sémanalyse* (1969, *Research toward a Sem-analysis*, where the prefix *sem-* is from the Greek word for “sign”). This was followed in 1974 by *Revolution in Poetic Language*, Kristeva’s doctoral dissertation, in which she developed a theory of poetic language based on the writings of Stéphane Mallarmé (1842–1898) and Isidore Ducasse (better known as the comte de Lautréamont, 1846–1870). We print several sections from this book as our selection, below. The “revolution” in poetic language Kristeva analyzed in the work of these late nineteenth-century French poets quickly became a revolution brought about by Kristeva herself in the *analysis* of poetic language as such.

Kristeva finds two forces competing for expression in the language of poetry: the symbolic and the semiotic. The *symbolic* is that aspect of language that allows it to *refer*. It is systematic, propositional, rule-bound, tied to the social order, dependent on a functional separation between the subject and the object, and capable of existing independently of its referent. The linguistics of Saussure focused on this dimension, treating language as a theoretical fiction studied in the absence of any particular speaker. The *semiotic* dimension of language—which cannot be known except in the moments where it breaks through the symbolic—is that aspect that bears the trace of the language user’s own body and of the mother’s protolinguistic presence—the babbling of the infant who tries out the vocal repertoire before he or she learns to speak, for instance, or the mother’s voice prior to the baby’s acquisition of language: poetic language in this sense has been called “babble, doodle, and riddle.” The “music” of poetry (and indeed prosody itself), Kristeva contends, arises out of this dimension. It is important to avoid two possible misunderstandings of Kristeva’s use of these terms. Her “symbolic” is similar to Lacan’s, insofar as it is not symbolic of anything—not a collection of meaning-filled symbols as, say, Carl Jung might conceive it—but is a *structure*. And “the semiotic” is not the same as *semiotics*, which is the study of the functioning of signs.

In *Revolution in Poetic Language*, Kristeva thus maintains that all signification entails the dialectical interaction of the symbolic and the semiotic. The semiotic represents the discharge of pre-oedipal instinctual energies and drives within language; it is associated with what Kristeva, following PLATO, designates as the *chora* (literally, “space”; Greek)—receptacle, space, womb. This semiotic *chora*, which “precedes and underlies figuration,” is, in turn, connected to the maternal body, to the feminine in general, and to what remains mysterious, unintelligible, and unsignifiable. Kristeva’s thesis is that the eruption of the semiotic within the symbolic is what provides the creative and innovative impulse of modern poetic language. Ordinary language use depends on a *thetic* or positing structure (Kristeva borrows the term from the German phenomenologist Edmund Husserl, 1859–1938): that is, it is positional and propositional. Artistic practice, capable of transgressing the thetic boundary between the symbolic and the semiotic, fractures and disrupts established modes of signification so as to retrieve the surmounted semiotic energies and thus create an opening for new, polyvalent cultural meanings. This thetic rupture, then, is profoundly subversive, not only implying an upheaval of art forms (such as that effected by Mallarmé and Lautréamont, according to Kristeva, on traditional literary discourse) but also calling for a reconfiguration of the notion of subjectivity. Distinguishing between the *genotext* (the energies that bring a text about) and the *phenotext* (the linguistic structure that results), Kristeva tries to capture the trace of what in a subject brings a text into being, not just what the text signifies. The genotext corresponds roughly to Freud’s primary (unconscious) processes—a dream’s “latent content.” But while a dream’s “manifest content” obeys only the rule of representability, a text is shaped by all the linguistic and social structures of the symbolic order.

The “revolution” of Kristeva’s title therefore both refers to a transformation in poetic practice and heralds the emergence of what Kristeva, throughout her writings, refers to as the *sujet-en-procès*. *Procès*, in French, means both “process” and “trial.”

Hence, this expression can be translated “subject in process” or “subject on trial.” The phrase itself expresses what Kristeva sees as the double bind of subjecthood: it combines the incompatible forces of constant change and constant judgment. The subject both *cannot* and *must* present itself in stasis. The semiotic dimension frees the subject from stasis and, according to Kristeva, “gives us a vision of the human venture as a venture of innovation, of creation, of opening, of renewal” (*Interviews*, 1996).

But the breakthroughs of the semiotic have their dark as well as their playful side. The theories of psychoanalysis have enabled Kristeva—who completed her training as a psychoanalyst in 1979—to analyze in more detail the consequences of those breakthroughs for life and writing. Her many book-length studies—treating horror, anti-Semitism, melancholy, and abjection—attend to the destructive as well as the creative consequences of breaking through the symbolic, which is the repository of civilization in both its repressive and its protective guises. Indeed, for Kristeva psychoanalysis is the *practice* of the difficulty in tearing apart the two “sides.” The *abject*, for instance, is for her as important to the constitution of the “subject” as its “object.” The abject is what the subject’s consciousness has to expel or disregard in order to create the proper separation between subject and object. The mother splits into two parts: she is the prototype of subsequent objects that the subject will desire or hate, but she is also the despised ground of infantile dependency and bodily need. Another way of putting this is that the abject is still unconsciously desired and thereby transformed into something undesirable, filthy, and disgusting, like the bodily processes for which it stands. Both matter and mother are *abjects* for the fantasy of self-creation.

Kristeva’s publications after 1979 thus take an explicitly psychoanalytic approach to what she calls “the maladies of the soul.” *Powers of Horror: An Essay on Abjection* (1980; trans. 1982), *Tales of Love* (1983; trans. 1987), *Black Sun: Depression and Melancholia* (1987; trans. 1989), and *New Maladies of the Soul* (1993; trans. 1995) often feature case studies from her clinical practice. At the same time, Kristeva began enlarging and loosening her compact, difficult, and rather abstract style to attempt new kinds of writing. In a special 1977 issue of *Tel Quel* titled *Recherches féminines* (*Research by and about Women*), she published a celebrated essay about motherhood (“Hérétique de l’amour” or “Love’s Herethics”¹; later translated as “Stabat Mater”) written in two columns juxtaposed irregularly on the page. She went on to write several novels, the first of which, *The Samurai* (1990), is a thinly disguised account of the *Tel Quel* milieu. Its Japanese title is a wink at the Chinese title used by SIMONE DE BEAUVOIR (an important precursor for Kristeva) for a similar roman à clef, *The Mandarins* (1954).

Kristeva has published more explicitly political writings as well, from her early *About Chinese Women* (1974)—based on a trip to China taken by several members of *Tel Quel* during its period of interest in Maoism—to the later *Strangers to Ourselves* (1989) and *Nations without Nationalism* (1990). In *Strangers to Ourselves*, Kristeva rediscovers Freud’s notion of the “uncanny” in the context of the encounter between the self and the “foreigner”: by recognizing that the foreignness lies *within* the self, it might be possible, she suggests, to avoid the violence entailed by its projection outward onto others.

The famous essay “Women’s Time” (1979; trans. 1981), a synthesis of Kristeva’s analysis of language, the social contract, and feminism, has been much reprinted. It addresses the question of female subjectivity by interrogating the position that women are said to occupy in the social structure. If, according to Lévi-Strauss, women are circulated on the marriage market between men of different groups like the words of a system of communication, what happens when women are seen not as the *objects* but as the *subjects* of communication? If women have had to bear the sacrificial weight of the social contract in patriarchy, does that mean that lifting the weight of patriarchy would provide free, unfettered enjoyment and fulfillment for women? It is

1. Herethics: an ethics tied to the feminine, which would represent a heretical or transgressive ethics.

Kristeva's contention that a liberating change in the social order, however necessary and desirable, would nevertheless not give access to the fulfillment whose attainment appears to be blocked by specific structures of subjectivity. The fantasy of wholeness is a function of those obstacles, not something beyond them. Kristeva's ideal could be said to be postfeminist in the sense that it implies the demolition of "Woman" as an identifiable social category. To the extent that feminism depends on the difference between men and women conceived as an *opposition*, she has resisted being called a "feminist." This has estranged her from some feminists committed to an oppositional notion of political action. When asked what constitutes her distinctiveness, however, she responds by calling herself "a female intellectual," committed to exploring the oxymoronic exclusiveness inherent in the traditional understanding of those categories but refusing to conceive of either one as an "identity."

The attempt to bridge the gap between French and Anglo-American feminisms has contributed to the introduction and dissemination of Kristeva's work to the English-speaking world—see, notably, Toril Moi's *Sexual/Textual Politics: Feminist Literary Theory* (1985)—but Kristeva herself tends to view institutionalized forms of feminism (like all institutionalized groups) as totalizing, at times even as totalitarian, forms of cultural discourse. In "Women's Time" she wonders whether feminism is not in the process of becoming a sort of religion; and she remains highly critical of any feminist politics based on universalist or essentialist notions of femininity. Although Kristeva, in Anglo-American writings, frequently gets grouped together with HÉLÈNE CIXOUS and Luce Irigaray as a representative of "French feminism," the three writers are really very different, united only by the extent to which each is influenced by the 1968 upheaval in French society. Yet Kristeva's rich and provocative writings—particularly her reflections on love, abjection, melancholy, maternity, and the preverbal semiotic—are directly relevant to feminist theorists and continue to generate a sizable body of criticism.

Drawing together linguistics, psychoanalysis, political science, and feminism, Julia Kristeva's work has repeatedly revealed aspects of textuality that literary theory is in danger of glossing over. In insisting that the speaking subject's investment in language is neither transcendental nor entirely conscious, she has enlarged, enriched, and complicated our sense of what goes on in a literary text.

*From Revolution in Poetic Language*¹

From Part I. The Semiotic and the Symbolic

2. THE SEMIOTIC *CHORA* ORDERING THE DRIVES

We understand the term "semiotic"² in its Greek sense: σημεῖον=distinctive mark, trace, index, precursory sign, proof, engraved or written sign, imprint, trace, figuration. This etymological reminder would be a mere archaeological embellishment (and an unconvincing one at that, since the term ultimately encompasses such disparate meanings), were it not for the fact that the preponderant etymological use of the word, the one that implies a *distinctiveness*, allows us to connect it to a precise modality in the signifying

1. Translated by Margaret Waller, who occasionally inserts the original French in brackets.

2. In Kristeva's usage, pre-oedipal—that is, before

the infant's discovery of sexual difference—preverbal drives and affects.

process. This modality is the one Freudian psychoanalysis points to in postulating not only the *facilitation* and the structuring *disposition* of drives, but also the so-called *primary processes*³ which displace and condense both energies and their inscription. Discrete quantities of energy move through the body of the subject who is not yet constituted as such and, in the course of his development, they are arranged according to the various constraints imposed on this body—always already involved in a semiotic process—by family and social structures. In this way the drives, which are “energy” charges as well as “psychical” marks, articulate what we call a *chora*: a non-expressive totality formed by the drives and their stases in a motility that is as full of movement as it is regulated.

We borrow the term *chora*⁴ from Plato’s *Timaeus*⁵ to denote an essentially mobile and extremely provisional articulation constituted by movements and their ephemeral stases. We differentiate this uncertain and indeterminate *articulation* from a *disposition* that already depends on representation, lends itself to phenomenological, spatial intuition,⁶ and gives rise to a geometry. Although our theoretical description of the *chora* is itself part of the discourse of representation that offers it as evidence, the *chora*, as rupture and articulations (rhythm), precedes evidence, verisimilitude, spatiality, and temporality. Our discourse—all discourse—moves with and against the *chora* in the sense that it simultaneously depends upon and refuses it. Although the *chora* can be designated and regulated, it can never be definitively posited: as a result, one can situate the *chora* and, if necessary, lend it a topology, but one can never give it axiomatic form.⁷

The *chora* is not yet a position that represents something for someone (i.e., it is not a sign); nor is it a *position* that represents someone for another position (i.e., it is not yet a signifier either⁸); it is, however, generated in order to attain to this signifying position. Neither model nor copy, the *chora* precedes

3. The most primitive of unconscious mechanisms, according to SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis. “Facilitation” (French *frayage*, from Freud’s German *Bahnung*) and “disposition” are the processes that shape habits of desire.

4. The term “*chora*” has recently been criticized for its ontological essence by Jacques Derrida, *Positions*, trans. and annot. Alan Bass (Chicago: University of Chicago Press, 1981), pp. 75, 106 n. 39 [Kristeva’s note]. Some of the author’s notes have been omitted. DERRIDA (1930–2004), French philosopher.

5. One of the later dialogues by the Greek philosopher PLATO (ca. 427–ca. 347 B.C.E.).

6. Phenomenology is a philosophical method restricted to analyzing the intellectual processes of which we are introspectively aware (while ignoring external objects, the question of whose existence is “bracketed”).

7. Plato emphasizes that the receptacle (ὑποδοχέον), which is also called space (χώρα) vis-à-vis reason, is necessary—but not divine since it is unstable, uncertain, ever changing and becoming; it is even unnameable, improbable, bastard: “Space, which is everlasting, not admitting destruction; providing a situation for all things that come into being, but itself apprehended without the senses by a sort of bastard reasoning, and hardly an object of belief. This, indeed, is that

which we look upon as in a dream and say that anything that is must needs be in some place and occupy some room . . .” (*Timaeus*, trans. Francis M. Cornford, 52a–b). Is the receptacle a “thing” or a mode of language? Plato’s hesitation between the two gives the receptacle an even more uncertain status. It is one of the elements that antedate not only the *universe* but also *names* and even *syllables*: “We speak . . . positing them as original principles, elements (as it were, letters) of the universe; whereas one who has ever so little intelligence should not rank them in this analogy even so low as syllables” (48b). “It is hard to say, with respect to any one of these, which we ought to call really water rather than fire, or indeed which we should call by any given name rather than by all the names together or by each severally, so as to use language in a sound and trustworthy way. . . . Since, then, in this way no one of these things ever makes its appearance as the *same* thing, which of them can we steadfastly affirm to be *this*—whatever it may be—and not something else, without blushing for ourselves? It cannot be done” (49b–d) [Kristeva’s note].

8. A reference to the statement by the French psychoanalyst JACQUES LACAN (1901–1981) that “a signifier represents a subject for another signifier”; see Seminar XI (1964), *The Four Fundamental Concepts of Psychoanalysis* (1973; trans. 1977).

and underlies figuration and thus specularization, and is analogous only to vocal or kinetic rhythm. We must restore this motility's gestural and vocal play (to mention only the aspect relevant to language) on the level of the socialized body in order to remove motility from ontology and amorphousness⁹ where Plato confines it in an apparent attempt to conceal it from Democritean rhythm.¹ The theory of the subject proposed by the theory of the unconscious will allow us to read in this rhythmic space, which has no thesis and no position, the process by which signifi² is constituted. Plato himself leads us to such a process when he calls this receptacle or *chora* nourishing and maternal,³ not yet unified in an ordered whole because deity is absent from it. Though deprived of unity, identity, or deity, the *chora* is nevertheless subject to a regulating process [*réglementation*], which is different from that of symbolic law but nevertheless effectuates discontinuities by temporarily articulating them and then starting over, again and again.

The *chora* is a modality of signifi² in which the linguistic sign is not yet articulated as the absence of an object and as the distinction between real and symbolic. We emphasize the regulated aspect of the *chora*: its vocal and gestural organization is subject to what we shall call an objective *ordering* [*ordonnancement*], which is dictated by natural or socio-historical constraints such as the biological difference between the sexes or family structure. We may therefore posit that social organization, always already

9. There is a fundamental ambiguity: on the one hand, the receptacle is mobile and even contradictory, without unity, separable and divisible: pre-syllable, pre-word. Yet, on the other hand, because this separability and divisibility antecede numbers and forms, the space or receptacle is called *amorphous*; thus its suggested rhythmicity will in a certain sense be erased, for how can one think an articulation of what is not yet singular but is nevertheless necessary? All we may say of it, then, to make it intelligible, is that it is amorphous but that it "is of such and such a quality," not even an index or something in particular ("this" or "that"). Once named, it immediately becomes a container that takes the place of infinitely repeatable separability. This amounts to saying that this repeated separability is "ontologized" the moment a *name* or a *word* replaces it, making it intelligible: "Are we talking idly whenever we say that there is such a thing as an intelligible Form of anything? Is this nothing more than a word?" (*Timaeus* 51c). Is the Platonic *chora* the "nominability" of rhythm (of repeated separation)?

Why then borrow an ontologized term in order to designate an articulation that antecedes positing? First, the Platonic term makes explicit an insurmountable problem for discourse: once it has been named, that functioning, even if it is pre-symbolic, is brought back into a symbolic position. All discourse can do is differentiate, by means of a "bastard reasoning," the receptacle from the motility, which, by contrast, is not being posited as being "a certain something" [*une telle*]. Second, this motility is the precondition for symbolicity, heterogeneous to it, yet indispensable. Therefore what needs to be done is to try and differentiate, always through a "bastard reasoning," the specific arrangements of this motility, without seeing them as recipients of accidental singularities, or a *Being* always posited in itself, or a projection of

the *One*. Moreover, Plato invites us to differentiate in this fashion when he describes this, while gathering it into the receiving membrane: "But because it was filled with powers that were neither alike nor evenly balanced, there was no equipoise in any region of it; but it was everywhere swayed unevenly and shaken by these things, and its motion shook them in turn. And they, being thus moved, were perpetually being separated and carried in different directions; just as when things are shaken and winnowed by means of winnowing baskets and other instruments for cleaning corn [i.e., wheat] . . . it separated the most unlike kinds farthest apart from one another, and thrust the most alike closest together; whereby the different kinds came to have different regions, even before the ordered whole consisting of them came to be . . . but were altogether in such a condition as we should expect for anything when deity is absent from it" (52d–53b). Indefinite "conjunctions" and "disjunctions" (functioning, devoid of Meaning), the *chora* is governed by a necessity that is not God's law [Kristeva's note].

1. That is, the eternal motion of atoms in haphazard collision postulated by the Greek philosopher Democritus (ca. 460–ca. 370 B.C.E.), a concept here presented as a precursor of the semiotic.

2. Kristeva's coinage: the fact or process of signification, encompassing both the symbolic and the semiotic.

3. The Platonic space or receptacle is a mother and wet nurse: "Indeed we may fittingly compare the Recipient to a mother, the model to a father, and the nature that arises between them to their offspring" (*Timaeus* 50d); "Now the wet nurse of Becoming was made watery and fiery, received the characters of earth and air, and was qualified by all the other affections that go with these . . ." (52d; translation modified) [Kristeva's note].

symbolic, imprints its constraint in a mediated form which organizes the *chora* not according to a *law* (a term we reserve for the symbolic) but through an *ordering*.⁴ What is this mediation?

According to a number of psycholinguists, "concrete operations" precede the acquisition of language, and organize preverbal semiotic space according to logical categories, which are thereby shown to precede or transcend language. From their research we shall retain not the principle of an operational state⁵ but that of a preverbal functional state that governs the connections between the body (in the process of constituting itself as a body proper), objects, and the protagonists of family structure.⁶ But we shall distinguish this functioning from symbolic operations that depend on language as a sign system—whether the language [*langue*]⁷ is vocalized or gestural (as with deaf-mutes). The kinetic functional stage of the *semiotic* precedes the establishment of the sign; it is not, therefore, cognitive in the sense of being assumed by a knowing, already constituted subject. The genesis of the *functions* organizing the semiotic process can be accurately elucidated only within a theory of the subject that does not reduce the subject to one of understanding, but instead opens up within the subject this other scene of pre-symbolic functions. The Kleinian theory⁸ expanding upon Freud's positions on the drives will momentarily serve as a guide.

Drives involve pre-Oedipal semiotic functions and energy discharges that connect and orient the body to the mother. We must emphasize that "drives" are always already ambiguous, simultaneously assimilating and destructive; this dualism, which has been represented as a tetrad⁹ or as a double helix, as in the configuration of the DNA and RNA molecule,¹ makes the semiotized body a place of permanent scission. The oral and anal drives,² both of which are oriented and structured around the mother's body,³ dominate

4. "Law," which derives etymologically from *lex* (Latin), necessarily implies the act of judgment whose role in safeguarding society was first developed by the Roman law courts. "Ordering," on the other hand, is closer to the series "rule," "norm" (from the Greek *νόμος*, meaning "discerning" [adj.], "carpenter's square" [noun]), etc., which implies a numerical or geometrical necessity. On normativity in linguistics, see Alain Rey, "Usages, judgments et prescriptions linguistiques" [Linguistic Usage, Judgment, and Prescription], *Langue Française* (December 1972), 16:5. But the temporary ordering of the *chora* is not yet even a *rule*: the arsenal of geometry is posterior to the *chora*'s motility; it fixes the *chora* in place and reduces it [Kristeva's note].

5. Operations are, rather, an act of the subject of understanding [Kristeva's note]. Hans G. Furth, in *Piaget and Knowledge: Theoretical Foundations* (Englewood Cliffs, N.J.: Prentice-Hall, 1969), offers the following definition of "concrete operations": "Characteristic of the first stage of operational intelligence. A concrete operation implies underlying general systems or 'groupings' such as classification, seriation, number. Its applicability is limited to objects considered as real (concrete)" (p. 260) [translator's note].

6. Piaget stresses that the roots of sensorimotor operations precede language and that the acquisition of thought is due to the symbolic function, which, for him, is a notion separate from that of language per se. See Jean Piaget, "Language and

Symbolic Operations," in *Piaget and Knowledge*, pp. 121–30 [Kristeva's note].

7. That is, language as an abstract system, as distinguished from the speech or hand signs of any particular language user (*parole*)—a distinction first drawn by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913).

8. The theory of mother-child relations held by Melanie Klein (1882–1960), Austrian-born English psychoanalyst.

9. Such a position has been formulated by Lipot Szondi, *Experimental Diagnostic of Drives*, trans. Gertrude Aull (New York: Grune and Stratton, 1952) [Kristeva's note]. "Tetrad": group of four.

1. See James D. Watson, *The Double Helix: A Personal Account of the Discovery of the Structure of DNA* (London: Weidenfeld and Nicolson, 1968) [Kristeva's note].

2. The first and second phases of Freud's discussion of infantile sexuality; the "oral" is associated with sucking, the "anal" with the start of toilet training.

3. Throughout her writings, Melanie Klein emphasizes the "pre-Oedipal" phase, i.e., a period of the subject's development that precedes the "discovery" of castration and the positing of the super-ego, which itself is subject to (paternal) Law. The processes she describes for this phase correspond, *but on a genetic level*, to what we call the semiotic as opposed to the symbolic, which underlies and conditions the semiotic. Significantly, these pre-Oedipal processes are organized through

this sensorimotor organization. The mother's body is therefore what mediates the symbolic law organizing social relations and becomes the ordering principle of the semiotic *chora*,⁴ which is on the path of destruction, aggressivity, and death. For although drives have been described as disunited or contradictory structures, simultaneously "positive" and "negative," this doubling is said to generate a dominant "destructive wave" that is drive's most characteristic trait: Freud notes that the most instinctual drive is the death drive.⁵ In this way, the term "drive" denotes waves of attack against stases, which are themselves constituted by the repetition of these charges; together, charges and stases lead to no identity (not even that of the "body proper") that could be seen as a result of their functioning. This is to say that the semiotic *chora* is no more than the place where the subject is both generated and negated, the place where his unity succumbs before the process of charges and stases that produce him. We shall call this process of charges and stases a *negativity* to distinguish it from negation, which is the act of a judging subject (see below, part II).

Checked by the constraints of biological and social structures, the drive charge thus undergoes stases. Drive facilitation, temporarily arrested, marks *discontinuities* in what may be called the various material supports [*matéri-aux*] susceptible to semiotization: voice, gesture, colors. Phonic (later phonemic), kinetic, or chromatic units and differences are the marks of these stases in the drives. Connections or *functions* are thereby established between these discrete marks which are based on drives and articulated according to their resemblance or opposition, either by slippage or by condensation. Here we find the principles of metonymy and metaphor⁶ indissociable from the drive economy underlying them.

Although we recognize the vital role played by the processes of displacement and condensation in the organization of the semiotic, we must also

projection onto the mother's body, for girls as well as for boys: "at this stage of development children of both sexes believe that it is the body of their mother which contains all that is desirable, especially their father's penis." *The Psycho-analysis of Children*, trans. Alix Strachey (London: Hogarth Press, 1932), p. 269. Our own view of this stage is as follows: Without "believing" or "desiring" any "object" whatsoever, the subject is in the process of constituting himself vis-à-vis a non-object. He is in the process of separating from this non-object so as to make that non-object "one" and posit himself as "other": the mother's body is the not-yet-one that the believing and desiring subject will imagine as a "receptacle" [Kristeva's note].

4. As for what situates the mother in symbolic space, we find the phallus again (see Jacques Lacan, "La Relation d'objet et les structures freudiennes" [Object Relations and Freudian Structures], *Bulletin de Psychologie*, April 1957, pp. 426–30), represented by the mother's father, i.e., the subject's maternal grandfather (see Marie-Claire Boons, "Le Meurtre du Père chez Freud" [Killing the Father in Freud], *L'Inconscient*, January–March 1968, 5: 101–29) [Kristeva's note].

5. Though disputed and inconsistent, the Freudian theory of drives is of interest here because of the predominance Freud gives to the death drive in both "living matter" and the "human being." The death drive is transversal to identity and tends to disperse "narcissisms" whose constitu-

tion ensures the link between structures and, by extension, life. But at the same time and conversely, narcissism and pleasure are only temporary positions from which the death drive blazes new paths [*se fraye de nouveaux passages*]. Narcissism and pleasure are therefore inveiglings and realizations of the death drive. The semiotic *chora*, converting drive discharges into stases, can be thought of both as a delaying of the death drive and as a possible realization of this drive, which tends to return to a homeostatic state. This hypothesis is consistent with the following remark: "at the beginning of mental life," writes Freud, "the struggle for pleasure was far more intense than later but not so unrestricted: it had to submit to frequent interruptions." *Beyond the Pleasure Principle*, in *The Standard Edition of the Complete Psycho-Analytic Works of Sigmund Freud*, ed. James Strachey (London: Hogarth Press, 1953), 18:63 [Kristeva's note].

6. Two figures (dependent on resemblance and association, respectively), most influentially discussed by the Russian-born American linguist ROMAN JAKOBSON in "Two Aspects of Language and Two Types of Aphasic Disturbances" (1956; see above); Lacan (in "The Agency of the Letter in the Unconscious," 1957; see above) and others connected them to Freud's dream-work processes of condensation and displacement, as described in *The Interpretation of Dreams* (1900; see above).

add to these processes the relations (eventually representable as topological spaces) that connect the zones of the fragmented body to each other and also to "external" "objects" and "subjects," which are not yet constituted as such. This type of relation makes it possible to specify the *semiotic* as a psychosomatic modality of the signifying process; in other words, not a symbolic modality but one articulating (in the largest sense of the word) a continuum: the connections between the (glottal and anal) sphincters in (rhythmic and intonational) vocal modulations, or those between the sphincters and family protagonists, for example.

All these various processes and relations, anterior to sign and syntax, have just been identified from a genetic perspective as previous and necessary to the acquisition of language, but not identical to language. Theory can "situate" such processes and relations diachronically within the process of the constitution of the subject precisely because *they function synchronically within the signifying process of the subject himself*, i.e., the subject of *cogitatio*.⁷ Only in *dream* logic, however, have they attracted attention, and only in certain signifying practices, such as the *text*, do they dominate the signifying process.

It may be hypothesized that certain semiotic articulations are transmitted through the biological code or physiological "memory" and thus form the inborn bases of the symbolic function. Indeed, one branch of generative linguistics asserts the principle of innate language universals. As it will become apparent in what follows, however, the *symbolic*—and therefore syntax and all linguistic categories—is a social effect of the relation to the other, established through the objective constraints of biological (including sexual) differences and concrete, historical family structures. Genetic programmings are necessarily semiotic: they include the primary processes such as displacement and condensation, absorption and repulsion, rejection and stasis, all of which function as innate preconditions, "memorizable" by the species, for language acquisition.

Mallarmé⁸ calls attention to the semiotic rhythm within language when he speaks of "The Mystery in Literature" ["Le Mystère dans les lettres"]. Indifferent to language, enigmatic and feminine, this space underlying the written is rhythmic, unfettered, irreducible to its intelligible verbal translation; it is musical, anterior to judgment, but restrained by a single guarantee: syntax. As evidence, we could cite "The Mystery in Literature" in its entirety.⁹ For now, however, we shall quote only those passages that ally the functioning of that "air or song beneath the text" with woman:

And the instrument of Darkness, whom they have designated, will not set down a word from then on except to deny that she must have been the enigma; lest she settle matters with a wisk of her skirts; 'I don't get it!'

.....
—They [the critics] play their parts disinterestedly or for a minor gain: leaving our Lady and Patroness exposed to show her dehiscence or lacuna, with respect to certain dreams, as though this were the standard to which everything is reduced.¹

7. Thinking (Latin).

8. Stéphane Mallarmé (1842–1898), French poet.

9. Mallarmé, *Oeuvres complètes* [*Complete Works*]

(Paris: Gallimard, 1945), pp. 382–87 [Kristeva's note].

1. Ibid., p. 383 [Kristeva's note].

To these passages we add others that point to the “mysterious” functioning of literature as a rhythm made intelligible by syntax: “Following the instinct for rhythms that has chosen him, the poet does not deny seeing a lack of proportion between the means let loose and the result.” “I know that there are those who would restrict Mystery to Music’s domain; when writing aspires to it.”²

What pivot is there, I mean within these contrasts, for intelligibility? a guarantee is needed—

Syntax—

. . . an extraordinary appropriation of structure, limpid, to the primitive lightning bolts of logic. A stammering, what the sentence seems, here repressed [. . .]

.....
The debate—whether necessary average clarity deviates in a detail—remains one for grammarians.³

Our positing of the semiotic is obviously inseparable from a theory of the subject that takes into account the Freudian positing of the unconscious. We view the subject in language as decentering the transcendental ego,⁴ cutting through it, and opening it up to a dialectic in which its syntactic and categorical understanding is merely the liminary moment of the process, which is itself always acted upon by the relation to the other dominated by the death drive and its productive reiteration of the “signifier.” We will be attempting to formulate the distinction between *semiotic* and *symbolic* within this perspective, which was introduced by Lacanian analysis, but also within the constraints of a practice—the *text*—which is only of secondary interest to psychoanalysis.

* * *

5. THE THETIC: RUPTURE AND/OR BOUNDARY

We shall distinguish the semiotic (drives and their articulations) from the realm of signification, which is always that of a proposition or judgment, in other words, a realm of *positions*. This positionality, which Husserlian phenomenology orchestrates through the concepts of *doxa*, *position*, and *thesis*, is structured as a break in the signifying process, establishing the *identification* of the subject and its object as preconditions of propositionality. We shall call this break, which produces the positing of signification, a *thetic*⁵ phase. All enunciation, whether of a word or of a sentence, is thetic. It requires an identification; in other words, the subject must separate from and through his image, from and through his objects. This image and objects must first be posited in a space that becomes symbolic because it connects the two separated positions, recording them or redistributing them in an open combinatorial system.

The child’s first so-called holophrastic enunciations include gesture, the object, and vocal emission. Because they are perhaps not yet sentences

2. Ibid., pp. 383, 385 [Kristeva’s note].

3. Ibid., pp. 385–86 [Kristeva’s note].

4. The autonomous, abstract subject implicit in perception and cognition, as defined by the Ger-

man philosopher Edmund Husserl (1859–1938), a founder of phenomenology.

5. Propositional (from *thesis*), also a term from Husserl.

(NP-VP),⁶ generative grammar is not readily equipped to account for them. Nevertheless, they are already thetic in the sense that they separate an object from the subject, and attribute to it a semiotic fragment, which thereby becomes a signifier. That this attribution is either metaphoric or metonymic ("woof-woof" says the dog, and all animals become "woof-woof") is logically secondary to the fact that it constitutes an *attribution*, which is to say, a positing of identity or difference, and that it represents the nucleus of judgment or proposition.

We shall say that the thetic phase of the signifying process is the "deepest structure" of the possibility of enunciation, in other words, of signification and the proposition. Husserl theologizes this deep logic of signification by making it a productive *origin* of the "free spontaneity" of the Ego:

Its *free spontaneity and activity* consists in positing, positing on the strength of this or that, positing as an antecedent or a consequent, and so forth; it does not live within the theses as a passive indweller; the theses radiate from it as from a primary source of generation [*Erzeugungen*]. Every thesis begins with a *point of insertion* [*Einsatzpunkt*] with a point at which *the positing has its origin* [*Ursprungssetzung*]; so it is with the first thesis and with each further one in the synthetic nexus. This 'inserting' even belongs to the thesis as such, as a remarkable modus of original actuality. It somewhat resembles the *fiat*,⁷ the point of insertion of will and action.⁸

In this sense, *there exists only one signification*, that of the thetic phase, which contains the object as well as the proposition, and the complicity between them. There is no sign that is not thetic and every sign is already the germ of a "sentence," attributing a signifier to an object through a "copula"⁹ that will function as a signified. Stoic semiology, which was the first to formulate the matrix of the sign, had already established *this complicity between sign and sentence*, making them proofs of each other.

Modern philosophy recognizes that the right to represent the founding *thesis* of signification (sign and/or proposition) devolves upon the transcendental ego. But only since Freud have we been able to raise the question not of the origin of this thesis but rather of the process of its production. To brand the thetic as the foundation of metaphysics is to risk serving as an antechamber for metaphysics—unless, that is, we specify the way the thetic is produced. In our view, the Freudian theory of the unconscious and its Lacanian development show, precisely, that thetic signification is a stage attained under certain precise conditions during the signifying process, and that it constitutes the subject without being reduced to this process precisely because it is the threshold of language. Such a standpoint constitutes neither a reduction of the subject to the transcendental ego, nor a denial [*dénégation*] of the thetic phase that establishes signification.

6. Noun-phrase, verb-phrase; nomenclature from the generative and transformational grammar of the American linguist Noam Chomsky (b. 1928).

7. Literally "let there be" (Latin); this is the form of God's creative pronouncements in Genesis, in the Vulgate Bible.

8. Edmund Husserl, *Ideas: General Introduction to Pure Phenomenology*, trans. W. R. Boyce Gibson (London: Allen and Unwin, 1969), p. 342 [Kristeva's note].

9. Linking verb (which joins the subject and predicate).

12. GENOTEXT AND PHENOTEXT

In light of the distinction we have made between the semiotic *chora* and the symbolic, we may now examine the way texts function. What we shall call a *genotext* will include semiotic processes but also the advent of the symbolic. The former includes drives, their disposition, and their division of the body, plus the ecological and social system surrounding the body, such as objects and pre-Oedipal relations with parents. The latter encompasses the emergence of object and subject, and the constitution of nuclei of meaning involving categories: semantic and categorial fields. Designating the genotext in a text requires pointing out the transfers of drive energy that can be detected in phonematic devices (such as the accumulation and repetition of phonemes¹ or rhyme) and melodic devices (such as intonation or rhythm), in the way semantic and categorial fields are set out in syntactic and logical features, or in the economy of mimesis (fantasy, the deferment of denotation, narrative, etc.). The genotext is thus the only transfer of drive energies that organizes a space in which the subject is not yet a split unity that will become blurred, giving rise to the symbolic. Instead, the space it organizes is one in which the subject will be *generated* as such by a process of facilitations² and marks within the constraints of the biological and social structure.

In other words, even though it can be seen in language, the genotext is not linguistic (in the sense understood by structural or generative linguistics). It is, rather, a *process*, which tends to articulate structures that are ephemeral (unstable, threatened by drive charges, “quanta” rather than “marks”) and nonsignifying (devices that do not have a double articulation).³ It forms these structures out of: (a) instinctual dyads, (b) the corporeal and ecological continuum, (c) the social organism and family structures, which convey the constraints imposed by the mode of production, and (d) matrices of enunciation, which give rise to discursive “genres” (according to literary history), “psychic structures” (according to psychiatry and psychoanalysis), or various arrangements of “the participants in the speech event” (in Jakobson’s notion of the linguistics of discourse).⁴ We may posit that the matrices of enunciation are the result of the repetition of drive charges (a) within biological, ecological, and socio-familial constraints (b and c), and the stabilization of their facilitation into stases whose surrounding structure accommodates and leaves its mark on symbolization.

The genotext can thus be seen as language’s underlying foundation. We shall use the term *phenotext* to denote language that serves to communicate, which linguistics describes in terms of “competence” and “performance.”⁵ The phenotext is constantly split up and divided, and is irreducible

1. Units of sound. The translator previously noted: “‘Device’ is Kristeva’s own choice for the translation of *dispositif*: something devised or constructed for a particular purpose.”

2. The translation of Freud’s German *Bahnungen*. According to Freud, it was easier to repeat an experience than to have a new one; repetition thus lays down or “facilitates” a pattern for future experiences.

3. To signify something else, language must both

link the sign to the thing (referent) and articulate the two parts of the sign (signifier and signified).

4. See “Shifters, Verbal Categories, and the Russian Verb,” in Roman Jakobson, *Selected Writings*, 2 vols. (The Hague: Mouton, 1971), 2:130–47 [Kristeva’s note].

5. Chomsky’s terms, corresponding roughly to Saussure’s *langue* and *parole*: “competence” is knowledge of language as a system; “performance” involves linguistic acts by particular speakers.

to the semiotic process that works through the genotext. The phenotext is a structure (which can be generated, in generative grammar's sense); it obeys rules of communication and presupposes a subject of enunciation and an addressee. The genotext, on the other hand, is a process; it moves through zones that have relative and transitory borders and constitutes a *path* that is not restricted to the two poles of univocal information between two full-fledged subjects. If these two terms—genotext and phenotext—could be translated into a metalanguage that would convey the difference between them, one might say that the genotext is a matter of topology, whereas the phenotext is one of algebra.⁶ This distinction may be illustrated by a particular signifying system: written and spoken Chinese, particularly classical Chinese. Writing represents-articulates the signifying process into specific networks or spaces; *speech* (which may correspond to that writing) restores the diacritical elements necessary for an exchange of meaning between two subjects (temporality, aspect, specification of the protagonists, morpho-semantic identifiers, and so forth).⁷

The signifying process therefore includes both the genotext and the phenotext; indeed it could not do otherwise. For it is in language that all signifying operations are realized (even when linguistic material is not used), and it is on the basis of language that a theoretical approach may attempt to perceive that operation.

In our view, the process we have just described accounts for the way all signifying practices are generated.⁸ But every signifying practice does not encompass the infinite totality of that process. Multiple constraints—which are ultimately sociopolitical—stop the signifying process at one or another of the theses that it traverses; they knot it and lock it into a given surface or structure; they discard *practice* under fixed, fragmentary, symbolic *matrices*, the tracings of various social constraints that obliterate the infinity of the process: the phenotext is what conveys these obliterations. Among the capitalist mode of production's numerous signifying practices only certain literary texts of the avant-garde (Mallarmé, Joyce⁹) manage to cover the infinity of the process, that is, reach the semiotic *chora*, which modifies linguistic structures. It must be emphasized, however, that this total exploration of the signifying process generally leaves in abeyance the theses that are characteristic of the social organism, its structures, and their political transformation: the text has a tendency to dispense with political and social signifieds.

It has only been in very recent years or in revolutionary periods that signifying practice has inscribed within the phenotext the plural, heteroge-

6. That is, the genotext is the shape taken by existing space, while the phenotext translates the relations discovered into a formal language.

7. See Joseph Needham, *Science and Civilisation in China*, 4 vols. (Cambridge: Cambridge University Press, 1960), vol. 1 [Kristeva's note].

8. From a similar perspective, Edgar Morin writes: "We can think of magic, mythologies, and ideologies both as mixed systems, making affectivity rational and rationality affective, and as outcomes of combining: (a) fundamental drives, (b) the chancy play of fantasy, and (c) logico-constructive systems. (To our mind, the theory of myth must be

based on triunic syncretism rather than unilateral logic.)" He adds, in a note, that "myth does not have a single logic but a synthesis of three kinds of logic." "Le Paradigme perdu: La Nature humaine" [Paradigm Lost: Human Nature], paper presented at the "Invariants biologiques et universaux culturels" [Biological Invariants and Cultural Universals] Colloquium, Royaumont, September 6–9, 1972 [Kristeva's note].

9. James Joyce (1882–1941), Irish writer known for his innovations in the form and language of the novel.

neous, and contradictory process of signification encompassing the flow of drives, material discontinuity, political struggle, and the pulverization of language.¹

Lacan has delineated four types of discourse in our society: that of the hysteric, the academic, the master, and the analyst.² Within the perspective just set forth, we shall posit a different classification, which, in certain respects, intersects these four Lacanian categories, and in others, adds to them. We shall distinguish between the following signifying practices: narrative, metalanguage, contemplation, and text-practice.

Let us state from the outset that this distinction is only provisional and schematic, and that although it corresponds to actual practices, it interests us primarily as a didactic implement [*outil*]³—one that will allow us to specify some of the modalities of signifying dispositions. The latter interest us to the extent that they give rise to different practices and are, as a consequence, more or less coded in modes of production. Of course narrative and contemplation could also be seen as devices stemming from (hysterical and obsessional) transference neurosis; and metalanguage and the text as practices allied with psychotic (paranoid and schizoid) economies.³

1974

1. An allusion to *Le Poème pulvérisé* (1947, *The Pulverized Poem*), a volume of prose poems by the French poet René Char.

2. Lacan presented this typology of discourse at his 1969 and 1970 seminars [Kristeva's note].

3. Suggesting parallels between creativity and madness, Kristeva connects narrative with hysteria, contemplation with obsession, metalanguage with paranoia, and textuality with schizophrenia.

LAURA MULVEY

b. 1941

The writer and filmmaker Laura Mulvey is widely regarded as one of the most challenging and incisive contemporary feminist cultural theorists. Belonging to the 1970s generation of British film theorists and independent filmmakers, she came to prominence with "Visual Pleasure and Narrative Cinema," a foundational text in feminist film criticism. This essay, published in 1975 in the vanguard British film journal *Screen* and frequently anthologized since, was groundbreaking as one of the earliest pieces of feminist criticism to go beyond cataloguing images of women in films. Extending the psychoanalytic insights of both SIGMUND FREUD and JACQUES LACAN, Mulvey describes how sexual difference and inequality are inscribed not only in the content or subject matter of a film but in its formal visual apparatus—its characteristic ways of looking—as well.

Born in Oxford, England, Mulvey received a B.A. in history from Oxford University in 1963. In 1972, with Claire Johnston and Linda Myles, she organized the women's events at the Edinburgh Film Festival. She has taught classes at Bulmershe College in Reading, England; the London Institute; the University of East Anglia; Cornell University; the University of California at Davis; and the British Film Institute. Since 1999 she has been a professor of film and media studies at Birkbeck, University of London. She has co-directed several avant-garde films with her husband, Peter Wollen, including *Penthesilea: Queen of the Amazons* (1974),

Riddles of the Sphinx (1977), *Amy!* (1980), *Crystal Gazing* (1982), and *The Bad Sister* (1983), all of which attempt to undermine conventional cinematic methods of filming women. With Mark Lewis, she co-directed *Disgraced Monuments* (1991). In addition, her essays on a wide variety of subjects have been published in *Visual and Other Pleasures* (1989) and *Fetishism and Curiosity* (1996).

In 1975 Mulvey's essay on visual pleasure and narrative cinema was revolutionary. It was written at a time when feminist literary criticism was beginning to establish itself as a field of study in many English departments and when women's studies programs were just getting off the ground. Few of the works now considered canonical in feminist literary criticism had been written. Anglo-American feminists, documenting images of women in literature, focused mainly on the content rather than the form of the texts they examined. Furthermore, many were hostile toward psychoanalysis, though a few were already exploring the potential connections between Freud and feminism. In France the theorists who would come to be known in the United States as the French feminists—JULIA KRISTEVA, HÉLÈNE CIXOUS, and Luce Irigaray—were using psychoanalytic theory as a means of exploring sexual difference and inequality, but their work would not begin to have a significant impact on American feminism until the 1980s.

"Visual Pleasure and Narrative Cinema" describes the manner in which the traditional visual apparatus of mainstream Hollywood "narrative" film looks at women as passive objects subordinated to the male gaze. Using a dense but illuminating psychoanalytic framework, Mulvey explores how the male unconscious shapes the erotic pleasures involved in looking. While she concedes that psychoanalysis might not offer a way out of the inequalities between the sexes or the oppression of women, she argues that it does provide a useful political tool for illustrating the mechanisms of pleasure on which the cinematic objectification of women depends.

According to Mulvey, the visual techniques of cinema afford viewers two contradictory pleasures. First, through the process Freud terms *scopophilia* (pleasure in looking), we enjoy making others the object of a controlling gaze. Second, through a process of identification that parallels Lacan's famous mirror stage (theorized in "The Mirror Stage," 1949; see above), we derive pleasure from identifying with an ideal image on the screen. Both have their origins in infantile processes by which we learned to separate ourselves from others. As described to this point, the two processes seem to structure the visual pleasure of men and women in the same way. However, Mulvey argues that because the male viewer cannot bear the burden of sexual objectification, he (the viewer is specifically male) deflects the tension by splitting his gaze between spectacle and narrative. A woman on-screen typically functions as the primary erotic object for both screen characters and audience members, becoming the object of the dominant, male gaze; as such, she exists outside the narrative illusions of time and space the film creates. At the same time, spectators identify with the male protagonist, who acts within the parameters of time and space—the diegesis—created by the film's story line.

The visual apparatus of mainstream film is further complicated because the process of gazing on the female object of desire is both pleasurable and threatening. While film creates an illusionistic world that allows for the free play of desire, in actuality the viewer is never free from the circumstances that gave rise to those desires within the symbolic social order, especially from the castration complex. The female object of the gaze, because she lacks a penis, is associated with the primordial fear of castration; although that threat initiates the male subject's integration into the symbolic social order, it also creates considerable anxiety. For this reason, the controlling male ego must attempt to escape the threat of castration evoked by the very gaze that gives it pleasure. Mulvey maintains that the male unconscious has two means of disarming the threat. The first is a form of voyeurism—investigating the female, demystifying her, and either denouncing, punishing, or saving her. The second is male disavowal, achieved by the substitution of a fetish object that becomes

reassuring rather than dangerous. She examines these processes in the films of the directors Josef von Sternberg (1894–1969) and Alfred Hitchcock (1899–1980).

Before the pleasures of mainstream film can be challenged, Mulvey argues, viewers must be able to break down the cinematic codes that create the controlling male gaze and the illusionistic world that satisfies the desires it invokes. The cinema depends on three looks: that of the camera, that of the audience, and that of the film's characters. It achieves its illusion of truth and reality (mimesis) by denying or downplaying the first two (the material process of recording and the critical reading of the viewer) and by emphasizing the last. Only by disrupting the seamlessness of this whole visual illusion can women's subordination to the male gaze be defied.

The visual dynamics described in "Visual Pleasure and Narrative Cinema" have been widely applied not only to film but to other media as well, including photography, advertising, painting, and television, making this essay a landmark text for visual culture and media studies generally. But Mulvey's description of the male gaze has not been without its critics—feminists included—who have pointed out limitations. For many, the spatial logic of the male gaze limits the ways in which vision (and visual pleasure) can be understood. Because the masculine gaze is always posited as the site of mastery and control, while the feminine is marked by submission to the gaze, little room is left within mainstream narrative cinema for resistances or alternative practices. Nor does avant-garde cinema, where Mulvey locates the alternative to the male gaze, offer much evidence of being any more responsive to feminist critique than Hollywood filmmaking. Others argue that her paradigm locks the activity of looking into a traditional oedipal heterosexuality. Moreover, theories drawing on a visual apparatus based on a gendered split between female object and male voyeur cannot describe the visual pleasure of female viewers, or account for the male gaze at another male. Mulvey herself has recognized the validity of such objections, attempting to address many of them in a later essay, "Afterthoughts on 'Visual Pleasure and Narrative Cinema' Inspired by King Vidor's *Duel in the Sun*" (1981). Despite such criticism, Mulvey's 1975 essay continues to inspire important work in feminist film studies.

Visual Pleasure and Narrative Cinema¹

I. Introduction

(A) A POLITICAL USE OF PSYCHOANALYSIS

This paper intends to use psychoanalysis to discover where and how the fascination of film is reinforced by pre-existing patterns of fascination already at work within the individual subject and the social formations that have moulded him. It takes as its starting-point the way film reflects, reveals and even plays on the straight, socially established interpretation of sexual difference which controls images, erotic ways of looking and spectacle. It is helpful to understand what the cinema has been, how its magic has worked in the past, while attempting a theory and a practice which will challenge this cinema of the past. Psychoanalytic theory is thus appropriated here as a political weapon, demonstrating the way the unconscious of patriarchal society has structured film form.

1. All notes are written by the editor.

The paradox of phallocentrism² in all its manifestations is that it depends on the image of the castrated woman to give order and meaning to its world. An idea of woman stands as linchpin to the system: it is her lack that produces the phallus as a symbolic presence, it is her desire to make good the lack that the phallus signifies. Recent writing in *Screen*³ about psychoanalysis and the cinema has not sufficiently brought out the importance of the representation of the female form in a symbolic order⁴ in which, in the last resort, it speaks castration and nothing else. To summarise briefly: the function of woman in forming the patriarchal unconscious is twofold: she firstly symbolises the castration threat by her real lack of a penis and secondly thereby raises her child into the symbolic. Once this has been achieved, her meaning in the process is at an end. It does not last into the world of law and language except as a memory, which oscillates between memory of maternal plenitude and memory of lack. Both are posited on nature (or on anatomy in Freud's famous phrase⁵). Woman's desire is subjugated to her image as bearer of the bleeding wound; she can exist only in relation to castration and cannot transcend it. She turns her child into the signifier of her own desire to possess a penis (the condition, she imagines, of entry into the symbolic). Either she must gracefully give way to the word, the name of the father and the law, or else struggle to keep her child down with her in the half-light of the imaginary. Woman then stands in patriarchal culture as a signifier⁶ for the male other, bound by a symbolic order in which man can live out his fantasies and obsessions through linguistic command by imposing them on the silent image of woman still tied to her place as bearer, not maker, of meaning.

There is an obvious interest in this analysis for feminists, a beauty in its exact rendering of the frustration experienced under the phallocentric order. It gets us nearer to the roots of our oppression, it brings closer an articulation of the problem, it faces us with the ultimate challenge: how to fight the unconscious structured like a language (formed critically at the moment of arrival of language) while still caught within the language of the patriarchy? There is no way in which we can produce an alternative out of the blue, but we can begin to make a break by examining patriarchy with the tools it provides, of which psychoanalysis is not the only but an important one. We are still separated by a great gap from important issues for the female unconscious which are scarcely relevant to phallocentric theory: the sexing of the female infant and her relationship to the symbolic, the sexually mature woman as non-mother, maternity outside the signification of the phallus, the vagina.

2. The psychoanalytic system in which sexual difference is defined as the difference between having and lacking the phallus; the term has come to refer to the patriarchal cultural system as a whole insofar as that system privileges the phallus as the symbol and source of power. Because of that privilege, women suffer "penis envy" and men suffer the "castration complex" (the fear of every male child that his desire for his mother will be punished by castration by his father; more generally, the fear of becoming "castrated" like women that leads men to cling to masculinity); both terms are originally from the theories of SIGMUND FREUD (1856–1939).

3. Vanguard British film journal, founded in 1969 by the British Society for Education in Film

and Television.

4. In the theories of the psyche put forward by the French psychoanalyst JACQUES LACAN (1901–1981), the Symbolic is the dimension of language, law, and the father; in contrast, the Imaginary is modeled on the preverbal mother-child dyad, or on the relation between an infant and its mirror image.

5. That is, "anatomy is destiny" ("The Dissolution of the Oedipus Complex," 1924).

6. Term used by structuralist and poststructuralist theorists that was coined by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913) to explain the functioning of signs, which he divided into a *signifier* (the form a sign takes) and a *signified* (the concept it represents).

But, at this point, psychoanalytic theory as it now stands can at least advance our understanding of the *status quo*, of the patriarchal order in which we are caught.

(B) DESTRUCTION OF PLEASURE AS A RADICAL WEAPON

As an advanced representation system, the cinema poses questions about the ways the unconscious (formed by the dominant order) structures ways of seeing and pleasure in looking. Cinema has changed over the last few decades. It is no longer the monolithic system based on large capital investment exemplified at its best by Hollywood in the 1930s, 1940s and 1950s. Technological advances (16mm and so on) have changed the economic conditions of cinematic production, which can now be artisanal as well as capitalist. Thus it has been possible for an alternative cinema to develop. However self-conscious and ironic Hollywood managed to be, it always restricted itself to a formal *mise en scène*⁷ reflecting the dominant ideological concept of the cinema. The alternative cinema provides a space for the birth of a cinema which is radical in both a political and an aesthetic sense and challenges the basic assumptions of the mainstream film. This is not to reject the latter moralistically, but to highlight the ways in which its formal preoccupations reflect the psychical obsessions of the society which produced it and, further, to stress that the alternative cinema must start specifically by reacting against these obsessions and assumptions. A politically and aesthetically avant-garde cinema is now possible, but it can still only exist as a counterpoint.

The magic of the Hollywood style at its best (and of all the cinema which fell within its sphere of influence) arose, not exclusively, but in one important aspect, from its skilled and satisfying manipulation of visual pleasure. Unchallenged, mainstream film coded the erotic into the language of the dominant patriarchal order. In the highly developed Hollywood cinema it was only through these codes that the alienated subject, torn in his imaginary memory by a sense of loss, by the terror of potential lack in fantasy, came near to finding a glimpse of satisfaction: through its formal beauty and its play on his own formative obsessions. This article will discuss the interweaving of that erotic pleasure in film, its meaning and, in particular, the central place of the image of woman. It is said that analysing pleasure, or beauty, destroys it. That is the intention of this article. The satisfaction and reinforcement of the ego⁸ that represent the high point of film history hitherto must be attacked. Not in favour of a reconstructed new pleasure, which cannot exist in the abstract, nor of intellectualised unpleasure, but to make way for a total negation of the ease and plenitude of the narrative fiction film. The alternative is the thrill that comes from leaving the past behind without simply rejecting it, transcending outworn or oppressive forms, and daring to break with normal pleasurable expectations in order to conceive a new language of desire.

7. In film, everything within the frame of a shot, including actors, settings, costumes, action, and lighting.

8. The part of the psyche, as described by Freud, that is conscious, controls behavior, and is in touch with external reality.

II. *Pleasure in Looking/Fascination with the Human Form*

A The cinema offers a number of possible pleasures. One is scopophilia (pleasure in looking). There are circumstances in which looking itself is a source of pleasure, just as, in the reverse formation, there is pleasure in being looked at. Originally, in his *Three Essays on Sexuality*, Freud isolated scopophilia as one of the component instincts of sexuality which exist as drives quite independently of the erotogenic zones. At this point he associated scopophilia with taking other people as objects, subjecting them to a controlling and curious gaze. His particular examples centre on the voyeuristic activities of children, their desire to see and make sure of the private and forbidden (curiosity about other people's genital and bodily functions, about the presence or absence of the penis and, retrospectively, about the primal scene⁹). In this analysis scopophilia is essentially active. (Later, in 'Instincts and Their Vicissitudes', Freud developed his theory of scopophilia further, attaching it initially to pre-genital auto-eroticism, after which, by analogy, the pleasure of the look is transferred to others. There is a close working here of the relationship between the active instinct and its further development in a narcissistic form.) Although the instinct is modified by other factors, in particular the constitution of the ego, it continues to exist as the erotic basis for pleasure in looking at another person as object. At the extreme, it can become fixated into a perversion, producing obsessive voyeurs and Peeping Toms whose only sexual satisfaction can come from watching, in an active controlling sense, an objectified other.

At first glance, the cinema would seem to be remote from the undercover world of the surreptitious observation of an unknowing and unwilling victim. What is seen on the screen is so manifestly shown. But the mass of mainstream film, and the conventions within which it has consciously evolved, portray a hermetically sealed world which unwinds magically, indifferent to the presence of the audience, producing for them a sense of separation and playing on their voyeuristic fantasy. Moreover the extreme contrast between the darkness in the auditorium (which also isolates the spectators from one another) and the brilliance of the shifting patterns of light and shade on the screen helps to promote the illusion of voyeuristic separation. Although the film is really being shown, is there to be seen, conditions of screening and narrative conventions give the spectator an illusion of looking in on a private world. Among other things, the position of the spectators in the cinema is blatantly one of repression of their exhibitionism and projection of the repressed desire onto the performer.

B The cinema satisfies a primordial wish for pleasurable looking, but it also goes further, developing scopophilia in its narcissistic aspect. The conventions of mainstream film focus attention on the human form. Scale, space, stories are all anthropomorphic. Here, curiosity and the wish to look intermingle with a fascination with likeness and recognition: the human face, the human body, the relationship between the human form and its surroundings, the visible presence of the person in the world. Jacques Lacan has described

9. The scene of the child's parents engaged in sexual intercourse. Freud published *Three Essays on the Theory of Sexuality* in 1905 and "Instincts and Their Vicissitudes" in 1915.

how the moment when a child recognises its own image in the mirror is crucial for the constitution of the ego.¹ Several aspects of this analysis are relevant here. The mirror phase occurs at a time when children's physical ambitions outstrip their motor capacity, with the result that their recognition of themselves is joyous in that they imagine their mirror image to be more complete, more perfect than they experience in their own body. Recognition is thus overlaid with misrecognition: the image recognised is conceived as the reflected body of the self, but its misrecognition as superior projects this body outside itself as an ideal ego, the alienated subject which, re-introjected² as an ego ideal, prepares the way for identification with others in the future. This mirror moment predates language for the child.

Important for this article is the fact that it is an image that constitutes the matrix of the imaginary, of recognition/misrecognition and identification, and hence of the first articulation of the I, of subjectivity. This is a moment when an older fascination with looking (at the mother's face, for an obvious example) collides with the initial inklings of self-awareness. Hence it is the birth of the long love affair/despair between image and self-image which has found such intensity of expression in film and such joyous recognition in the cinema audience. Quite apart from the extraneous similarities between screen and mirror (the framing of the human form in its surroundings, for instance), the cinema has structures of fascination strong enough to allow temporary loss of ego while simultaneously reinforcing it. The sense of forgetting the world as the ego has come to perceive it (I forgot who I am and where I was) is nostalgically reminiscent of that pre-subjective moment of image recognition. While at the same time, the cinema has distinguished itself in the production of ego ideals, through the star system for instance. Stars provide a focus or centre both to screen space and screen story where they act out a complex process of likeness and difference (the glamorous impersonates the ordinary).

C Sections A and B have set out two contradictory aspects of the pleasurable structures of looking in the conventional cinematic situation. The first, scopophilic, arises from pleasure in using another person as an object of sexual stimulation through sight. The second, developed through narcissism and the constitution of the ego, comes from identification with the image seen. Thus, in film terms, one implies a separation of the erotic identity of the subject from the object on the screen (active scopophilia), the other demands identification of the ego with the object on the screen through the spectator's fascination with and recognition of his like. The first is a function of the sexual instincts, the second of ego libido.³ This dichotomy was crucial for Freud. Although he saw the two as interacting and overlaying each other, the tension between instinctual drives and self-preservation polarises in terms of pleasure. But both are formative structures, mechanisms without intrinsic meaning. In themselves they have no signification, unless attached to an idealisation. Both pursue aims in indifference to perceptual reality, and moti-

1. Lacan, in "The Mirror Stage" (1949; see above), describes the development of selfhood in children between 6 and 18 months old.

2. A psychoanalytic term; *introjection* is the unconscious process by which the outside world is

taken into the self and represented in its internal structure.

3. Narcissistic libido, a pleasure derived from idealizing the self.

vate eroticised phantasmagoria that affect the subject's perception of the world to make a mockery of empirical objectivity.

During its history, the cinema seems to have evolved a particular illusion of reality in which this contradiction between libido and ego has found a beautifully complementary fantasy world. In *reality* the fantasy world of the screen is subject to the law which produces it. Sexual instincts and identification processes have a meaning within the symbolic order which articulates desire. Desire, born with language, allows the possibility of transcending the instinctual and the imaginary, but its point of reference continually returns to the traumatic moment of its birth: the castration complex. Hence the look, pleasurable in form, can be threatening in content, and it is woman as representation/image that crystallises this paradox.

III. *Woman as Image, Man as Bearer of the Look*

A In a world ordered by sexual imbalance, pleasure in looking has been split between active/male and passive/female. The determining male gaze projects its fantasy onto the female figure, which is styled accordingly. In their traditional exhibitionist role women are simultaneously looked at and displayed, with their appearance coded for strong visual and erotic impact so that they can be said to connote *to-be-looked-at-ness*. Woman displayed as sexual object is the *leitmotif* of erotic spectacle: from pin-ups to striptease, from Ziegfeld to Busby Berkeley,⁴ she holds the look, and plays to and signifies male desire. Mainstream film neatly combines spectacle and narrative. (Note, however, how in the musical song-and-dance numbers interrupt the flow of the diegesis.⁵) The presence of woman is an indispensable element of spectacle in normal narrative film, yet her visual presence tends to work against the development of a story-line, to freeze the flow of action in moments of erotic contemplation. This alien presence then has to be integrated into cohesion with the narrative. As Budd Boetticher⁶ has put it:

What counts is what the heroine provokes, or rather what she represents. She is the one, or rather the love or fear she inspires in the hero, or else the concern he feels for her, who makes him act the way he does. In herself the woman has not the slightest importance.

(A recent tendency in narrative film has been to dispense with this problem altogether; hence the development of what Molly Haskell⁷ has called the 'buddy movie', in which the active homosexual eroticism of the central male figures can carry the story without distraction.) Traditionally, the woman displayed has functioned on two levels: as erotic object for the characters within the screen story, and as erotic object for the spectator within the auditorium, with a shifting tension between the looks on either side of the screen. For instance, the device of the show-girl allows the two looks to be unified technically without any apparent break in the diegesis. A woman performs

4. American choreographer and film director (1895–1976), famous for his musical productions. Florenz Ziegfeld Jr. (1867–1932), American theatrical producer, best known for extravagant revues featuring showgirls.

5. The ongoing story or narrative.

6. American film director (1916–2001), best known for his westerns.

7. American film critic (b. 1939); she discusses "buddy movies" in *From Reverence to Rape: The Treatment of Women in the Movies* (1974).

within the narrative; the gaze of the spectator and that of the male characters in the film are neatly combined without breaking narrative verisimilitude. For a moment the sexual impact of the performing woman takes the film into a no man's land outside its own time and space. Thus Marilyn Monroe's first appearance in *The River of No Return* and Lauren Bacall's songs in *To Have and Have Not*.⁸ Similarly, conventional close-ups of legs (Dietrich, for instance) or a face (Garbo)⁹ integrate into the narrative a different mode of eroticism. One part of a fragmented body destroys the Renaissance space, the illusion of depth demanded by the narrative; it gives flatness, the quality of a cut-out or icon, rather than verisimilitude, to the screen.

B An active/passive heterosexual division of labour has similarly controlled narrative structure. According to the principles of the ruling ideology and the psychological structures that back it up, the male figure cannot bear the burden of sexual objectification. Man is reluctant to gaze at his exhibitionist like. Hence the split between spectacle and narrative supports the man's role as the active one of advancing the story, making things happen. The man controls the film fantasy and also emerges as the representative of power in a further sense: as the bearer of the look of the spectator, transferring it behind the screen to neutralise the extra-diegetic¹ tendencies represented by woman as spectacle. This is made possible through the processes set in motion by structuring the film around a main controlling figure with whom the spectator can identify. As the spectator identifies with the main male protagonist, he projects his look onto that of his like, his screen surrogate, so that the power of the male protagonist as he controls events coincides with the active power of the erotic look, both giving a satisfying sense of omnipotence. A male movie star's glamorous characteristics are thus not those of the erotic object of the gaze, but those of the more perfect, more complete, more powerful ideal ego conceived in the original moment of recognition in front of the mirror. The character in the story can make things happen and control events better than the subject/spectator, just as the image in the mirror was more in control of motor co-ordination.

In contrast to woman as icon, the active male figure (the ego ideal of the identification process) demands a three-dimensional space corresponding to that of the mirror recognition, in which the alienated subject internalised his own representation of his imaginary existence. He is a figure in a landscape. Here the function of film is to reproduce as accurately as possible the so-called natural conditions of human perception. Camera technology (as exemplified by deep focus in particular) and camera movements (determined by the action of the protagonist), combined with invisible editing (demanded by realism), all tend to blur the limits of screen space. The male protagonist is free to command the stage, a stage of spatial illusion in which he articulates the look and creates the action. (There are films with a woman as main protagonist, of course. To analyse this phenomenon seri-

9. Greta Garbo (1905–1990), Swedish-born American film actress. Marlene Dietrich (1901–1992), German-born American actress.

1. Outside the story or the frame of the camera.

ously here would take me too far afield. Pam Cook and Claire Johnston's study of *The Revolt of Mamie Stover*² in Phil Hardy (ed.), *Raoul Walsh* (Edinburgh, 1974), shows in a striking case how the strength of this female protagonist is more apparent than real.)

C1 Sections III A and B have set out a tension between a mode of representation of woman in film and conventions surrounding the diegesis. Each is associated with a look: that of the spectator in direct scopophilic contact with the female form displayed for his enjoyment (connoting male fantasy) and that of the spectator fascinated with the image of his like set in an illusion of natural space, and through him gaining control and possession of the woman within the diegesis. (This tension and the shift from one pole to the other can structure a single text. Thus both in *Only Angels Have Wings*³ and in *To Have and Have Not*, the film opens with the woman as object of the combined gaze of spectator and all the male protagonists in the film. She is isolated, glamorous, on display, sexualised. But as the narrative progresses she falls in love with the main male protagonist and becomes his property, losing her outward glamorous characteristics, her generalised sexuality, her show-girl connotations; her eroticism is subjected to the male star alone. By means of identification with him, through participation in his power, the spectator can indirectly possess her too.)

But in psychoanalytic terms, the female figure poses a deeper problem. She also connotes something that the look continually circles around but disavows: her lack of a penis, implying a threat of castration and hence unpleasure. Ultimately, the meaning of woman is sexual difference, the visually ascertainable absence of the penis, the material evidence on which is based the castration complex essential for the organisation of entrance to the symbolic order and the law of the father. Thus the woman as icon, displayed for the gaze and enjoyment of men, the active controllers of the look, always threatens to evoke the anxiety it originally signified. The male unconscious has two avenues of escape from this castration anxiety: preoccupation with the re-enactment of the original trauma (investigating the woman, demystifying her mystery), counterbalanced by the devaluation, punishment or saving of the guilty object (an avenue typified by the concerns of the *film noir*⁴); or else complete disavowal of castration by the substitution of a fetish object or turning the represented figure itself into a fetish so that it becomes reassuring rather than dangerous (hence overvaluation, the cult of the female star).

This second avenue, fetishistic scopophilia, builds up the physical beauty of the object, transforming it into something satisfying in itself. The first avenue, voyeurism, on the contrary, has associations with sadism: pleasure lies in ascertaining guilt (immediately associated with castration), asserting control and subjugating the guilty person through punishment or forgiveness. This sadistic side fits in well with narrative. Sadism demands a story, depends on making something happen, forcing a change in another person, a battle of will and strength, victory/defeat, all occurring in a linear time with a

2. A 1956 American film (dir. Raoul Walsh), starring Jane Russell in the title role.

3. A 1939 American film (dir. Howard Hawks); the female "object" is Jean Arthur.

4. Literally, "black film" (French), a post-WWII genre characterized by dark settings, by shady or disturbed characters who are alienated and isolated, and by a view of society from its underside.

beginning and an end. Fetishistic scopophilia, on the other hand, can exist outside linear time as the erotic instinct is focused on the look alone. These contradictions and ambiguities can be illustrated more simply by using works by Hitchcock and Sternberg,⁵ both of whom take the look almost as the content or subject matter of many of their films. Hitchcock is the more complex, as he uses both mechanisms. Sternberg's work, on the other hand, provides many pure examples of fetishistic scopophilia.

C2 Sternberg once said he would welcome his films being projected upside-down so that story and character involvement would not interfere with the spectator's undiluted appreciation of the screen image. This statement is revealing but ingenuous: ingenuous in that his films do demand that the figure of the woman (Dietrich, in the cycle of films with her, as the ultimate example) should be identifiable; but revealing in that it emphasises the fact that for him the pictorial space enclosed by the frame is paramount, rather than narrative or identification processes. While Hitchcock goes into the investigative side of voyeurism, Sternberg produces the ultimate fetish, taking it to the point where the powerful look of the male protagonist (characteristic of traditional narrative film) is broken in favour of the image in direct erotic rapport with the spectator. The beauty of the woman as object and the screen space coalesce; she is no longer the bearer of guilt but a perfect product, whose body, stylised and fragmented by close-ups, is the content of the film and the direct recipient of the spectator's look.

Sternberg plays down the illusion of screen depth; his screen tends to be one-dimensional, as light and shade, lace, steam, foliage, net, streamers and so on reduce the visual field. There is little or no mediation of the look through the eyes of the main male protagonist. On the contrary, shadowy presences like La Bessière in *Morocco*⁶ act as surrogates for the director, detached as they are from audience identification. Despite Sternberg's insistence that his stories are irrelevant, it is significant that they are concerned with situation, not suspense, and cyclical rather than linear time, while plot complications revolve around misunderstanding rather than conflict. The most important absence is that of the controlling male gaze within the screen scene. The high point of emotional drama in the most typical Dietrich films, her supreme moments of erotic meaning, take place in the absence of the man she loves in the fiction. There are other witnesses, other spectators watching her on the screen, their gaze is one with, not standing in for, that of the audience. At the end of *Morocco*, Tom Brown has already disappeared into the desert when Amy Jolly kicks off her gold sandals and walks after him. At the end of *Dishonoured*,⁷ Kranau is indifferent to the fate of Magda. In both cases, the erotic impact, sanctified by death, is displayed as a spectacle for the audience. The male hero misunderstands and, above all, does not see.

In Hitchcock, by contrast, the male hero does see precisely what the audience sees. However, although fascination with an image through scopophilic

5. Josef von Sternberg (1894–1969), Austrian-born American film director; he brought the actress Marlene Dietrich to the United States and featured her in a number of films in the early 1930s. Alfred Hitchcock (1899–1980), English film director known as a master of suspense; many of his most important films were made in Hollywood.

6. A 1930 American film directed by Sternberg; La Bessière is played by Adolphe Menjou, Tom Brown by Gary Cooper, and Amy Jolly by Dietrich.

7. A 1931 American film directed by Sternberg; Kranau is played by Victor McLaglen and Marie (not "Magda"), a spy, by Dietrich.

eroticism can be the subject of the film, it is the role of the hero to portray the contradictions and tensions experienced by the spectator. In *Vertigo* in particular, but also in *Marnie* and *Rear Window*,⁸ the look is central to the plot, oscillating between voyeurism and fetishistic fascination. Hitchcock has never concealed his interest in voyeurism, cinematic and non-cinematic. His heroes are exemplary of the symbolic order and the law—a policeman (*Vertigo*), a dominant male possessing money and power (*Marnie*)—but their erotic drives lead them into compromised situations. The power to subject another person to the will sadistically or to the gaze voyeuristically is turned onto the woman as the object of both. Power is backed by a certainty of legal right and the established guilt of the woman (evoking castration, psychoanalytically speaking). True perversion is barely concealed under a shallow mask of ideological correctness—the man is on the right side of the law, the woman on the wrong. Hitchcock's skillful use of identification processes and liberal use of subjective camera from the point of view of the male protagonist draw the spectators deeply into his position, making them share his uneasy gaze. The spectator is absorbed into a voyeuristic situation within the screen scene and diegesis, which parodies his own in the cinema.

In an analysis of *Rear Window*, Douchet⁹ takes the film as a metaphor for the cinema. Jeffries is the audience, the events in the apartment block opposite correspond to the screen. As he watches, an erotic dimension is added to his look, a central image to the drama. His girlfriend Lisa had been of little sexual interest to him, more or less a drag, so long as she remained on the spectator side. When she crosses the barrier between his room and the block opposite, their relationship is reborn erotically. He does not merely watch her through his lens, as a distant meaningful image, he also sees her as a guilty intruder exposed by a dangerous man threatening her with punishment, and thus finally giving him the opportunity to save her. Lisa's exhibitionism has already been established by her obsessive interest in dress and style, in being a passive image of visual perfection; Jeffries's voyeurism and activity have also been established through his work as a photo-journalist, a maker of stories and captor of images. However, his enforced inactivity, binding him to his seat as a spectator, puts him squarely in the fantasy position of the cinema audience.

In *Vertigo*, subjective camera predominates. Apart from one flashback from Judy's point of view, the narrative is woven around what Scottie sees or fails to see.¹ The audience follows the growth of his erotic obsession and subsequent despair precisely from his point of view. Scottie's voyeurism is blatant: he falls in love with a woman he follows and spies on without speaking to. Its sadistic side is equally blatant: he has chosen (and freely chosen, for he had been a successful lawyer) to be a policeman, with all the attendant possibilities of pursuit and investigation. As a result, he follows, watches and falls in love with a perfect image of female beauty and mystery.

8. Three American films directed by Hitchcock: *Vertigo* (1958), *Marnie* (1964), and *Rear Window* (1954).

9. Jean Douchet (b. 1929), French film director and critic, author of *Alfred Hitchcock* (1967). Jeffries, temporarily immobilized by a broken leg, is played by James Stewart; Lisa is played by

Grace Kelly.

1. Scottie (James Stewart) is hired to watch Madeleine (Kim Novak), a wealthy man's wife; he becomes obsessed with her, and after her suicide, he finds another woman who resembles her (Judy, also played by Novak).

Once he actually confronts her, his erotic drive is to break her down and force her *to tell* by persistent cross-questioning.

In the second part of the film, he re-enacts his obsessive involvement with the image he loved to watch secretly. He reconstructs Judy as Madeleine, forces her to conform in every detail to the actual physical appearance of his fetish. Her exhibitionism, her masochism, make her an ideal passive counterpart to Scottie's active sadistic voyeurism. She knows her part is to perform, and only by playing it through and then replaying it can she keep Scottie's erotic interest. But in the repetition he does break her down and succeeds in exposing her guilt. His curiosity wins through; she is punished.

Thus, in *Vertigo*, erotic involvement with the look boomerangs: the spectator's own fascination is revealed as illicit voyeurism as the narrative content enacts the processes and pleasures that he is himself exercising and enjoying. The Hitchcock hero here is firmly placed within the symbolic order, in narrative terms. He has all the attributes of the patriarchal superego.² Hence the spectator, lulled into a false sense of security by the apparent legality of his surrogate, sees through his look and finds himself exposed as complicit, caught in the moral ambiguity of looking. Far from being simply an aside on the perversion of the police, *Vertigo* focuses on the implications of the active/looking, passive/looked-at split in terms of sexual difference and the power of the male symbolic encapsulated in the hero. Marnie, too, performs for Mark Rutland's gaze and masquerades as the perfect to-be-looked-at image.³ He, too, is on the side of the law until, drawn in by obsession with her guilt, her secret, he longs to see her in the act of committing a crime, make her confess and thus save her. So he, too, becomes complicit as he acts out the implications of his power. He controls money and words; he can have his cake and eat it.

IV. Summary

The psychoanalytic background that has been discussed in this article is relevant to the pleasure and unpleasure offered by traditional narrative film. The scopophilic instinct (pleasure in looking at another person as an erotic object) and, in contradistinction, ego libido (forming identification processes) act as formations, mechanisms, which mould this cinema's formal attributes. The actual image of woman as (passive) raw material for the (active) gaze of man takes the argument a step further into the content and structure of representation, adding a further layer of ideological significance demanded by the patriarchal order in its favourite cinematic form—illusionistic⁴ narrative film. The argument must return again to the psychoanalytic background: women in representation can signify castration, and activate voyeuristic or fetishistic mechanisms to circumvent this threat. Although none of these interacting layers is intrinsic to film, it is only in the film form that they can reach a perfect and beautiful contradiction, thanks to the possibility in the cinema of shifting the emphasis of the look. The place of the look defines cinema, the possibility of varying it and exposing it. This is what makes cin-

2. The part of the psyche, as described by Freud, that develops through the incorporation of the moral standards of the parents and community.

3. In *Marnie*, the title character (Tippi Hedren) is

a habitual thief and liar who steals from her employers and then changes her identity; Rutland (Sean Connery) hires her despite recognizing her.

4. Relying on illusion to convey realism.

ema quite different in its voyeuristic potential from, say, strip-tease, theatre, shows and so on. Going far beyond highlighting a woman's to-be-looked-at-ness, cinema builds the way she is to be looked at into the spectacle itself. Playing on the tension between film as controlling the dimension of time (editing, narrative) and film as controlling the dimension of space (changes in distance, editing), cinematic codes create a gaze, a world and an object, thereby producing an illusion cut to the measure of desire. It is these cinematic codes and their relationship to formative external structures that must be broken down before mainstream film and the pleasure it provides can be challenged.

To begin with (as an ending), the voyeuristic-scopophilic look that is a crucial part of traditional filmic pleasure can itself be broken down. There are three different looks associated with cinema: that of the camera as it records the pro-filmic event, that of the audience as it watches the final product, and that of the characters at each other within the screen illusion. The conventions of narrative film deny the first two and subordinate them to the third, the conscious aim being always to eliminate intrusive camera presence and prevent a distancing awareness in the audience. Without these two absences (the material existence of the recording process, the critical reading of the spectator), fictional drama cannot achieve reality, obviousness and truth. Nevertheless, as this article has argued, the structure of looking in narrative fiction film contains a contradiction in its own premises: the female image as a castration threat constantly endangers the unity of the diegesis and bursts through the world of illusion as an intrusive, static, one-dimensional fetish. Thus the two looks materially present in time and space are obsessively subordinated to the neurotic needs of the male ego. The camera becomes the mechanism for producing an illusion of Renaissance space, flowing movements compatible with the human eye, an ideology of representation that revolves around the perception of the subject; the camera's look is disavowed in order to create a convincing world in which the spectator's surrogate can perform with verisimilitude. Simultaneously, the look of the audience is denied an intrinsic force: as soon as fetishistic representation of the female image threatens to break the spell of illusion, and the erotic image on the screen appears directly (without mediation) to the spectator, the fact of fetishisation, concealing as it does castration fear, freezes the look, fixates the spectator and prevents him from achieving any distance from the image in front of him.

This complex interaction of looks is specific to film. The first blow against the monolithic accumulation of traditional film conventions (already undertaken by radical film-makers) is to free the look of the camera into its materiality⁵ in time and space and the look of the audience into dialectics⁶ and passionate detachment. There is no doubt that this destroys the satisfaction, pleasure and privilege of the 'invisible guest', and highlights the way film has depended on voyeuristic active/passive mechanisms. Women, whose image has continually been stolen and used for this end, cannot view the decline of the traditional film form with anything much more than sentimental regret.

5. Actual mechanisms.

6. Analysis of interaction.

GIORGIO AGAMBEN

b. 1942

Written before the events of 9/11 and the subsequent “war on terror,” the Italian philosopher Giorgio Agamben’s *Homo Sacer* (1995) captures for many the form that state sovereignty and political power have assumed in the current era. Drawing on MICHEL FOUCAULT’s concept of “biopower,” WALTER BENJAMIN’s critique of violence, and the German political theorist Carl Schmitt’s work on “the state of exception,” Agamben considers how power differentiates between those whose lives should be protected and those who should be stripped of all rights, including a right to live. His pursuit of these questions illuminates the complex political and legal dynamics of modernity and the nation-state. His work contributes to the heightened focus on the term *life* in contemporary theory and to the suspicion of “human rights” discourse among the critics of the war on terror.

Agamben studied law and philosophy at the University of Rome, writing his Ph.D. thesis on the political philosophy of the French mystic and activist Simone Weil. In 1966, 1968, and 1969, he attended small seminars conducted by MARTIN HEIDEGGER in France. He collaborated during the 1960s and ’70s on several projects with the Italian filmmaker Pier Paolo Pasolini and the Italian author Italo Calvino. Agamben has taught at several universities in Italy, including the Universities of Macerata and Verona, and at the Collège Internationale de Paris and the European Graduate School in Switzerland. Prior to 9/11 he held visiting positions at the University of California at Berkeley and Northwestern University, among other U.S. institutions. After Congress passed the Homeland Security Act of 2004, which required certain foreign visitors to undergo biometric scanning to receive a visa, Agamben refused to return to America. The writing of *Homo Sacer* in 1995 inaugurated a series on which Agamben worked for twenty years; he published the ninth and final volume of the *Homo Sacer* project, *The Use of Bodies*, in 2014.

In “What Is a Camp?,” our first selection, Agamben asserts that the concentration camp is the “*nomos* of the political space in which we live.” *Nomos* literally means “law” (Greek) or, more broadly, the prevailing customs and norms of a society. To explain what it means to live, Agamben turns to ARISTOTLE’s *Politics*, which he sees as differentiating between two understandings of *life*: *zoē*, which is the physical life of the body and which Agamben calls “bare life” or “naked life,” and *bios*, which is the life shaped by an individual as a meaningful product of her interactions with others. Agamben accepts Foucault’s contention that in modern societies, the state undertakes to protect and even nurture life. Modern sovereignty rests on this “biopower”—the deployment of power in the name of “life.” But Agamben insists, in a theoretical move akin to the logic of deconstruction, that this attention to the life of citizens is enabled, even constituted, by the exclusion of those deemed unworthy of life. The law is always accompanied by a “state of exception,” in which its rights and protections are suspended for some people. The favored ones, citizens, benefit from a *bios* guaranteed by law; but the excluded, who are stripped of or denied citizenship, are reduced to “bare life” and removed to a space apart from the legal, political realm, a space called “the camp.” Designated as threats to the citizens’ ability to live a full life, the inhabitants of the camp are held by a power that can, because it is outside of the law even as it is legally established by that law, do anything to them. Furthermore, the camp is extraterritorial, often located outside the proper jurisdictional territory of the state that establishes it—and thus, in Agamben’s reading, quite literally the “outside” that constitutes the “inside.” The United States’ relegation of suspected terrorists to the Guantánamo Bay prison in Cuba beginning in 2002 provided a dramatic manifestation of the scenario that Agamben outlines.

Our second selection, from *Homo Sacer*, shows how Agamben deploys the Foucauldian notion of biopower. Unlike Foucault, Agamben is mostly interested in the power deployed by the state, and not in nonstate power diffused through any number of social actors and institutions. But like Foucault, he understands power as productive. Biopower uses its focus on life to create a new kind of political subject, one that depends on the state to protect the life of citizens against threats such as epidemics, famine, environmental hazards, and infant mortality. This new kind of power gives the state unprecedented access to the body. It is now a matter of state interest that someone be well fed and free of disease. This "politicization of life" can be based on the notion that "life" is "sacred" and therefore should be protected and preserved, but it also leads to the distinction between "bare life," which is merely bodily and derided as "animalistic," and *bios*, a fully human life. Sovereignty, traditionally the power of the king to order the death of his subjects, has now become the power to provide a fully human life to those subjects. This transformation makes the distinction between subjects (citizens) and nonsubjects momentous. The noncitizen is not entitled to the state-provided means for *bios*, but instead exists only in the realm of bare life. The multiple refugees and displaced persons created by contemporary wars exist in this minimalist condition.

Agamben takes the ancient Roman legal category of the *homo sacer* as the emblem of this fundamental contradiction at the heart of our current situation. An accursed man or outlaw, the *homo sacer* may be killed by anyone who encounters him. But, displaying the fundamental ambivalence of core religious terms, the *homo sacer* is also sacred, since his extralegal status places him outside of worldly power. The state may not sacrifice him, just as he (as a noncitizen) cannot sacrifice himself (as a soldier or otherwise) for his country. As a nonperson, he does not exist for the state, which is why others can kill him with impunity. Agamben contends that biopower cannot exist without this category of the nonperson, the one who has only *zoē* and whose life is not protected.

In the modern era, the *homo sacer* is the inhabitant of the camps. That is why, as HANNAH ARENDT was the first to highlight, the Nazis had to strip German Jews of citizenship before sending them to the camps. Citizens have "rights" that limit what the state can do to them. Agamben links the rise of biopower to the reliance since the American and French Revolutions on the discourse of rights to legitimate political regimes. While rights might be viewed as liberating, in Agamben's view they firmly locate the subject of those rights within the legal system and, hence, make that subject answerable to its demands. That there is barely any life outside of rights is true, but the subjection to rights creates the nation-state's sovereignty. And the notion of rights, Agamben contends, is contradictory from its very origins. Rights are meant, in part, to protect subjects against state tyranny. But the enforcer of rights is the state itself. Furthermore, the state is obliged to protect only the rights of citizens, of its own subjects. So by submitting to the state as its subject, the citizen is supposed to get protection against the state. This doesn't make sense—and, for that reason, the rights enjoyed by virtue of being a citizen are always supplemented by other rights (perhaps more fundamental ones) assumed to be enjoyed by virtue of being human. "Human rights" are contrasted to "political rights," but the idea of human rights (even when the lack the concept is meant to fill is clear) has proved terribly ineffective in protecting those persons that states deem outside the law.

At times, Agamben seems to accept, as do Benjamin and JACQUES DERRIDA, that there is an originary violence at the heart of the law, that the valuing of "life" by biopower must always be shadowed or even constituted by the category of "bare life" and the extralegal *homo sacer*. But as the *Homo Sacer* series has unfolded, Agamben has struggled to imagine ways of being that are nonviolent and offer an alternative to the *nomos* of the state of exception, with its camps. His insistence that democracy and totalitarianism are only inches apart can seem hyperbolic, just as his refusal to acknowledge the successes of rights discourse and humanitarianism

in alleviating tyranny and suffering can seem obtuse. But there is no denying that power, concentrated mostly in the hands of nation-states, has persistently over the past one hundred years refused to countenance more than bare life for millions who cannot gain citizenship in the world's more prosperous countries.

From Means Without End: Notes on Politics¹

What Is a Camp?

What happened in the camps exceeds the juridical concept of crime to such an extent that the specific political-juridical structure within which those events took place has often been left simply unexamined. The camp is the place in which the most absolute *conditio inhumana*² ever to appear on Earth was realized: this is ultimately all that counts for the victims as well as for posterity. Here I will deliberately set out in the opposite direction. Rather than deducing the definition of camp from the events that took place there, I will ask instead: *What is a camp? What is its political-juridical structure? How could such events have taken place there?* This will lead us to look at the camp not as a historical fact and an anomaly that—though admittedly still with us—belongs nonetheless to the past, but rather in some sense as the hidden matrix and *nomos*³ of the political space in which we still live.

Historians debate whether the first appearance of camps ought to be identified with the *campos de concentraciones*⁴ that were created in 1896 by the Spaniards in Cuba in order to repress the insurrection of that colony's population, or rather with the *concentration camps* into which the English herded the Boers⁵ at the beginning of the twentieth century. What matters here is that in both cases one is dealing with the extension to an entire civilian population of a state of exception⁶ linked to a colonial war. The camps, in other words, were not born out of ordinary law, and even less were they the product—as one might have believed—of a transformation and a development of prison law; rather, they were born out of the state of exception and martial law. This is even more evident in the case of the Nazi *Lager*,⁷ whose origin and juridical regime is well documented. It is well known that the juridical foundation of internment was not ordinary law but rather the *Schutzhaft* (literally, protective custody), which was a juridical institution of Prussian derivation that Nazi jurists sometimes considered a measure of preventive policing inasmuch as it enabled the “taking into custody” of indi-

1. Translated by Vincenzo Binetti and Cesare Casarino.

2. Inhuman condition (Latin). Agamben is referring to the Nazi concentration camps, first established in 1933 and turned into mass extermination camps during World War II.

3. Law (Greek); more generally, the prevailing customs or norms of a society.

4. Concentration camps (Spanish).

5. South Africans of Dutch, German, and Huguenot descent, defeated by the British in a war (1899–1902) for political dominance of South Africa.

6. For Agamben a key term of governance theory, designating the suspension of legal protection and of rights for certain persons.

7. Concentration camp (literally, “storeroom” or “warehouse”; German).

viduals regardless of any relevant criminal behavior and exclusively in order to avoid threats to the security of the state. The origin of the *Schutzhaft*, however, resides in the Prussian law on the state of siege that was passed on June 4, 1851, and that was extended to the whole of Germany (with the exception of Bavaria) in 1871, as well as in the earlier Prussian law on the "protection of personal freedom" (*Schutz der persönlichen Freiheit*) that was passed on February 12, 1850. Both these laws were applied widely during World War I.

One cannot overestimate the importance of this constitutive nexus between state of exception and concentration camp for a correct understanding of the nature of the camp. Ironically, the "protection" of freedom that is in question in the *Schutzhaft* is a protection against the suspension of the law that characterizes the state of emergency. What is new here is that this institution is dissolved by the state of exception on which it was founded and is allowed to continue to be in force under normal circumstances. *The camp is the space that opens up when the state of exception starts to become the rule.* In it, the state of exception, which was essentially a temporal suspension of the state of law, acquires a permanent spatial arrangement that, as such, remains constantly outside the normal state of law. When Himmler⁸ decided, in March 1933, on the occasion of the celebrations of Hitler's election to the chancellorship of the Reich, to create a "concentration camp for political prisoners" at Dachau, this camp was immediately entrusted to the SS and, thanks to the *Schutzhaft*, was placed outside the jurisdiction of criminal law as well as prison law, with which it neither then nor later ever had anything to do. Dachau, as well as the other camps that were soon added to it (Sachsenhausen, Buchenwald, Lichtenberg),⁹ remained virtually always operative: the number of inmates varied and during certain periods (in particular, between 1935 and 1937, before the deportation of the Jews began) it decreased to 7,500 people; the camp as such, however, had become a permanent reality in Germany.

One ought to reflect on the paradoxical status of the camp as space of exception: the camp is a piece of territory that is placed outside the normal juridical order; for all that, however, it is not simply an external space. According to the etymological meaning of the term *exception* (*ex-capere*¹), what is being excluded in the camp is *captured outside*, that is, it is included by virtue of its very exclusion. Thus, what is being captured under the rule of law is first of all the very state of exception. In other words, if sovereign power is founded on the ability to decide on the state of exception, the camp is the structure in which the state of exception is permanently realized. Hannah Arendt² observed once that what comes to light in the camps is the principle that supports totalitarian domination and that common sense stubbornly refuses to admit to, namely, the principle according to which anything is possible.

8. Heinrich Himmler (1900–1945), head of the Schutzstaffel (protection squad; German), or SS, the elite paramilitary organization founded as Hitler's personal bodyguard (1925). Eventually members of the SS became responsible for populating and administering the concentration camps, the first of which was Dachau, about 12 miles north of Munich.

9. All concentration camps in Germany itself, established in 1936, 1937, and 1933, respectively.

1. The Latin verb from which "exception" is derived, broken into its components (which literally mean "to seize out of").

2. German-born American political theorist (1906–1975; see above); she makes this observation in *The Origins of Totalitarianism* (1951).

It is only because the camps constitute a space of exception—a space in which the law is completely suspended—that everything is truly possible in them. If one does not understand this particular political-juridical structure of the camps, whose vocation is precisely to realize permanently the exception, the incredible events that took place in them remain entirely unintelligible. The people who entered the camp moved about in a zone of indistinction between the outside and the inside, the exception and the rule, the licit and the illicit, in which every juridical protection had disappeared; moreover, if they were Jews, they had already been deprived of citizenship rights by the Nuremberg Laws³ and were later completely denationalized at the moment of the “final solution.”⁴ *Inasmuch as its inhabitants have been stripped of every political status and reduced completely to naked life,⁵ the camp is also the most absolute biopolitical space that has ever been realized—a space in which power confronts nothing other than pure biological life without any mediation.* The camp is the paradigm itself of political space at the point in which politics becomes biopolitics and the *homo sacer*⁶ becomes indistinguishable from the citizen. The correct question regarding the horrors committed in the camps, therefore, is not the question that asks hypocritically how it could have been possible to commit such atrocious horrors against other human beings; it would be more honest, and above all more useful, to investigate carefully how—that is, thanks to what juridical procedures and political devices—human beings could have been so completely deprived of their rights and prerogatives to the point that committing any act toward them would no longer appear as a crime (at this point, in fact, truly anything had become possible).

If this is the case, if the essence of the camp consists in the materialization of the state of exception and in the consequent creation of a space for naked life as such, we will then have to admit to be facing a camp virtually every time that such a structure is created, regardless of the nature of the crimes committed in it and regardless of the denomination and specific topography it might have. The soccer stadium in Bari in which the Italian police temporarily herded Albanian illegal immigrants in 1991 before sending them back to their country, the cycle-racing track in which the Vichy authorities rounded up the Jews before handing them over to the Germans,⁷ the refugee camp near the Spanish border where Antonio Machado⁸ died in 1939, as well as the *zones d'attente*⁹ in French international airports in which foreigners requesting refugee status are detained will all have to be considered camps. In all these cases, an apparently anodyne place (such as the Hotel Arcade near the Paris airport) delimits instead a space in which, for all intents and purposes, the normal rule of law is suspended and in which

3. Laws passed in a 1935 convention in Nürnberg that deprived Jews of German citizenship and banned sexual relations between Jews and those of “German or kindred blood.”

4. That is, to the “Jewish question”: the solution, adopted in 1942, was to send all Jews within German-controlled territories to labor and extermination camps.

5. Also “bare life,” a key term for Agamben: the minimal existence of a human being, apart from any attributes, accomplishments, or rights that attend recognized membership in a political or social community.

6. Sacred/accursed man (Latin): in ancient Roman law, a man who is banned and therefore can be killed with impunity because he is placed outside the law, but who could not be offered as a sacrifice in religious rites.

7. Thousands of Jews were rounded up in Paris by French police on July 16–17, 1942, and most were held in a bicycle racing track and stadium before being shipped to Auschwitz.

8. Spanish poet and playwright (1875–1939); he was fleeing after the Republican defeat in the Spanish Civil War.

9. Waiting zones (French).

the fact that atrocities may or may not be committed does not depend on the law but rather on the civility and ethical sense of the police that act temporarily as sovereign. This is the case, for example, during the four days foreigners may be kept in the *zone d'attente* before the intervention of French judicial authorities. In this sense, even certain outskirts of the great postindustrial cities as well as the gated communities of the United States are beginning today to look like camps, in which naked life and political life, at least in determinate moments, enter a zone of absolute indeterminacy.

From this perspective, the birth of the camp in our time appears to be an event that marks in a decisive way the political space itself of modernity. This birth takes place when the political system of the modern nation-state—founded on the functional nexus between a determinate localization (territory) and a determinate order (the state), which was mediated by automatic regulations for the inscription of life (birth or nation)—enters a period of permanent crisis and the state decides to undertake the management of the biological life of the nation directly as its own task. In other words, if the structure of the nation-state is defined by three elements—*territory*, *order*, and *birth*—the rupture of the old *nomos* does not take place in the two aspects that, according to Carl Schmitt,¹ used to constitute it (that is, localization, *Ortung*, and order, *Ordnung*),² but rather at the site in which naked life is inscribed in them (that is, there where inscription turns *birth* into *nation*). There is something that no longer functions in the traditional mechanisms that used to regulate this inscription, and the camp is the new hidden regulator of the inscription of life in the order—or, rather, it is the sign of the system's inability to function without transforming itself into a lethal machine. It is important to note that the camps appeared at the same time that the new laws on citizenship and on the denationalization of citizens were issued (not only the Nuremberg Laws on citizenship in the Reich but also the laws on the denationalization of citizens that were issued by almost all the European states, including France, between 1915 and 1933).³ The state of exception, which used to be essentially a temporary suspension of the order, becomes now a new and stable spatial arrangement inhabited by that naked life that increasingly cannot be inscribed into the order. *The increasingly widening gap between birth (naked life) and nation-state is the new fact of the politics of our time and what we are calling "camp" is this disparity.* To an order without localization (that is, the state of exception during which the law is suspended) corresponds now a localization without order (that is, the camp as permanent space of exception). The political system no longer orders forms of life and juridical norms in a determinate space; rather, it contains within itself a *dislocating localization* that exceeds it and in which virtually every form of life and every norm can be captured. The camp intended as a dislocating localization is the hidden matrix of the politics in which we still live, and we must learn to recognize it in all of its metamor-

1. German jurist and political theorist (1888–1985); he is Agamben's source for the concept of "state of exception."

2. Schmitt's terms to designate the key feature of the nation-state: namely, its imposition of order over a specific territory or locality.

3. The French citizenship law of 1933 revoked citizenship by birth, requiring children born in France of non-French parents to request French citizenship upon reaching adulthood at the age of 18. Citizenship requirements were similarly tightened in Great Britain, Italy, and Austria.

phoses. The camp is the fourth and inseparable element that has been added to and has broken up the old trinity of nation (birth), state, and territory.

It is from this perspective that we need to see the reappearance of camps in a form that is, in a certain sense, even more extreme in the territories of the former Yugoslavia.⁴ What is happening there is not at all, as some interested observers rushed to declare, a redefinition of the old political system according to new ethnic and territorial arrangements, that is, a simple repetition of the processes that culminated in the constitution of the European nation-states. Rather, we note there an irreparable rupture of the old *nomos* as well as a dislocation of populations and human lives according to entirely new lines of flight. That is why the camps of ethnic rape are so crucially important. If the Nazis never thought of carrying out the “final solution” by impregnating Jewish women, that is because the principle of birth, which ensured the inscription of life in the order of the nation-state, was in some way still functioning, even though it was profoundly transformed. This principle is now adrift: it has entered a process of dislocation in which its functioning is becoming patently impossible and in which we can expect not only new camps but also always new and more delirious normative definitions of the inscription of life in the city. The camp, which is now firmly settled inside it, is the new biopolitical *nomos* of the planet.

From Part Three: The Camp as Biopolitical Paradigm of the Modern

§ 1 THE POLITICIZATION OF LIFE

1.1. In the last years of his life, while he was working on the history of sexuality and unmasking the deployments of power at work within it, Michel Foucault² began to direct his inquiries with increasing insistence toward the study of what he defined as *biopolitics*, that is, the growing inclusion of man's natural life in the mechanisms and calculations of power. At the end of the first volume of *The History of Sexuality*,³ Foucault, as we have seen, summarizes the process by which life, at the beginning of the modern age, comes to be what is at stake in politics: “For millennia, man remained what he was for Aristotle: a living animal with the additional capacity for political existence; modern man is an animal whose politics calls his existence as a living being into question.”⁴ Until the very end, however, Foucault continued to investigate the “processes of subjectivization” that, in the passage from the ancient to the modern world, bring the individual to objectify his own self, constituting himself as a subject and, at the same time, binding him-

4. As part of the ethnic cleansing undertaken by Serbs to drive out or kill Bosnian Muslims and Croats after Yugoslavia broke apart in 1991, mass executions and systematic rapes occurred in concentration camps.

2. French historian and philosopher (1926–1984; see above).

3. A 3-volume work (1979–84).

4. *History of Sexuality*, vol. 1, *An Introduction*, trans. Robert Hurley (New York: Vintage, 1980), p. 143. For the Greek philosopher ARISTOTLE (384–322 B.C.E.), see above.

self to a power of external control. Despite what one might have legitimately expected, Foucault never brought his insights to bear on what could well have appeared to be the exemplary place of modern biopolitics: the politics of the great totalitarian states of the twentieth century. The inquiry that began with a reconstruction of the *grand enfermement*⁵ in hospitals and prisons did not end with an analysis of the concentration camp.

If, on the other hand, the pertinent studies that Hannah Arendt⁶ dedicated to the structure of totalitarian states in the postwar period have a limit, it is precisely the absence of any biopolitical perspective. Arendt very clearly discerns the link between totalitarian rule and the particular condition of life that is the camp: "The supreme goal of all totalitarian states," she writes, in a plan for research on the concentration camps, which, unfortunately, was not carried through, "is not only the freely admitted, long-ranging ambition to global rule, but also the never admitted and immediately realized attempt at total domination. The concentration camps are the laboratories in the experiment of total domination, for human nature being what it is, this goal can be achieved only under the extreme circumstances of human made hell" (*Essays*, p. 240). Yet what escapes Arendt is that the process is in a certain sense the inverse of what she takes it to be, and that precisely the radical transformation of politics into the realm of bare life⁷ (that is, into a camp) legitimated and necessitated total domination. Only because politics in our age had been entirely transformed into biopolitics was it possible for politics to be constituted as totalitarian politics to a degree hitherto unknown.

The fact that the two thinkers who may well have reflected most deeply on the political problem of our age were unable to link together their own insights is certainly an index of the difficulty of this problem. The concept of "bare life" or "sacred life" is the focal lens through which we shall try to make their points of view converge. In the notion of bare life the interlacing of politics and life has become so tight that it cannot easily be analyzed. Until we become aware of the political nature of bare life and its modern avatars (biological life, sexuality, etc.), we will not succeed in clarifying the opacity at their center. Conversely, once modern politics enters into an intimate symbiosis with bare life, it loses the intelligibility that still seems to us to characterize the juridico-political foundation of classical politics.

1.2. Karl Löwith⁸ was the first to define the fundamental character of totalitarian states as a "politicization of life" and, at the same time, to note the curious contiguity between democracy and totalitarianism:

Since the emancipation of the third estate,⁹ the formation of bourgeois democracy and its transformation into mass industrial democracy, the neutralization of politically relevant differences and postponement of a decision about them has developed to the point of turning into its opposite: a total politicization [*totale Politisierung*] of everything, even

5. Grand (or mass) confinement (French).

6. German-born American political theorist (1906–1975; see above). Agamben quotes from her *Essays in Understanding, 1930–1954: Formation, Exile, and Totalitarianism*, ed. Jerome Kohn (New York: Schocken, 2005).

7. Also "naked life," a key term for Agamben: the

minimal existence of a human being, apart from any attributes, accomplishments, or rights that attend recognized membership in a political or social community.

8. German philosopher and intellectual historian (1897–1973).

9. That is, the commons.

of seemingly neutral domains of life. Thus in Marxist Russia there emerged a worker-state that was “more intensively state-oriented than any absolute monarchy”; in fascist Italy, a corporate state normatively regulating not only national work, but also “after-work” [*Dopolavoro*] and all spiritual life; and, in National Socialist Germany, a wholly integrated state, which, by means of racial laws and so forth, politicizes even the life that had until then been private. (*Der okkasionelle Dezionismus*, p. 33)¹

The contiguity between mass democracy and totalitarian states, nevertheless, does not have the form of a sudden transformation (as Löwith, here following in Schmitt's² footsteps, seems to maintain); before impetuously coming to light in our century, the river of biopolitics that gave *homo sacer*³ his life runs its course in a hidden but continuous fashion. It is almost as if, starting from a certain point, every decisive political event were double-sided: the spaces, the liberties, and the rights won by individuals in their conflicts with central powers always simultaneously prepared a tacit but increasing inscription of individuals' lives within the state order, thus offering a new and more dreadful foundation for the very sovereign power from which they wanted to liberate themselves. “The ‘right’ to life,” writes Foucault, explaining the importance assumed by sex as a political issue, “to one's body, to health, to happiness, to the satisfaction of needs and, beyond all the oppressions or ‘alienation,’ the ‘right’ to rediscover what one is and all that one can be, this ‘right’—which the classical juridical system was utterly incapable of comprehending—was the political response to all these new procedures of power” (*La volonté*, p. 191).⁴ The fact is that one and the same affirmation of bare life leads, in bourgeois democracy, to a primacy of the private over the public and of individual liberties over collective obligations and yet becomes, in totalitarian states, the decisive political criterion and the exemplary realm of sovereign decisions. And only because biological life and its needs had become the *politically* decisive fact is it possible to understand the otherwise incomprehensible rapidity with which twentieth-century parliamentary democracies were able to turn into totalitarian states and with which this century's totalitarian states were able to be converted, almost without interruption, into parliamentary democracies. In both cases, these transformations were produced in a context in which for quite some time politics had already turned into biopolitics, and in which the only real question to be decided was which form of organization would be best suited to the task of assuring the care, control, and use of bare life. Once their fundamental referent becomes bare life, traditional political distinctions (such as those between Right and Left, liberalism and totalitarianism, private and public) lose their clarity and intelligibility and enter into a zone of indistinction. The ex-communist ruling classes' unexpected fall into the most extreme

1. Löwith, *Der okkasionelle Dezionismus von Carl Schmitt* [*The Opportunistic Decisionism of Carl Schmitt*], in his *Sämtliche Schriften*, ed. Klaus Stichweh and Marc B. de Launey, vol. 8 (Stuttgart: Metzler, 1984).

2. Carl Schmitt (1888–1985), German jurist and political theorist who openly supported Nazism.

3. Sacred/accursed man (Latin); in ancient

Roman law, a man who is banned and therefore can be killed with impunity because he is placed outside the law, but who could not be offered as a sacrifice in religious rites.

racism (as in the Serbian program of "ethnic cleansing")⁵ and the rebirth of new forms of fascism in Europe also have their roots here.

Along with the emergence of biopolitics, we can observe a displacement and gradual expansion beyond the limits of the decision on bare life, in the state of exception, in which sovereignty consisted. If there is a line in every modern state marking the point at which the decision on life becomes a decision on death, and biopolitics can turn into thanatopolitics,⁶ this line no longer appears today as a stable border dividing two clearly distinct zones. This line is now in motion and gradually moving into areas other than that of political life, areas in which the sovereign is entering into an ever more intimate symbiosis not only with the jurist but also with the doctor, the scientist, the expert, and the priest. In the pages that follow, we shall try to show that certain events that are fundamental for the political history of modernity (such as the declaration of rights), as well as others that seem instead to represent an incomprehensible intrusion of biologico-scientific principles into the political order (such as National Socialist eugenics and its elimination of "life that is unworthy of being lived," or the contemporary debate on the normative determination of death criteria), acquire their true sense only if they are brought back to the common biopolitical (or thanatopolitical) context to which they belong. From this perspective, the camp—as the pure, absolute, and impassable biopolitical space (insofar as it is founded solely on the state of exception⁷)—will appear as the hidden paradigm of the political space of modernity, whose metamorphoses and disguises we will have to learn to recognize.

1.3. The first recording of bare life as the new political subject is already implicit in the document that is generally placed at the foundation of modern democracy: the 1679 writ of *habeas corpus*.⁸ Whatever the origin of this formula, used as early as the eighteenth century to assure the physical presence of a person before a court of justice, it is significant that at its center is neither the old subject of feudal relations and liberties nor the future *citoyen*, but rather a pure and simple *corpus*.⁹ When John the Landless conceded Magna Carta to his subjects in 1215,¹ he turned his attention to the "archbishops, bishops, abbots, counts, barons, viscounts, provosts, officials and bailiffs," to the "cities, towns, villages," and, more generally, to the "free men of our kingdom," so that they might enjoy "their ancient liberties and free customs" as well as the ones he now specifically recognized. Article 29, whose task was to guarantee the physical freedom of the subjects, reads: "No free man [*homo liber*] may be arrested, imprisoned, dispossessed of his goods, or placed outside the law [*utlagetur*] or molested in any way; we will not place our hands on him nor will have others place their hands on him [*nec super*

5. The Serbian attempt during the Bosnian War (1992–95) to drive out or kill all Muslims and Croats in Bosnia.

6. A politics of death (in Greek, *thanatos*), the reverse of a politics of life (*bios*).

7. The suspension of the law under what are deemed extraordinary circumstances, thereby allowing the state to deprive people of all rights.

8. You should have the body (Latin), the first words of a writ directing the production in court

of a person being detained. Although it was in use in England in the Middle Ages, many procedures were formalized in the Habeas Corpus Act of 1679.

9. Body (Latin), as contrasted to a citizen (*citoyen*, French).

1. The "Great Charter," issued to his barons by England's King John (1167–1216), is often seen as the first legal statement of rights granted to citizens by a sovereign.

eum ibimis, nec super eum mittemus], except after a legal judgment by his peers according to the law of the realm." Analogously, an ancient writ that preceded the *habeas corpus* and was understood to assure the presence of the accused in a trial bears the title *de homine replegiando* (or *repigliando*).²

Consider instead the formula of the writ that the act of 1679 generalizes and makes into law: *Praecipimus tibi quod Corpus X, in custodia vestra detentum, ut dicitur, una cum causa captionis et detentionis, quodcumque nomine idem X censeatur in eadem, habeas coram nobis, apud Westminster, ad subjiciendum*, "We command that you have before us to show, at Westminster, that body X, by whatsoever name he may be called therein, which is held in your custody, as it is said, as well as the cause of the arrest and the detention." Nothing allows one to measure the difference between ancient and medieval freedom and the freedom at the basis of modern democracy better than this formula. It is not the free man and his statutes and prerogatives, nor even simply *homo*, but rather *corpus* that is the new subject of politics. And democracy is born precisely as the assertion and presentation of this "body": *habeas corpus ad subjiciendum*, "you will have to have a body to show."

The fact that, of all the various jurisdictional regulations concerned with the protection of individual freedom, it was *habeas corpus* that assumed the form of law and thus became inseparable from the history of Western democracy is surely due to mere circumstance. It is just as certain, however, that nascent European democracy thereby placed at the center of its battle against absolutism not *bios*, the qualified life of the citizen, but *zoē*—the bare, anonymous life that is as such taken into the sovereign ban ("the body of being taken . . .," as one still reads in one modern formulation of the writ, "by whatsoever name he may be called therein").³

What comes to light in order to be exposed *apud Westminster* is, once again, the body of *homo sacer*, which is to say, bare life. This is modern democracy's strength and, at the same time, its inner contradiction: modern democracy does not abolish sacred life but rather shatters it and disseminates it into every individual body, making it into what is at stake in political conflict. And the root of modern democracy's secret biopolitical calling lies here: he who will appear later as the bearer of rights and, according to a curious oxymoron, as the new sovereign subject (*subiectus superaneus*, in other words, what is below and, at the same time, most elevated) can only be constituted as such through the repetition of the sovereign exception and the isolation of *corpus*, bare life, in himself. If it is true that law needs a body in order to be in force, and if one can speak, in this sense, of "law's desire to have a body," democracy responds to this desire by compelling law to assume the care of this body. This ambiguous (or polar) character of democracy appears even more clearly in the *habeas corpus* if one considers the fact that the same legal procedure that was originally intended to assure the presence of the accused at the trial and, therefore, to keep the accused from avoiding judgment, turns—in its new and definitive form—into grounds for the sheriff to detain and exhibit the body of the accused. *Corpus* is a two-

2. For replevying a man: i.e., for releasing a prisoner upon bail.

3. Both *zoē* and *bios* mean "life" in Greek, but Agamben finds in Aristotle's *Politics* a distinction between the terms. *Zoē* (Agamben's "bare life" or

"naked life") is physical life, our animal existence; *bios* is our social or political life, the personhood we create (our biography) through our interaction with others.

face being, the bearer both of subjection to sovereign power and of individual liberties.

This new centrality of the “body” in the sphere of politico-juridical terminology thus coincides with the more general process by which *corpus* is given such a privileged position in the philosophy and science of the Baroque age, from Descartes to Newton, from Leibniz to Spinoza.⁴ And yet in political reflection *corpus* always maintains a close tie to bare life, even when it becomes the central metaphor of the political community, as in *Leviathan* or *The Social Contract*.⁵ Hobbes’s use of the term is particularly instructive in this regard. If it is true that in *De homine*⁶ he distinguishes man’s natural body from his political body (*homo enim non modo corpus naturale est, sed etiam civitatis, id est, ut ita loquar, corporis politici pars*, “Man is not only a natural body, but also a body of the city, that is, of the so-called political part” [*De homine*, p. 1]), in the *De cive*⁷ it is precisely the body’s capacity to be killed that founds both the natural equality of men and the necessity of the “Commonwealth”:

If we look at adult men and consider the fragility of the unity of the human body (whose ruin marks the end of every strength, vigor, and force) and the ease with which the weakest man can kill the strongest man, there is no reason for someone to trust in his strength and think himself superior to others by nature. Those who can do the same things to each other are equals. And those who can do the supreme thing—that is, kill—are by nature equal among themselves. (*De cive*, p. 93)

The great metaphor of the Leviathan, whose body is formed out of all the bodies of individuals, must be read in this light. The absolute capacity of the subjects’ bodies to be killed forms the new political body of the West.

FROM § 2 BIOPOLITICS AND THE RIGHTS OF MAN

2.1. Hannah Arendt entitled the fifth chapter of her book on imperialism,⁸ which is dedicated to the problem of refugees, “The Decline of the Nation-State and the End of the Rights of Man.” Linking together the fates of the rights of man and of the nation-state, her striking formulation seems to imply the idea of an intimate and necessary connection between the two, though the author herself leaves the question open. The paradox from which Arendt departs is that the very figure who should have embodied the rights of man par excellence—the refugee—signals instead the concept’s radical crisis. “The conception of human rights,” she states, “based upon the assumed existence of a human being as such, broke down at the very moment when those who professed to believe in it were for the first time confronted with

4. BARUCH SPINOZA (1632–1677), Jewish-born Dutch philosopher. RENÉ DESCARTES (1596–1650), French philosopher. ISAAC NEWTON (1642–1727), English scientist and mathematician. GOTTFRIED LEIBNIZ (1646–1716), German philosopher and mathematician.

5. A classic of political philosophy (1762) by the Swiss-born French philosopher Jean-Jacques Rousseau (1717–1778). *Leviathan* (1651), a work by the English political philosopher Thomas Hobbes (1588–1679); it was the first to suggest that government originates in a social contract of

all its members.

6. *Concerning Man* (1658). Agamben quotes the Latin text from Thomas Hobbes, *Opera philosophica quae latine scripsit omnia in unum corpus*, ed. William Molesworth, vol. 2 (London: J. Bohn, 1983).

7. *Concerning the Citizen* (1642); Agamben quotes from *De cive: The Latin Version*, ed. Howard Warrender (Oxford: Clarendon Press, 1983).

8. “Imperialism” is the title of part 2 of Arendt’s *Origins of Totalitarianism* (1951; reprint, New York: Harcourt Brace Jovanovich, 1979).

people who had indeed lost all other qualities and specific relationships—except that they were still human” (*Origins*, p. 299). In the system of the nation-state, the so-called sacred and inalienable rights of man show themselves to lack every protection and reality at the moment in which they can no longer take the form of rights belonging to citizens of a state. If one considers the matter, this is in fact implicit in the ambiguity of the very title of the French Declaration of the Rights of Man and Citizen, of 1789. In the phrase *La déclaration des droits de l'homme et du citoyen*, it is not clear whether the two terms *homme* and *citoyen* name two autonomous beings or instead form a unitary system in which the first is always already included in the second. And if the latter is the case, the kind of relation that exists between *homme* and *citoyen* still remains unclear. From this perspective, Burke's *boutade*⁹ according to which he preferred his “Rights of an Englishman” to the inalienable rights of man acquires an unsuspected profundity.

Arendt does no more than offer a few, essential hints concerning the link between the rights of man and the nation-state, and her suggestion has therefore not been followed up. In the period after the Second World War, both the instrumental emphasis on the rights of man and the rapid growth of declarations and agreements on the part of international organizations have ultimately made any authentic understanding of the historical significance of the phenomenon almost impossible. Yet it is time to stop regarding declarations of rights as proclamations of eternal, metajuridical¹ values binding the legislator (in fact, without much success) to respect eternal ethical principles, and to begin to consider them according to their real historical function in the modern nation-state. Declarations of rights represent the originary figure of the inscription of natural life in the juridico-political order of the nation-state. The same bare life that in the *ancien régime*² was politically neutral and belonged to God as creaturely life and in the classical world was (at least apparently) clearly distinguished as *zōē* from political life (*bios*) now fully enters into the structure of the state and even becomes the earthly foundation of the state's legitimacy and sovereignty.

A simple examination of the text of the Declaration of 1789 shows that it is precisely bare natural life—which is to say, the pure fact of birth—that appears here as the source and bearer of rights. “Men,” the first article declares, “are born and remain free and equal in rights” (from this perspective, the strictest formulation of all is to be found in La Fayette's³ project elaborated in July 1789: “Every man is born with inalienable and indefeasible rights”). At the same time, however, the very natural life that, inaugurating the biopolitics of modernity, is placed at the foundation of the order vanishes into the figure of the citizen, in whom rights are “preserved” (according to the second article: “The goal of every political association is the preservation of the natural and indefeasible rights of man”). And the Declaration can attribute sovereignty to the “nation” (according to the third article: “The

9. Outburst, sally (French). The English philosopher and statesman EDMUND BURKE (1729–1797) assailed the French Revolution and, specifically, its declaration of rights in *Reflections on the Revolution in France* (1790).

1. Outside or beyond the realm of law established by governmental authority.

2. Old regime (French); specifically, France

before the revolution of 1789.

3. The marquis de Lafayette (1757–1834), who after fighting against the British in the American Revolution became a member of France's revolutionary National Assembly, to which in July 1789 he presented his draft of a declaration of rights (written with the aid of Thomas Jefferson).

principle of all sovereignty resides essentially in the nation") precisely because it has already inscribed this element of birth in the very heart of the political community. The nation—the term derives etymologically from *nascere* (to be born)—thus closes the open circle of man's birth.

2.2. Declarations of rights must therefore be viewed as the place in which the passage from divinely authorized royal sovereignty to national sovereignty is accomplished. This passage assures the *exceptio*⁴ of life in the new state order that will succeed the collapse of the *ancien régime*. The fact that in this process the "subject" is, as has been noted, transformed into a "citizen" means that birth—which is to say, bare natural life as such—here for the first time becomes (thanks to a transformation whose biopolitical consequences we are only beginning to discern today) the immediate bearer of sovereignty. The principle of nativity and the principle of sovereignty, which were separated in the *ancien régime* (where birth marked only the emergence of a *sujet*, a subject), are now irrevocably united in the body of the "sovereign subject" so that the foundation of the new nation-state may be constituted. It is not possible to understand the "national" and biopolitical development and vocation of the modern state in the nineteenth and twentieth centuries if one forgets that what lies at its basis is not man as a free and conscious political subject but, above all, man's bare life, the simple birth that as such is, in the passage from subject to citizen, invested with the principle of sovereignty. The fiction implicit here is that *birth* immediately becomes *nation* such that there can be no interval of separation [*scarto*] between the two terms. Rights are attributed to man (or originate in him) solely to the extent that man is the immediately vanishing ground (who must never come to light as such) of the citizen.

Only if we understand this essential historical function of the doctrine of rights can we grasp the development and metamorphosis of declarations of rights in our century. When the hidden difference [*scarto*] between birth and nation entered into a lasting crisis following the devastation of Europe's geopolitical order after the First World War, what appeared was Nazism and fascism, that is, two properly biopolitical movements that made of natural life the exemplary place of the sovereign decision. We are used to condensing the essence of National Socialist ideology into the syntagm "blood and soil" (*Blut und Boden*). When Alfred Rosenberg⁵ wanted to express his party's vision of the world, it is precisely to this hendiadys⁶ that he turned. "The National Socialist vision of the world," he writes, "springs from the conviction that soil and blood constitute what is essential about Germanness, and that it is therefore in reference to these two givens that a cultural and state politics must be directed" (*Blut und Ehre*, p. 242). Yet it has too often been forgotten that this formula, which is so highly determined politically, has, in truth, an innocuous juridical origin. The formula is nothing other than the concise expression of the two criteria that, already in Roman law, served to identify citizenship (that is, the primary inscription of life in the state

4. Exception (Latin).

5. German Nazi ideologist (1893–1946), hanged as a war criminal after the war. Agamben quotes from his *Blut und Ehre, Ein Kampf für deutsche Wiedergeburt: Reden und Aufsätze 1919–1933* [*Blood and Honor, A War for German Rebirth: Speeches and Articles, 1919–1933*] (Munich: F. Eher, 1936).

6. A figure of speech in which a single idea is expressed by two terms joined together by "and," rather than one term modified by the other.

order): *ius soli* (birth in a certain territory) and *ius sanguinis* (birth from citizen parents).⁷ In the *ancien régime*, these two traditional juridical criteria had no essential meaning, since they expressed only a relation of subjugation. Yet with the French Revolution they acquire a new and decisive importance. Citizenship now does not simply identify a generic subjugation to royal authority or a determinate system of laws, nor does it simply embody (as Chaliér⁸ maintained when he suggested to the convention on September 23, 1792, that the title of citizen be substituted for the traditional title *monsieur* or *sieur*⁹ in every public act) the new egalitarian principle; citizenship names the new status of life as origin and ground of sovereignty and, therefore, literally identifies—to cite Jean-Denis Lanjuinais's words to the convention—*les membres du souverain*, “the members of the sovereign.” Hence the centrality (and the ambiguity) of the notion of “citizenship” in modern political thought, which compels Rousseau to say, “No author in France . . . has understood the true meaning of the term ‘citizen.’”¹² Hence too, however, the rapid growth in the course of the French Revolution of regulatory provisions specifying which *man* was a *citizen* and which one not, and articulating and gradually restricting the area of the *ius soli* and the *ius sanguinis*. Until this time, the questions “What is French? What is German?” had constituted not a political problem but only one theme among others discussed in philosophical anthropologies. Caught in a constant work of redefinition, these questions now begin to become essentially political, to the point that, with National Socialism, the answer to the question “Who and what is German?” (and also, therefore, “Who and what is not German?”) coincides immediately with the highest political task. Fascism and Nazism are, above all, redefinitions of the relations between man and citizen, and become fully intelligible only when situated—no matter how paradoxical it may seem—in the biopolitical context inaugurated by national sovereignty and declarations of rights.

Only this tie between the rights of man and the new biopolitical determination of sovereignty makes it possible to understand the striking fact, which has often been noted by historians of the French Revolution, that at the very moment in which native rights were declared to be inalienable and indefeasible, the rights of man in general were divided into active rights and passive rights. In his *Préliminaire de la constitution*, Sieyès³ already clearly stated:

Natural and civil rights are those rights *for* whose preservation society is formed, and political rights are those rights *by* which society is formed. For the sake of clarity, it would be best to call the first ones passive rights, and the second ones active rights. . . . All inhabitants of a country must enjoy the rights of passive citizens . . . all are not active citizens. Women, at least in the present state, children, foreigners, and also those who would not at all contribute to the public establishment must have no active influence on public matters. (*Écrits politiques*, pp. 189–206)

7. Literally, the Latin phrases mean “right of the soil” and “right of blood.”

8. Joseph Chaliér (1747–1793), French revolutionary.

9. Literally, “my lord” or “lord” (French); in common usage, titles of address roughly equivalent to the English “Mister” and “Sir.”

1. French politician and jurist (1753–1827).

2. Rousseau, *Social Contract* 1.6 (Rousseau cred-

its one contemporary author, Jean d’Alembert, with understanding the term).

3. Emmanuel Joseph Sieyès (1748–1836), or Abbé Sieyès: French Roman Catholic cleric and political theorist. Agamben quotes his “Preliminary to the Constitution” (1789) from *Écrits politiques* (Paris: Éditions des Archives contemporaines, 1985).

And after defining the *membres du souverain*, the passage of Lanjuinais cited above continues with these words: "Thus children, the insane, minors, women, those condemned to a punishment either restricting personal freedom or bringing disgrace [*punition afflictive ou inflammante*] . . . will not be citizens" (quoted in Sewell, "Le citoyen,"⁴ p. 105).

Instead of viewing these distinctions as a simple restriction of the democratic and egalitarian principle, in flagrant contradiction to the spirit and letter of the declarations, we ought first to grasp their coherent biopolitical meaning. One of the essential characteristics of modern biopolitics (which will continue to increase in our century) is its constant need to redefine the threshold in life that distinguishes and separates what is inside from what is outside. Once it crosses over the walls of the *oikos*⁵ and penetrates more and more deeply into the city, the foundation of sovereignty—nonpolitical life—is immediately transformed into a line that must be constantly redrawn. Once *zoē* is politicized by declarations of rights, the distinctions and thresholds that make it possible to isolate a sacred life must be newly defined. And when natural life is wholly included in the *polis*—and this much has, by now, already happened—these thresholds pass, as we will see, beyond the dark boundaries separating life from death in order to identify a new living dead man, a new sacred man.

2.3. If refugees (whose number has continued to grow in our century, to the point of including a significant part of humanity today) represent such a disquieting element in the order of the modern nation-state, this is above all because by breaking the continuity between man and citizen, *nativity* and *nationality*, they put the originary fiction of modern sovereignty in crisis. Bringing to light the difference between birth and nation, the refugee causes the secret presupposition of the political domain—bare life—to appear for an instant within that domain. In this sense, the refugee is truly "the man of rights," as Arendt suggests, the first and only real appearance of rights outside the fiction of the citizen that always covers them over. Yet this is precisely what makes the figure of the refugee so hard to define politically.

Since the First World War, the birth-nation link has no longer been capable of performing its legitimating function inside the nation-state, and the two terms have begun to show themselves to be irreparably loosened from each other. From this perspective, the immense increase of refugees and stateless persons in Europe (in a short span of time 1,500,000 White Russians, 700,000 Armenians, 500,000 Bulgarians, 1,000,000 Greeks, and hundreds of thousands of Germans, Hungarians, and Rumanians were displaced from their countries) is one of the two most significant phenomena. The other is the contemporaneous institution by many European states of juridical measures allowing for the mass denaturalization and denationalization of large portions of their own populations. The first introduction of such rules into the juridical order took place in France in 1915 with respect to naturalized citizens of "enemy" origin; in 1922, Belgium followed the

Colin (Oxford: Pergamon, 1988).

5. Household (Greek), a term used by Aristotle in his *Politics* to designate the nonpolitical domestic sphere.

French example and revoked the naturalization of citizens who had committed “antinational” acts during the war; in 1926, the fascist regime issued an analogous law with respect to citizens who had shown themselves to be “unworthy of Italian citizenship”; in 1933, it was Austria’s turn; and so it continued until the Nuremberg laws⁶ on “citizenship in the Reich” and the “protection of German blood and honor” brought this process to the most extreme point of its development, introducing the principle according to which citizenship was something of which one had to prove oneself worthy and which could therefore always be called into question. And one of the few rules to which the Nazis constantly adhered during the course of the “Final Solution”⁷ was that Jews could be sent to the extermination camps only after they had been fully denationalized (stripped even of the residual citizenship left to them after the Nuremberg laws).

These two phenomena—which are, after all, absolutely correlative—show that the birth-nation link, on which the declaration of 1789 had founded national sovereignty, had already lost its mechanical force and power of self-regulation by the time of the First World War. On the one hand, the nation-states become greatly concerned with natural life, discriminating within it between a so-to-speak authentic life and a life lacking every political value. (Nazi racism and eugenics are only comprehensible if they are brought back to this context.) On the other hand, the very rights of man that once made sense as the presupposition of the rights of the citizen are now progressively separated from and used outside the context of citizenship, for the sake of the supposed representation and protection of a bare life that is more and more driven to the margins of the nation-states, ultimately to be recodified into a new national identity. The contradictory character of these processes is certainly one of the reasons for the failure of the attempts of the various committees and organizations by which states, the League of Nations, and, later, the United Nations confronted the problem of refugees and the protection of human rights, from the Bureau Nansen⁸ (1922) to the contemporary High Commission for Refugees (1951), whose actions, according to statute, are to have not a political but rather a “solely humanitarian and social” mission. What is essential is that, every time refugees represent not individual cases but—as happens more and more often today—a mass phenomenon, both these organizations and individual states prove themselves, despite their solemn invocations of the “sacred and inalienable” rights of man, absolutely incapable of resolving the problem and even of confronting it adequately.

2.4. The separation between humanitarianism and politics that we are experiencing today is the extreme phase of the separation of the rights of man from the rights of the citizen. In the final analysis, however, humanitarian organizations—which today are more and more supported by international commissions—can only grasp human life in the figure of bare or sacred life,

6. Laws passed in a 1935 convention in Nürnberg that deprived Jews of German citizenship and banned sexual relations between Jews and those of “German or kindred blood.”

7. That is, to the “Jewish question”: the solution, adopted in 1942, was to send all Jews within

German-controlled territories to labor and extermination camps.

8. The office, led by the Norwegian explorer and humanitarian Fridtjof Nansen, that issued travel documents to refugees following World War I.

and therefore, despite themselves, maintain a secret solidarity with the very powers they ought to fight. It takes only a glance at the recent publicity campaigns to gather funds for refugees from Rwanda⁹ to realize that here human life is exclusively considered (and there are certainly good reasons for this) as sacred life—which is to say, as life that can be killed but not sacrificed—and that only as such is it made into the object of aid and protection. The “imploring eyes” of the Rwandan child, whose photograph is shown to obtain money but who “is now becoming more and more difficult to find alive,” may well be the most telling contemporary cipher of the bare life that humanitarian organizations, in perfect symmetry with state power, need. A humanitarianism separated from politics cannot fail to reproduce the isolation of sacred life at the basis of sovereignty, and the camp—which is to say, the pure space of exception—is the biopolitical paradigm that it cannot master.

The concept of the refugee (and the figure of life that this concept represents) must be resolutely separated from the concept of the rights of man, and we must seriously consider Arendt’s claim that the fates of human rights and the nation-state are bound together such that the decline and crisis of the one necessarily implies the end of the other. The refugee must be considered for what he is: nothing less than a limit concept that radically calls into question the fundamental categories of the nation-state, from the birth-nation to the man-citizen link, and that thereby makes it possible to clear the way for a long-overdue renewal of categories in the service of a politics in which bare life is no longer separated and excepted, either in the state order or in the figure of human rights.

1995

9. Following the genocidal violence in the African nation of Rwanda in 1994, during which as many as 2 million Rwandans fled the country.

GLORIA ANZALDÚA

1942–2004

The Mexican American writer and activist Gloria Anzaldúa self-consciously embodied the longings, critical consciousness, and contradictions of so-called identity politics. She both spoke from her perspective as a lesbian Mexican American *and* contradicted any simple categorization of individuals through their ethnic origins or sexual orientation. We are all mixtures, she insisted, and she called for a new *mestiza* (mixed or hybrid) consciousness to replace “the policy of racial purity that white America practices.” Her work simultaneously celebrates and explores the difficulties of multicultural identity.

Anzaldúa came from a seventh-generation Mexican American family that settled in the Rio Grande Valley in southern Texas. After her father died when she was fifteen, she worked as a farm laborer for a time to help support her family. The only member of her family with any education beyond high school, she received her B.A. from Pan-American University in 1969 and an M.A. in English and education from

the University of Texas at Austin in 1972. After teaching at a high school for migrant workers in Indiana, Anzaldúa returned to Texas to pursue a Ph.D. in comparative literature, but quit when she met resistance to her desire to focus on Chicano (Mexican American) studies. She subsequently did additional graduate work at the University of California at Santa Cruz while teaching at both San Francisco State University and Santa Cruz. Along with occasional visiting positions at universities, in her later years she devoted herself primarily to writing and social activism. She received a National Endowment for the Arts Fiction Award as well as the 1991 Lesbian Rights Award. When she died from complications from diabetes in 2004, she was a few weeks away from receiving her Ph.D. from UC Santa Cruz.

Anzaldúa's work is important—and has been widely read and taught—not only because she effectively articulates the radical understandings and aspirations of the ethnic, feminist, and gay liberation movements born in the late 1960s and early 1970s, but also because she faced the ambivalences and contradictions of these movements. For literary studies, the most obvious result of such liberation efforts (often referred to as “the new social movements”) has been the overt politicization of teaching and criticism. To the bafflement of many and the outrage of some, reading lists and teaching methods in literature classes have been opened to political scrutiny. A formerly vague and innocuous idea—culture—is now a battleground. At stake is “identity”—especially the relative status accorded different identities within a multiethnic society. The new social movements demand not just equal rights and economic opportunity but also respect and recognition. They aim at affirming racial, sexual, and class identities in all their difference from prevailing norms. Anzaldúa's writings speak to this call for affirmation and acknowledgement.

The political energies of the new social movements interacted with developments in literary studies in three especially salient ways. First, the new interest in different identities within American culture arose at the same time that French poststructuralism arrived in literature departments. Although distinct from the “multiculturalist” emphasis on inter- and intracultural differences, the poststructuralist concept of “difference” (especially in the work of JACQUES DERRIDA) provided a favorable theoretical environment for exploring the heterogeneity of identity. In particular, the poststructuralist questioning of boundaries and of the integrity of defined entities encouraged the interest in mixed, hybrid identities found in ethnic theory like Anzaldúa's.

The second conjunction of the new social movements with developments in literary studies centered on the term *voice*. Mid-twentieth-century New Criticism tried to sever the content expressed in literary works from the intention and voice of the author through an insistence on the “intentional fallacy” (see WILLIAM K. WIMSATT JR. and MONROE C. BEARDSLEY), which states that the narrator in a novel or the speaker in a lyric poem is always a mask, a “persona,” never the author. With the increasing interest of the 1960s in the personal (culminating in feminism's declaration that “the personal is political”) and the growing desire to recover lost and oppressed “voices” in American history, the new social movements stressed the voices of testimony and experience at the exact time when literary critics were striving to reconnect literary expressions to their authors. “Recovery work,” which resurrected neglected or forgotten works by nonwhite, nonmale, and nonheterosexual authors, was combined with a new valuing of narratives of personal experience in both historical and contemporary texts. Anzaldúa's text, in our selection taken from her book *Borderlands/La Frontera* (1987), mixes cultural analysis with history, private memories, poems, and politics, demonstrating the stylistic possibilities opened up by the new interest in personal voice. Furthermore, her preoccupation with the difficulties faced by writers who use the “master's tongue” (in her case, English) resonates with similar concerns in post-colonial theory. Anzaldúa wants to combat the suppression of Spanish in America by creating a space for Spanish voices within American literature and culture, but she

also recognizes that she must use English to reach the widest possible audience. So her literary voice mixes languages as well as genres. At her request, we have not translated the Spanish phrases and sentences in our selection.

Third, and finally, the dual focus of the new social movements on "identity" and "culture" coincides with the general shift in literary studies after 1965 from text to context, a movement partly reflected in the broad (and often loosely used) term *cultural studies*. The literary work is studied as a product and symptom of its culture or of its author's identity and not as a self-enclosed unit of purely aesthetic elements. In addition, the writing and reading (interpreting) of literary texts are understood as dynamic processes through which identities and cultures are produced, reproduced, maintained, and transformed. Cultural representations are the very stuff of which identities are made, and literature is one crucial arena in which that making is done. As Anzaldúa put it, "culture" is a "story to explain the world and our participation in it, a . . . value system with images and symbols to connect us to each other and to the planets." She saw her cultural work as the production of a "new" culture, a new story with new images.

Cultural representations, such as the stereotypes that undergird contempt for others who are different, can hurt. They are powerful in every sense of that word, coming to us invested with authority and upheld by the social institutions that promulgate them. Those representations, those images, occupy us; they are ours, they are us. That's what it means to be immersed in a culture. For that reason, Anzaldúa insists that the primary political work is "inner." "The struggle," she writes, "has always been inner, and is played out in outer terrains. Awareness of our situation must come before inner changes, which in turn come before changes in society. Nothing happens in the 'real' world unless it first happens in our heads." This focus on changing images and representations is sometimes called "cultural politics," which means emphasizing the transformation of values and beliefs more than changes in elected officials, laws, or working conditions.

It is not surprising that Anzaldúa and other literary people would put their energy and faith into cultural politics. Words and images are their stock-in-trade, what most influences them, and where they have some chance of wielding influence. But cultural politics in the late twentieth-century United States was also a direct response to the civil rights movement, which succeeded in changing the laws and institutional structures of a legally racist society. People discovered, however, that abolishing the legality of racism was hardly the same thing as creating a nonracist society. Cultural politics is often criticized as vague, as nonconcrete, as ignoring bread-and-butter issues. But a cultural politics like Anzaldúa's is developed to foreground and contest the nebulous quality of racism and sexism in her America, prejudices that often do not manifest themselves in overt ways yet have persistent concrete effects in the continued poverty of and the differential opportunities in housing, education, and employment available to nonwhites and women.

Anzaldúa's work, then, is largely concerned with conveying what it feels like for a nonwhite, nonheterosexual woman to live in post-civil rights movement North America. She explores the ambiguities and ambivalences lived by a "hyphenated" Mexican American. The United States both is obsessed with this presence of nonwhites in its midst and tries to act as if they do not exist. On one level, she simply calls for recognition, for the acknowledgment by the culture at large, and Anglos in particular, that she and her people—part Native American, part European, part American—exist. They have been here a long time and are going to be here even longer; meanwhile, "the dominant white culture is killing us slowly with its ignorance." Anzaldúa calls our attention to the 34 million Mexican Americans in the United States.

But on another level, Anzaldúa is arguing that our whole understanding of identity has to be revised. The old notion that we can know who we are by tracing our roots, by

referring back to some stable point of origin, has to be abandoned. There is no pure, single source. All identities are hybrids, formed over time through the interaction of multiple cultures and constantly being transformed by new encounters in the “borderlands” between one culture and another. Anzaldúa’s work here parallels contemporary postcolonial criticism, particularly that of HOMI K. BHABHA. The nostalgic demand for unitary, isolated cultures can only do harm in a world in which each of us is always already a mixture and we constantly come into contact with, and must live among, others who are mixed in different ways.

Identity politics is often criticized for its contradictions, especially for joining a celebration of difference with simplistic notions of group solidarity. Anzaldúa’s work addresses the complex emotional core of identity politics: the deep desire felt throughout the contemporary world for an identity that can be asserted, recognized, affirmed, and respected in the public sphere. In addition, she describes the very forces of cultural mixing and powerful blindnesses that make an unambiguous, clear identity so attractive, especially to those who are least visible within the current order. In trying to negotiate these contrary pressures and achieve a coherent identity in the face of the myriad cultural influences that shape us, Anzaldúa necessarily becomes a writer of ambiguity and ambivalence. “It makes us crazy constantly,” she writes, “but if the center holds, we’ve made some kind of evolutionary step forward.”

Borderlands/La Frontera: The New Mestiza Keywords: Cultural Studies, Feminist Theory, Identity, Queer Theory, Race and Ethnicity Studies, Vernacular Language

From Borderlands/La Frontera: The New Mestiza

Chapter 7. La conciencia de la mestiza/Towards a New Consciousness

Por la mujer de mi raza
hablará el espíritu.

José Vasconcelos, Mexican philosopher, envisaged *una raza mestiza, una mezcla de razas afines, una raza de color—la primera raza síntesis del globo*. He called it a cosmic race, *la raza cósmica*, a fifth race embracing the four major races of the world.¹ Opposite to the theory of the pure Aryan, and to the policy of racial purity that white America practices, his theory is one of inclusivity. At the confluence of two or more genetic streams, with chromosomes constantly “crossing over,” this mixture of races, rather than resulting in an inferior being, provides hybrid progeny, a mutable, more malleable species with a rich gene pool. From this racial, ideological, cultural and biological cross-pollination, an “alien” consciousness is presently in the making—a new *mestiza* consciousness, *una conciencia de mujer*. It is a consciousness of the Borderlands.

1. This is my own “take off” on José Vasconcelos’ idea. José Vasconcelos, *La Raza Cósmica: Misión de la Raza Ibero-Americana* (Mexico City: Aguilar

S.A. de Ediciones, 1961) [Anzaldúa’s note]. At Anzaldúa’s request, we have not translated the Spanish passages in her text.

UNA LUCHA DE FRONTERAS/A STRUGGLE OF BORDERS

Because I, a *mestiza*,
 continually walk out of one culture
 and into another,
 because I am in all cultures at the same time,
alma entre dos mundos, tres, cuatro,
me zumba la cabeza con lo contradictorio.
Estoy norteadada por todas las voces que me hablan
simultáneamente.

The ambivalence from the clash of voices results in mental and emotional states of perplexity. Internal strife results in insecurity and indecisiveness. The *mestiza's* dual or multiple personality is plagued by psychic restlessness.

In a constant state of mental nepantilism, an Aztec² word meaning torn between ways, *la mestiza* is a product of the transfer of the cultural and spiritual values of one group to another. Being tricultural, monolingual, bilingual, or multilingual, speaking a patois, and in a state of perpetual transition, the *mestiza* faces the dilemma of the mixed breed: which collectivity does the daughter of a darkskinned mother listen to?

El choque de un alma atrapado entre el mundo del espíritu y el mundo de la técnica a veces la deja entullada. Cradled in one culture, sandwiched between two cultures, straddling all three cultures and their value systems, *la mestiza* undergoes a struggle of flesh, a struggle of borders, an inner war. Like all people, we perceive the version of reality that our culture communicates. Like others having or living in more than one culture, we get multiple, often opposing messages. The coming together of two self-consistent but habitually incomparable frames of reference³ causes *un choque*, a cultural collision.

Within us and within *la cultura chicana*,⁴ commonly held beliefs of the white culture attack commonly held beliefs of the Mexican culture, and both attack commonly held beliefs of the indigenous culture. Subconsciously, we see an attack on ourselves and our beliefs as a threat and we attempt to block with a counterstance.

But it is not enough to stand on the opposite river bank, shouting questions, challenging patriarchal, white conventions. A counterstance locks one into a duel of oppressor and oppressed; locked in mortal combat, like the cop and the criminal, both are reduced to a common denominator of violence. The counterstance refutes the dominant culture's views and beliefs, and, for this, it is proudly defiant. All reaction is limited by, and dependent on, what it is reacting against. Because the counterstance stems from a problem with authority—outer as well as inner—it's a step towards liberation from cultural domination. But it is not a way of life. At some point, on our way to a new consciousness, we will have to leave the opposite bank, the split between the two mortal combatants somehow healed so that we are on both shores at once and, at once, see through serpent and eagle eyes. Or perhaps we will decide to disengage from the dominant culture, write it off altogether as a lost cause, and cross the border into a wholly new and separate territory. Or

2. One of the major native groups in Mexico before the arrival of Europeans.

3. Arthur Koestler termed this "bisociation." Albert Rothenberg, *The Creative Process in Art, Science, and Other Fields* (Chicago: University of Chicago Press, 1979), 12 [Anzaldúa's note]. Koest-

ler (1905–1983), Hungarian-born English novelist, journalist, and critic.

4. Chicanos are portrayed by Anzaldúa as existing between Anglo (white European) U.S. culture and the indigenous Native American culture of both Mexico and the United States.

we might go another route. The possibilities are numerous once we decide to act and not react.

A TOLERANCE FOR AMBIGUITY

These numerous possibilities leave *la mestiza* floundering in uncharted seas. In perceiving conflicting information and points of view, she is subjected to a swamping of her psychological borders. She has discovered that she can't hold concepts or ideas in rigid boundaries. The borders and walls that are supposed to keep the undesirable ideas out are entrenched habits and patterns of behavior; these habits and patterns are the enemy within. Rigidity means death. Only by remaining flexible is she able to stretch the psyche horizontally and vertically. *La mestiza* constantly has to shift out of habitual formations; from convergent thinking, analytical reasoning that tends to use rationality to move toward a single goal (a Western mode), to divergent thinking,⁵ characterized by movement away from set patterns and goals and toward a more whole perspective, one that includes rather than excludes.

The new *mestiza* copes by developing a tolerance for contradictions, a tolerance for ambiguity. She learns to be an Indian in Mexican culture, to be Mexican from an Anglo point of view. She learns to juggle cultures. She has a plural personality, she operates in a pluralistic mode—nothing is thrust out, the good the bad and the ugly, nothing rejected, nothing abandoned. Not only does she sustain contradictions, she turns the ambivalence into something else.

She can be jarred out of ambivalence by an intense, and often painful, emotional event which inverts or resolves the ambivalence. I'm not sure exactly how. The work takes place underground—subconsciously. It is work that the soul performs. That focal point or fulcrum, that juncture where the *mestiza* stands, is where phenomena tend to collide. It is where the possibility of uniting all that is separate occurs. This assembly is not one where severed or separated pieces merely come together. Nor is it a balancing of opposing powers. In attempting to work out a synthesis, the self has added a third element which is greater than the sum of its severed parts. That third element is a new consciousness—a *mestiza* consciousness—and though it is a source of intense pain, its energy comes from continual creative motion that keeps breaking down the unitary aspect of each new paradigm.

En unas pocas centurias, the future will belong to the *mestiza*. Because the future depends on the breaking down of paradigms, it depends on the straddling of two or more cultures. By creating a new mythos—that is, a change in the way we perceive reality, the way we see ourselves, and the ways we behave—*la mestiza* creates a new consciousness.

The work of *mestiza* consciousness is to break down the subject-object duality that keeps her a prisoner and to show in the flesh and through the images in her work how duality is transcended. The answer to the problem between the white race and the colored, between males and females, lies in healing the split that originates in the very foundation of our lives, our culture, our languages, our thoughts. A massive uprooting of dualistic thinking in the individual and collective consciousness is the beginning of a long

5. In part, I derive my definitions for "convergent" and "divergent" thinking from Rothenberg, 12–13 [Anzaldúa's note].

struggle, but one that could, in our best hopes, bring us to the end of rape, of violence, of war.

LA ENCRUCIJADA/THE CROSSROADS

A chicken is being sacrificed
at a crossroads, a simple mound of earth
a mud shrine for *Eshu*,
*Yoruba*⁶ god of indeterminacy,
who blesses her choice of path.
She begins her journey.

Su cuerpo es una bocacalle. La mestiza has gone from being the sacrificial goat to becoming the officiating priestess at the crossroads.

As a *mestiza* I have no country, my homeland cast me out; yet all countries are mine because I am every woman's sister or potential lover. (As a lesbian I have no race, my own people disclaim me; but I am all races because there is the queer of me in all races.) I am cultureless because, as a feminist, I challenge the collective cultural/religious male-derived beliefs of Indo-Hispanics and Anglos; yet I am cultured because I am participating in the creation of yet another culture, a new story to explain the world and our participation in it, a new value system with images and symbols that connect us to each other and to the planet. *Soy un amasamiento*, I am an act of kneading, of uniting and joining that not only has produced both a creature of darkness and a creature of light, but also a creature that questions the definitions of light and dark and gives them new meanings.

We are the people who leap in the dark, we are the people on the knees of the gods. In our very flesh, (r)evolution works out the clash of cultures. It makes us crazy constantly, but if the center holds, we've made some kind of evolutionary step forward. *Nuestra alma el trabajo*, the opus, the great alchemical work; spiritual *mestizaje*, a "morphogenesis,"⁷ an inevitable unfolding. We have become the quickening serpent movement.

Indigenous like corn, like corn, the *mestiza* is a product of crossbreeding, designed for preservation under a variety of conditions. Like an ear of corn—a female seed-bearing organ—the *mestiza* is tenacious, tightly wrapped in the husks of her culture. Like kernels she clings to the cob; with thick stalks and strong brace roots, she holds tight to the earth—she will survive the crossroads.

*Lavando y remojando el maíz en agua de cal, despojando el pellejo. Moliendo, mixteando, amasando, haciendo tortillas de masa.*⁸ She steeps the corn

6. One of the three largest ethnic groups in Nigeria; many Caribbean and Latin American blacks are descended from the Yoruba and have retained elements of their ancestral culture.

7. To borrow chemist Ilya Prigogine's theory of "dissipative structures." Prigogine [1917–2003] discovered that substances interact not in predictable ways as it was taught in science, but in different and fluctuating ways to produce new and more complex structures, a kind of birth he called "morphogenesis," which created unpredictable innova-

tion. Harold Gilliam, "Searching for a New World View," *This World*, January 1981, 23 [Anzaldúa's note].

8. *Tortillas de masa*: corn tortillas are of two types, the smooth uniform ones made in a tortilla press and usually bought at a tortilla factory or supermarket, and *gorditas*, made by mixing *masa* with lard or shortening or butter (my mother sometimes puts in bits of bacon or *chicarrones*) [Anzaldúa's note].

in lime, it swells, softens. With stone roller on *metate* she grinds the corn, then grinds again. She kneads and moulds the dough, pats the round balls into *tortillas*.

We are the porous rock in the stone *metate*
 squatting on the ground
 We are the rolling pin, *el maíz y agua*,
la masa harina. Somos el amasijo.
Somos lo molido en el metate.
 We are the *comal* sizzling hot,
 the hot *tortilla*, the hungry mouth.
 We are the coarse rock.
 We are the grinding motion,
 the mixed potion, *somos el molcajete.*
 We are the pestle, the *comino, ajo, pimienta*,
 We are the *chile colorado*,
 the green shoot that cracks the rock.
 We will abide.

EL CAMINO DE LA MESTIZA/THE MESTIZA WAY

Caught between the sudden contraction, the breath sucked in and the endless space, the brown woman stands still, looks at the sky. She decides to go down, digging her way along the roots of trees. Sifting through the bones, she shakes them to see if there is any marrow in them. Then, touching the dirt to her forehead, to her tongue, she takes a few bones, leaves the rest in their burial place.

She goes through her backpack, keeps her journal and address book, throws away the muni-bart metromaps.⁹ The coins are heavy and they go next, then the greenbacks flutter through the air. She keeps her knife, can opener and eyebrow pencil. She puts bones, pieces of bark, *hierbas*, eagle feather, snakeskin, tape recorder, the rattle and drum in her pack and she sets out to become the complete *tolteca*.¹

Her first step is to take inventory. *Despojando, desgranando, quitando paja*. Just what did she inherit from her ancestors? This weight on her back—which is the baggage from the Indian mother, which the baggage from the Spanish father, which the baggage from the Anglo?

Pero es difícil differentiating between *lo heredado, lo adquirido, lo impuesto*. She puts history through a sieve, winnows out the lies, looks at the forces that we as a race, as women, have been a part of. *Luego bota lo que no vale, los desmientos, los desencuentos, el embrutecimiento. Aguarda el juicio, hondo y enraizado, de la gente antigua*. This step is a conscious rupture with all oppressive traditions of all cultures and religions. She communicates that rupture, documents the struggle. She reinterprets history and, using new symbols, she shapes new myths. She adopts new perspectives toward the darkskinned, women and queers. She strengthens her tolerance (and intolerance) for ambiguity. She is willing to share, to make herself vulnerable to foreign ways of

9. Maps of San Francisco's bus and subway routes.

canas (Los Angeles Castle Lithograph, 1982), 2 [Anzaldúa's note].

seeing and thinking. She surrenders all notions of safety, of the familiar. Deconstruct, construct. She becomes a *nahual*, able to transform herself into a tree, a coyote, into another person. She learns to transform the small "I" into the total Self. *Se hace moldeadora de su alma. Según la concepción que tiene de sí misma, así será.*

QUE NO SE NOS OLVIDE LOS HOMBRES

*Tú no sirves pa' nada—
you're good for nothing.
Eres pura vieja.*

"You're nothing but a woman" means you are defective. Its opposite is to be *un macho*. The modern meaning of the word "machismo," as well as the concept, is actually an Anglo invention. For men like my father, being "macho" meant being strong enough to protect and support my mother and us, yet being able to show love. Today's macho has doubts about his ability to feed and protect his family. His "machismo" is an adaptation to oppression and poverty and low self-esteem. It is the result of hierarchical male dominance. The Anglo, feeling inadequate and inferior and powerless, displaces or transfers these feelings to the Chicano by shaming him. In the Gringo world, the Chicano suffers from excessive humility and self-effacement, shame of self and self-depreciation. Around Latinos he suffers from a sense of language inadequacy and its accompanying discomfort; with Native Americans he suffers from a racial amnesia which ignores our common blood, and from guilt because the Spanish part of him took their land and oppressed them. He has an excessive compensatory hubris when around Mexicans from the other side. It overlays a deep sense of racial shame.

The loss of a sense of dignity and respect in the macho breeds a false machismo which leads him to put down women and even to brutalize them. Coexisting with his sexist behavior is a love for the mother which takes precedence over that of all others. Devoted son, macho pig. To wash down the shame of his acts, of his very being, and to handle the brute in the mirror, he takes to the bottle, the snort, the needle, and the fist.

Though we "understand" the root causes of male hatred and fear, and the subsequent wounding of women, we do not excuse, we do not condone, and we will no longer put up with it. From the men of our race, we demand the admission/acknowledgment/disclosure/testimony that they wound us, violate us, are afraid of us and of our power. We need them to say they will begin to eliminate their hurtful put-down ways. But more than the words, we demand acts. We say to them: We will develop equal power with you and those who have shamed us.

It is imperative that *mestizas* support each other in changing the sexist elements in the Mexican-Indian culture. As long as woman is put down, the Indian and the Black in all of us is put down. The struggle of the *mestiza* is above all a feminist one. As long as *los hombres* think they have to *chingar mujeres* and each other to be men, as long as men are taught that they are superior and therefore culturally favored over *la mujer*, as long as to be a *vieja* is a thing of derision, there can be no real healing of our psyches. We're halfway

there—we have such love of the Mother, the good mother. The first step is to unlearn the *puta/virgen* dichotomy and to see *Coatlapopeuh-Coatlicue* in the Mother, *Guadalupe*.²

Tenderness, a sign of vulnerability, is so feared that it is showered on women with verbal abuse and blows. Men, even more than women, are fettered to gender roles. Women at least have had the guts to break out of bondage. Only gay men have had the courage to expose themselves to the woman inside them and to challenge the current masculinity. I've encountered a few scattered and isolated gentle straight men, the beginnings of a new breed, but they are confused, and entangled with sexist behaviors that they have not been able to eradicate. We need a new masculinity and the new man needs a movement.

Lumping the males who deviate from the general norm with man, the oppressor, is a gross injustice. *Asombra pensar que nos hemos quedado en ese pozo oscuro donde el mundo encierra a las lesbianas. Asombra pensar que hemos, como feministas y lesbianas, cerrado nuestros corazones a los hombres, a nuestros hermanos los jotos, desheredados y marginales como nosotros.* Being the supreme crossers of cultures, homosexuals have strong bonds with the queer white, Black, Asian, Native American, Latino, and with the queer in Italy, Australia and the rest of the planet. We come from all colors, all classes, all races, all time periods. Our role is to link people with each other—the Blacks with Jews with Indians with Asians with whites with extraterrestrials. It is to transfer ideas and information from one culture to another. Colored homosexuals have more knowledge of other cultures; have always been at the forefront (although sometimes in the closet) of all liberation struggles in this country; have suffered more injustices and have survived them despite all odds. Chicanos need to acknowledge the political and artistic contributions of their queer. People, listen to what your *jotería* is saying.

The *mestizo* and the queer exist at this time and point on the evolutionary continuum for a purpose. We are a blending that proves that all blood is intricately woven together, and that we are spawned out of similar souls.

SOMOS UNA GENTE

*Hay tantísimas fronteras
que dividen a la gente,
pero por cada frontera
existe también un puente.*

—Gina Valdés³

Divided Loyalties. Many women and men of color do not want to have any dealings with white people. It takes too much time and energy to explain to the downwardly mobile, white middle-class women that it's okay for us to want to own "possessions," never having had any nice furniture on our dirt floors or "luxuries" like washing machines. Many feel that whites should help their own people rid themselves of race hatred and fear first. I, for one, choose to use some of my energy to serve as mediator. I think we

2. Our Lady of Guadalupe, the Virgin Mary (who is said to have appeared to a Native American in that Mexican city in 1531). *Coatlapopeuh*—

Coatlicue: Aztec earth goddess who is the mother of the gods.

3. Valdés, *Puentes y Fronteras*, 2 [Anzaldúa's note].

need to allow whites to be our allies. Through our literature, art, *corridos*, and folktales we must share our history with them so when they set up committees to help Big Mountain Navajos or the Chicano farmworkers or *los Nicaragüenses*⁴ they won't turn people away because of their racial fears and ignorances. They will come to see that they are not helping us but following our lead.

Individually, but also as a racial entity, we need to voice our needs. We need to say to white society: We need you to accept the fact that Chicanos are different, to acknowledge your rejection and negation of us. We need you to own the fact that you looked upon us as less than human, that you stole our lands, our personhood, our self-respect. We need you to make public restitution: to say that, to compensate for your own sense of defectiveness, you strive for power over us, you erase our history and our experience because it makes you feel guilty—you'd rather forget your brutish acts. To say you've split yourself from minority groups, that you disown us, that your dual consciousness splits off parts of yourself, transferring the "negative" parts onto us. (Where there is persecution of minorities, there is shadow projection. Where there is violence and war, there is repression of shadow.) To say that you are afraid of us, that to put distance between us, you wear the mask of contempt. Admit that Mexico is your double, that she exists in the shadow of this country, that we are irrevocably tied to her. Gringo, accept the doppelganger in your psyche. By taking back your collective shadow the intracultural split will heal. And finally, tell us what you need from us.

BY YOUR TRUE FACES WE WILL KNOW YOU

I am visible—see this Indian face—yet I am invisible. I both blind them with my beak nose and am their blind spot. But I exist, we exist. They'd like to think I have melted in the pot. But I haven't, we haven't.

The dominant white culture is killing us slowly with its ignorance. By taking away our self-determination, it has made us weak and empty. As a people we have resisted and we have taken expedient positions, but we have never been allowed to develop unencumbered—we have never been allowed to be fully ourselves. The whites in power want us people of color to barricade ourselves behind our separate tribal walls so they can pick us off one at a time with their hidden weapons; so they can whitewash and distort history. Ignorance splits people, creates prejudices. A misinformed people is a subjugated people.

Before the Chicano and the undocumented worker and the Mexican from the other side can come together, before the Chicano can have unity with Native Americans and other groups, we need to know the history of their struggle and they need to know ours. Our mothers, our sisters and brothers, the guys who hang out on street corners, the children in the playgrounds, each of us must know our Indian lineage, our *afro-mestisaje*, our history of resistance.

To the immigrant *mexicano* and the recent arrivals we must teach our history. The 80 million *mexicanos* and the Latinos from Central and South

4. In the 1980s the U.S. government funded paramilitary forces engaged in a guerrilla war against the Sandinista government of Nicaragua.

America must know of our struggles. Each one of us must know basic facts about Nicaragua, Chile and the rest of Latin America.⁵ The Latinoist movement (Chicanos, Puerto Ricans, Cubans and other Spanish-speaking people working together to combat racial discrimination in the market place) is good but it is not enough. Other than a common culture we will have nothing to hold us together. We need to meet on a broader communal ground.

The struggle is inner: Chicano, *indio*, American Indian, *mojado*, *mexicano*, immigrant Latino, Anglo in power, working class Anglo, Black, Asian—our psyches resemble the bordertowns and are populated by the same people. The struggle has always been inner, and is played out in the outer terrains. Awareness of our situation must come before inner changes, which in turn come before changes in society. Nothing happens in the “real” world unless it first happens in the images in our heads.

EL DÍA DE LA CHICANA

I will not be shamed again
Nor will I shame myself.

I am possessed by a vision that we Chicanas and Chicanos have taken back or uncovered our true faces, our dignity and self-respect. It's a validation vision.

Seeing the Chicana anew in light of her history. I seek an exoneration, a seeing through the fictions of white supremacy, a seeing of ourselves in our true guises and not as the false racial personality that has been given to us and that we have given to ourselves. I seek our woman's face, our true features, the positive and the negative seen clearly, free of the tainted biases of male dominance. I seek new images of identity, new beliefs about ourselves, our humanity and worth no longer in question.

Estamos viviendo en la noche de la Raza, un tiempo cuando el trabajo se hace a lo quieto, en el oscuro. El día cuando aceptamos tal y como somos y para en donde vamos y porque—ese día será de la Raza. Yo tengo el compromiso de expresar mi visión, mi sensibilidad, mi percepción de la revalidación de la gente mexicana, su mérito estimación, honra, aprecio, y validez.

On December 2nd when my sun goes into my first house, I celebrate *el día de la Chicana y el Chicano*. On that day I clean my altars, light my *Coatloapeuh* candle, burn sage and copal, take *el baño para espantar basura*, sweep my house. On that day I bare my soul, make myself vulnerable to friends and family by expressing my feelings. On that day I affirm who we are.

On that day I look inside our conflicts and our basic introverted racial temperament. I identify our needs, voice them. I acknowledge that the self and the race have been wounded. I recognize the need to take care of our personhood, of our racial self. On that day I gather the splintered and disowned parts of *la gente mexicana* and hold them in my arms. *Todas las partes de nosotros valen.*

5. This history includes U.S. government interventions in Latin and Central American countries from 1950 to 1990, undermining governments

thought to be too leftist and supporting right-wing governments.

On that day I say, "Yes, all you people wound us when you reject us. Rejection strips us of self-worth; our vulnerability exposes us to shame. It is our innate identity you find wanting. We are ashamed that we need your good opinion, that we need your acceptance. We can no longer camouflage our needs, can no longer let defenses and fences sprout around us. We can no longer withdraw. To rage and look upon you with contempt is to rage and be contemptuous of ourselves. We can no longer blame you, nor disown the white parts, the male parts, the pathological parts, the queer parts, the vulnerable parts. Here we are weaponless with open arms, with only our magic. Let's try it our way, the *mestiza* way, the Chicana way, the woman way.

On that day, I search for our essential dignity as a people, a people with a sense of purpose—to belong and contribute to something greater than our *pueblo*. On that day I seek to recover and reshape my spiritual identity. ¡*Anímate! Raza, a celebrar el día de la Chicana.*

EL RETORNO

All movements are accomplished in six stages,
and the seventh brings return.

—I Ching⁶

*Tanto tiempo sin verte casa mía,
mi cuna, mi hondo nido de la huerta.*

—"Soledad"⁷

I stand at the river, watch the curving, twisting serpent, a serpent nailed to the fence where the mouth of the Rio Grande empties into the Gulf.

I have come back. *Tanto dolor me costó el alejamiento.* I shade my eyes and look up. The bone beak of a hawk slowly circling over me, checking me out as potential carrion. In its wake a little bird flickering its wings, swimming sporadically like a fish. In the distance the expressway and the slough of traffic like an irritated sow. The sudden pull in my gut, *la tierra, los aguaceros.* My land, *el viento soplando la arena, el lagartijo debajo de un nopalito.* Me acuerdo como era antes. *Una región desértica de vasta llanuras, costeras de baja altura, de escasa lluvia, de chaparrales formados por mesquites y huizaches.* If I look real hard I can almost see the Spanish fathers who were called "the cavalry of Christ" enter this valley riding their burros, see the clash of cultures commence.

Tierra natal. This is home, the small towns in the Valley, *los pueblitos* with chicken pens and goats picketed to mesquite shrubs. *En las colonias on the other side of the tracks, junk cars line the front yards of hot pink and lavender-trimmed houses—Chicano architecture we call it, self-consciously. I have missed the TV shows where hosts speak in half and half, and where awards are given in the category of Tex-Mex music. I have missed the Mexican cemeteries blooming with artificial flowers, the fields of aloe vera and red pepper, rows of sugar cane, of corn hanging on the stalks, the cloud of polvareda in the dirt roads behind a speeding pickup truck, el sabor de tamales de*

6. Richard Wilhelm, *The I Ching or Book of Changes*, trans. Cary F. Baynes (Princeton: Princeton University Press, 1950), 98 [Anzaldúa's note].

7. "Soledad" is sung by the group Haciendo Punto and Otto Son [Anzaldúa's note].

rez y venado. I have missed *la yegua colorada* gnawing the wooden gate of her stall, the smell of horse flesh from Carito's corrals. *He hecho menos las noches calientes sin aire, noches de linternas y lechuzas* making holes in the night.

I still feel the old despair when I look at the unpainted, dilapidated, scrap lumber houses consisting mostly of corrugated aluminum. Some of the poorest people in the U.S. live in the Lower Rio Grande Valley, an arid and semi-arid land of irrigated farming, intense sunlight and heat, citrus groves next to chaparral and cactus. I walk through the elementary school I attended so long ago, that remained segregated until recently. I remember how the white teachers used to punish us for being Mexican.

How I love this tragic valley of South Texas, as Ricardo Sánchez⁸ calls it; this borderland between the Nueces and the Rio Grande. This land has survived possession and ill-use by five countries: Spain, Mexico, the Republic of Texas, the U.S., the Confederacy, and the U.S. again. It has survived Anglo-Mexican blood feuds, lynchings, burnings, rapes, pillage.

Today I see the Valley still struggling to survive. Whether it does or not, it will never be as I remember it. The borderlands depression that was set off by the 1982 peso devaluation in Mexico resulted in the closure of hundreds of Valley businesses. Many people lost their homes, cars, land. Prior to 1982, U.S. store owners thrived on retail sales to Mexicans who came across the border for groceries and clothes and appliances. While goods on the U.S. side have become 10, 100, 1000 times more expensive for Mexican buyers, goods on the Mexican side have become 10, 100, 1000 times cheaper for Americans. Because the Valley is heavily dependent on agriculture and Mexican retail trade, it has the highest unemployment rates along the entire border region; it is the Valley that has been hardest hit.⁹

"It's been a bad year for corn," my brother, Nune, says. As he talks, I remember my father scanning the sky for a rain that would end the drought, looking up into the sky, day after day, while the corn withered on its stalk. My father has been dead for 29 years, having worked himself to death. The life span of a Mexican farm laborer is 56—he lived to be 38. It shocks me that I am older than he. I, too, search the sky for rain. Like the ancients, I worship the rain god and the maize goddess, but unlike my father I have recovered their names. Now for rain (irrigation) one offers not a sacrifice of blood, but of money.

"Farming is in a bad way," my brother says. "Two to three thousand small and big farmers went bankrupt in this country last year. Six years ago the price of corn was \$8.00 per hundred pounds," he goes on. "This year it is \$3.90 per hundred pounds." And, I think to myself, after taking inflation into account, not planting anything puts you ahead.

8. American poet and critic (1941–1995).

9. Out of the 22 border counties in the four border states, Hidalgo County (named for Father Hidalgo who was shot in 1810 after instigating Mexico's revolt against Spain under the banner of *la Virgen de Guadalupe*) is the most poverty-

stricken county in the nation as well as the largest home base (along with Imperial in California) for migrant farm-workers. It was here that I was born and raised. I am amazed that both it and I have survived [Anzaldúa's note].

I walk out to the back yard, stare at *los rosales de mamá*. She wants me to help her prune the rose bushes, dig out the carpet grass that is choking them. *Mamagrande Ramona también tenía rosales*. Here every Mexican grows flowers. If they don't have a piece of dirt, they use car tires, jars, cans, shoe boxes. Roses are the Mexican's favorite flower. I think, how symbolic—thorns and all.

Yes, the Chicano and Chicana have always taken care of growing things and the land. Again I see the four of us kids getting off the school bus, changing into our work clothes, walking into the field with Papí and Mamí, all six of us bending to the ground. Below our feet, under the earth lie the watermelon seeds. We cover them with paper plates, putting *terremotes* on top of the plates to keep them from being blown away by the wind. The paper plates keep the freeze away. Next day or the next, we remove the plates, bare the tiny green shoots to the elements. They survive and grow, give fruit hundreds of times the size of the seed. We water them and hoe them. We harvest them. The vines dry, rot, are plowed under. Growth, death, decay, birth. The soil prepared again and again, impregnated, worked on. A constant changing of forms, *renacimientos de la tierra madre*.

This land was Mexican once
was Indian always
and is.

And will be again.

1987

GAYATRI CHAKRAVORTY SPIVAK

b. 1942

Gayatri Chakravorty Spivak is an unsettling voice in literary theory and, especially, postcolonial studies. She has described herself as a “practical deconstructionist feminist Marxist” and as a “gadfly.” She uses deconstruction to examine “how truth is constructed” and to deploy the assertions of one intellectual and political position (such as Marxism) to “interrupt” or “bring into crisis” another (feminism, for example). In her work, she combines passionate denunciations of the harm done to women, non-Europeans, and the poor by the privileged West with a persistent questioning of the grounds on which radical critique takes its stand.

Her continual interrogation of assumptions can make Spivak difficult to read. But her restless critiques connect directly to her ethical aspiration for a “politics of the open end,” in which deconstruction acts as a “safeguard” against the repression or exclusion of “alterities”—that is, people, events, or ideas that are radically “other” to the dominant worldview. Deconstruction, according to Spivak, “is constantly and persistently looking into how truths are produced. That’s why deconstruction doesn’t say logocentrism is a pathology, or metaphysical enclosures are something you can escape. Deconstruction, if one wants a formula, is among other things, a persistent critique of what one cannot not want.” She writes against the “epistemic violence” done by discourses of knowledge that carve up the world and condemn to

oblivion the pieces that do not easily fit. Characteristically, she does not claim to avoid such violence herself; rather, she self-consciously explores structures of violence without assuming a final, settled position.

Spivak was born in Calcutta, India, and received her B.A. from the University of Calcutta. She came to the United States and completed her M.A. and Ph.D. in English literature at Cornell University, where PAUL DE MAN was one of her mentors. She has taught at various American universities, including the University of Iowa, the University of Texas, Emory University, the University of Pittsburgh, and Columbia University. Her earliest important work was her introduction to and translation of JACQUES DERRIDA's *Of Grammatology* (1977), the first of his major books to be rendered in full into English. Spivak played a key role in introducing French "theory" into North American and British literature departments between 1975 and 1982. Almost from the start, she emphasized how deconstruction's interest in the "violence" of traditional hierarchical binary oppositions (between male and female, the West and the rest, etc.) afforded a passage from literary theory to radical politics. Spivak joined feminism's interest in silenced women to a Marxist global concern with the political, economic, and cultural oppression of nonwhite people. The result was a series of highly influential essays that helped set the agenda for feminism and for postcolonial theory in the 1980s and 1990s. In 1997 Spivak founded the Pares Chandra and Sivani Chakravorty Memorial Literacy Project, a charitable foundation that trains teachers and runs schools in rural India.

"Can the Subaltern Speak?" may be Spivak's best-known essay; it is certainly her most controversial. First given as a lecture in 1983 and published in different versions in 1985 and 1988, Spivak offers a greatly expanded revision (more than one hundred pages) in her *Critique of Postcolonial Reason* (1999). Our selection offers three sections from this revised version, beginning with the sentence in which Spivak poses a central concern: "the possibility that the intellectual is complicit in the persistent constitution of the Other as the Self's shadow." Her essay insists "on marking [critics'] positionality as investigating subjects." Postcolonial critics, like many feminists, want to give silenced others a voice. But Spivak worries that even the most benevolent effort merely repeats the very silencing it aims to combat. The outsider creates the framework within which the "native" speaks and, thus, for Spivak constitutes that native in ways that undermine any claim to authentic contact. After all, colonialists often thought of themselves as well-intentioned. Spivak points to the British outlawing of *sati*, the Hindu practice of burning a widow on her husband's funeral pyre. While this intervention saved some lives and may have given women a modicum of free choice, it also served to secure British power in India and to underscore the asserted difference between British "civilization" and Indian "barbarism." Hindu culture was driven underground, written out of law, denied any legitimacy. Can today's intellectuals avoid a similar condescension when they represent the oppressed?

Spivak articulates her reasons for her worries in the first part of our selection, applying MICHEL FOUCAULT's understanding of "epistemic violence" to the "remotely orchestrated, far-flung, and heterogeneous project to constitute the colonial subject as Other." Foucault views intellectual power as functioning discursively to produce the very subject over which it then exercises mastery. Of course, no discourse succeeds in obliterating all alternative discourses. Intellectuals have frequently tried to create counterdiscourses that contest the dominant discourses, with the hope of connecting with the oppressed's own acts of resistance. Spivak sees postcolonial studies as a new instance of this attempt to liberate the other and to enable that other to experience and articulate those parts of itself that fall outside what the dominant discourse has constituted as its subjecthood. She asks whether such work can succeed. Can—with or without the intervention of well-intentioned intellectuals—the "subaltern" speak? Her blunt answer is no.

A subaltern, according to the dictionary, is a person holding a subordinate position, originally a junior officer in the British army. But Spivak draws on the term's nuances. It has particularly rich connotations for the Indian subcontinent because the Anglo-Indian writer Rudyard Kipling (1865–1936) so often viewed imperialism from the ambivalent position of the subaltern functionary in the complex colonial hierarchy, caught between detested superiors and feared “natives.” The Italian Marxist theorist ANTONIO GRAMSCI later applied the term to the unorganized masses that must be politicized for the workers’ revolution to succeed. In the 1980s the Subaltern Studies Group (a collective of radical historians in India with whom Spivak maintains ties) appropriated the term, focusing their attention on the disenfranchised peoples of India. The “subaltern” always stands in an ambiguous relation to power—subordinate to it but never fully consenting to its rule, never adopting the dominant point of view or vocabulary as expressive of its own identity. “One must nevertheless insist that the colonized subaltern *subject* is irretrievably heterogeneous,” declares Spivak. Can this difference be articulated? And if so, by whom?

Because subalterns exist, to some extent, outside power, theorists and advocates of political transformation have consistently looked to them as a potential source of change. Marxists speak of and for the proletariat, feminists of and for oppressed women, and anticolonialists of and for third world peoples. In part, Spivak is reacting against the persistent tendency of radical political movements to romanticize the other, especially against the notion that third world peoples must lead the fight against multinational global capitalism. To assign them that role is to repeat colonialism’s basic violence, which views non-Europeans as important only insofar as they follow Western scripts. Furthermore, when most of the power resides in the West, why should the least powerful of those caught up in globalization be responsible for halting its advance? Finally, Spivak points out that the suggestion that all third world peoples stand in the same relation to global capitalism and should respond to it in the same way is “essentialist.”

Essentialism names the belief that certain people or entities share some essential, unchanging “nature” that secures their membership in a category. In the 1980s, essentialism was the target of much feminist criticism because activists recognized that generalizations about “woman” inevitably exclude some women. One response was “difference feminism,” which stressed alliances among women across their differences and hoped to replace a solidarity based on shared essential qualities and experiences. Spivak’s landmark contribution to this debate was the concept of “strategic essentialism.” In some instances, she argued, it was important *strategically* to make essentialist claims, even while one retained an awareness that those claims were, at best, crude political generalizations. For example, feminists must publicize “the feminization of poverty”—the ways in which employment practices and wages, divorce law and settlements, and social policies ensure that in many societies women make up the majority of poor adults. Of course, many women are not poor, and poverty has causes other than an individual’s sex, but to battle effectively against the poverty of some women requires the strategic essentialism of highlighting the gendered nature of economic inequality.

Leftist intellectuals who romanticize the oppressed, Spivak argues, essentialize the subaltern and thus replicate the colonialist discourses they purport to critique. To replace this leftist fantasy of an untouched or essential purity lodged in a particular group, Spivak reminds us (citing Ranajit Guha, a founding member of the Subaltern Studies Group) that a person’s or group’s identity is relational, a function of its place in a system of differences. There is no true or pure other; instead, the other always already exists in relation to the discourse that would name it as other.

But does the differential position of otherness afford it some resources it can use to articulate its singularity, its nonidentity with power? Spivak seems doubtful; her

historical and political analysis describes Western capitalism and colonialism as triumphant. The whole world is now organized economically, politically, and culturally along the lines of Western discourses. Although those discourses are not perfectly aligned, their multiplicity generally reinforces rather than undercuts the marginalization of nonwhite peoples and the dual marginalization of nonwhite women. Given this bleak picture, Spivak turns (in the second part of our selection) to SIGMUND FREUD in an effort to develop an appropriate model of intellectual work.

Freud furthers the analysis of colonialism by helping us see how the very identity of whiteness itself is created in part through the self-proclaimed benevolence of colonial action. More important, he implicitly cautions us against scapegoating or, conversely, creating saviors. Spivak's "sentence"—"White men are saving brown women from brown men"—serves to justify colonial interventions if white men are taken as saviors and brown men are scapegoated as oppressors of brown women. A postcolonialist discourse could just as easily scapegoat white men, with the inevitable consequence of presenting either brown men or brown women as the saviors. Spivak thinks that Freud (as both a positive and a negative example, since he himself didn't always avoid scapegoating) can aid us to keep the "sentence" open, to explore the dynamics of the unfolding human relationships without foreclosing narratives by assigning determinate roles. She remains leery of any attempt to fix and celebrate the subaltern's distinctive voice by claims that the subaltern occupies the position of victim, abjected other, scapegoat, savior, and so on. The critic must remain attentive to the fluidity of possible relations and actions. Spivak's discussion of Freud is offered not "as a solution" but "in acknowledgment of these dangers" of interpreting and representing the other.

Neither Freud nor Spivak is silent. They each make various determinate claims and, Spivak says, reveal their "political interests" in those claims. As intellectuals, both are at home (although their belonging is qualified by Freud's being Jewish and Spivak's being a nonwhite woman) within the dominant discourse. The subaltern is not similarly privileged, and does not speak in a vocabulary that will get a hearing in institutional locations of power. The subaltern enters official and intellectual discourse only rarely and usually through the mediating commentary of someone more at home in those discourses. If the problematic is understood this way, it is hard to see how the subaltern can be capable of speaking.

In the third part of our selection, Spivak offers yet a further twist. She tells the story of Bhubaneswari Bhaduri's suicide not as an example of the Indian woman's inability to speak within Western discourse, but to show that Indian discourse has been so battered by the storms of (colonial) history that it, too, offers no resources for successful communication. Bhubaneswari's suicide is misunderstood by everyone, including her own family—and no one in India seems interested in Spivak's return to and reinterpretation of the event. "Unnerved by this failure of communication," Spivak wrote her "passionate lament: the subaltern cannot speak!" Fifteen years later, Spivak comments: "It was an inadvisable remark."

What scraps of comfort has Spivak unearthed in the meantime to challenge her first, despairing conclusion? She has reminded herself that "speaking" always occurs within the nexus of actions that include listening, responding, interpreting, and qualifying. One's words can be taken up in any number of possible ways. The ongoing effects of an utterance, not its singular expression or any one response, produces its character as a speech act. Much of the point of revisionist history, of returning to scenes of domination and oppression, is to reactivate attempts at speaking that other forces tried to obliterate and keep from having effects. In revisiting Bhubaneswari's suicide, Spivak makes it speak in new ways. To deny that this retelling is a form of speaking would be to hold on to a criterion of "authenticity" that runs counter to Spivak's whole argument about identity. The historian who tries to recover the past should sketch "the itinerary of the trace" that the silenced subaltern has left, should mark the sites where the subaltern was effaced, and should delineate the discourses that did the effacing.

Spivak remains wary of all representations, even while accepting that the opening of “a line of communication” is “to be desired” and “allows us to take pride in our work without making missionary claims.” On theoretical and ethical grounds, she insists that any system, any discourse, inevitably excludes something, and she will “reserve” the word *subaltern* to point toward “the sheer heterogeneity of decolonized space.” She very much wants the “traces” of those exclusions to haunt us. In every utterance she urges us to hear the faint whisper of what could not be said. And she asks us to be ready to change our current discourse for a new one that would get closer to what the old one leaves unspoken—although the new discourse will have its own silences. This attunement to the unheard is what Spivak, following the philosopher Bimal Krishna Matilal, calls “moral love.”

A persistent complaint against Spivak, aside from her difficult style, is that she leaves us no place to stand. Her political pronouncements are unambiguous, but she steadfastly refuses to advocate solutions beyond an openness to the other that can appear vague, undiscriminating, and indeed theatrical. To continually dismantle one’s own assumptions seems itself an act of privilege, a deconstructionist’s luxury that few can afford, especially those who have to make decisions here and now (a point somewhat conceded by Spivak in her concept of “strategic essentialism”). As an antidote to complacency, however, Spivak’s work is exemplary. She never lets anyone, including herself, smugly assume that he or she is on the side of the angels. Her restless probing is unsettling, but invigorating. Like the stranger whose name is “trouble,” she shakes things up and gets them moving. No topic is ever quite the same or quite so easy after Spivak has come through town.

From Chapter 3. History

[CAN THE SUBALTERN SPEAK?]

* * *

In the face of the possibility that the intellectual is complicit in the persistent constitution of the Other as the Self’s shadow, a possibility of political practice for the intellectual would be to put the economic “under erasure,” to see the economic factor as irreducible as it reinscribes the social text, even as it is erased, however imperfectly, when it claims to be the final determinant or the transcendental signified.¹

1. This argument is developed further in Spivak, “Scattered Speculations on the Question of Value,” in *In Other Worlds: Essays in Cultural Politics* (New York: Methuen, 1987), pp. 154–75. Once again, the *Anti-Oedipus* did not ignore the economic text, although the treatment was perhaps too allegorical. In this respect, the move from schizo- to rhyzo-analysis in *A Thousand Plateaus* was not, perhaps, salutary [Spivak’s note]. Some of the author’s notes have been edited, and some omitted. Spivak here argues against regarding the economic as all-powerful or as negligible; instead, the economic factor has a discernible impact on society and its discourses (the “social

text”). In *A Thousand Plateaus* (1980), the French philosopher GILLES DELEUZE (1925–1995) and the French psychoanalyst FÉLIX GUATTARI (1930–1992) argue for a model of knowledge patterned not on plants with roots (as is traditional) but on fungal rhizomes, which lack centralized control or structure; their earlier *Anti-Oedipus: Capitalism and Schizophrenia* (1972) critiques both orthodox Marxism and institutional Freudianism. Earlier in her book, Spivak faults them for ignoring sociohistorical specificities, an omission that leads them to posit an essentialized psychological “subject of desire” in place of a historically constituted subject.

Until very recently, the clearest available example of such epistemic violence² was the remotely orchestrated, far-flung, and heterogeneous project to constitute the colonial subject as Other. This project is also the asymmetrical obliteration of the trace of that Other in its precarious Subjectivity. It is well known that Foucault locates one case of epistemic violence, a complete overhaul of the episteme, in the redefinition of madness at the end of the European eighteenth century.³ But what if that particular redefinition was only a part of the narrative of history in Europe as well as in the colonies? What if the two projects of epistemic overhaul worked as dislocated and unacknowledged parts of a vast two-handed engine? Perhaps it is no more than to ask that the subtext of the palimpsestic narrative of imperialism be recognized as “subjugated knowledge,” “a whole set of knowledges that have been disqualified as inadequate to their task or insufficiently elaborated: naive knowledges, located low down on the hierarchy, beneath the required level of cognition or scientificity.”⁴

This is not to describe “the way things really were” or to privilege the narrative of history as imperialism as the best version of history. It is, rather, to continue the account of how *one* explanation and narrative of reality was established as the normative one. A comparable account in the case(s) of Central and Eastern Europe is soon to be launched. To elaborate on this, let us consider for the moment and briefly the underpinnings of the British codification of Hindu Law.

Once again, I am not a South Asianist. I turn to Indian material because I have some accident-of-birth facility there.

Here, then, is a schematic summary of the epistemic violence of the codification of Hindu Law. If it clarifies the notion of epistemic violence, my final discussion of widow-sacrifice⁵ may gain added significance.

At the end of the eighteenth century, Hindu Law, insofar as it can be described as a unitary system, operated in terms of four texts that “staged” a four-part episteme defined by the subject’s use of memory: *sruti* (the heard), *smṛiti* (the remembered), *sāstra* (the calculus), and *vyavahāra* (the performance). The origins of what had been heard and what was remembered were not necessarily continuous or identical. Every invocation of *sruti* technically recited (or reopened) the event of originary “hearing” or revelation. The second two texts—the learned and the performed—were seen as dialectically continuous. Legal theorists and practitioners were not in any given case certain if this structure described the body of law or four ways of settling a dispute. The legitimation, through a binary vision, of the polymorphous structure of legal performance, “internally” noncoherent and open at both ends, is the narrative of codification I offer as an example of epistemic violence.⁶

2. That is, the forcible replacement of one structure of beliefs with another; the term is borrowed from the writings of the French philosopher and historian of ideas MICHEL FOUCAULT (1926–1984), who meant by *episteme* (literally, “knowledge”; Greek) the underlying structure of knowledge and beliefs during a historical period.

3. See Foucault, *Madness and Civilization: A History of Insanity in the Age of Reason*, trans. Richard Howard (New York: Pantheon, 1965), pp. 251, 262, 269 [Spivak’s note].

4. Foucault, *Power/Knowledge: Selected Interviews and Other Writings, 1972–1977*, ed. Colin Gordon (New York: Pantheon, 1980), p. 82 [Spivak’s note].

5. Suttē (from the Hindu *satī*, literally “devoted woman”), the Hindu custom of a widow’s being cremated on the funeral pyre of her husband.

6. That is, the British Empire’s imposition of “binary vision” in place of the existing set of beliefs, the “polymorphous” Hindu Law.

Consider the often-quoted programmatic lines from Macaulay's infamous "Minute on Indian Education" (1835):

We must at present do our best to form a class who may be interpreters between us and the millions whom we govern; a class of persons, Indian in blood and colour, but English in taste, in opinions, in morals, and in intellect. To that class we may leave it to refine the vernacular dialects of the country, to enrich those dialects with terms of science borrowed from the Western nomenclature, and to render them by degrees fit vehicles for conveying knowledge to the great mass of the population.⁷

The education of colonial subjects complements their production in law. One effect of establishing a version of the British system was the development of an uneasy separation between disciplinary formation in Sanskrit studies and the native, now alternative, tradition of Sanskrit "high culture." In the first section, I have suggested that within the former, the cultural explanations generated by authoritative scholars matched the epistemic violence of the legal project.⁸

Those authorities would be *the very best* of the sources for the nonspecialist French intellectual's entry into the civilization of the Other.⁹ I am, however, not referring to intellectuals and scholars of colonial production, like Shastri,¹ when I say that the Other as Subject is inaccessible to Foucault and Deleuze. I am thinking of the general nonspecialist, nonacademic population across the class spectrum, for whom the episteme operates its silent programming function. Without considering the map of exploitation,² on what grid of "oppression" would they place this motley crew?

Let us now move to consider the margins (one can just as well say the silent, silenced center) of the circuit marked out by this epistemic violence, men and women among the illiterate peasantry, Aborigines, and the lowest strata of the urban subproletariat. According to Foucault and Deleuze (in the First World,³ under the standardization and regimentation of socialized capital, though they do not seem to recognize this) and *mutatis mutandis* the metropolitan⁴ "third world feminist" only interested in resistance within capital logic, the oppressed, if given the chance (the problem of representation cannot be bypassed here), and on the way to solidarity through alliance politics (a Marxist thematic is at work here) *can speak and know their conditions*. We must now confront the following question: On the other side of

7. Thomas Babington Macaulay, "Minute on Indian Education," in *Selected Writings*, ed. John Clive and Thomas Pinney (Chicago: University of Chicago Press, 1972), p. 249 [Spivak's note]. Macaulay (1800–1859), English historian and statesman.

8. In suggesting that the organization and production of knowledge within academic disciplines acts with and reinforces more overtly political and legal accumulations of power, Spivak follows Foucault.

9. I have discussed this issue in greater detail with reference to Julia Kristeva's *About Chinese Women*, trans. Anita Barrows (New York: Urizen, 1977), in "French Feminism in an International Frame," in *In Other Worlds*, pp. 136–41

[Spivak's note]. KRISTEVA (b. 1941), Bulgarian-born French philosopher and psychoanalyst.

1. Mahamahopadhyaya Shastri (active 1920s), described by Spivak earlier in the chapter as a "learned Indianist, [and] brilliant representative of the indigenous elite within colonial production."

2. That is, the map of the colonized non-Western world, a map absent from Western thought.

3. The highly industrialized (largely Western) nations in a global economy, which dominate the "underdeveloped" countries of the "third world," many of which are former colonies.

4. Of or pertaining to the "mother country," as distinguished from its colony.

the international division of labor from socialized capital, inside *and* outside the circuit of the epistemic violence of imperialist law and education supplementing an earlier economic text, *can the subaltern speak?*

We have already considered the possibility that, given the exigencies of the inauguration of colonial records, the instrumental woman (the Rani of Sirmur) is not fully written.⁵

Antonio Gramsci's⁶ work on the "subaltern classes" extends the class-position/class-consciousness argument isolated in *The Eighteenth Brumaire*.⁷ Perhaps because Gramsci criticizes the vanguardistic position of the Leninist intellectual,⁸ he is concerned with the intellectual's rôle in the subaltern's cultural and political movement into the hegemony. This movement must be made to determine the production of history as narrative (of truth).⁹ In texts such as *The Southern Question*, Gramsci considers the movement of historical-political economy in Italy within what can be seen as an allegory of reading taken from or prefiguring an international division of labor.¹ Yet an account of the phased development of the subaltern is thrown out of joint when his cultural macrology² is operated, however remotely, by the epistemic interference with legal and disciplinary definitions accompanying the imperialist project. When I move, at the end of this essay, to the question of woman as subaltern, I will suggest that the possibility of collectivity itself is persistently foreclosed through the manipulation of female agency.³

The first part of my proposition—that the phased development of the subaltern is complicated by the imperialist project—is confronted by the "Subaltern Studies" group.⁴ They *must* ask, Can the subaltern speak? Here we are within Foucault's own discipline of history and with people who acknowledge his influence. Their project is to rethink Indian colonial historiography from the perspective of the discontinuous chain of peasant insurgencies during the colonial occupation. This is indeed the problem of "the permission to narrate" discussed by Said.⁵ As Ranajit Guha, the founding editor of the collective, argues,

5. In an earlier chapter, Spivak discusses at length how the British in 1815 prevented the widow-suicide of the widow of the deposed leader of the province of Sirmur, arguing that their intervention was based on a misunderstanding of Hindu practice, served the British's administrative needs in Sirmur, was conducted with an almost parodic British reverence for "legality," and completely obscured the Rani's motives and wishes.

6. Italian Marxist (1891–1937; see above), best known for his notions of "cultural hegemony" (the manufactured consent that legitimates a dominant group and unifies a society) and the "organic intellectual" (someone, regardless of profession, who directs the ideas and aspirations of the particular social class to which he or she "organically" belongs). In his *Prison Notebooks* (published 1948–51), he applies the word *subaltern* to the proletariat.

7. *The Eighteenth Brumaire of Louis Napoleon* (1852), an analysis by the German social, economic, and political theorist KARL MARX (1818–1883) of the dictatorship (later emperorship) declared by President Louis Bonaparte of France in 1851. Spivak argues earlier in her text that Marx explores the "gap" between "class-position" (a group's location in the economic relations of production) and "class-consciousness" (a group's

ability to represent to itself the interests that stem from its class position).

8. That is, the position of the Russian revolutionary V. I. Lenin (1870–1924), contrary to Marx's own theory, that the proletarian revolution must be led by a vanguard (i.e., the Bolsheviks).

9. That is, a way of seeing the world shared by those individuals won over to the hegemonic view.

1. Antonio Gramsci, *The Southern Question*, trans. Pasquale Verdicchio (West Lafayette, Ind.: Bordighera, 1995) [Spivak's note].

2. Prolonged discourse.

3. That is, by colonial and postcolonial economic and political arrangements that place women and men at odds with one another.

4. A group of radical historians in India—in particular, the editorial collective of the annual publication *Subaltern Studies* (founded in 1982)—who have worked to recover the struggles of the poor independent of elite nationalism and to reconstruct peasant consciousness.

5. Edward W. Said, "Permission to Narrate," *London Review of Books*, February 16, 1984 [Spivak's note]. SAID (1935–2003), Palestinian-born American theorist of postcolonialism and political activist.

The historiography of Indian nationalism has for a long time been dominated by elitism—colonialist elitism and bourgeois-nationalist elitism . . . shar[ing] the prejudice that the making of the Indian nation and the development of the consciousness—nationalism—which confirmed this process were exclusively or predominantly elite achievements. In the colonialist and neo-colonialist historiographies these achievements are credited to British colonial rulers, administrators, policies, institutions, and culture; in the nationalist and neo-nationalist writings—to Indian elite personalities, institutions, activities and ideas.⁶

Certain members of the Indian elite are of course native informants for first-world intellectuals interested in the voice of the Other. But one must nevertheless insist that the colonized subaltern *subject* is irretrievably heterogeneous.

Against the indigenous elite we may set what Guha calls “the *politics* of the people,” both outside (“this was an *autonomous* domain, for it neither originated from elite politics nor did its existence depend on the latter”) and inside (“it continued to operate vigorously in spite of [colonialism], adjusting itself to the conditions prevailing under the Raj⁷ and in many respects developing entirely new strains in both form and content”) the circuit of colonial production. I cannot entirely endorse this insistence of determinate vigor and full autonomy, for practical historiographic exigencies will not allow such endorsements to privilege subaltern consciousness. Against the possible charge that his approach is essentialist, Guha constructs a definition of the people (the place of that essence) that can be only an identity-in-differential. He proposes a dynamic stratification grid describing colonial social production at large. Even the third group on the list, the buffer group, as it were, between the people and the great macro-structural dominant groups, is itself defined as a place of in-betweenness. The classification falls into: “dominant foreign groups,” and “dominant indigenous groups at the all-India and at the regional and local levels” representing the elite; and “[t]he social groups and elements included in [the terms “people” and “subaltern classes”] represent[ing] the demographic difference between the total Indian population and all those whom we have described as the “elite.”⁸

“The task of research” projected here is “to investigate, identify and measure the *specific* nature and degree of the *deviation* of [the] elements [constituting item 3] from the ideal and situate it historically.” “Investigate, identify, and measure the specific”: a program could hardly be more essentialist and taxonomic. Yet a curious methodological imperative is at work. I have argued that, in the Foucault-Deleuze conversation, a post-representationalist vocabulary⁹ hides an essentialist agenda. In subaltern studies, because of the violence of imperialist epistemic, social, and disciplinary inscription, a project understood in essentialist terms¹ must traffic in a radical textual practice of differences. The object of the group’s investigation, in this case not even of the people as such but of the floating buffer zone of the regional elite—is a *deviation* from an *ideal*—the people or subaltern—which is itself defined as a difference from the elite. It is toward this structure that the research is

7. British colonial rule in India.

8. Guha, pp. 4, 8 [Spivak’s note].

9. That is, a vocabulary that champions difference and the undecidable.

1. In terms of a search for the “true” or “essential” voice of Indian resistance to the British.

oriented, a predicament rather different from the self-diagnosed transparency of the first-world radical intellectual. What taxonomy can fix such a space? Whether or not they themselves perceive it—in fact Guha sees his definition of “the people” within the master-slave dialectic²—their text articulates the difficult task of rewriting its own conditions of impossibility as the conditions of its possibility. “At the regional and local levels [the dominant indigenous groups] . . . if belonging to social strata hierarchically inferior to those of the dominant all-Indian groups *acted in the interests of the latter and not in conformity to interests corresponding truly to their own social being*.”³ When these writers speak, in their essentializing language, of a gap between interest and action in the intermediate group, their conclusions are closer to Marx than to the self-conscious naivete of Deleuze’s pronouncement on the issue. Guha, like Marx, speaks of interest in terms of the social rather than the libidinal being. The Name-of-the-Father imagery in *The Eighteenth Brumaire* can help to emphasize that, on the level of class or group action, “true correspondence to own being” is as artificial or social as the patronymic.⁴

It is to this intermediate group that the second woman in this chapter belongs.⁵ The pattern of domination is here determined mainly by gender rather than class. The subordinated gender following the dominant within the challenge of nationalism while remaining caught within gender oppression is not an unknown story.

For the (gender-unspecified) “true” subaltern group, whose identity is its difference, there is no unrepresentable subaltern subject that can know and speak itself; the intellectual’s solution is not to abstain from representation. The problem is that the subject’s itinerary⁶ has not been left traced so as to offer an object of seduction to the representing intellectual. In the slightly dated language of the Indian group, the question becomes, How can we touch the consciousness of the people, even as we investigate their politics? With what voice-consciousness can the subaltern speak?

My question about how to earn the “secret encounter” with the contemporary hill women of Sirmur⁷ is a practical version of this. The woman of whom I will speak in this section was not a “true” subaltern, but a metropolitan middle-class girl. Further, the effort she made to write or speak her body was in the accents of accountable reason, the instrument of self-conscious responsibility. Still her Speech Act⁸ was refused. She was made to unspeak herself posthumously, by other women. In an earlier version of this chapter, I had summarized this historical indifference and its results as: the subaltern cannot speak.

The critique by Ajit K. Chaudhury, a West Bengali Marxist, of Guha’s search for the subaltern consciousness can be taken as representative of a

2. As set forth by the German philosopher GEORG WILHELM FRIEDRICH HEGEL in *Phenomenology of Spirit* (1807; see above): he tells of two self-consciousnesses that confront each other and fight for mutual recognition. One wins the battle and the other loses, but each gets recognition and thereby identifies him- or herself through the eyes of the other.

3. Guha, 1 [Spivak’s note].

4. That is, the Name-of-the-Father, a term used by the French psychoanalyst JACQUES LACAN (1901–1981) to refer to the father in the Symbolic realm (not a biological entity), which marks the

child’s entrance into language-based experience.

5. Bhunaneswari Bhaduri, discussed later in this selection.

6. That is, the history of its constitution as a subject—and hence the erasure of its heterogeneity—by epistemically violent discourses.

7. That is, the contemporary equivalents of the Rani of Sirmur.

8. An allusion to the speech act theory of the English philosopher J. L. AUSTIN (1911–1960), who considered all the actions typically performed in speaking (here the reverse is suggested: an action serves as an utterance).

moment of the production process that includes the subaltern.⁹ Chaudhury's perception that the Marxist view of the transformation of consciousness involves the knowledge of social relations seems, in principle, astute. Yet the heritage of the positivist ideology¹ that has appropriated orthodox Marxism obliges him to add this rider: "This is not to belittle the importance of understanding peasants' consciousness or workers' consciousness *in its pure form*. This enriches our knowledge of the peasant and the worker and, possibly, throws light on how a particular mode takes on different forms in different regions, *which is considered a problem of second order importance in classical Marxism*."²

This variety of "internationalist Marxism," which believes in a pure, retrievable form of consciousness only to dismiss it, thus closing off what in Marx remain moments of productive bafflement, can at once be the occasion for Foucault's and Deleuze's rejection of Marxism *and* the source of the critical motivation of the subaltern studies groups. All three are united in the assumption that there *is* a pure form of consciousness. On the French scene, there is a shuffling of signifiers: "the unconscious" or "the subject-in-oppression" clandestinely fills the space of "the pure form of consciousness." In orthodox "internationalist" intellectual Marxism, whether in the First World or the Third, the pure form of consciousness remains, paradoxically, a material effect, and therefore a second-order problem. This often earns it the reputation of racism and sexism. In the subaltern studies group it needs development according to the unacknowledged terms of its own articulation.

Within the effaced itinerary of the subaltern subject, the track of sexual difference is doubly effaced.³ The question is not of female participation in insurgency, or the ground rules of the sexual division of labor, for both of which there is "evidence." It is, rather, that, both as object of colonialist historiography and as subject of insurgency, the ideological construction of gender keeps the male dominant. If, in the contest of colonial production, the subaltern has no history and cannot speak, the subaltern as female is even more deeply in shadow.

In the first part of this chapter we meditate upon an elusive female figure called into the service of colonialism. In the last part we will look at a comparable figure in anti-colonialist nationalism. The regulative psychobiography of widow self-immolation will be pertinent in both cases. In the interest of the invaginated spaces⁴ of this book, let us remind ourselves of the gradual emergence of the new subaltern in the New World Order.⁵

* * *

9. Since then, in the disciplinary fallout after the serious electoral and terrorist augmentation of Hindu nationalism in India, more alarming charges have been leveled at the group. See Aijaz Ahmad, *In Theory: Classes, Nations, Literature* (London: Verso, 1992), pp. 68, 194, 207–11; and Sumit Sarkar, "The Fascism of the Sangh Parivar," *Economic and Political Weekly*, January 30, 1993, pp. 163–67 [Spivak's note].

1. The sociopolitical program that takes knowledge and meaning to derive solely from what can be empirically observed.

2. Ajit K. Chaudhury, "New Wave Social Science," *Frontier* 16.24 (January 28, 1984), p. 10. Emphasis mine [Spivak's note].

3. I do not believe that the recent trend of romanticizing anything written by the Aboriginal or outcaste intellectual has lifted the effacement [Spivak's note].

4. An allusion to the *écriture féminine* (feminine writing) championed by the French feminist HÉLÈNE CIXOUS (b. 1937) and a description of Spivak's method, which folds together various arguments rather than laying them out in a linear progression.

5. A phrase used by George H. W. Bush (b. 1924; 41st U.S. president, 1989–93) to describe what was needed to replace East-West cold war rivalries after the collapse of communism in Eastern Europe.

I am generally sympathetic with the call to make U.S. feminism more “theoretical.” It seems, however, that the problem of the muted subject of the subaltern woman, though not solved by an “essentialist” search for lost origins, cannot be served by the call for more theory in Anglo-America either.

That call is often given in the name of a critique of “positivism,” which is seen here as identical with “essentialism.” Yet Hegel, the modern inaugurator of “the work of the negative,” was not a stranger to the notion of essences. For Marx, the curious persistence of essentialism within the dialectic was a profound and productive problem. Thus, the stringent binary opposition between positivism/essentialism (read, U.S.) and “theory” (read, French or Franco-German via Anglo-American) may be spurious. Apart from repressing the ambiguous complicity between essentialism and critiques of positivism (acknowledged by Derrida in “Of Grammatology as a Positive Science”⁶), it also errs by implying that positivism is not a theory. This move allows the emergence of a proper name, a positive essence, Theory. And once again, the position of the investigator remains unquestioned. If and when this territorial debate turns toward the Third World, no change in the question of method is to be discerned. This debate cannot take into account that, in the case of the woman as subaltern, rather few ingredients for the constitution of the itinerary of the trace of a sexed subject (rather than an anthropological object) can be gathered to locate the possibility of dissemination.⁷

Yet I remain generally sympathetic to aligning feminism with the critique of positivism and the defetishization of the concrete. I am also far from averse to learning from the work of Western theorists, though I have learned to insist on marking their positionality as investigating subjects. Given these conditions, and as a literary critic, I tactically confronted the immense problem of the consciousness of the woman as subaltern. I reinvented the problem in a sentence and transformed it into the object of a simple semiosis.⁸ What can such a transformation mean?

This gesture of transformation marks the fact that knowledge of the other subject is theoretically impossible. Empirical work in the discipline constantly performs this transformation tacitly. It is a transformation from a first-second person performance to the constatation in the third person.⁹ It is, in other words, at once a gesture of control and an acknowledgement of limits. Freud provides a homology¹ for such positional hazards.

Sarah Kofman has suggested that the deep ambiguity of Freud’s use of women as a scapegoat may be read as a reaction-formation to an initial and continuing desire to give the hysteric a voice, to transform her into the *subject* of hysteria.² The masculine-imperialist ideological formation that shaped

6. A section of *Of Grammatology* (1967; trans. 1977 by Spivak), by the French deconstructive philosopher JACQUES DERRIDA (1930–2004).

7. An allusion to Derrida, one of whose important works is titled *Dissemination* (1972).

8. Process of meaning making, of producing signs. The “sentence,” given below, is “White men are saving brown women from brown men.”

9. In speech act theory, an utterance that describes a condition, fact, or state of affairs; in contrast, a performative utterance does something (e.g., saying, “I promise to . . .” makes a promise). By writing in the 3d person, Western scholars hide the performative nature of their

work, which creates a particular way of seeing the “facts.”

1. An example of similarity in structure due to similar development; like the scholars, the psychoanalyst SIGMUND FREUD (1856–1939) turned the performatives of his own 1st-person claims and his patients’ appropriated 2d-person accounts into 3d-personal “empirical” statements of scientific “fact.”

2. Sarah Kofman, *The Enigma of Woman: Woman in Freud’s Writings*, trans. Catherine Porter (Ithaca, N.Y.: Cornell University Press, 1985) [Spivak’s note].

that desire into “the daughter’s seduction”³ is part of the same formation that constructs the monolithic “third-world woman.” No contemporary metropolitan investigator is not influenced by that formation. Part of our “unlearning” project is to articulate our participation in that formation—by *measuring* silences, if necessary—into the *object* of investigation. Thus, when confronted with the questions, Can the subaltern speak? and Can the subaltern (as woman) speak? our efforts to give the subaltern a voice in history will be doubly open to the dangers run by Freud’s discourse. It is in acknowledgment of these dangers rather than as solution to a problem that I put together the sentence “White men are saving brown women from brown men,” a sentence that runs like a red thread through today’s “gender and development.” My impulse is not unlike the one to be encountered in Freud’s investigation of the sentence “A child is being beaten.”⁴

The use of Freud here does not imply an isomorphic analogy between subject-formation and the behavior of social collectives, a frequent practice, often accompanied by a reference to Reich,⁵ in the conversation between Deleuze and Foucault. I am, in other words, not suggesting that “White men are saving brown women from brown men” is a sentence indicating a *collective* fantasy symptomatic of a *collective* itinerary of sadomasochistic repression in a *collective* imperialist enterprise. There is a satisfying symmetry in such an allegory, but I would rather invite the reader to consider it a problem in “wild psychoanalysis” than a clinching solution.⁶ Just as Freud’s insistence on making the woman the scapegoat in “A child is being beaten” and elsewhere discloses his political interests, however imperfectly, so my insistence on imperialist subject-production as the occasion for this sentence discloses a politics that I cannot step around.

* * *

A young woman of sixteen or seventeen, Bhubaneswari Bhaduri, hanged herself in her father’s modest apartment in North Calcutta in 1926. The suicide was a puzzle since, as Bhubaneswari was menstruating at the time, it was clearly not a case of illicit pregnancy. Nearly a decade later, it was discovered, in a letter she had left for her elder sister, that she was a member of one of the many groups involved in the armed struggle for Indian independence. She had been entrusted with a political assassination. Unable to confront the task and yet aware of the practical need for trust, she killed herself.

Bhubaneswari had known that her death would be diagnosed as the outcome of illegitimate passion. She had therefore waited for the onset of menstruation.

3. A reference both to Freud’s work on female hysteria (viewed as a symptom of frustrated sexual desire for a male authority figure) and to *The Daughter’s Seduction* (1982), a book by Jane Gallop that describes feminist appropriations of Freud.

4. Freud, “‘A Child Is Being Beaten’: A Contribution to the Study of the Origin of Sexual Perversion,” in *The Standard Edition of the Complete Psychological Works of Sigmund Freud*, ed. James Strachey, 24 vols. (London: Hogarth, 1953–74), 17:175–204. For a list of ways in which Western criticism constructs “third world women,” see Chandra Talpade Mohanty, “Under Western Eyes: Feminist Scholarship and Colonial Discourses,”

in *Third World Women and the Politics of Feminism*, ed. Mohanty et al. (Bloomington: Indiana University Press, 1991), pp. 51–80 [Spivak’s note].

5. Wilhelm Reich (1897–1957), Austrian psychoanalyst whose *Mass Psychology of Fascism* (1933) exemplifies a radical attempt to psychoanalyze a whole society.

6. Freud, “‘Wild’ Psycho-Analysis,” in *Standard Edition*, 11:221–27. A good deal of psychoanalytic social critique would fit this description [Spivak’s note]. Freud warns against “wild” psychoanalysis that jumps to conclusions without the slow accumulation of information and the relationship between patient and therapist necessary for psychoanalytic treatment.

While waiting, Bhubaneswari, the *brahmacārini*⁷ who was no doubt looking forward to good wifehood, perhaps rewrote the social text of *sati*-suicide in an interventionist way. (One tentative explanation of her inexplicable act had been a possible melancholia brought on by her father's death and her brother-in-law's repeated taunts that she was too old to be not-yet-a-wife.) She generalized the sanctioned motive for female suicide by taking immense trouble to displace (not merely deny), in the physiological inscription of her body, its imprisonment within legitimate passion by a single male. In the immediate context, her act became absurd, a case of delirium rather than sanity. The displacing gesture—waiting for menstruation—is at first a reversal of the interdict against a menstruating widow's right to immolate herself; the unclean widow must wait, publicly, until the cleansing bath of the fourth day, when she is no longer menstruating, in order to claim her dubious privilege.

In this reading, Bhubaneswari Bhaduri's suicide is an unemphatic, ad hoc, subaltern rewriting of the social text of *sati*-suicide as much as the hegemonic account of the blazing, fighting, familial Durga.⁸ The emergent dissenting possibilities of that hegemonic account of the fighting mother are well documented and popularly well remembered through the discourse of the male leaders and participants in the Independence movement. The subaltern as female cannot be heard or read.

I know of Bhubaneswari's life and death through family connections. Before investigating them more thoroughly, I asked a Bengali woman, a philosopher and Sanskritist whose early intellectual production is almost identical to mine, to start the process. Two responses: (a) Why, when her two sisters, Saileswari and Raseswari, led such full and wonderful lives, are you interested in the hapless Bhubaneswari? (b) I asked her nieces. It appears that it was a case of illicit love.

I was so unnerved by this failure of communication that, in the first version of this text, I wrote, in the accents of passionate lament: the subaltern cannot speak! It was an inadvisable remark.

In the intervening years between the publication of the second part of this chapter in essay form and this revision, I have profited greatly from the many published responses to it. I will refer to two of them here: "Can the Subaltern Vote?" and "Silencing Sycorax."⁹

As I have been insisting, Bhubaneswari Bhaduri was not a "true" subaltern. She was a woman of the middle class, with access, however clandestine, to the bourgeois movement for Independence. Indeed the Rani of Sirmur, with her claim to elevated birth, was not a subaltern at all. Part of what I seem to have argued in this chapter is that woman's interception of the claim to subalternity can be staked out across strict lines of definition by virtue of their muting by heterogeneous circumstances. Gulari¹ cannot speak to us because indigenous

7. Female member of the Brahmin (upper) caste (Hindi).

8. In Hindu mythology and religion, one of the many forms of Devi (the divine mother goddess). She is a warrior, often represented with 8 or 10 arms; each hand holds the special weapon of the other gods.

9. Leerom Medovoi et al., "Can the Subaltern Vote?" *Socialist Review* 20.3 (July–September

1990): 133–49; and Abena Busia, "Silencing Sycorax: On African Colonial Discourse and the Unvoiced Female," *Cultural Critique*, no. 14 (winter 1989–90): 81–104 [Spivak's note]. Spivak's original essay was "Can the Subaltern Speak?" in *Marxism and the Interpretation of Culture*, ed. Cary Nelson and Lawrence Grossberg (Urbana: University of Illinois Press, 1988), pp. 271–313.

1. The family name of the Rani of Sirmur.

patriarchal “history” would only keep a record of her funeral and colonial history only needed her as an incidental instrument. Bhubaneswari attempted to “speak” by turning her body into a text of woman/writing. The immediate passion of my declaration “the subaltern cannot speak,” came from the despair that, in her own family, among women, in no more than fifty years, her attempt had failed. I am not laying the blame for the muting on the *colonial* authorities here, as Busia seems to think: “Gayatri Spivak’s ‘Can the Subaltern Speak?’—section 4 of which is a compelling explication of this role of disappearing in the case of Indian women in British legal history.”²

I am pointing, rather, at her silencing by her own more emancipated granddaughters: a new mainstream. To this can be added two newer groups: one, the liberal multiculturalist metropolitan academy, Susan Barton’s³ great-granddaughters; as follows:

As I have been saying all along, I think it is important to acknowledge our complicity in the muting, in order precisely to be more effective in the long run. Our work cannot succeed if we always have a scapegoat. The postcolonial migrant investigator is touched by the colonial social formations. Busia strikes a positive note for further work when she points out that, after all, I am able to read Bhubaneswari’s case, and therefore she *has* spoken in some way. Busia is right, of course. All speaking, even seemingly the most immediate, entails a distanced decipherment by another, which is, at best, an interception. That is what speaking is.

I acknowledge this theoretical point, and also acknowledge the practical importance, for oneself and others, of being upbeat about future work. Yet the moot decipherment by another in an academic institution (willy-nilly a knowledge-production factory) many years later must not be too quickly identified with the “speaking” of the subaltern. It is not a mere tautology to say that the colonial or postcolonial subaltern is defined as the being on the other side of difference, or an epistemic fracture, even from other groupings among the colonized. What is at stake when we insist that the subaltern speaks?

In “Can the Subaltern Vote?” the three authors apply the question of stakes to “political speaking.” This seems to me to be a fruitful way of extending my reading of subaltern speech into a collective arena. Access to “citizenship” (civil society) by becoming a voter (in the nation) is indeed the symbolic circuit of the mobilizing of subalternity into hegemony. This terrain, ever negotiating between national liberation and globalization, allows for examining the casting of the vote itself as a performative convention given as constative “speech” of the subaltern subject. It is part of my current concerns to see how this set is manipulated to legitimize globalization; but it is beyond the scope of this book. Here let us remain confined to the field of academic prose, and advance three points:

1. Simply by being postcolonial or the member of an ethnic minority, we are not “subaltern.” That word is reserved for the sheer heterogeneity of decolonized space.

2. Busia, “Silencing Sycorax,” p. 102 [Spivak’s note].

3. The daughter whose mother refuses to acknowledge her as her own in Daniel Defoe’s novel *Roxana: The Fortunate Mistress* (1724). The South African writer J. M. Coetzee (b. 1940) uses

Susan Barton as the narrator for much (but not all) of his retelling of Defoe’s *Robinson Crusoe* story (1719) in his novel *Foe* (1987), a retelling that Spivak discusses at length in chapter 2 of *A Critique of Postcolonial Reason*.

2. When a line of communication is established between a member of subaltern groups and the circuits of citizenship or institutionality, the subaltern has been inserted into the long road to hegemony. Unless we want to be romantic purists or primitivists about “preserving subalternity”—a contradiction in terms—this is absolutely to be desired. (It goes without saying that museumized or curricularized access to ethnic origin—another battle that must be fought—is not identical with preserving subalternity.) Remembering this allows us to take pride in our work without making missionary claims.
3. This trace-structure (effacement in disclosure) surfaces as the tragic emotions of the political activist, springing not out of superficial utopianism, but out of the depths of what Bimal Krishna Matilal has called “moral love.” Mahasweta Devi,⁴ herself an indefatigable activist, documents this emotion with exquisite care in “Pterodactyl, Puran Sahay, and Pirtha.”

And finally, the third group: Bhubaneswari’s elder sister’s eldest daughter’s eldest daughter’s eldest daughter is a new U.S. immigrant and was recently promoted to an executive position in a U.S.-based transnational. She will be helpful in the emerging South Asian market precisely because she is a well-placed Southern diasporic.

For Europe, the time when the new capitalism *definitely* superseded the old can be established with fair precision: it was the beginning of the twentieth century . . . [With t]he boom at the end of the nineteenth century and the crisis of 1900–03 . . . [c]artels become one of the foundations of the whole of economic life. Capitalism has been transformed into imperialism.⁵

Today’s program of global financialization carries on that relay. Bhubaneswari had fought for national liberation. Her great-grandniece works for the New Empire. This too is a historical silencing of the subaltern. When the news of this young woman’s promotion was broadcast in the family amidst general jubilation I could not help remarking to the eldest surviving female member: “Bhubaneswari”—her nickname had been Talu—“hanged herself in vain,” but not too loudly. Is it any wonder that this young woman is a staunch multiculturalist, believes in natural childbirth, and wears only cotton?

TERRY EAGLETON

b. 1943

Since the 1970s, Terry Eagleton has been perhaps the most prominent and prolific commentator on criticism and theory in English. From an unabashed Marxist perspective, he has taken to task the quietism of other kinds of criticism, and unlike most academically trained critics, he has written with puckish humor and in a variety of genres. For instance, in our first selection, “The Rise of English,” from his landmark *Literary Theory: An Introduction* (1983; 3d ed., 2008), he mocks the assumption that culture is edifying, noting instead the use of English literary studies as a form of social control: “If the masses are not thrown a few novels, they may react by throwing up a few barricades.” He has in mind the canonical view of MATTHEW ARNOLD (see above), who argued that high culture is ennobling; answering the perennial question of the role of literature in society differently, Eagleton holds that it, like formal religion, helps reproduce the dominant social order. In our second selection, from his book *Culture and the Death of God* (2014), Eagleton turns to condemn postmodern theory in general, finding that it gives up both the ethical core of religion and the critical perspective of modernism.

A student of the Marxist literary and cultural critic RAYMOND WILLIAMS, Eagleton has introduced contemporary theory and its concepts to a wide Anglophone audience, as well as worked as a literary journalist, novelist, and playwright. Born in a working-class community in Salford, England, he attended Cambridge University on a scholarship, receiving his B.A. in 1964 and his Ph.D. in 1968. He taught at Cambridge for a year, held various appointments at Oxford University until 2001, and since has been a distinguished professor at the University of Manchester, Lancaster University, and the University of Notre Dame. During the politically vibrant late 1960s, Eagleton was active in the Catholic Left—among other things, he helped found a journal, *Slant*—and he published three books before he was thirty. It was not until the mid-1970s, however, that he established himself as a leading expositor of Marxism within the emerging field of contemporary literary theory, most notably with *Criticism and Ideology: A Study in Marxist Literary Theory* (1976). It extends LOUIS ALTHUSSER’s theory of ideology to literature, revising the conventional Marxist view, espoused by Leon Trotsky, that texts directly reflect social reality; Eagleton argues instead that texts actively produce ideology.

Eagleton subsequently turned away from the pursuit of an overarching theoretical model, or what the American sociologist C. Wright Mills (1916–1962) termed “Grand Theory.” As he remarked in a 1990 interview, “I think that back in the seventies we used to suffer from a certain fetishism of method; we used to think that we have to get a certain kind of systematic method right, and this would be *the* way of proceeding. I think some of my early work, certainly *Criticism and Ideology*, would fall within that general approach.” Rather than dispensing with Marxism, however, he distinguishes between theoretical methods and political goals: “[A] Marxist has to define certain urgent political goals and allow, as it were, those to determine questions of method rather than the other way around.” In eschewing large-scale theoretical models, Eagleton resembles the twentieth-century neopragmatists such as STANLEY FISH, who insists that method cannot be determined in advance but derives from practice. But whereas they argue that literary studies are politically ineffectual, Eagleton advocates a political focus.

Another element of Eagleton’s turn from Grand Theory is his style, which is lively, witty, clear, and frequently opinionated, combining theory and literary journalism. Eagleton unabashedly states his opinions—often in audacious one-liners, such as “deconstruction is the death drive at the level of theory”—and injects

humor into his writing; for instance, he calls Fish “the Donald Trump of American academia.”

In his *Function of Criticism: From the “Spectator” to Post-Structuralism* (1984), Eagleton declares that contemporary criticism has lost its social purpose and become marginalized through the technocratic fetishizing of Grand Theory. Drawing on JÜRGEN HABERMAS’s concept of the public sphere, he notes that modern criticism arose in the eighteenth century in opposition to the absolutist state, and he calls for the renewed oppositional role of criticism in the public sphere. To that end, Eagleton became known as the foremost popularizer of contemporary literary theory in the 1980s. His *Literary Theory* has been an academic bestseller and probably the most influential introduction to contemporary theory for students and curious readers. It conducts a knowledgeable but fast-paced, readable, and pithy survey of reader-response and reception theory, structuralism, deconstruction, and psychoanalysis. Rather than presenting a dispassionate history, *Literary Theory* bluntly states Eagleton’s preferences and value judgments. Finding fault with most contemporary theories for their lack of attention to politics, he praises Marxist and feminist criticism for their concern with the political effects of literature.

Accessible and polemical, “The Rise of English” illustrates Eagleton’s trademark style. It combines broad historical overview and ideological analysis. Eagleton sees English, which became an academic subject only in the late nineteenth century, as an outgrowth of nationalism as well as a replacement for religion as a crucial ideological apparatus. While lacking nuance, Eagleton’s analysis succinctly answers a major theoretical question, proposing that literature has social significance not simply as an innocent, pleasurable entertainment but as a primary means of reinforcing the dominant social order.

In our selection from *Culture and the Death of God*, Eagleton tallies up a balance sheet on postmodern theory, and he finds it lacking. As in “The Rise of English,” he employs a large historical frame, placing postmodernism in a lineage reaching back to modernism and earlier. In his view, a chief problem with postmodernism—as he suggests here and explains in other books, especially *The Idea of Culture* (2000)—is that its relativism forces it to vacate a critical stance, resulting in an immersion in identity politics rather than class politics. While he acknowledges that the previous mode of modernism was elitist, he finds that its emphasis on *Kulturkritik*, or “culture critique,” gave it a stronger position in opposition to capitalism. His assessment differs from that of other figures, notably FREDRIC JAMESON, who sees the critical potential of postmodernism more dialectically at the conclusion of “Postmodernism and Consumer Society” (see above). Eagleton’s mode is more polemical than dialectical.

Another element of *Culture and the Death of God* is a focus on religion. As Eagleton remarks in *Reason, Faith, and Revolution: Reflections on the God Debate* (2009), we should not simply dismiss religion as irrational—arguing that it fails according to standards of scientific proof—but should judge it as a different mode of meaning than science. While in our selection he does not assert a faith, he holds that the idea of God presents a more promising view of human potential that postmodernism evacuates. As he remarks in an interview with Matthew Beaumont in *The Task of the Critic: Terry Eagleton in Dialogue* (2009), “I stopped calling myself a Roman Catholic, even though I continue to value aspects of that cultural context and tradition.”

In part because of his popularizations of theory, and in part because of the often sweeping, polemical nature of his arguments, Eagleton has occasionally been dismissed by specialist commentators on theory. His influence among theorists is much less pronounced than that of Jameson, the most prominent U.S. Marxist critic. However, Eagleton has made theory accessible to students and nonspecialists, persistently reminding readers of its social role in the public sphere. He has provided a model for younger literary critics who self-consciously choose to write in a more journalistic mode, turning from the dense language and specialist focus of Grand Theory to

address a larger public in discussing cultural issues. The tension in criticism between specialization and accessibility, which itself became a central theoretical issue in the 1990s, mirrors a perennial debate in literary studies—whether literature demonstrates special qualities available only to connoisseurs who have expert knowledge of the tradition, as articulated by the modernist T. S. ELIOT, or it can reach the common reader, in what the Romantic poet WILLIAM WORDSWORTH calls “the real language of men.”

Literary Theory: An Introduction Keywords: Ideology, Institutional Studies, Literary History, Marxism, Nationhood, Religion

Culture and the Death of God Keywords: Literary History, Modernity, Popular Culture, Postmodernity, Religion, Subjectivity

From Literary Theory: An Introduction

From Chapter 1. *The Rise of English*

* * *

To speak of ‘literature and ideology’ as two separate phenomena which can be interrelated is, as I hope to have shown, in one sense quite unnecessary. Literature, in the meaning of the word we have inherited, *is* an ideology.¹ It has the most intimate relations to questions of social power. But if the reader is still unconvinced, the narrative of what happened to literature in the later nineteenth century might prove a little more persuasive.

If one were asked to provide a single explanation for the growth of English studies in the later nineteenth century, one could do worse than reply: ‘the failure of religion’. By the mid-Victorian period, this traditionally reliable, immensely powerful ideological form was in deep trouble. It was no longer winning the hearts and minds of the masses, and under the twin impacts of scientific discovery and social change its previous unquestioned dominance was in danger of evaporating. This was particularly worrying for the Victorian ruling class, because religion is for all kinds of reasons an extremely effective form of ideological control. Like all successful ideologies, it works much less by explicit concepts or formulated doctrines than by image, symbol, habit, ritual and mythology. It is affective and experiential, entwining itself with the deepest unconscious roots of the human subject; and any social ideology which is unable to engage with such deep-seated a-rational fears and needs, as T. S. Eliot² knew, is unlikely to survive very long. Religion, moreover, is capable of operating at every social level: if there is a doctrinal inflection of it for the intellectual elite, there is also a pietistic brand of it for the masses. It provides an excellent social ‘cement’, encompassing pious peasant, enlightened middle-class liberal and theological intellectual in a single organization. Its ideological power lies in its capacity to ‘materialize’ beliefs as practices: religion is the sharing of the chalice and the blessing of the harvest, not just abstract argument about

1. That is, a system of specific class beliefs, images, values, and practices that functions to reproduce the dominant social order.

2. American-born English poet, critic, and dramatist (1888–1965; see above).

consubstantiation or hyperdulia.³ Its ultimate truths, like those mediated by the literary symbol, are conveniently closed to rational demonstration, and thus absolute in their claims. Finally religion, at least in its Victorian forms, is a *pacifying* influence, fostering meekness, self-sacrifice and the contemplative inner life. It is no wonder that the Victorian ruling class looked on the threatened dissolution of this ideological discourse with something less than equanimity.

Fortunately, however, another remarkably similar discourse lay to hand: English literature. George Gordon,⁴ early Professor of English Literature at Oxford, commented in his inaugural lecture that 'England is sick, and . . . English literature must save it. The Churches (as I understand) having failed, and social remedies being slow, English literature has now a triple function: still, I suppose, to delight and instruct us, but also, and above all, to save our souls and heal the State.'⁵ Gordon's words were spoken in our own century, but they find a resonance everywhere in Victorian England. It is a striking thought that had it not been for this dramatic crisis in mid-nineteenth-century ideology, we might not today have such a plentiful supply of Jane Austen casebooks and bluffer's guides to Pound.⁶ As religion progressively ceases to provide the social 'cement', affective values and basic mythologies by which a socially turbulent class-society can be welded together, 'English' is constructed as a subject to carry this ideological burden from the Victorian period onwards. The key figure here is Matthew Arnold,⁷ always preternaturally sensitive to the needs of his social class, and engagingly candid about being so. The urgent social need, as Arnold recognizes, is to 'Hellenize' or cultivate the philistine middle class, who have proved unable to underpin their political and economic power with a suitably rich and subtle ideology. This can be done by transfusing into them something of the traditional style of the aristocracy, who as Arnold shrewdly perceives are ceasing to be the dominant class in England, but who have something of the ideological where-withal to lend a hand to their middle-class masters. State-established schools, by linking the middle class to 'the best culture of their nation', will confer on them 'a greatness and a noble spirit, which the tone of these classes is not of itself at present adequate to impart'.⁸

The true beauty of this manoeuvre, however, lies in the effect it will have in controlling and incorporating the working class:

It is of itself a serious calamity for a nation that its tone of feeling and grandeur of spirit should be lowered or dulled. But the calamity appears

3. The particular veneration of the Virgin Mary by Roman Catholics. "Consubstantiation": the Lutheran doctrine that the body and blood of Christ coexist with the elements of bread and wine during Holy Communion (a point of argument with the Roman Catholic belief in transubstantiation, the literal transformation of the consecrated bread and wine into the body and blood of Christ).

4. Oxford professor and critic (1881–1942).

5. Quoted by Chris Baldick, *The Social Mission of English Criticism, 1848–1932* (Oxford, 1983), p. 105 [Eagleton's note]. "To delight and instruct" are the traditional functions of literature; see HORACE, *Ars Poetica* (ca. 10 B.C.E.), lines 343–44, above.

6. Ezra Pound (1885–1972), American poet, editor, and critic, notable for his difficulty and abstruse range of literary references. Austen (1775–1817), English novelist.

7. English critic, poet, and school inspector (1822–1888; see above), who greatly influenced modern views of literature. In *Culture and Anarchy* (1869; see above) he divided England into Barbarians (the aristocracy), Philistines (the materialist middle classes), and the Populace; he also opposed "Hellenism" to "Hebraism," favoring the former (and classical Greek culture generally).

8. "The Popular Education of France," in *Democratic Education*, ed. R. H. Super (Ann Arbor, 1962), p. 22 [Eagleton's note].

far more serious still when we consider that the middle classes, remaining as they are now, with their narrow, harsh, unintelligent, and unattractive spirit and culture, will almost certainly fail to mould or assimilate the masses below them, whose sympathies are at the present moment actually wider and more liberal than theirs. They arrive, these masses, eager to enter into possession of the world, to gain a more vivid sense of their own life and activity. In this their irrepressible development, their natural educators and initiators are those immediately above them, the middle classes. If these classes cannot win their sympathy or give them their direction, society is in danger of falling into anarchy.⁹

Arnold is refreshingly unhypocritical: there is no feeble pretence that the education of the working class is to be conducted chiefly for their own benefit, or that his concern with their spiritual condition is, in one of his own most cherished terms, in the least 'disinterested'. In the even more disarmingly candid words of a twentieth-century proponent of this view: 'Deny to working-class children any common share in the immaterial, and presently they will grow into the men who demand with menaces a communism of the material'.¹ If the masses are not thrown a few novels, they may react by throwing up a few barricades.

Literature was in several ways a suitable candidate for this ideological enterprise. As a liberal, 'humanizing' pursuit, it could provide a potent antidote to political bigotry and ideological extremism. Since literature, as we know, deals in universal human values rather than in such historical trivia as civil wars, the oppression of women or the dispossession of the English peasantry, it could serve to place in cosmic perspective the petty demands of working people for decent living conditions or greater control over their own lives, and might even with luck come to render them oblivious of such issues in their high-minded contemplation of eternal truths and beauties. English, as a Victorian handbook for English teachers put it, helps to 'promote sympathy and fellow feeling among all classes'; another Victorian writer speaks of literature as opening a 'serene and luminous region of truth where all may meet and expatiate in common', above 'the smoke and stir, the din and turmoil of man's lower life of care and business and debate'.² Literature would rehearse the masses in the habits of pluralistic thought and feeling, persuading them to acknowledge that more than one viewpoint than theirs existed—namely, that of their masters. It would communicate to them the moral riches of bourgeois civilization, impress upon them a reverence for middle-class achievements, and, since reading is an essentially solitary, contemplative activity, curb in them any disruptive tendency to collective political action. It would give them a pride in their national language and literature: if scanty education and extensive hours of labour prevented them personally from producing a literary masterpiece, they could take pleasure in the thought that others of their own kind—English people—had done so. The people, according to a study of English literature written in 1891, 'need political culture, instruction, that is to say, in what pertains to their relation to the State, to

cal Literature in the Work of Education," *Macmillan's Magazine* 11 (1860), quoted by Baldick, *The Social Mission of English Criticism*, p. 66 [Eagleton's note].

their duties as citizens; and they need also to be impressed sentimentally by having the presentation in legend and history of heroic and patriotic examples brought vividly and attractively before them'.³ All of this, moreover, could be achieved without the cost and labour of teaching them the Classics: English literature was written in their own language, and so was conveniently available to them.

Like religion, literature works primarily by emotion and experience, and so was admirably well-fitted to carry through the ideological task which religion left off. Indeed by our own time literature had become effectively identical with the opposite of analytical thought and conceptual enquiry: whereas scientists, philosophers and political theorists are saddled with these drably discursive pursuits, students of literature occupy the more prized territory of feeling and experience. Whose experience, and what kinds of feeling, is a different question. Literature from Arnold onwards is the enemy of 'ideological dogma', an attitude which might have come as a surprise to Dante, Milton and Pope;⁴ the truth or falsity of beliefs such as that blacks are inferior to whites is less important than what it feels like to experience them. Arnold himself had beliefs, of course, though like everybody else he regarded his own beliefs as reasoned positions rather than ideological dogmas. Even so, it was not the business of literature to communicate such beliefs directly—to argue openly, for example, that private property is the bulwark of liberty. Instead, literature should convey *timeless* truths, thus distracting the masses from their immediate commitments, nurturing in them a spirit of tolerance and generosity, and so ensuring the survival of private property. Just as Arnold attempted in *Literature and Dogma* and *God and the Bible*⁵ to dissolve away the embarrassingly doctrinal bits of Christianity into poetically suggestive sonorities, so the pill of middle-class ideology was to be sweetened by the sugar of literature.

There was another sense in which the 'experiential' nature of literature was ideologically convenient. For 'experience' is not only the homeland of ideology, the place where it takes root most effectively; it is also in its literary form a kind of vicarious self-fulfillment. If you do not have the money and leisure to visit the Far East, except perhaps as a soldier in the pay of British imperialism, then you can always 'experience' it at second hand by reading Conrad or Kipling.⁶ Indeed according to some literary theories this is even more real than strolling round Bangkok. The actually impoverished experience of the mass of people, an impoverishment bred by their social conditions, can be supplemented by literature: instead of working to change such conditions (which Arnold, to his credit, did more thoroughly than almost any of those who sought to inherit his mantle), you can vicariously fulfil someone's desire for a fuller life by handing them *Pride and Prejudice*.⁷

It is significant, then, that 'English' as an academic subject was first institutionalized not in the Universities, but in the Mechanics' Institutes, working

4. All three major poets—the Italian DANTE ALIGHIERI (1265–1321), the English John Milton (1608–1674), and ALEXANDER POPE (1688–1744)—held strong political views.

5. Published in 1873 and 1875, respectively.

6. Both these English writers—the Polish-born novelist Joseph Conrad (1857–1924) and the short story writer, poet, and novelist Rudyard Kipling (1865–1936)—often set their works in places under colonial rule (though not usually the Far East).

7. Jane Austen's best-known novel (published 1813).

men's colleges and extension lecturing circuits.⁸ English was literally the poor man's Classics—a way of providing a cheapish 'liberal' education for those beyond the charmed circles of public school and Oxbridge.⁹ From the outset, in the work of 'English' pioneers like F. D. Maurice and Charles Kingsley,¹ the emphasis was on solidarity between the social classes, the cultivation of 'larger sympathies', the instillation of national pride and the transmission of 'moral' values. This last concern—still the distinctive hallmark of literary studies in England, and a frequent source of bemusement to intellectuals from other cultures—was an essential part of the ideological project; indeed the rise of 'English' is more or less concomitant with an historic shift in the very meaning of the term 'moral', of which Arnold, Henry James and F. R. Leavis² are the major critical exponents. Morality is no longer to be grasped as a formulated code or explicit ethical system: it is rather a sensitive preoccupation with the whole quality of life itself, with the oblique, nuanced particulars of human experience. Somewhat rephrased, this can be taken as meaning that the old religious ideologies have lost their force, and that a more subtle communication of moral values, one which works by 'dramatic enactment' rather than rebarbative abstraction, is thus in order. Since such values are nowhere more vividly dramatized than in literature, brought home to 'felt experience' with all the unquestionable reality of a blow on the head, literature becomes more than just a handmaiden of moral ideology: it is moral ideology for the modern age, as the work of F. R. Leavis was most graphically to evince.

The working class was not the only oppressed layer of Victorian society at whom 'English' was specifically beamed. English literature, reflected a Royal Commission witness in 1877, might be considered a suitable subject for 'women . . . and the second- and third-rate men who [. . .] become schoolmasters.'³ The 'softening' and 'humanizing' effects of English, terms recurrently used by its early proponents, are within the existing ideological stereotypes of gender clearly feminine. The rise of English in England ran parallel to the gradual, grudging admission of women to the institutions of higher education; and since English was an untaxing sort of affair, concerned with the finer feelings rather than with the more virile topics of *bona fide* academic 'disciplines', it seemed a convenient sort of non-subject to palm off on the ladies, who were in any case excluded from science and the professions. Sir Arthur Quiller Couch,⁴ first Professor of English at Cambridge University, would open with the word 'Gentlemen' lectures addressed to a hall filled largely with women. Though modern male lecturers may have changed their manners, the ideological conditions which make English a popular University subject for women to read have not.

If English had its feminine aspect, however, it also acquired a masculine one as the century drew on. The era of the academic establishment of English

is also the era of high imperialism in England. As British capitalism became threatened and progressively outstripped by its younger German and American rivals, the squalid, undignified scramble of too much capital chasing too few overseas territories, which was to culminate in 1914 in the first imperialist world war, created the urgent need for a sense of national mission and identity. What was at stake in English studies was less English *literature* than *English* literature: our great 'national poets' Shakespeare and Milton, the sense of an 'organic' national tradition and identity to which new recruits could be admitted by the study of humane letters. The reports of educational bodies and official enquiries into the teaching of English, in this period and in the early twentieth century, are strewn with nostalgic back-references to the 'organic' community of Elizabethan England⁵ in which nobles and groundlings found a common meeting-place in the Shakespearian theatre, and which might still be reinvented today. It is no accident that the author of one of the most influential Government reports in this area, *The Teaching of English in England* (1921), was none other than Sir Henry Newbolt,⁶ minor jingoist poet and perpetrator of the immortal line 'Play up! play up! and play the game!' Chris Baldick has pointed to the importance of the admission of English literature to the Civil Service examinations in the Victorian period: armed with this conveniently packaged version of their own cultural treasures, the servants of British imperialism could sally forth overseas secure in a sense of their national identity, and able to display that cultural superiority to their envying colonial peoples.⁷

It took rather longer for English, a subject fit for women, workers and those wishing to impress the natives, to penetrate the bastions of ruling-class power in Oxford and Cambridge. English was an upstart, amateurish affair as academic subjects went, hardly able to compete on equal terms with the rigours of Greats or philology;⁸ since every English gentleman read his own literature in his spare time anyway, what was the point of submitting it to systematic study? Fierce rearguard actions were fought by both ancient Universities against this distressingly dilettante subject: the definition of an academic subject was what could be examined,⁹ and since English was no more than idle gossip about literary taste it was difficult to know how to make it unpleasant enough to qualify as a proper academic pursuit. This, it might be said, is one of the few problems associated with the study of English which have since been effectively resolved. The frivolous contempt for his subject displayed by the first really 'literary' Oxford professor, Sir Walter Raleigh, has to be read to be believed.¹ Raleigh held his post in the years leading up to the First World War; and his relief at the outbreak of the war, an event which allowed him to abandon the feminine vagaries of literature and put his pen to something more manly—war propaganda—is palpable in his writing. The only way in which English seemed likely to justify its existence in the ancient Universities was by systematically mistaking itself

for the Classics; but the classicists were hardly keen to have this pathetic parody of themselves around.

If the first imperialist world war more or less put paid to Sir Walter Raleigh, providing him with an heroic identity more comfortingly in line with that of his Elizabethan namesake,² it also signalled the final victory of English studies at Oxford and Cambridge. One of the most strenuous antagonists of English—philology—was closely bound up with Germanic influence; and since England happened to be passing through a major war with Germany, it was possible to smear classical philology as a form of ponderous Teutonic nonsense with which no self-respecting Englishman should be caught associating.³ England's victory over Germany meant a renewal of national pride, an upsurge of patriotism which could only aid English's cause; but at the same time the deep trauma of the war, its almost intolerable questioning of every previously held cultural assumption, gave rise to a 'spiritual hungering', as one contemporary commentator described it, for which poetry seemed to provide an answer. It is a chastening thought that we owe the University study of English, in part at least, to a meaningless massacre. The Great War, with its carnage of ruling-class rhetoric, put paid to some of the more strident forms of chauvinism on which English had previously thrived: there could be few more Walter Raleighs after Wilfred Owen.⁴ English Literature rode to power on the back of wartime nationalism; but it also represented a search for spiritual solutions on the part of an English ruling class whose sense of identity had been profoundly shaken, whose psyche was ineradicably scarred by the horrors it had endured. Literature would be at once solace and reaffirmation, a familiar ground on which Englishmen could regroup both to explore, and to find some alternative to, the nightmare of history.

1983

From Culture and the Death of God

From Chapter 6. Modernism and After

As the power of religion begins to fail, its various functions are redistributed like a precious legacy to those aspiring to become its heirs. Scientific rationalism takes over its doctrinal certainties, while radical politics inherits its mission to transform the face of the earth. Culture in the aesthetic sense safeguards something of its spiritual depth. Indeed, most aesthetic ideas (creation, inspiration, unity, autonomy, symbol, epiphany and so on) are really displaced fragments of theology. Signs which accomplish what they signify are known as poetry to aesthetics and as sacraments to theology. Meanwhile, culture in the wider sense of the word retains something of

2. The soldier, courtier, and poet Sir Walter Raleigh (1552–1618). "Put paid to": dealt effectually with; put an end to.

3. See Francis Mulhern, *The Moment of "Scrutiny"* (London, 1979), pp. 20–22 [Eagleton's note].

4. English poet (1893–1918), who wrote about his experiences as a soldier in World War I; he died in combat.

religion's communitarian ethos. Science, philosophy, culture and politics, needless to say, survive the decline of religion as enterprises in their own right. Yet they are also called on to shoulder some of its offices, alongside their own proper business.

Like religion, high culture plays a double role, offering a critique of modern civilisation but also a refuge from its degeneracy. * * *

It is remarkable how resilient the faith that art might prove our salvation turns out to be. It is Nietzsche's¹ theme from start to finish. It is a hope which is able to survive the collapse of the high Victorian consensus and the carnage of the First World War. Versions of it are to be found in both Bloomsbury and *Scrutiny*,² sworn enemies in so much else. Art is a fortress against an encroaching barbarism. 'Poetry,' writes I. A. Richards with stunning credulity, 'is capable of saving us; it is a perfectly possible means of overcoming chaos.'³ F. R. Leavis speaks of confronting a crassly materialistic society with the 'religious depth of thought and feeling' to be found in great literature.⁴ 'After one has abandoned a belief in God,' remarks Wallace Stevens, 'poetry is that essence which takes its place as life's redemption.'⁵ 'Poetry / Exceeding music must take the place / Of empty heaven and its hymns', he writes in 'The Man with the Blue Guitar.' It is a note one can hear sounded as early as Mallarmé,⁶ for whom the proper role of art is to succeed religion. Having done service for theology in its time, the aesthetic now makes a bid to supplant it. High modernism is numinous through and through, as the work of art provides one of the last outposts of enchantment in a spiritually degenerate world. Postmodernism, with its notorious absence of affect, is post-numinous. It is also in a sense post-aesthetic, since the aestheticisation of everyday life extends to the point where it undermines the very idea of a special phenomenon known as art. Stretched far enough, the category of the aesthetic cancels itself out.

The imagination as a means of grace is one of modernism's abiding motifs, from the redemptive power of memory in Proust's great novel to the priestly vocation of the Joycean artist.⁷ Henry James⁸ finds in art a form of saintly self-immolation. Epiphanies of transcendence haunt the fiction of Woolf and the poetry of Rilke.⁹ An anthropology based on death, sacrifice and rebirth underlies the most renowned of English modernist poems. Its author will argue later in his *Notes Towards the Definition of Culture*¹ that the culture

1. FRIEDRICH NIETZSCHE (1844–1900), German philosopher who notoriously declared that "God is dead" and debunked metaphysical conceptions of existence; he stressed the value of art and artistry.

2. The most influential English critical journal of its time (active 1932–53), principally edited by F. R. LEAVIS (1895–1978), a major British critic who found fundamental moral value in literature; critics associated with it were somewhat mockingly called "Scrutineers." "Bloomsbury" is shorthand for the Bloomsbury group, a circle of writers, artists, and critics highly skeptical of traditional values (notably the novelist and critic VIRGINIA WOOLF, 1882–1941), several of whom lived near London's Bloomsbury Square, who met from about 1910 to the early 1930s.

3. I. A. Richards, *Science and Poetry* (London, 1926), pp. 82–83 [Eagleton's note]. Richards (1893–1979), English literary critic and theorist.

4. F. R. Leavis, *Two Cultures? The Significance of C. P. Snow* (London, 1962), p. 23 [Eagleton's note].

5. Wallace Stevens, *Opus Posthumous* (New York, 1977), p. 158 [Eagleton's note]. Stevens (1879–1955), American modernist poet.

6. Stéphane Mallarmé (1842–1898), French symbolist poet and critic.

7. In *A Portrait of the Artist as a Young Man* (1916), the Irish novelist James Joyce (1882–1941) sanctifies the role of the writer. The great novel by the French novelist Marcel Proust (1871–1922) is *In Search of Lost Time* (7 vols., 1913–27).

8. Major American writer (1843–1916); see above.

9. Rainer Maria Rilke (1875–1926), Austrian modernist poet.

1. Work of criticism (1948) by T. S. ELIOT (1888–1965), American-born British poet and critic, who converted to the Church of England in 1927. His most renowned poem is *The Waste Land* (1922).

of a people must be founded on religion if it is to thrive. Not many modernist artists, however, happened to be devout Anglo-Catholics, and their preferred strategy was accordingly for culture to replace religion rather than to rest upon it. The shadow of the death of God still falls over the work of one of the most resolutely secular of twentieth-century critics, Frank Kermode, for whose *Sense of an Ending*² myths, both religious and political, must give way to self-conscious fictions.

God is not exactly dead, but he has turned his hinderparts to humanity, who can now sense his unbearable presence only in his ominous absence. * * *

With the advent of modernism, the two main senses of culture, aesthetic and anthropological, are increasingly riven apart. They can converge only in such imaginary worlds as Lawrence's Mexico, Yeats's Anglo-Irish estate, the organic society of the Scrutineers, Eliot's stratified Christian society, the aesthetic South of the American New Critics or Heidegger's vision of a philosophical inquiry conducted among the peasantry.³ (Adorno⁴ retorted that one would like to know the peasants' opinion of that.) The contest between culture as art and culture as form of life is one between minority and popular culture, which from now on confront one another as mortal rivals. Modernism is among other things a defensive reaction to the culture industry, with which it was twinned at birth. The dream of the radical Enlightenment—of a culture which would be both learned and popular, resourceful enough to challenge the reigning powers but sufficiently lucid to rally the common people to its standard—would now seem definitively over. So would the radical-Romantic hope of uniting art, culture and politics in a common project. It was a time for distinctions rather than syntheses.

* * *

* * * From the 1980s onward, culture in the sense of art became increasingly populist, streetwise and vernacular, while culture as a form of life was aestheticised from end to end. For the Hellenists and Romantics,⁵ the latter meant the kind of common life that was creatively fulfilling; for postmodernism, rather less euphorically, it meant a politics and economy dependent on the image. The long-dreamt-of marriage of art and everyday life, which for the revolutionary avant-garde was consummated in political murals or agitprop theatre, could be found instead in fashion and design, the media and public relations, advertising agencies and recording studios. Culture opened its arms to the everyday life that *Kulturkritik*⁶ had regarded as its nemesis.

2. A book (1967) by Kermode (1919–2010), a British literary critic, that describes the modernist feeling of exhaustion.

3. The German philosopher MARTIN HEIDEGGER (1889–1976) presents peasants as closer than others to the relation between earth and world in a major essay, "The Origin of the Work of Art" (1937). The English writer D. H. Lawrence (1885–1930) paints an idealized picture in his travel essays in *Mornings in Mexico* (1927). The ruined castle purchased by the Irish poet W. B. Yeats (1865–1939) was an important symbol in some of his best poems. Eliot espoused hierarchical Anglican views, notably in "The Idea of a Christian Society" (1939). A number of the New Critics, such as JOHN CROWE RANSOM and

CLEANTH BROOKS, found special value in the agrarian South of the United States.

4. THEODORE ADORNO (1903–1969), German philosopher and member of the Frankfurt School, which stressed Marxist criticism of mass society.

5. During the late 18th and early 19th centuries, Romantic poets such as WILLIAM WORDSWORTH foregrounded the value of ordinary life and the "language of the common man." Hellenists embraced classical Greece as providing ideals of beauty and democracy.

6. Cultural criticism (German): specifically, a form of it produced in the early 20th century and variously espoused by Adorno, Eliot, and Leavis that, influenced by modernism, excoriated the dangers of mass society and popular taste.

What it gained in democratic terms, however, it abandoned in critical ones. *Kulturkritik*, with its high-minded contempt for everyday habits, was an elitist vein of conservatism; postmodernism, with its fusion of art and commerce, is a populist one. If *Kulturkritik* is too caustic in its view of the commonplace, postmodernism is too complicit. Both look askance at the way of life of the majority—*Kulturkritik* because of what it sees as its dreary mediocrity, postmodernism because it falsely assumes that consensuses and majorities are inherently benighted, and thus has an ideological preference for margins and minorities. *Kulturkritik* is disdainful of such humdrum questions as state, class, economy and political organisation; postmodernism, entranced by the liminal, aberrant and transgressive, can muster scarcely more enthusiasm for them.

* * * Modernism involves a readiness to encounter dark, Dionysian forces,⁷ even the possibility of total dissolution, in its zealous pursuit of the truth. Postmodernism sees no such necessity. It is too young to recall a time when there was (so it is alleged) truth, unity, totality, objectivity, universals, absolute values, stable identities and rock-solid foundations, and thus finds nothing disquieting in their apparent absence. It differs in this sense from its modernist precursors, who are close enough to the original catastrophe to be still reeling from the shock waves. For postmodernism, by contrast, there is no fragmentation, since unity was an illusion all along; no false consciousness, because no unequivocal truth; no shaking of the foundations, since there were none to be dislodged. It is not as though truth, identity and foundations are tormentingly elusive, simply that they never were. They have not vanished for ever, leaving only a spectre behind them. There is no phantom limb syndrome here. Their absence is no more palpable than the absence of a hairdryer in the hands of the Mona Lisa.⁸ One would no more mourn the lack of these things than one would lament the fact that a pig cannot recite *Paradise Lost*.⁹ As Richard Rorty¹ might put it, there is no point in scratching where it doesn't itch.

Whereas modernism experiences the death of God as a trauma, an affront, a source of anguish as well as a cause for celebration, postmodernism does not experience it at all. There is no God-shaped hole at the centre of its universe, as there is at the centre of Kafka, Beckett or even Philip Larkin.² Indeed, there is no gap of any kind in its universe. This is one of several reasons why postmodernism is post-tragic. Tragedy involves the possibility of irretrievable loss, whereas for postmodernism there is nothing momentous missing. It is just that we have failed to register this fact in our compulsively idealising hunt for higher, nobler, deeper things. In any case, tragedy is thought to require a certain depth of subjectivity, which is one reason why

7. That is, the frenzied, ecstatic chaotic creative forces associated with Dionysus, the Greek god of wine and vegetation, which Nietzsche sets against Apollonian order and individuation in *The Birth of Tragedy* (1872; see above).

8. Iconic painting of a woman (ca. 1510), seated with folded hands, by Leonardo da Vinci.

9. Epic poem (1667, 1674) by John Milton, generally viewed as one of the greatest poems in the English language.

1. American philosopher (1931–2007) who argued against metaphysical or epistemological

foundationalism, favoring instead a form of pragmatism.

2. English poet (1922–1985), known for anti-Romantic, colloquial, and often dark verse. Samuel Beckett (1906–1989), Irish-born writer who published in both English and French; in his best-known work, the play *Waiting for Godot* (1952), two characters vainly await the arrival of “Godot.” Franz Kafka (1883–1924), Austrian writer who lived most of his life in Prague and wrote in German; his fictions are often strange and sometimes nightmarish parables of anxiety and alienation.

it might appear to be lacking in Beckett. The postmodern subject is hard-pressed to find enough depth and continuity in itself to be a suitable candidate for tragic self-dispossession. You cannot give away a self you never had. If there is no longer a God, it is partly because there is no longer any secret interior place where he might install himself. Depth and interiority belong to a clapped-out metaphysics, and to eradicate them is to abolish God by rooting out the underground places where he has been concealing himself. For psychoanalysis, by contrast, the human subject is diffused and unstable yet furnished with inner depths. Indeed, the two facts are closely allied. It thus ranks among the latter-day inheritors of the tragic sense, as postmodernism does not.

* * *

If postmodern culture is depthless, anti-tragic, non-linear, anti-numinous, non-foundational and anti-universalist, suspicious of absolutes and averse to interiority, one might claim that it is genuinely post-religious, as modernism most certainly is not. Most religious thought, for example, posits a universal humanity, since a God who concerned himself with only a particular section of the species, say Bosnians or people over five foot eight inches tall, would appear lacking in the impartial benevolence appropriate to a Supreme Being. There must also be some common ground between ourselves and Abraham³ for the Hebrew Scriptures to make sense. Postmodernism, however, is notoriously nervous of universals, despite its claim that grand narratives have everywhere disappeared from the earth, or that there are no stable identities to be found, wherever one looks. As a current of thought, it inherits most of those aspects of Nietzsche's philosophy that make for atheism; but since in its streetwise style it rejects the notion of the *Übermensch*,⁴ it refuses to smuggle in a new form of divinity to replace the old. Sceptical of the whole concept of a universal humanity, it repudiates Man as well as God, and in doing so refuses the quasi-religious consolations of humanism. In this sense, Nietzsche's warning that the Almighty will only rest quiet in his grave when Man lies alongside him is finally taken seriously.

* * *

Since Man is no longer to be seen primarily as agent or creator, he is no longer in danger of being mistaken for the Supreme Being. He has finally attained maturity, but only at the cost of relinquishing his identity. He is not to be seen as self-determining, which is what freedom means for the likes of Kant and Hegel.⁵ The self is no longer coherent enough to be so. This is certainly one way in which postmodernism is post-theological, since it is God above all who is One, and who is the ground of his own being. It follows that if you want to be shot off⁶ him, you need to refashion the concept of subjectivity itself, which is just what postmodernism seeks to do. It is easier to accomplish this if the capitalist system happens to be in transit from the subject as producer to the subject as consumer. Consumers are passive, dif-

3. The first of the three biblical patriarchs.

4. Overman (German), a concept from Nietzsche's *Thus Spoke Zarathustra* (1883–85) that signifies a goal toward which superior humans should strive.

5. Two major German idealist philosophers, IMMANUEL KANT (1724–1804) and GEORG WILHELM FRIEDRICH HEGEL (1770–1831).

6. Rid of.

fuse, provisional subjects, which is not quite how the Almighty is traditionally portrayed. As long as men and women are seen as producers, labourers, manufacturers or self-fashioners, God can never quite expire. Behind every act of production lurks an image of Creation, and one act of production in particular—art—rivals that of the Almighty himself. Not even he, however, can survive the advent of Man the Eternal Consumer.

Perhaps, then, the latter decades of the twentieth century will be seen as the time when the deity was finally put to death. With the advent of post-modern culture, a nostalgia for the numinous is finally banished. It is not so much that there is no redemption as that there is nothing to be redeemed. Religion, to be sure, lives on, since there is more to late modern civilisation than postmodernism. Even so, after a long succession of botched projects, flawed strategies and theoretical cul-de-sacs, it would not be too much to claim that with the emergence of postmodernism, human history arrives for the first time at an authentic atheism. It is true that postmodern thought pays an enormous price for this coming of age, if coming of age it is. In writing off religion, it also dismisses a good many other momentous questions as so much metaphysical illusion. If it abjures religion, it does so, as we have seen, at the cost of renouncing depth, of which it is notably nervous. It thereby abandons a good deal else of value.

It is true that postmodernism retains the odd trace of transcendence, not least in its somewhat fetishistic cult of otherness. Yet though there is otherness in plenty, there is no Big Other, no grand totality or transcendental signifier. Besides, though other cultures may be incommensurate with one's own, there is no other to culture itself. Culture goes all the way down, as God himself was once thought to do. It is a shamefaced form of foundation-alism. Culture is what you cannot peer behind or dig beneath, since the peering and digging would themselves be cultural procedures. It thus operates as a kind of absolute, as culture in a loftier sense of the term did for Arnold.⁷ Yet this is culture as transcendental rather than transcendent—as the condition of possibility of all phenomena, rather than as some sacred domain beyond their orbit.

There are also traces of the transcendent in the bogus spirituality of some postmodern cultures. It is the kind of soft-centred, cut-price religiosity one would expect from a thoroughly materialist society. A muddled sense of mystery is the only form of faith to which such hard-headed societies can aspire, rather as broad humour is the only comedy with which the humourless feel at ease. So it is that those who cannot conceive of an end to Wall Street are perfectly capable of believing in Kabbalah.⁸ It comes as no surprise that Scientology, packaged Sufism,⁹ off-the-peg occultism and ready-to-serve transcendental meditation should figure as fashionable pastimes among the super-rich, or that Hollywood should turn its eyes to Hinduism. The hard-boiled who believe in nothing turn out to be the kind of fantasists who will believe in anything. It is the worldly and well-heeled who think of

7. MATTHEW ARNOLD (1822–1888), English poet and critic who stressed—especially in *Culture and Anarchy* (1867; see above)—that culture, composed of “the best that has been known and thought,” serves an important social purpose of preventing anarchy.

8. An esoteric school of Jewish mysticism (literally, “Tradition”; Hebrew).

9. Mystical Islamic beliefs and practice. Scientology: a body of religious beliefs promulgated by a church founded in 1954 by the American science fiction author L. Ron Hubbard.

religion as cosmic harmony and esoteric cult, rather as the idea of the artist as a shock-haired bohemian, so James Joyce once pointed out, is the respectable burgher's view of him. Feeding the hungry is too close to filling in one's tax return for those in search of an escape from the mundane. The point of spirituality is to cater for needs that one's stylist or stockbroker cannot fulfil. Yet all this reach-me-down otherworldliness is really a form of atheism. It is a way of feeling uplifted without the gross inconvenience of God.

STEPHEN J. GREENBLATT

b. 1943

In 1980 literary discussion in the United States was dominated by debates over theory, especially over the status of language, as scholars questioned its referential value and its power to construct or undo meaning. A group of younger critics, several of them at the University of California at Berkeley, were instead turning their attention to the concrete particularities of history. But rather than simply amassing facts, as did traditional literary historians, they used more creative methods, most notably drawing on anecdotes, to illuminate the context of literature. A leading member of that group was Stephen J. Greenblatt, who coined the term “the new historicism” to describe the kind of literary history that he and his colleagues were writing, and who has become the leading critic of Shakespeare of his generation. In our selection, from his essay “Resonance and Wonder” (1990), he explains his sense of literary history, which accounts for the aesthetic wonder that texts arouse as well as their historical resonance.

Born in the Boston area, Greenblatt is the son of a lawyer and grandson of Lithuanian immigrants, as he recounts in some of his essays. He received his B.A. in 1964 from Yale University, where his undergraduate thesis on modern British novelists won a Yale College award and was published in 1965, and where he earned his Ph.D. in 1969. In between undergraduate and graduate work, he spent two years at Cambridge University in England, attending lectures with RAYMOND WILLIAMS and developing his interest in Renaissance literature. He taught at the University of California at Berkeley from 1969 to 1997; he then moved to Harvard University, where he holds a University Professorship of the Humanities. Among his many honors, he served as president of the Modern Language Association in 2002. Building from his studies of Renaissance literature, he has become a prominent public figure in the humanities, serving as general editor of *The Norton Shakespeare* (1997; 3d ed., 2015) and writing the popular biographical study *Will in the World* (2004), which was a finalist for a Pulitzer Prize; taking over the editorship of the major college textbook in English, *The Norton Anthology of English Literature*, in 1999; and lecturing around the globe.

The dominant mode of criticism in the United States when Greenblatt was in college was the New Criticism, and in fact several influential New Critics were at Yale, notably CLEANTH BROOKS and WILLIAM K. WIMSATT JR. They were formalists, holding that literary criticism should attend only to the “verbal icon” and its internal features, and ruling out attention to the work's author, audience, or context. Three Yale Ph.D. students eventually gained fame by turning those formalist prohibitions on their

head. In the face of the “intentional fallacy,” HAROLD BLOOM focused on the author and his psychic struggle with his predecessors to establish himself in the great tradition. In the face of the “affective fallacy,” STANLEY FISH posited that meaning was not in the poem but in the reader. And in the face of bans against considering external matter, Greenblatt focused on both the biographical and historical circumstances surrounding literary works. While not avoiding aesthetic analysis, he showed how history enhanced the interpretation of, for instance, a Shakespeare play. In a famous chapter in *Shakespearean Negotiations* (1988), he tells the story of a trial of a transvestite in France during the Renaissance as a way to explain some of the dilemmas of marriage and gender in Shakespeare’s *Twelfth Night* (1601).

Though he named the New Historicism, Greenblatt has been less invested in elaborating a theoretical program than in practical criticism. Still, he has assimilated a variety of theoretical positions along the way. He remarks that studying at Cambridge, especially with Raymond Williams, opened his eyes to the social aspects of literature. But he did not become a Marxist, as Williams was, and he also drew from MICHEL FOUCAULT and from cultural anthropology. Like Foucault’s *Discipline and Punish* (1975; see above), which starts its examination of the way that modern society exerts control through subtle discipline rather than overt force with a striking story of an execution, Greenblatt’s analyses often begin with an anecdote, unusual detail, or incidental object, like Cardinal Wolsey’s cap in “Resonance and Wonder.” From Foucault he and many of the New Historicists developed the idea that modern society operates through “subversion and containment”—that is, while it seems that some practices subvert discipline, such resistance is regularly incorporated back into the system. For instance, we might protest an unjust action of our government, but our act of protesting affirms that we have a free society, and therefore reinforces society’s overall control rather than disturbing it. From anthropologists, Greenblatt takes ideas of the circulation and exchange of cultural practices, which he uses in showing how a play might represent the dynamics of gender. Greenblatt also is a fellow traveler of poststructuralists, holding that history is textual, constructed, and self-contradictory rather than offering a record of events as they actually happened, as he notes in our selection. We “know” the reign of Henry VIII only through Shakespeare’s plays and other texts, and through artifacts like Wolsey’s hat.

In “Resonance and Wonder,” Greenblatt defines the New Historicism as “an interest . . . in the embeddedness of cultural objects in the contingencies of history.” While usually less interested in elaborating a theory than in bringing past texts to life, in this essay Greenblatt programmatically reflects on his position. His stress on history departs from the New Criticism as well as from more recent modes of criticism, like deconstruction, that concentrate on the linguistic attributes of literature. The main target of “Resonance and Wonder,” though, is traditional historicism, and he rebuts three standard views. By stressing contingency, Greenblatt distances himself from more deterministic views, such as Marxism, which hold that history follows a teleological path rooted in class struggle. He also counters the idea of scholarly objectivity, the notion that one merely reports facts; rather, New Historicists see their work as interested and aim to intervene in cultural debates—for instance, to dispel rigid, normative ideas of gender. His third attack is on the veneration of history as stable and coherent fact. As he remarks, New Historicists are “as concerned with the margins as with the center,” examining the contradictions and conflicts as well as the resolutions.

Though Greenblatt is known for revivifying the study of history, one key that undergirds “Resonance and Wonder” and his work overall is his interest in the literary. While his stress on “resonance” reminds us that literary works are not icons but historical objects spun from a web of cultural practices, his stress on “wonder” forestalls the reduction of a work to its historical context. Rather, it reaffirms the uniqueness of the literary object, through its aesthetic power “to stop the viewer in his

tracks." In this regard, Greenblatt represents a revival of literary criticism and aesthetic appreciation over theory; often overlooked is the influence on his work of ERICH AUERBACH, who studied literary masterpieces across Western culture in his classic *Mimesis* (1953; see above). Auerbach opens each chapter with a brief quotation from a literary work, from which he builds his arguments about the shift in cultural representation over two thousand years. As Greenblatt discusses in *Practicing New Historicism* (2000), anecdotes play a similar role for him. They sometimes seem random, but from them Greenblatt builds a sense of an era. Greenblatt's anecdotes try to effect what he has called "the touch of the real," re-creating the social and cultural negotiations of a historical moment.

Although Greenblatt has largely avoided theoretical battles, his work has been criticized on various grounds. Traditionalists appreciate his high valuation of literature, but feel he brings extraneous material into the field. More radical critics, often from the Marxist side, have attacked him for not taking a strong political stand and for having a vague sense of historical causality; he often juxtaposes objects or events that lack a verifiable historical connection—for example, a trial in France and an English play. Ironically, it is probably because he takes a nonpolemical stance, and maintains the importance of literature, that Greenblatt has become a leading representative of literary studies and the world's leading commentator on Shakespeare.

"Resonance and Wonder" Keywords: Aesthetics, The Canon/Tradition, Drama, Formalism, Literary History, Marxism, New Historicism, Poststructuralism

From Resonance and Wonder

In a small glass case in the library of Christ Church, Oxford, there is a round, red priest's hat; a note card identifies it as having belonged to Cardinal Wolsey.¹ It is altogether appropriate that this hat should have wound up at Christ Church, for the college owed its existence to Wolsey, who had decided at the height of his power to found in his own honor a magnificent new Oxford college. But the hat was not a direct bequest; historical forces, as we sometimes say—in this case taking the ominous form of Henry VIII—intervened, and Christ Church, like Hampton Court Palace,² was cut off from its original benefactor. Instead, the note informs us, the hat was acquired for Christ Church in the eighteenth century, purchased, we are told, from a company of players. If this miniature history of an artifact is too vague to be of much consequence—I do not know the name of the company of players, or the circumstances in which they acquired their curious stage property, or whether it was ever used, for example, by an actor playing Wolsey in Shakespeare's *Henry VIII*,³ or when it was placed under glass, or even whether it was anything but a clever fraud—it nonetheless evokes a vision of cultural production that I find compelling. The peregrinations of Wolsey's

1. Thomas Wolsey (ca. 1475–1530), English prelate and statesman who was both a Roman Catholic cardinal (1515–30) and Lord Chancellor (1515–29) under Henry VIII, king of England (1491–1547; reigned 1509–47). Wolsey was charged with treason after failing to obtain the divorce from Catherine of Aragon sought by Henry VIII, but he died before his trial. Wolsey

founded Cardinal College in 1525; it was refounded as Christ Church in 1546.

2. A huge palace complex, in outer London, built by Wolsey, then taken over and expanded by Henry VIII.

3. A history play (1613), written in collaboration with John Fletcher.

hat suggest that cultural artifacts do not stay still, that they exist in time, and that they are bound up with personal and institutional conflicts, negotiations, and appropriations.

The term culture has, in the case of the hat, a convenient material referent—a bit of red cloth stitched together—but that referent is only a tiny element in a complex symbolic construction that originally marked the transformation of Wolsey from a butcher's son to a prince of the church. Wolsey's gentleman usher, George Cavendish,⁴ has left a remarkably circumstantial contemporary account of that construction, an account that enables us even to glimpse the hat or as Cavendish terms it, the "pillion," in its place, on the Cardinal's head.

And after Mass he would return in his privy chamber again and, being advertised of the furniture of his chamber without⁵ with noblemen and gentlemen . . . , would issue out into them apparelled all in red in the habit of a Cardinal; which was either of fine scarlet or else of crimson satin, taffeta, damask, or caffia [a rich silk cloth], the best that he could get for money; and upon his head a round pillion with a neck of black velvet, set to the same in the inner side. . . . There was also borne before him first the Great Seal of England, and then his Cardinal's hat by a nobleman or some worthy gentleman right solemnly, bareheaded. And as soon as he was entered into his chamber of presence⁶ where was attending his coming to await upon him to Westminster Hall, as well noblemen and other worthy gentlemen as noblemen and gentlemen of his own family; thus passing forth with two great crosses of silver borne before him, with also two great pillars of silver, and his sergeant at arms with a great mace of silver gilt. Then his gentlemen ushers cried and said, 'On my lords and masters, make way for my lord's grace!'"⁷

The extraordinary theatricality of this manifestation of clerical power did not escape the notice of the Protestant reformers who called the Catholic church "the Pope's playhouse." When the Reformation in England⁸ dismantled the histrionic apparatus of Catholicism, they sold some of its gorgeous properties to the professional players—not only a mark of thrift but a polemical gesture, signifying that the sanctified vestments were in reality mere trumpery whose proper place was a disreputable world of illusion-mongering. In exchange for this polemical service, the theatrical joint-stock companies received more than an attractive, cut-rate wardrobe; they acquired the tarnished but still potent charisma that clung to the old vestments, charisma

4. English poet (1494–ca. 1561); a member of Wolsey's household until the cardinal's death and author of *The Life and Death of Cardinal Wolsey* (written ca. 1554–58, and widely circulated in manuscript; printed 1641).

5. That is, being told that the chamber outside his private room was occupied.

6. That is, the ceremonial room where others waited for (attended) him.

7. George Cavendish, *The Life and Death of Cardinal Wolsey*, in *Two Early Tudor Lives*, ed. Richard S. Sylvester and Davis P. Harding (New Haven and London: Yale University Press, 1962), pp. 24–25. We get another glimpse of the symbolism of hats later in the text, when Wolsey is beginning his precipitous fall from power: "And talking

with Master Norris upon his knees in the mire, he would have pulled off his under cap of velvet, but he could not undo the knot under his chin. Wherefore with violence he rent the laces and pulled it from his head and so kneeled bare-headed" (p. 106) [Greenblatt's note]. The Great Seal of England, now the Great Seal of the Realm, is used by the presiding monarch to authorize official documents. Westminster Hall served many governmental purposes and now is where the houses of Parliament meet.

8. The break with the Catholic Church by Henry VIII, who issued the Act of Supremacy (1534) that rejected papal control and created the national Church of England.

that in paradoxical fashion the players at once emptied out and heightened. By the time Wolsey's hat reached the library at Christ Church, its charisma must have been largely exhausted, but the college could confer upon it the prestige of an historical curiosity, as a trophy of the distant founder. And in its glass case it still radiates a tiny quantum of cultural energy.

Tiny indeed—I may already have seemed to make much more of this trivial relic than it deserves. But I am fascinated by transmigrations of the kind I have just sketched here—from theatricalized rituals to the stage to the university library or museum—because they seem to reveal something critically important about the *textual* relics with which my profession is obsessed. They enable us to glimpse the social process through which objects, gestures, rituals, and phrases are fashioned and moved from one zone of display to another. The display cases with which I am most involved—books—characteristically conceal this process, so that we have a misleading impression of fixity and little sense of the historical transactions through which the great texts we study have been fashioned. Let me give a literary example, an appropriately tiny textual equivalent of Wolsey's hat. At the close of Shakespeare's *Midsummer Night's Dream*,⁹ the Fairy King Oberon declares that he and his attendants are going to bless the beds of the three couples who have just been married. This ritual of blessing will ensure the happiness of the newlyweds and ward off moles, harelips, and other prodigious marks that would disfigure their offspring. "With this field-dew consecrate," the Fairy King concludes,

Every fairy take his gait,
And each several chamber bless,
Through this palace, with sweet peace,
And the owner of it blest
Ever shall in safety rest.

(5.1.415–20)

Oberon himself, we are told, will conduct the blessing upon the "best bride-bed," that of the ruler Theseus and his Amazon queen Hippolyta.

The ceremony—manifestly the sanctification of ownership and caste, as well as marriage—is a witty allusion to the traditional Catholic blessing of the bride-bed with holy water, a ceremony vehemently attacked as pagan superstition and banned by English Protestants. But the conventional critical term "allusion" seems inadequate, for the term usually implies a bloodless, bodiless thing, while even the tiny, incidental detail of the field dew bears a more active charge. Here, as with Wolsey's hat, I want to ask what is at stake in the shift from one zone of social practice to another, from the old religion to public theater, from priests to fairies, from holy water to field dew, or rather to theatrical fairies and theatrical field dew on the London stage. When the Catholic ritual is made into theatrical representation, the transposition at once naturalizes, denaturalizes, mocks, and celebrates. It naturalizes the ritual by transforming the specially sanctified water into ordinary

9. A comedy (ca. 1595) that focuses on the love intrigues of two young couples, framed by the mature relationships of two other couples—the king and queen of the Fairies, Oberon and Titania, as well as Theseus, duke of Athens, and his

wife Hippolyta. In Greek mythology, Theseus was king of Athens and had a son with an Amazon whose name is given variously as Antiope, Melanippe, or Hippolyte (who was not the queen).

dew; it denaturalizes the ritual by removing it from human agents and attributing it to the fairies; it mocks Catholic practice by associating it with notorious superstition and then by enacting it on the stage where it is revealed as a histrionic illusion; and it celebrates such practice by reinvesting it with the charismatic magic of the theater.

Several years ago, intending to signal a turn away from the formal, decontextualized analysis that dominates new criticism, I used the term “new historicism”¹ to describe an interest in the kinds of issues I have been raising—in the embeddedness of cultural objects in the contingencies of history—and the term has achieved a certain currency. But like most labels, this one is misleading. The new historicism, like the Holy Roman Empire,² constantly belies its own name. *The American Heritage Dictionary* gives three meanings for the term “historicism”:

1. The belief that processes are at work in history that man can do little to alter.
2. The theory that the historian must avoid all value judgments in his study of past periods or former cultures.
3. Veneration of the past or of tradition.

Most of the writing labeled new historicist, and certainly my own work, has set itself resolutely against each of these positions.

1. *The belief that processes are at work in history that man can do little to alter.* This formulation rests upon a simultaneous abstraction and evacuation of human agency. The men and women who find themselves making concrete choices in given circumstances at particular times are transformed into something called “man.” And this colorless, nameless collective being cannot significantly intervene in the “processes . . . at work in history,” processes that are thus mysteriously alienated from all of those who enact them.

New historicism, by contrast, eschews the use of the term “man”; interest lies not in the abstract universal but in particular, contingent cases, the selves fashioned and acting according to the generative rules and conflicts of a given culture. And these selves, conditioned by the expectations of their class, gender, religion, race and national identity, are constantly effecting changes in the course of history. Indeed if there is any inevitability in the new historicism’s vision of history it is this insistence on agency, for even inaction or extreme marginality is understood to possess meaning and therefore to imply intention. Every form of behavior, in this view, is a strategy: taking up arms or taking flight is a significant social action, but so is staying put, minding one’s business, turning one’s face to the wall. Agency is virtually inescapable.

1. A term coined in Greenblatt’s introduction to *The Power of Forms in the English Renaissance* (1982). New Criticism: an approach (championed by CLEANTH BROOKS, WILLIAM K. WIMSATT JR., and others) that emphasizes close reading of the text considered as an autonomous whole; it has greatly influenced teaching from the mid-20th century onward.

2. A Germanic union of German territories in western and central Europe, founded by Charlemagne in 800 C.E. and dissolved in 1806 by the last Holy Roman Emperor, Francis II; in 1756 it was famously described by the French writer and philosopher Voltaire as neither holy nor Roman nor an empire.

Inescapable but not simple: new historicism, as I understand it, does not posit historical processes as unalterable and inexorable, but it does tend to discover limits or constraints upon individual intervention. Actions that appear to be single are disclosed as multiple; the apparently isolated power of the individual genius turns out to be bound up with collective, social energy; a gesture of dissent may be an element in a larger legitimation process, while an attempt to stabilize the order of things may turn out to subvert it. And political valences may change, sometimes abruptly: there are no guarantees, no absolute, formal assurances that what seems progressive in one set of contingent circumstances will not come to seem reactionary in another.

The new historicism's insistence on the pervasiveness of agency has apparently led some of its critics to find in it a Nietzschean celebration of the ruthless will to power,³ while its ironic and skeptical reappraisal of the cult of heroic individualism has led others to find in it a pessimistic doctrine of human helplessness. Hence, for example, from a Marxist perspective one critic characterizes the new historicism as a "liberal disillusionment" that finds that "any apparent site of resistance ultimately serves the interests of power" (33), while from a liberal humanist perspective, another critic proclaims that "anyone who, like me, is reluctant to accept the will to power as the defining human essence will probably have trouble with the critical procedures of the new historicists and with their interpretive conclusions."⁴ But the very idea of a "defining human essence" is precisely what new historicists find vacuous and untenable, as I do the counter-claim that love rather than power makes the world go round. The Marxist critique is more plausible, but it rests upon an assertion that new historicism argues that "any apparent site of resistance" is ultimately coopted. Some are, some aren't.

I argued in an essay published some years ago that the sites of resistance in Shakespeare's second tetralogy⁵ are coopted in the plays' ironic, complex, but finally celebratory affirmation of charismatic kingship. That is, the formal structure and rhetorical strategy of the plays make it difficult for audiences to withhold their consent from the triumph of Prince Hal. Shakespeare shows that the triumph rests upon a claustrophobic narrowing of pleasure, a hypocritical manipulation of appearances, and a systematic betrayal of friendship, and yet these manifestations of bad faith only contrive to heighten the spectators' knowing pleasure and the ratification of applause. The subversive perceptions do not disappear, but insofar as they remain within the structure of the play, they are contained and indeed serve to heighten a power they would appear to question.

3. A central concept in the work of the German philosopher FRIEDRICH NIETZSCHE (1844–1900); the phrase, which supplies the title of his posthumously collected notes, *The Will to Power* (1900), appears in his earlier writings as well.

4. Walter Cohen, "Political Criticism of Shakespeare," in *Shakespeare Reproduced: The Text in History and Ideology*, ed. Jean E. Howard and Marion F. O'Connor (New York and London: Methuen, 1987), p. 33; Edward Pechter, "The New Historicism and Its Discontents," in *PMLA* 102 (1987), p. 301 [Greenblatt's note]. A perspective inspired by the writings of KARL MARX (1818–1883) would not only analyze the dynamic of power but would also

emphasize the importance of class struggle and revolution.

5. Shakespeare's tetralogies are 8 plays covering the reigns of English kings from Richard II to Richard III (1377–1485). The second in time of completion (though portraying earlier events) consists of *Richard II* (1595), the 2 parts of *Henry IV* (1597, 1598), and *Henry V* (1599). Prince Hal, the young hero of the *Henry IV* plays, triumphs as he ascends to the throne as Henry V, and then brutally rejects the friendship of his former companion, Falstaff. Greenblatt's essay is "Invisible Bullets: Renaissance Authority and Its Subversion" (1981).

I did not propose that all manifestation of resistance in all literature (or even in all plays by Shakespeare) were coopted—one can readily think of plays where the forces of ideological containment break down. And yet characterizations of this essay in particular, and new historicism in general, repeatedly refer to a supposed argument that any resistance is impossible.⁶ A particularizing argument about the subject position projected by a set of plays is at once simplified and turned into a universal principle from which contingency and hence history itself is erased.

Moreover, even my argument about Shakespeare's second tetralogy is misunderstood if it is thought to foreclose the possibility of dissent or change or the radical alteration of the processes of history. The point is that certain aesthetic and political structures work to contain the subversive perceptions they generate, not that those perceptions simply wither away. On the contrary, they may be pried loose from the order with which they were bound up and may serve to fashion a new and radically different set of structures. How else could change ever come about? No one is forced—except perhaps in school—to take aesthetic or political wholes as sacrosanct. The order of things is never simply a given: it takes labor to produce, sustain, reproduce, and transmit the way things are, and this labor may be withheld or transformed. Structures may be broken in pieces, the pieces altered, inverted, rearranged. Everything can be different than it is; everything could have been different than it was. But it will not do to imagine that this alteration is easy, automatic, without cost or obligation. My objection was to the notion that the rich ironies in the history plays were themselves inherently liberating, that to savor the tetralogy's skeptical cunning was to participate in an act of political resistance. In general I find dubious the assertion that certain rhetorical features in much-loved literary works constitute authentic acts of political liberation; the fact that this assertion is now heard from the left, where in my college days it was more often heard from the right, does not make it in most instances any less fatuous and presumptuous. I wished to show, at least in the case of Shakespeare's histories and in several analogous discourses, how a set of representational and political practices in the late sixteenth century could produce and even batten upon what appeared to be their own subversion.

To show this is not to give up on the possibility of altering historical processes—if this is historicism I want no part of it—but rather to eschew an aestheticized and idealized politics of the imagination.

2. *The theory that the historian must avoid all value judgments in his study of past periods or former cultures.* Once again, if this is an essential tenet of historicism, then the new historicism belies its name. My own critical practice and that of many others associated with new historicism was decisively shaped by the American 1960s and early 70s, and especially by the opposi-

6. "The new historicists and cultural materialists," one typical summary puts it, "represent, and by representing, reproduce in their new history of ideas, a world which is hierarchical, authoritarian, hegemonic, unsubvertible. . . . In this world picture, Stephen Greenblatt has poignantly asserted, there can be no subversion—and certainly not for us!" [C. T. Neely, "Constructing the Subject: Femi-

nist Practice and the New Renaissance Discourses," *English Literary Renaissance* 18 (1988), p. 10.] Poignantly or otherwise, I asserted no such thing; I argued that the spectator of the history plays was continually tantalized by a resistance simultaneously powerful and deferred [Greenblatt's note].

tion to the Viet Nam War.⁷ Writing that was not engaged, that withheld judgments, that failed to connect the present with the past seemed worthless. Such connection could be made either by analogy or causality; that is, a particular set of historical circumstances could be represented in such a way as to bring out homologies with aspects of the present or, alternatively, those circumstances could be analyzed as the generative forces that led to the modern condition. In either mode, value judgments were implicated, because a neutral or indifferent relation to the present seemed impossible. Or rather it seemed overwhelmingly clear that neutrality was itself a political position, a decision to support the official policies in both the state and the academy.

To study the culture of sixteenth-century England did not present itself as an escape from the turmoil of the present; it seemed rather an intervention, a mode of relation. The fascination for me of the Renaissance was that it seemed to be powerfully linked to the present both analogically and causally. This doubled link at once called forth and qualified my value judgments: called them forth because my response to the past was inextricably bound up with my response to the present; qualified them because the analysis of the past revealed the complex, unsettling historical genealogy of the very judgments I was making. To study Renaissance culture then was simultaneously to feel more rooted and more estranged in my own values.⁸

Other critics associated with the new historicism have written directly and forcefully about their own subject position and have made more explicit than I the nature of this engagement.⁹ If I have not done so to the same extent, it is not because I believe that my values are somehow suspended in my study of the past but because I believe they are pervasive: in the textual and visual traces I choose to analyze, in the stories I choose to tell, in the cultural conjunctions I attempt to make, in my syntax, adjectives, pronouns. "The new historicism," someone has written in a lively critique, "needs at every point to be more overtly self-conscious of its methods and its theoretical assumptions, since what one discovers about the historical place and function of literary texts is in large measure a function of the angle from which one looks and the assumptions that enable the investigation."¹⁰ I am certainly not opposed to methodological self-consciousness, but I am less inclined to see overt-ness—an explicit articulation of one's values and methods—as inherently necessary or virtuous. Nor, though I believe that my values are everywhere engaged in my work, do I think that there need be a perfect integration of those values and the objects I am studying. On the contrary, some of the most interesting and powerful ideas in cultural criticism occur precisely at

7. As U.S. involvement in the war between North and South Vietnam escalated throughout the 1960s, opposition to the war also grew, especially among draft-age university students. The last American forces left in 1973, and South Vietnam fell to the communist North in 1975.

8. See my *Renaissance Self-Fashioning: From More to Shakespeare* (Chicago: University of Chicago Press, 1980), pp. 174–75: "We are situated at the close of the cultural movement initiated in the Renaissance; the place in which our social and psychological world seems to be cracking apart are those structural joints visible when it was first constructed" [Greenblatt's note].

9. Louis Adrian Montrose, "Renaissance Literary Studies and the Subject of History," in *English*

Literary Renaissance 16 (1986), pp. 5–12; Don Wayne, "Power, Politics, and the Shakespearean Text: Recent Criticism in England and the United States," in *Shakespeare Reproduced: The Text in History and Ideology*, ed. Howard and O'Connor, pp. 47–67; Catherine Gallagher, "Marxism and the New Historicism," in *The New Historicism*, ed. Harold Veesser (New York and London: Routledge, 1989) [Greenblatt's note].

10. Jean E. Howard, "The New Historicism in Renaissance Studies," in *Renaissance Historicism: Selections from "English Literary Renaissance"*, ed. Arthur F. Kinney and Dan S. Collins (Amherst: University of Massachusetts Press, 1987), pp. 32–33 [Greenblatt's note].

moments of disjunction, disintegration, unevenness. A criticism that never encounters obstacles, that celebrates predictable heroines and rounds up the usual suspects, that finds confirmation of its values everywhere it turns, is quite simply boring.²

3. *Veneration of the past or of tradition.* The third definition of historicism obviously sits in a strange relation to the second, but they are not simply alternatives. The apparent eschewing of value judgments was often accompanied by a still more apparent admiration, however cloaked as objective description, of the past. One of the more irritating qualities of my own literary training had been its relentlessly celebratory character: literary criticism was and largely remains a kind of secular theodicy. Every decision made by a great artist could be shown to be a brilliant one; works that had seemed flawed and uneven to an earlier generation of critics bent on displaying discriminations in taste were now revealed to be organic masterpieces. A standard critical assignment in my student years was to show how a text that seemed to break in parts was really a complex whole: thousands of pages were dutifully churned out to prove that the bizarre subplot of *The Changeling* was cunningly integrated into the tragic mainplot or that every tedious bit of clowning in *Doctor Faustus*³ was richly significant. Behind these exercises was the assumption that great works of art were triumphs of resolution, that they were, in Bakhtin's term, monological⁴—the mature expression of a single artistic intention. When this formalism was combined, as it often was, with both ego psychology and historicism, it posited aesthetic integration as the reflection of the artist's psychic integration and posited that psychic integration as the triumphant expression of a healthy, integrated community. Accounts of Shakespeare's relation to Elizabethan culture were particularly prone to this air of veneration, since the Romantic cult of poetic genius could be conjoined with the still older political cult that had been created around the figure of the Virgin Queen.⁵

Here again new historicist critics have swerved in a different direction. They have been more interested in unresolved conflict and contradiction than in integration; they are as concerned with the margins as with the center; and they have turned from a celebration of achieved aesthetic order to an exploration of the ideological and material bases for the production of this order. Traditional formalism and historicism, twin legacies of early nineteenth-century Germany, shared a vision of high culture as a harmoniz-

2. If there is then no suspension of value judgments in the new historicism, there is at the same time a complication of those judgments, what I have called a sense of estrangement. This estrangement is bound up with the abandonment of a belief in historical inevitability, for, with this abandonment, the values of the present could no longer seem the necessary outcome of an irreversible teleological progression, whether of enlightenment or decline. An older historicism that proclaimed self-consciously that it had avoided all value judgments in its account of the past—that it had given us historical reality *wie es eigentlich gewesen* ["as it really was"; German]—did not thereby avoid all value judgments; it simply provided a misleading account of what it had actually done. In this sense the new historicism, for all its

acknowledgment of engagement and partiality, may be slightly less likely than the older historicism to impose its values belligerently on the past, for those values seem historically contingent [Greenblatt's note].

ing domain of reconciliation based upon an aesthetic labor that transcends specific economic or political determinants. What is missing is psychic, social, and material resistance, a stubborn, unassimilable otherness, a sense of distance and difference. New historicism has attempted to restore this distance; hence its characteristic concerns have seemed to some critics off-center or strange. "New historicists," writes a Marxist observer, "are likely to seize upon something out of the way, obscure, even bizarre: dreams, popular or aristocratic festivals, denunciations of witchcraft, sexual treatises, diaries and autobiographies, descriptions of clothing, reports on disease, birth and death records, accounts of insanity."⁶ What is fascinating to me is that concerns like these should have come to seem bizarre, especially to a critic who is committed to the historical understanding of culture. That they have done so indicates how narrow the boundaries of historical understanding had become, how much these boundaries needed to be broken.

For none of the cultural practices on this list (and one could extend it considerably) is or should be "out of the way" in a study of Renaissance literature or art; on the contrary, each is directly in the way of coming to terms with the period's methods of regulating the body, its conscious and unconscious psychic strategies, its ways of defining and dealing with marginals and deviants, its mechanisms for the display of power and the expression of discontent, its treatment of women. If such concerns have been rendered "obscure," it is because of a disabling idea of causality that confines the legitimate field of historical agency within absurdly restrictive boundaries. The world is parcelled out between a predictable group of stereotypical causes and a large, dimly lit mass of raw materials that the artist chooses to fashion.

The new historicist critics are interested in such cultural expressions as witchcraft accusations, medical manuals, or clothing not as raw materials but as "cooked"⁷—complex symbolic and material articulations of the imaginative and ideological structures of the society that produced them. Consequently, there is a tendency in at least some new historicist writings (certainly in my own) for the focus to be partially displaced from the work of art that is their formal occasion onto the related practices that had been adduced ostensibly in order to illuminate that work. It is difficult to keep those practices in the background if the very concept of historical background has been called into question.

I have tried to deal with the problem of focus by developing a notion of cultural negotiation and exchange, that is, by examining the points at which one cultural practice intersects with another, borrowing its forms and intensities or attempting to ward off unwelcome appropriations or moving texts and artifacts from one place to another. But it would be misleading to imagine that there is a complete homogenization of interest; my own concern remains centrally with imaginative literature, and not only because other cultural structures resonate powerfully within it. If I do not approach works of art in a spirit of veneration, I do approach them in a spirit that is best described as wonder. Wonder has not been alien to literary criticism, but it has been associated (if only implicitly) with formalism rather than histori-

7. This distinction between the natural world and

the world of human culture was famously drawn by the French anthropologist CLAUDE LÉVI-STRAUSS in *The Raw and the Cooked* (1964).

cism. I wish to extend this wonder beyond the formal boundaries of works of art, just as I wish to intensify resonance within those boundaries.

It will be easier to grasp the concepts of resonance and wonder if we think of the way in which our culture presents to itself not the textual traces of its past but the surviving visual traces, for the latter are put on display in galleries and museums specially designed for the purpose. By resonance I mean the power of the object displayed to reach out beyond its formal boundaries to a larger world, to evoke in the viewer the complex, dynamic cultural forces from which it has emerged and for which as metaphor or more simply as metonymy it may be taken by a viewer to stand. By wonder I mean the power of the object displayed to stop the viewer in his tracks, to convey an arresting sense of uniqueness, to evoke an exalted attention.

The new historicism obviously has distinct affinities with resonance; that is, its concern with literary texts has been to recover as far as possible the historical circumstances of their original production and consumption and to analyze the relationship between these circumstances and our own. New historicist critics have tried to understand the intersecting circumstances not as a stable, prefabricated background against which the literary texts can be placed, but as a dense network of evolving and often contradictory social forces. The idea is not to find outside the work of art some rock onto which literary interpretation can be securely chained but rather to situate the work in relation to other representational practices operative in the culture at a given moment in both its history and our own. In Louis Montrose's⁸ convenient formulation, the goal has been to grasp simultaneously the historicity of texts and the textuality of history.

Insofar as this approach, developed for literary interpretation, is at all applicable to visual traces, it would call for an attempt to reduce the isolation of individual "masterpieces," to illuminate the conditions of their making, to disclose the history of their appropriation and the circumstances in which they come to be displayed, to restore the tangibility, the openness, the permeability of boundaries that enabled the objects to come into being in the first place. An actual restoration of tangibility is obviously in most cases impossible, and the frames that enclose pictures are only the ultimate formal confirmation of the closing of the borders that marks the finishing of a work of art. But we need not take that finishing so entirely for granted; museums can and on occasion do make it easier imaginatively to recreate the work in its moment of openness.

That openness is linked to a quality of artifacts that museums obviously dread, their precariousness. But though it is perfectly reasonable for museums to protect their objects—I would not wish it any other way—precariousness is a rich source of resonance. Thomas Greene, who has written a sensitive book on what he calls the "vulnerable text," suggests that the symbolic wounding to which literature is prone may confer upon it power and fecundity. "The vulnerability of poetry," Greene argues, "stems from four basic conditions of language: its historicity, its dialogic function, its referential function, and its

8. Prominent New Historicist critic (b. 1941); his "formulation" appears in "The Elizabethan Subject and the Spenserian Text" (1986).

dependence on figuration.”⁹ Three of these conditions are different for the visual arts, in ways that would seem to reduce vulnerability: painting and sculpture may be detached more readily than language from both referentiality and figuration, and the pressures of contextual dialogue are diminished by the absence of an inherent *logos*,¹ a constitutive word. But the fourth condition—historicity—is in the case of material artifacts vastly increased, indeed virtually literalized. Museums function, partly by design and partly in spite of themselves, as monuments to the fragility of cultures, to the fall of sustaining institutions and noble houses, the collapse of rituals, the evacuation of myths, the destructive effects of warfare, neglect, and corrosive doubt.

I am fascinated by the signs of alteration, tampering, even destructiveness which many museums try simply to efface: first and most obviously, the act of displacement that is essential for the collection of virtually all older artifacts and most modern ones—pulled out of chapels, peeled off church walls, removed from decaying houses, seized as spoils of war, stolen, “purchased” more or less fairly by the economically ascendent from the economically naïve, the poor, the hard-pressed heirs of fallen dynasties and impoverished religious orders. Then too there are the marks on the artifacts themselves: the attempt to scratch out or deface the image of the devil in numerous late-medieval and Renaissance paintings, the concealing of the genitals in sculptured and painted figures, the iconoclastic² smashing of human or divine representations, the evidence of cutting or reshaping to fit a new frame or purpose, the cracks or scorch marks or broken-off noses that indifferently record the grand disasters of history and the random accidents of trivial incompetence. Even these accidents—the marks of a literal fragility—can have their resonance: the climax of an absurdly hagiographical Proust exhibition several years ago was a display case holding a small, patched, modest vase with a notice, “This vase broken by Marcel Proust.”³

As this comical example suggests, wounded artifacts may be compelling not only as witnesses to the violence of history but as signs of use, marks of the human touch, and hence links with the openness to touch that was the condition of their creation. The most familiar way to recreate the openness of aesthetic artifacts without simply renewing their vulnerability is through a skillful deployment of explanatory texts in the catalogue, on the walls of the exhibit, or on cassettes. The texts so deployed introduce and in effect stand in for the context that has been effaced in the process of moving the object into the museum. But insofar as that context is partially, often primarily, visual as well as verbal, textual contextualism has its limits. Hence the mute eloquence of the display of the palette, brushes, and other implements that an artist of a given period would have employed or of objects that are represented in the exhibited paintings or of materials and images that in some way parallel or intersect with the formal works of art.

Among the most resonant moments are those in which the supposedly contextual objects take on a life of their own, make a claim that rivals that

of the object that is formally privileged. A table, a chair, a map, often seemingly placed only to provide a decorative setting for a grand work, become oddly expressive, significant not as “background” but as compelling representational practices in themselves. These practices may in turn impinge upon the grand work, so that we begin to glimpse a kind of circulation: the cultural practice and social energy implicit in map-making drawn into the aesthetic orbit of a painting which has itself enabled us to register some of the representational significance of the map. Or again the threadbare fabric on the old chair or the gouges in the wood of a cabinet juxtapose the privileged painting or sculpture with marks not only of time but of use, the imprint of the human body on the artifact, and call attention to the deliberate removal of certain exalted aesthetic objects from the threat of that imprint.

For the effect of resonance does not necessarily depend upon a collapse of the distinction between art and non-art; it can be achieved by awakening in the viewer a sense of the cultural and historically contingent construction of art objects, the negotiations, exchanges, swerves, exclusions by which certain representational practices come to be set apart from other representational practices that they partially resemble. A resonant exhibition often pulls the viewer away from the celebration of isolated objects and toward a series of implied, only half-visible relationships and questions. How have the objects come to be displayed? What is at stake in categorizing them as of “museum-quality”? How were they originally used? What cultural and material conditions made possible their production? What were the feelings of those who originally held these objects, cherished them, collected them, possessed them? What is the meaning of my relationship to these same objects now that they are displayed here, in this museum, on this day?

1990

DONNA HARAWAY

b. 1944

In the introduction to her book *Simians, Cyborgs, and Women: The Reinvention of Nature* (1991), Donna Haraway describes her transformation from a “proper, U.S. socialist feminist, white, female, hominid biologist” into a “multiply marked cyborg feminist” whose writings range freely from cyborgs and monsters to apes and dogs, productive assemblages that in her later work she comes to call “companion species.” Haraway’s challenging and innovative theoretical work is part of the cultural studies of science and technology, a thriving subdiscipline interested in the history, sociology, and politics of technoscience. Her best-known text, “A Manifesto for Cyborgs” (1985), has been hailed as the central text of cyberfeminism—an often iconoclastic wave of feminist theory and practice that is seeking to reclaim technoscience. As she attempts to understand the place of technology within a postmod-

ern, socialist feminism, Haraway argues that far from being antithetical to the human organism, technology is a material and symbolic apparatus that is already deeply involved in what it means to be human. The old political strategies—Marxist, liberal, and conservative—have become obsolete in the face of a global technoscience that is outpacing the ethical and political mechanisms we have devised for containing it. Her landmark essay is a call for “reconstructing socialist-feminist politics . . . through theory and practice addressed to the social relations of science and technology.” In this manifesto, she introduces the mysterious boundary creature and new myth: the cyborg, a “hybrid of machine and organism” that, for Haraway, becomes a metaphor for the “disassembled and reassembled, post-modern collective and personal self” of contemporary cultural theory suited to the West’s late capitalist social order.

Haraway’s educational history illuminates the broad range of her scholarship. With the aid of a Boettcher Foundation scholarship, she earned a degree in zoology and philosophy in 1966 from Colorado College, where she also fulfilled the requirements for an English major. She studied philosophies of evolution in Paris for a year on a Fulbright scholarship before beginning graduate studies in biology at Yale University; in 1972 she earned a Ph.D. for an interdisciplinary dissertation on the functions of metaphor in shaping twentieth-century research in developmental biology. She has taught at the University of Hawaii and Johns Hopkins University and, from 1980 until her retirement in 2011, in the History of Consciousness Program at the University of California at Santa Cruz. She is also a professor of feminist theory and technoscience in the Media and Communications Program of the European Graduate School in Switzerland.

Although best known for the frequently anthologized *A Manifesto for Cyborgs*, Haraway has published on an impressive array of topics, including primatology, science fiction, animal studies, dogs, technoscience, ecofeminism, globalization, and immunity. As befits someone who received a special dispensation to write a dissertation on metaphors in science, what provides coherence to her eclectic body of work is a fascination with the power of tropes—figures of speech, metaphors—to shape and organize the complex interrelationships between the material world and semiosis, the study of signs and meaning. Haraway’s writing draws on a series of tropes—the cyborg, the monster, the ape, the dog—to embody the border skirmishes and disarticulated identities that trouble late capitalism. She sees her work as both in alliance and in tension with that of other thinkers of the “posthuman,” including N. KATHERINE HAYLES, ROSI BRAIDOTTI, BRUNO LATOUR, and Cary Wolfe. She is particularly interested in bridging the rift between the so-called two cultures—the arts and the sciences—and in bringing science studies to feminism and feminism to science studies. Haraway is at home in the genre of the manifesto, a speculative form of writing that attempts to imagine the world differently, a form that produces risky readings designed to unsettle commonplace ways of thinking about the world.

A Manifesto for Cyborgs, our first selection, attempts to appropriate the resources of contemporary technoscience as a means of constructing “an ironic political myth faithful to feminism, socialism, and materialism.” The icon of this new feminist mythology is the cyborg, the hybrid creation of modern science—part human, part machine. Like the feminist theorist GLORIA ANZALDÚA, Haraway is interested in exploring those boundaries, borders, and borderlands where our jumbled personal and collective identities are constructed and contested. By adopting the cyborg as a political myth, feminism, she believes, might be able to initiate effective political action without recourse to essentialism or identity politics; she argues “for *pleasure* in the confusion of boundaries and for *responsibility* in their construction.” While Anzaldúa investigates boundary confusion in geographical space and racial identity, Haraway explores and affirms the breakdowns in three crucial boundaries that have resulted from post–World War II technoscience: those between human and animal, organism and machine, and the physical and non-physical.

Because they are situated on the boundary between organism and machine, Haraway argues, cyborgs do not participate in the various traditional mythologies that have defined the West. Most pernicious among these are the myths of essential identity and original unity—the myth of the garden of Eden, a belief in a pure, coherent social identity that separates the truly human from animals and machines, as well as from other races and ethnic groups. Haraway joins postmodern feminists such as JUDITH BUTLER and EVE KOSOFSKY SEDGWICK in the critique of essentialism, arguing that totalizing formulations of pure identity often associated with Marxism, the feminism of Catharine MacKinnon, and other movements are based on exclusion and marginalization. Because the cyborg is postgender, post-Western, post-Marxist, and post-oedipal, it serves as a viable image for a new partial and heterogeneous subjectivity that reconceptualizes identity politics. Cyborgs, being “wary of holism, but needy for connection,” offer a new kind of community and politics based not on unity but on affinity, not on the party but on the coalition, not on the totalized conception of the category “woman” (central to many feminisms) but on partial explanations based on a careful understanding of difference. Yet Haraway warns that “difference” is not inherently liberating: “some differences are playful; some are poles of world historical systems of domination.”

Haraway's post-Marxist call for new political strategies follows from her perception of new forms of political domination. The old forms of domination endemic to an industrial society—to white patriarchal capitalism—are rapidly being rendered obsolete by new technologies. The emerging new networks of power, which she calls the “informatics of domination,” are adapted to technoscientific economies based on information systems. Haraway's focus on the metaphor of the cyborg does not, as a few of her critics have unfairly charged, ignore the real material oppression of women worldwide—their poverty and exploitation; it is not a flight away from the “real world” into a poststructuralist utopia, even though her poststructuralist language is very difficult and highly theoretical. Her exploration of the informatics of domination rests on an analysis of the social and material relations of science and technology. These real and frequently oppressive relations, promoted by laissez-faire late capitalism, include the “homework economy” (that is, the restructuring and feminization of the workplace), encroaching privatization and the loss of public life, growing insecurity even among the well-to-do, cultural impoverishment, and the “failure of subsistence networks for the most vulnerable.”

While best known for the trope of the cyborg, Haraway has always evinced a keen interest in the ways in which the divide between human and animal has been used to determine what it means to be human. Most recently, she has engaged with the emerging field of animal studies, a subject that also occupied JACQUES DERRIDA in his later work (see above). In our excerpt from *The Companion Species Manifesto: Dogs, People, and Significant Otherness* (2003), Haraway argues that dogs and humans have become inextricably interwoven into a single “companion species,” a symbiotic relation “in which none of the partners pre-exist the relating.” She sees her work on dogs as a “branch of feminist theory.” Haraway believes that by taking dog-human relationships seriously as an object of study, we might develop “an ethics and politics committed to the flourishing of significant otherness.” The trope of companion species links this essay to her earlier essay on the cyborg, enabling her to trouble the boundaries between “the human and non-human, the organic and technological, carbon and silicon, freedom and structure, history and myth, the rich and the poor, the state and the subject, diversity and depletion, modernity and postmodernity, and nature and culture.” *The Companion Species Manifesto* marks a significant intervention in the traditional divide between nature and culture. Haraway coins the term *natureculture* to underscore the inextricable entanglements of nature and culture, of the material and semiotic, and of body and mind.

Haraway has been criticized for the exuberance with which she embraces the “monstrous” mixed identity of the cyborg, but her enthusiasm is qualified by sobering discussions of the various impacts of modern and postmodern technoscience on our lives. Where critics sometimes found *Manifesto for Cyborgs* abstruse, they find *The Companion Species Manifesto* cobbled together and inconsistent. Some animal studies scholars have accused her of ignoring animal rights issues, while feminists have complained that she leaves the relationship between dogs and feminism ambiguous. However, Haraway draws on the notion of partial connections, articulated by the anthropologist Marilyn Strathern, insisting that if the parts of her manifestos don’t add up to a whole, neither does natureculture. If the relationship to feminism remains latent, it also tantalizes, demanding a response. None of us sees the world as a whole; all we can do is track out networks of connections in a project that is ultimately collaborative.

Haraway’s cyborg myth, which recognizes that monsters always mark the limits of community, attempts to integrate women and machines into a new “science” fiction. Her “dog stories” relate tales of biopower and biosociality. Writing and language are crucial to both technoscience and feminist politics. Yet she advocates not the “dream of a common language” embraced by ADRIENNE RICH or the purified *écriture féminine* (feminine writing) described by HÉLÈNE CIXOUS, but a “powerful infidel heteroglossia,” derived from the writings of MIKHAIL BAKHTIN, that enables us to theorize the complications of language, the frustrations of communicating experience, and the necessity of negotiating rather than policing boundaries that are becoming increasingly unstable.

From A Manifesto for Cyborgs: Science, Technology, and Socialist Feminism in the 1980s

*An Ironic Dream of a Common Language for Women in the Integrated Circuit*¹

This essay is an effort to build an ironic political myth faithful to feminism, socialism, and materialism. Perhaps more faithful as blasphemy is faithful, than as reverent worship and identification. Blasphemy has always seemed to require taking things very seriously. I know no better stance to adopt from within the secular-religious, evangelical traditions of United States politics, including the politics of socialist-feminism. Blasphemy protects one from the moral majority within, while still insisting on the need for community. Blasphemy is not apostasy. Irony is about contradictions that do not resolve into larger wholes, even dialectically, about the tension of holding incompatible things together because both or all are necessary and true. Irony is about

1. A reference to the feminism of ADRIENNE RICH (1929–2012), author of “Compulsory Heterosexuality and Lesbian Existence” (1980; see above)

and of a 1978 collection of poetry titled *The Dream of a Common Language*.

humor and serious play. It is also a rhetorical strategy and a political method, one I would like to see more honored within socialist feminism. At the center of my ironic faith, my blasphemy, is the image of the cyborg.

A cyborg is a cybernetic organism, a hybrid of machine and organism, a creature of social reality as well as a creature of fiction. Social reality is lived social relations, our most important political construction, a world-changing fiction. The international women's movements have constructed "women's experience," as well as uncovered or discovered this crucial collective object. This experience is a fiction and fact of the most crucial, political kind. Liberation rests on the construction of the consciousness, the imaginative apprehension, of oppression, and so of possibility. The cyborg is a matter of fiction and lived experience that changes what counts as women's experience in the late twentieth century. This is a struggle over life and death, but the boundary between science fiction and social reality is an optical illusion.

Contemporary science fiction is full of cyborgs—creatures simultaneously animal and machine, who populate worlds ambiguously natural and crafted. Modern medicine is also full of cyborgs, of couplings between organism and machine, each conceived as coded devices, in an intimacy and with a power that was not generated in the history of sexuality. Cyborg "sex" restores some of the lovely replicative baroque of ferns and invertebrates (such nice organic prophylactics against heterosexism). Cyborg replication is uncoupled from organic reproduction. Modern production seems like a dream of cyborg colonization of work, a dream that makes the nightmare of Taylorism² seem idyllic. And modern war is a cyborg orgy, coded by C³I, command-control-communication-intelligence, an \$84 billion item in 1984's U.S. defense budget. I am making an argument for the cyborg as a fiction mapping our social and bodily reality and as an imaginative resource suggesting some very fruitful couplings. Foucault's biopolitics³ is a flaccid premonition of cyborg politics, a very open field.

By the late twentieth century, our time, a mythic time, we are all chimeras, theorized and fabricated hybrids of machine and organism; in short, we are cyborgs. The cyborg is our ontology;⁴ it gives us our politics. The cyborg is a condensed image of both imagination and material reality, the two joined centers structuring any possibility of historical transformation. In the traditions of "Western" science and politics—the tradition of racist, male-dominant capitalism; the tradition of progress; the tradition of the appropriation of nature as resource for the productions of culture; the tradition of reproduction of the self from the reflections of the other—the relation between organism and machine has been a border war. The stakes in the border war have been the territories of production, reproduction, and imagination. This essay is an argument for *pleasure* in the confusion of boundaries and for *responsibility* in their construction. It is also an effort to

2. A system of industrial management, devised by the American inventor and engineer Frederick Taylor (1856–1916), that seeks to maximize workers' efficiency in order to optimize production.

3. A term used in *The History of Sexuality* (1976) by the French philosopher and cultural historian MICHEL FOUCAULT (1926–1984) to describe the social mechanisms of power that regulate the

body, extending the methods of power and knowledge over life itself.

4. The branch of philosophy concerned with the nature of being. *Chimera*: in Greek mythology, a female monster with a lion's head, a goat's body, and a serpent's tail; more generally, any monster made of incongruous parts.

contribute to socialist-feminist culture and theory in a post-modernist, non-naturalist mode and in the utopian tradition of imagining a world without gender, which is perhaps a world without genesis, but maybe also a world without end. The cyborg incarnation is outside salvation history.

The cyborg is a creature in a post-gender world; it has no truck with bisexuality, pre-Oedipal symbiosis,⁵ unalienated labor,⁶ or other seductions to organic wholeness through a final appropriation of all the powers of the parts into a higher unity. In a sense, the cyborg has no origin story in the Western sense; a "final" irony since the cyborg is also the awful apocalyptic *telos* of the "West's" escalating dominations of abstract individuation, an ultimate self untied at last from all dependency, a man in space. An origin story in the "Western," humanist sense depends on the myth of original unity, fullness, bliss and terror, represented by the phallic mother from whom all humans must separate, the task of individual development and of history, the twin potent myths inscribed most powerfully for us in psychoanalysis and Marxism. Hilary Klein has argued⁷ that both Marxism and psychoanalysis, in their concepts of labor and of individuation and gender formation, depend on the plot of original unity out of which difference must be produced and enlisted in a drama of escalating domination of woman/nature. The cyborg skips the step of original unity, of identification with nature in the Western sense. This is its illegitimate promise that might lead to subversion of its teleology as star wars.⁸

The cyborg is resolutely committed to partiality, irony, intimacy, and perversity. It is oppositional, utopian, and completely without innocence. No longer structured by the polarity of public and private, the cyborg defines a technological polis based partly on a revolution of social relations in the *oikos*,⁹ the household. Nature and culture are reworked; the one can no longer be the resource for appropriation or incorporation by the other. The relationships for forming wholes from parts, including those of polarity and hierarchical domination, are at issue in the cyborg world. Unlike the hopes of Frankenstein's monster,¹ the cyborg does not expect its father to save it through a restoration of the garden; i.e., through the fabrication of a heterosexual mate, through its completion in a finished whole, a city and cosmos. The cyborg does not dream of community on the model of the organic family, this time without the Oedipal project.² The cyborg would not recognize the Garden of Eden; it is not made of mud and cannot dream of returning to dust.³ Perhaps that is why I want to see if cyborgs can subvert the apocalypse of returning to nuclear dust in the manic compulsion to name the Enemy. Cyborgs are not reverent; they do not re-member the cosmos.

5. In psychoanalytic theory, a period of maternal dependence, narcissistic identification, and polymorphous erotic drives that occurs during earliest infancy, preceding the oedipal phase when conflict with the father and the social order emerge. This period of intense attachment to the maternal has been of great interest to contemporary feminist psychoanalytic theorists (e.g., JULIA KRISTEVA and HÉLÈNE CIXOUS).

6. In Marxist theory, labor that does not occur within the exploitative relationships of slavery, feudalism, colonialism, or capitalism.

7. See Klein's "Marxism, Psychoanalysis, and Mother Nature," *Feminist Studies* 15 (1989).

8. The Strategic Defense Initiative, proposed by

President Ronald Reagan in 1983, to create a shield against incoming missiles.

9. House (Greek), part of the root of the English word *economy*.

1. That is, the creature constructed in Mary Shelley's novel *Frankenstein* (1818), who begs his creator for a mate.

2. Psychoanalysis describes the task of early childhood—the formation of a distinct ego or identity—as separation from the mother, accomplished through the oedipal stage in which the paternal figure intervenes between the mother-child dyad.

3. The book of Genesis describes the creation of man (in Hebrew, *adam*) from dust (2.7).

They are wary of holism, but needy for connection—they seem to have a natural feel for united front politics, but without the vanguard party.⁴ The main trouble with cyborgs, of course, is that they are the illegitimate offspring of militarism and patriarchal capitalism, not to mention state socialism. But illegitimate offspring are often exceedingly unfaithful to their origins. Their fathers, after all, are inessential.

I will return to the science fiction of cyborgs at the end of this essay, but now I want to signal three crucial boundary breakdowns that make the following political fictional (political scientific) analysis possible. By the late twentieth century in United States scientific culture, the boundary between human and animal is thoroughly breached. The last beachheads of uniqueness have been polluted if not turned into amusement parks—language, tool use, social behavior, mental events, nothing really convincingly settles the separation of human and animal. And many people no longer feel the need of such a separation; indeed, many branches of feminist culture affirm the pleasure of connection of human and other living creatures. Movements for animal rights are not irrational denials of human uniqueness; they are clear-sighted recognition of connection across the discredited breach of nature and culture. Biology and evolutionary theory over the last two centuries have simultaneously produced modern organisms as objects of knowledge and reduced the line between humans and animals to a faint trace re-etched in ideological struggle or professional disputes between life and social sciences. Within this framework, teaching modern Christian creationism should be fought as a form of child abuse.

Biological-determinist ideology is only one position opened up in scientific culture for arguing the meanings of human animality. There is much room for radical political people to contest for the meanings of the breached boundary.⁵ The cyborg appears in myth precisely where the boundary between human and animal is transgressed. Far from signaling a walling off of people from other living beings, cyborgs signal disturbingly and pleasurably tight coupling. Bestiality has a new status in this cycle of marriage exchange.

The second leaky distinction is between animal-human (organism) and machine. Pre-cybernetic machines could be haunted; there was always the specter of the ghost in the machine.⁶ This dualism structured the dialogue

4. Haraway alludes to Soviet history. "Vanguard party": party intended to lead and control the revolution of the workers (e.g., the Bolshevik Party, established during the Russian Revolution). "United front politics": coalitions (e.g., the united fronts set up by the Comintern during the 1930s).

5. 6. The phrase used by the English analytic philosopher Gilbert Ryle (1900–1976) to criticize the mind-body dualism of the French philosopher René Descartes (1596–1650), who separated the publicly observable (material, physical) from the private mind (spiritual).

between materialism and idealism that was settled by a dialectical progeny, called spirit or history, according to taste. But basically machines were not self-moving, self-designing, autonomous. They could not achieve man's dream, only mock it. They were not man, an author to himself, but only a caricature of that masculinist reproductive dream. To think they were otherwise was paranoid. Now we are not so sure. Late-twentieth-century machines have made thoroughly ambiguous the difference between natural and artificial, mind and body, self-developing and externally-designed, and many other distinctions that used to apply to organisms and machines. Our machines are disturbingly lively, and we ourselves frighteningly inert.

Technological determinism is only one ideological space opened up by the reconceptions of machine and organism as coded texts through which we engage in the play of writing and reading the world.⁷ "Textualization" of everything in post-structuralist, post-modernist theory has been damned by Marxists and socialist feminists for its utopian disregard for lived relations of domination that ground the "play" of arbitrary reading.⁸ It is certainly true that post-modernist strategies, like my cyborg myth, subvert myriad organic wholes (e.g., the poem, the primitive culture, the biological organism). In short, the certainty of what counts as nature—a source of insight and a promise of innocence—is undermined, probably fatally. The transcendent

7. Starting points for left and/or feminist approaches to technology and politics include: Ruth Schwartz Cowan, *More Work for Mother: The Ironies of Household Technology from the Open Hearth to the Microwave* (New York: Basic Books, 1983); Joan Rothschild, *Machina ex Dea: Feminist Perspectives on Technology* (New York: Pergamon, 1983); Sharon Traweek, *[Beantimes and Lifetimes: The World of High Energy Physics]* (Cambridge, Mass.: Harvard University Press, 1988); R. M. Young and Les Levidov, eds., *Science, Technology, and the Labour Process*, vols. 1–3 (London: CSE Books); Joseph Weizenbaum, *Computer Power and Human Reason* (San Francisco: Freeman, 1976); Langdon Winner, *Autonomous Technology: Technics out of Control as a Theme in Political Thought* (Cambridge, Mass.: MIT Press, 1977); Langdon Winner, *[The Whale and the Reactor]* (Chicago: University of Chicago Press, 1986); Jan Zimmerman, ed., *The Technological Woman: Interfacing with Tomorrow* (New York: Praeger, 1983); *Global Electronics Newsletter*, 867 West Dana St., #204, Mountain View, CA 94041; *Processed World*, 55 Sutter St., San Francisco, CA 94104; ISIS, Women's International Information and Communication Service, P.O. Box 50 (Cornavin), 1211 Geneva 2, Switzerland, and Via Santa Maria dell'Anima 30, 00186 Rome, Italy. Fundamental approaches to modern social studies of science that do not continue the liberal mystification that it all started with Thomas Kuhn, include: Karin Knorr-Cetina, *The Manufacture of Knowledge* (Oxford: Pergamon, 1981); K. D. Knorr-Cetina and Michael Mulkay, eds., *Science Observed: Perspectives on the Social Study of Science* (Beverly Hills, Calif.: Sage, 1983); BRUNO LATOUR and Steve Woolgar, *Laboratory Life: The Social Construction of Scientific Facts* (Beverly Hills, Calif.: Sage, 1979); Robert M. Young, "Interpreting the Production of Science," *New Scientist*, vol. 29 (March 1979), pp. 1026–28. More is claimed than is known about room for contesting productions of science in the

mythic/material space of "the laboratory": the 1984 Directory of the Network for the Ethnographic Study of Science, Technology, and Organizations lists a wide range of people and projects crucial to better radical analysis; available from NBSSTO, P.O. Box 11442, Stanford, CA 94305 [Haraway's note]. Kuhn (1922–1996), American historian of science; his book that some view as starting modern social studies of science is *The Structure of Scientific Revolutions* (1962). 8. FREDRIC JAMESON, "Postmodernism, or, The Cultural Logic of Late Capitalism," *New Left Review*, July/August 1984, pp. 53–94. See Marjorie Perloff, "'Dirty' Language and Scramble Systems," *Sulfur* 11 (1984), pp. 178–83; Kathleen Fraser, *Something (Even Human Voices) in the Foreground, a Lake* (Berkeley, Calif.: Kelsey St. Press, 1984). A provocative, comprehensive argument about the policies and theories of "post-modernism" is made by Fredric Jameson, who argues that post-modernism is not an option, a style among others, but a cultural dominant requiring radical reinvention of left politics from within; there is no longer any place from without that gives meaning to the comforting fiction of critical distance. Jameson also makes clear why one cannot be for or against post-modernism, an essentially moralist move. My position is that feminists (and others) need continuous cultural reinvention, post-modernist critique, and historical materialism; only a cyborg would have a chance. The old dominations of white capitalist patriarchy seem nostalgically innocent now: they normalized heterogeneity, e.g., into man and woman, white and black. "Advanced capitalism" and post-modernism release heterogeneity without a norm, and we are flattened, without subjectivity, which requires depth, even unfriendly and drowning depths. It is time to write *The Death of the Clinic*. The clinic's methods required bodies and works; we have texts and surfaces. Our dominations don't work by medicalization and normalization anymore; they work by networking,

authorization of interpretation is lost, and with it the ontology grounding “Western” epistemology.⁹ But the alternative is not cynicism or faithlessness, i.e., some version of abstract existence, like the accounts of technological determinism destroying “man” by the “machine” or “meaningful political action” by the “text.” Who cyborgs will be is a radical question; the answers are a matter of survival. Both chimpanzees and artifacts have politics, so why shouldn’t we?¹

The third distinction is a subset of the second: the boundary between physical and non-physical is very imprecise for us. Pop physics books on the consequences of quantum theory and the indeterminacy principle are a kind of popular scientific equivalent to the Harlequin² romances as a marker of radical change in American white heterosexuality: they get it wrong, but they are on the right subject. Modern machines are quintessentially microelectronic devices: they are everywhere and they are invisible. Modern machinery is an irreverent upstart god, mocking the Father’s ubiquity and spirituality. The silicon chip is a surface for writing; it is etched in molecular scales disturbed only by atomic noise, the ultimate interference for nuclear scores. Writing, power, and technology are old partners in Western stories of the origin of civilization, but miniaturization has changed our experience of mechanism. Miniaturization has turned out to be about power; small is not so much beautiful as pre-eminently dangerous, as in cruise missiles. Contrast the TV sets of the 1950s or the news cameras of the 1970s with the TV wrist bands or hand-sized video cameras now advertised. Our best machines are made of sunshine; they are all light and clean because they are nothing but signals, electromagnetic waves, a section of a spectrum. And these machines are eminently portable, mobile—a matter of immense human pain in Detroit and Singapore. People are nowhere near so fluid, being both material and opaque. Cyborgs are ether, quintessence.³

The ubiquity and invisibility of cyborgs is precisely why these sunshine-belt machines are so deadly. They are as hard to see politically as materially. They are about consciousness—or its simulation.⁴ They are floating signi-

communications redesign, stress management. Normalization gives way to automation, utter redundancy. Michel Foucault’s *Birth of the Clinic* [1963], *History of Sexuality*, and *Discipline and Punish* [1975] name a form of power at its moment of implosion. The discourse of biopolitics gives way to technobabble, the language of the spliced substantive; no noun is left whole by the multinationals. These are their names, listed from one issue of *Science*: Tech-Knowledge, Genentech, Allergen, Hybritech, Compupro, Genencor, Syntex, Allelix, Agrigenetics Corp., Syntro, Codon, Repigen, Micro-Angelo from Scion Corp., Percom Data, Inter Systems, Cyborg Corp., Statcom Corp., Intertec. If we are imprisoned by language, then escape from that prison house requires language poets, a kind of cultural restriction enzyme to cut the code; cyborg heteroglossia is one form of radical culture politics [Haraway’s note]. On the American Marxist literary critic JAMESON (b. 1934), whose works include *The Prison-House of Language* (1972), see above. “Heteroglossia”: an allusion to the highly influential theories of MIKHAIL M. BAKHTIN (1895–1975).

9. The branch of philosophy concerned with ways of knowing.

1. Frans de Waal, *Chimpanzee Politics: Power and Sex among the Apes* (New York: Harper & Row, 1982); Langdon Winner, “Do Artifacts Have Politics?” *Daedalus*, winter 1980 [Haraway’s note].

2. Canada-based publisher that by the 1960s was exclusively publishing mass-market romance novels; over time, its offerings have become more varied and more sexually explicit. “The indeterminacy principle”: that is, the theory formulated in 1927 by the German physicist Werner Heisenberg that one cannot specify both the position and momentum of a subatomic particle.

3. In classical and medieval philosophy, the 5th and highest element, which makes up the heavenly bodies (all terrestrial things were believed to be compounds of the other 4 elements).

4. Jean Baudrillard, *Simulations*, trans. P. Foss, P. Patton, P. Beitchman (New York: Semiotext(e), 1983). Jameson (“Postmodernism,” p. 66) points out that Plato’s definition of the simulacrum is the copy for which there is no original, i.e., the world of advanced capitalism; of pure exchange [Haraway’s note]. On the French social critic and theorist BAUDRILLARD (1929–2007) and the Greek philosopher PLATO (ca. 427–ca. 327 B.C.E.), see above.

fiers moving in pickup trucks across Europe, blocked more effectively by the witch-weavings of the displaced and so unnatural Greenham women,⁵ who read the cyborg webs of power very well, than by the militant labor of older masculinist politics, whose natural constituency needs defense jobs. Ultimately the “hardest” science is about the realm of greatest boundary confusion, the realm of pure number, pure spirit, C^1 , cryptography, and the preservation of potent secrets. The new machines are so clean and light. Their engineers are sun-worshippers mediating a new scientific revolution associated with the night dream of post-industrial society. The diseases evoked by these clean machines are “no more” than the miniscule coding changes of an antigen in the immune system, “no more” than the experience of stress. The nimble little fingers of “Oriental” women, the old fascination of little Anglo-Saxon Victorian girls with doll houses, women’s enforced attention to the small take on quite new dimensions in this world. There might be a cyborg Alice⁶ taking account of these new dimensions. Ironically, it might be the unnatural cyborg women making chips in Asia and spiral dancing in Santa Rita⁷ whose constructed unities will guide effective oppositional strategies.

So my cyborg myth is about transgressed boundaries, potent fusions, and dangerous possibilities which progressive people might explore as one part of needed political work. One of my premises is that most American socialists and feminists see deepened dualisms of mind and body, animal and machine, idealism and materialism in the social practices, symbolic formulations, and physical artifacts associated with “high technology” and scientific culture. From *One-Dimensional Man* to *The Death of Nature*,⁸ the analytic resources developed by progressives have insisted on the necessary domination of technics and recalled us to an imagined organic body to integrate our resistance. Another of my premises is that the need for unity of people trying to resist worldwide intensification of domination has never been more acute. But a slightly perverse shift of perspective might better enable us to contest for meanings, as well as for other forms of power and pleasure in technologically-mediated societies.

From one perspective, a cyborg world is about the final imposition of a grid of control on the planet, about the final abstraction embodied in a Star War apocalypse waged in the name of defense, about the final appropriation of women’s bodies in a masculinist orgy of war.⁹ From another perspective, a cyborg world might be about lived social and bodily realities in which people are not afraid of their joint kinship with animals and machines, not afraid of permanently partial identities and contradictory standpoints. The political struggle is to see from both perspectives at once because each reveals both

5. British women’s group that protested the placement of nuclear cruise missiles at the U.S. Air Force base at Greenham Common for nearly two decades, beginning in 1982.

dominations and possibilities unimaginable from the other vantage point. Single vision produces worse illusions than double vision or many-headed monsters. Cyborg unities are monstrous and illegitimate; in our present political circumstances, we could hardly hope for more potent myths for resistance and recoupling. I like to imagine LAG, the Livermore Action Group,¹ as a kind of cyborg society, dedicated to realistically converting the laboratories that most fiercely embody and spew out the tools of technological apocalypse, and committed to building a political form that actually manages to hold together witches, engineers, elders, perverts, Christians, mothers, and Leninists² long enough to disarm the state. Fission Impossible is the name of the affinity group in my town. (Affinity: related not by blood but by choice, the appeal of one chemical nuclear group for another, avidity.)

Fractured Identities

It has become difficult to name one's feminism by a single adjective—or even to insist in every circumstance upon the noun. Consciousness of exclusion through naming is acute. Identities seem contradictory, partial, and strategic. With the hard-won recognition of their social and historical constitution, gender, race, and class cannot provide the basis for belief in “essential” unity. There is nothing about being “female” that naturally binds women. There is not even such a state as “being” female, itself a highly complex category constructed in contested sexual scientific discourses and other social practices. Gender, race, or class consciousness is an achievement forced on us by the terrible historical experience of the contradictory social realities of patriarchy, colonialism, and capitalism. And who counts as “us” in my own rhetoric? Which identities are available to ground such a potent political myth called “us,” and what could motivate enlistment in this collectivity? Painful fragmentation among feminists (not to mention among women) along every possible fault line has made the concept of *woman* elusive, an excuse for the matrix of women's dominations of each other. For me—and for many who share a similar historical location in white, professional middle class, female, radical, North American, mid-adult bodies—the sources of a crisis in political identity are legion. The recent history for much of the U.S. left and U.S. feminism has been a response to this kind of crisis by endless splitting and searches for a new essential unity. But there has also been a growing recognition of another response through coalition—affinity, not identity.³

* * *

It is important to note that the effort to construct revolutionary standpoints, epistemologies as achievements of people committed to changing the

1. A group organized to protest the development of nuclear weapons technology at Livermore Laboratory.

2. Adherents of the militant offshoot of communism associated with Vladimir Lenin (1870–1924), founder of the Russian Bolshevik Party.

3. Powerful developments of coalition politics emerge from “third world” speakers, speaking from nowhere, the displaced center of the universe, earth: “We live on the third planet from

the sun”—*Sun Poem* by Jamaican writer Edward Kamau Braithwaite, review by Nathaniel Mackey, *Sulfur* 11 (1984), pp. 200–205. *Home Girls*, ed. Barbara Smith (New York: Kitchen Table, Women of Color Press, 1983), ironically subverts naturalized identities precisely while constructing a place from which to speak called home. See esp. Bernice Reagan, “Coalition Politics, Turning the Century,” pp. 356–68 [Haraway's note].

world, has been part of the process showing the limits of identification. The acid tools of post-modernist theory and the constructive tools of ontological discourse about revolutionary subjects might be seen as ironic allies in dissolving Western selves in the interests of survival. We are excruciatingly conscious of what it means to have a historically constituted body. But with the loss of innocence in our origin, there is no expulsion from the Garden either. Our politics lose the indulgence of guilt with the naïveté of innocence. But what would another political myth for socialist feminism look like? What kind of politics could embrace partial, contradictory, permanently unclosed constructions of personal and collective selves and still be faithful, effective—and, ironically, socialist feminist?

I do not know of any other time in history when there was greater need for political unity to confront effectively the dominations of “race,” “gender,” “sexuality,” and “class.” I also do not know of any other time when the kind of unity we might help build could have been possible. None of “us” have any longer the symbolic or material capability of dictating the shape of reality to any of “them.” Or at least “we” cannot claim innocence from practicing such dominations. White women, including socialist feminists, discovered (i.e., were forced kicking and screaming to notice) the non-innocence of the category “woman.” That consciousness changes the geography of all previous categories; it denatures them as heat denatures a fragile protein. Cyborg feminists have to argue that “we” do not want any more natural matrix of unity and that no construction is whole. Innocence, and the corollary insistence on victimhood as the only ground for insight, has done enough damage. But the constructed revolutionary subject must give late-twentieth-century people pause as well. In the fraying of identities and in the reflexive strategies for constructing them, the possibility opens up for weaving something other than a shroud for the day after the apocalypse that so prophetically ends salvation history.

Both Marxist/socialist feminisms and radical feminisms have simultaneously naturalized and denatured the category “woman” and consciousness of the social lives of “women.” Perhaps a schematic caricature can highlight both kinds of moves. Marxian socialism is rooted in an analysis of wage labor which reveals class structure. The consequence of the wage relationship is systematic alienation, as the worker is dissociated from his (sic) product. Abstraction and illusion rule in knowledge, domination rules in practice. Labor is the pre-eminently privileged category enabling the Marxist to overcome illusion and find that point of view which is necessary for changing the world. Labor is the humanizing activity that makes man; labor is an ontological category permitting the knowledge of a subject, and so the knowledge of subjugation and alienation.

In faithful filiation, socialist feminism advanced by allying itself with the basic analytic strategies of Marxism. The main achievement of both Marxist feminists and socialist feminists was to expand the category of labor to accommodate what (some) women did, even when the wage relation was subordinated to a more comprehensive view of labor under capitalist patriarchy. In particular, women’s labor in the household and women’s activity as mothers generally, i.e., reproduction in the socialist feminist sense, entered theory on the authority of analogy to the Marxian concept of labor. The unity of women here rests on an epistemology based on the ontological structure

of “labor.” Marxist/socialist feminism does not “naturalize” unity; it is a possible achievement based on a possible standpoint rooted in social relations. The essentializing move is in the ontological structure of labor or of its analogue, women’s activity.⁴ The inheritance of Marxian humanism, with its pre-eminently Western self, is the difficulty for me. The contribution from these formulations has been the emphasis on the daily responsibility of real women to build unities, rather than to naturalize them.

* * *

The Informatics of Domination

In this attempt at an epistemological and political position, I would like to sketch a picture of possible unity, a picture indebted to socialist and feminist principles of design. The frame for my sketch is set by the extent and importance of rearrangements in worldwide social relations tied to science and technology. I argue for a politics rooted in claims about fundamental changes in the nature of class, race, and gender in an emerging system of world order analogous in its novelty and scope to that created by industrial capitalism; we are living through a movement from an organic, industrial society to a polymorphous, information system—from all work to all play, a deadly game. Simultaneously material and ideological, the dichotomies may be expressed in the following chart of transitions from the comfortable old hierarchical dominations to the scary new networks I have called the informatics of domination:

| | |
|------------------------------|---------------------------------|
| Representation | Simulation |
| Bourgeois novel, realism | Science fiction, post-modernism |
| Organism | Biotic component |
| Depth, integrity | Surface, boundary |
| Heat | Noise |
| Biology as clinical practice | Biology as inscription |
| Physiology | Communications engineering |
| Small group | Subsystem |
| Perfection | Optimization |

4. The feminist standpoint argument is being developed by: Jane Flax, “Political Philosophy and the Patriarchal Unconsciousness,” in Sandra Harding and Merrill Hintikka, eds., *Discovering Reality* (Dordrecht: Reidel, 1983); Sandra Harding, “The Contradictions and Ambivalence of a Feminist Science,” ms.; Harding and Hintikka, *Discovering Reality*; Nancy Hartsock, *Money, Sex, and Power* (New York: Longman, 1983) and “The Feminist Standpoint: Developing the Ground for a Specifically Feminist Historical Materialism,” in Harding and Hintikka, *Discovering Reality*; Mary O’Brien, *The Politics of Reproduction* (New York: Routledge & Kegan Paul, 1981); Hilary Rose, “Hand, Brain, and Heart: A Feminist Epistemology for the Natural Sciences,” *Signs*, vol. 9, no. 1 (1983), pp. 73–90; Dorothy Smith, “Women’s Perspective as a Radical Critique of Sociology,” *Sociological Inquiry* 44 (1974), and “A

Sociology of Women,” in J. Sherman and E. T. Beck, eds., *The Prism of Sex* (Madison: University of Wisconsin Press, 1979). The central role of object-relations versions of psychoanalysis and related strong universalizing moves in discussing reproduction, caring work, and mothering in many approaches to epistemology underline their authors’ resistance to what I am calling post-modernism. For me, both the universalizing moves and the versions of psychoanalysis make analysis of “women’s place in the integrated circuit” difficult and lead to systematic difficulties in accounting or even seeing major aspects of the construction of gender and gender social life [Haraway’s note]. Haraway’s main target in object-relations theory is Nancy Chodorow’s influential book *The Reproduction of Mothering* (1978).

| | |
|---------------------------------------|--|
| Eugenics | Population control |
| Decadence, <i>Magic Mountain</i> | Obsolescence, <i>Future Shock</i> ⁵ |

| Mind | Artificial Intelligence |
| World War II | Star Wars |
| White Capitalist Patriarchy | Informatics of Domination |

This list suggests several interesting things.⁸ First, the objects on the right-hand side cannot be coded as “natural,” a realization that subverts naturalistic coding for the left-hand side as well. We cannot go back ideologically or materially. It’s not just that “god” is dead; so is the “goddess.” In relation to objects like biotic components, one must think not in terms of essential properties, but in terms of strategies of design, boundary constraints, rates of flows, systems logics, costs of lowering constraints. Sexual reproduction is one kind of reproductive strategy among many, with costs and benefits as a function of the system environment. Ideologies of sexual reproduction can no longer reasonably call on the notions of sex and sex role as organic aspects in natural objects like organisms and families. Such reasoning will be unmasked as irrational, and ironically corporate executives reading *Playboy* and anti-

5. A 1970 book of social history and production by Alvin Toffler. *The Magic Mountain* (1924), a novel by Thomas Mann set in a tuberculosis sanatorium.

6. The concept that male and female workers holding different jobs that are comparable in difficulty and responsibility should receive equal pay. “Family wage”: a wage high enough that a single (usually male) breadwinner can support a family.

7. JACQUES LACAN (1901–1981), French psychoanalyst who argued that the unconscious is structured like a language and claimed to be the intellectual heir of SIGMUND FREUD (1856–1939), the Austrian founder of psychoanalysis.

8. My previous efforts to understand biology as a

cybernetic command-control discourse and organisms as “natural-technical objects of knowledge” are: “The High Cost of Information in Post-World War II Evolutionary Biology,” *Philosophical Forum*, vol. 13, nos. 2–3 (1979), pp. 206–37; “Signs of Dominance: From a Physiology to a Cybernetics of Primate Society,” *Studies in History of Biology* 6 (1983), pp. 129–219; “Class, Race, Sex, Scientific Objects of Knowledge: A Socialist-Feminist Perspective on the Social Construction of Productive Knowledge and Some Political Consequences,” in Violet Haas and Carolyn Perucci, eds., *Women in Scientific and Engineering Professions* (Ann Arbor: University of Michigan Press, 1984), pp. 212–29 [Haraway’s note].

porn radical feminists will make strange bedfellows in jointly unmasking the irrationalism.

* * *

One should expect control strategies to concentrate on boundary conditions and interfaces, on rates of flow across boundaries—and not on the integrity of natural objects. “Integrity” or “sincerity” of the Western self gives way to decision procedures and expert systems. For example, control strategies applied to women’s capacities to give birth to new human beings will be developed in the languages of population control and maximization of goal achievement for individual decision-makers. Control strategies will be formulated in terms of rates, costs of constraints, degrees of freedom. Human beings, like any other component or subsystem, must be localized in a system architecture whose basic modes of operation are probabilistic, statistical. No objects, spaces, or bodies are sacred in themselves; any component can be interfaced with any other if the proper standard, the proper code, can be constructed for processing signals in a common language. Exchange in this world transcends the universal translation effected by capitalist markets that Marx analyzed so well.⁹ The privileged pathology affecting all kinds of components in this universe is stress—communications breakdown.¹ The cyborg is not subject to Foucault’s biopolitics; the cyborg simulates politics, a much more potent field of operations.

This kind of analysis of scientific and cultural objects of knowledge which have appeared historically since World War II prepares us to notice some important inadequacies in feminist analysis which has proceeded as if the organic, hierarchical dualisms ordering discourse in “the West” since Aristotle² still ruled. They have been cannibalized, or as Zoe Sofia (Sofoulis) might put it, they have been “techno-digested.” The dichotomies between mind and body, animal and human, organism and machine, public and private, nature and culture, men and women, primitive and civilized are all in question ideologically. The actual situation of women is their integration/exploitation into a world system of production/reproduction and communication called the informatics of domination. The home, workplace, market, public arena, the body itself—all can be dispersed and interfaced in nearly infinite, polymorphous ways, with large consequences for women and others—consequences that themselves are very different for different people and which make potent oppositional international movements difficult to imagine and essential for survival. One important route for reconstructing socialist-feminist politics is through theory and practice addressed to the social relations of science and technology, including crucially the systems of myth and meanings structuring our imaginations. The cyborg is a kind of disassembled and reassembled, post-modern collective and personal self. This is the self feminists must code.

9. That is, the translation of individual labor power into commodities. On the German political theorist, economist, and revolutionary KARL MARX (1818–1883), see above.

1. E. Rusten Hogness, “Why Stress? A Look at the Making of Stress, 1936–56,” available from the

author, 4437 Mill Creek Rd., Healdsburg, CA 95448 [Haraway’s note].

2. Greek philosopher (384–322 B.C.E.; see above) whose scientific system dominated Western thought until the Renaissance.

Communications technologies and biotechnologies are the crucial tools recrafting our bodies. These tools embody and enforce new social relations for women worldwide. Technologies and scientific discourses can be partially understood as formalizations, i.e., as frozen moments, of the fluid social interactions constituting them, but they should also be viewed as instruments for enforcing meanings. The boundary is permeable between tool and myth, instrument and concept, historical systems of social relations and historical anatomies of possible bodies, including objects of knowledge. Indeed, myth and tool mutually constitute each other.

Furthermore, communications sciences and modern biologies are constructed by a common move—the *translation of the world into a problem of coding*, a search for a common language in which all resistance to instrumental control disappears and all heterogeneity can be submitted to disassembly, reassembly, investment, and exchange.

In communications sciences, the translation of the world into a problem in coding can be illustrated by looking at cybernetic (feedback controlled) systems theories applied to telephone technology, computer design, weapons deployment, or data base construction and maintenance. In each case, solution to the key questions rests on a theory of language and control; the key operation is determining the rates, directions, and probabilities of flow of a quantity called information. The world is subdivided by boundaries differentially permeable to information. Information is just that kind of quantifiable element (unit, basis of unity) which allows universal translation, and so unhindered instrumental power (called effective communication). The biggest threat to such power is interruption of communication. Any system breakdown is a function of stress. The fundamentals of this technology can be condensed into the metaphor C^3I , command-control-communication-intelligence, the military's symbol for its operations theory.

In modern biologies, the translation of the world into a problem in coding can be illustrated by molecular genetics, ecology, socio-biological evolutionary theory, and immunobiology. The organism has been translated into problems of genetic coding and read-out. Biotechnology, a writing technology, informs research broadly.³ In a sense, organisms have ceased to exist as objects of knowledge, giving way to biotic components, i.e., special kinds of information processing devices. The analogous moves in ecology could be examined by probing the history and utility of the concept of the ecosystem. Immunobiology and associated medical practices are rich exemplars of the privilege of coding and recognition systems as objects of knowledge, as constructions of bodily reality for us. Biology is here a kind of cryptography. Research is necessarily a kind of intelligence activity. Ironies abound. A stressed system goes awry; its communication processes break down; it fails to recognize the difference between self and other. Human babies with baboon hearts⁴ evoke national ethical perplexity—for animal-rights activists at least as much as for guardians of human purity. Gay men, Haitian

immigrants, and intravenous drug users⁵ are the “privileged” victims of an awful immune-system disease that marks (inscribes on the body) confusion of boundaries and moral pollution.

But these excursions into communications sciences and biology have been at a rarefied level; there is a mundane, largely economic reality to support my claim that these sciences and technologies indicate fundamental transformations in the structure of the world for us. Communications technologies depend on electronics. Modern states, multinational corporations, military power, welfare-state apparatuses, satellite systems, political processes, fabrication of our imaginations, labor-control systems, medical constructions of our bodies, commercial pornography, the international division of labor, and religious evangelism depend intimately upon electronics. Microelectronics is the technical basis of simulacra, i.e., of copies without originals.

Microelectronics mediates the translations of *labor* into robotics and word processing; *sex* into genetic engineering and reproductive technologies; and *mind* into artificial intelligence and decision procedures. The new biotechnologies concern more than human reproduction. Biology as a powerful engineering science for redesigning materials and processes has revolutionary implications for industry, perhaps most obvious today in areas of fermentation, agriculture, and energy. Communications sciences and biology are constructions of natural-technical objects of knowledge in which the difference between machine and organism is thoroughly blurred; mind, body, and tool are on very intimate terms. The “multinational” material organization of the production and reproduction of daily life and the symbolic organization of the production and reproduction of culture and imagination seem equally implicated. The boundary-maintaining images of base and super-structure,⁶ public and private, or material and ideal never seemed more feeble.

I have used Rachel Grossman’s image of women in the integrated circuit to name the situation of women in a world so intimately restructured through the social relations of science and technology.⁷ I use the odd circumlocution, “the social relations of science and technology,” to indicate that we are not dealing with a technological determinism, but with a historical system depending upon structured relations among people. But the phrase should also indicate that science and technology provide fresh sources of power, that we need fresh sources of analysis and political action.⁸ Some of the rearrange-

5. These three groups were the focus of medical attention when AIDS was first identified in the 1980s.

6. “Base” and “superstructure” are Marxist terms: a society’s base is its economic mode of production, which conditions its superstructure—its social, political, juridical, and intellectual life generally.

7. Starting references for “women in the integrated circuit”: Pamela D’Onofrio-Flores and Sheila M. Pfafflin, eds., *Scientific-Technological Change and the Role of Women in Development* (Boulder, Colo.: Westview Press, 1982); Maria Patricia Fernandez-Kelly, *For We Are Sold, I and My People* (Albany, N.Y.: SUNY Press, 1983); Annette Fuentes and Barbara Ehrenreich, *Women in the Global Factory* (Boston: South End Press, 1983), with an especially useful list of resources and organizations; Rachael Grossman,

ments of race, sex, and class rooted in high-tech-facilitated social relations can make socialist feminism more relevant to effective progressive politics.

The Homework Economy

The "New Industrial Revolution" is producing a new worldwide working class. The extreme mobility of capital and the emerging international division of labor are intertwined with the emergence of new collectivities, and the weakening of familiar groupings. These developments are neither gender- nor race-neutral. White men in advanced industrial societies have become newly vulnerable to permanent job loss, and women are not disappearing from the job rolls at the same rates as men. It is not simply that women in third-world countries are the preferred labor force for the science-based multinationals in the export-processing sectors, particularly in electronics. The picture is more systematic and involves reproduction, sexuality, culture, consumption, and production. In the prototypical Silicon Valley, many women's lives have been structured around employment in electronics-dependent jobs, and their intimate realities include serial heterosexual monogamy, negotiating childcare, distance from extended kin or most other forms of traditional community, a high likelihood of loneliness and extreme economic vulnerability as they age. The ethnic and racial diversity of women in Silicon Valley structures a microcosm of conflicting differences in culture, family, religion, education, language.

Richard Gordon has called this new situation the homework economy.⁹ Although he includes the phenomenon of literal homework emerging in connection with electronics assembly, Gordon intends "homework economy" to name a restructuring of work that broadly has the characteristics formerly ascribed to female jobs, jobs literally done only by women. Work is being redefined as both literally female and feminized, whether performed by men or women. To be feminized means to be made extremely vulnerable; able to be disassembled, reassembled, exploited as a reserve labor force; seen less as workers than as servers; subjected to time arrangements on and off the paid job that make a mockery of a limited work day; leading an existence that always borders on being obscene, out of place, and reducible to sex. Deskilling is an old strategy newly applicable to formerly privileged workers. However, the homework economy does not refer only to large-scale deskilling, nor does it deny that new areas of high skill are emerging, even for women and men previously excluded from skilled employment. Rather, the concept indicates that factory, home, and market are integrated on a new scale and that the places of women are crucial—and need to be analyzed

9. For the homework economy and some supporting arguments: Richard Gordon, "The Computerization of Daily Life, the Sexual Division of Labor, and the Homework Economy," in R. Gordon, ed., *Microelectronics in Transition* (Norwood, N.J.: Ablex, 1985); Patricia Hill Collins, "Third World Women in America," and Sara G. Burr, "Woman and Work," in Barbara K. Haber, ed., *The Women's Annual*, 1981 (Boston: G. K. Hall, 1982); Judith Gregory and Karen Nussbaum, "Race against Time: Automation of the

Office," *Office: Technology and People* 1 (1982), pp. 197–236; Frances Fox Piven and Richard Cloward, *The New Class War: Reagan's Attack on the Welfare State and Its Consequences* (New York: Pantheon, 1982); Microelectronics Group, *Microelectronics: Capitalist Technology and the Working Class* (London: CSE, 1980); Karin Stalard, Barbara Ehrenreich, and Holly Sklar, *Poverty in the American Dream* (Boston: South End Press, 1983), including a useful organization and resource list [Haraway's note].

for differences among women and for meanings for relations between men and women in various situations.

The homework economy as a world capitalist organizational structure is made possible by (not caused by) the new technologies. The success of the attack on relatively privileged, mostly white, men's unionized jobs is tied to the power of the new communications technologies to integrate and control labor despite extensive dispersion and decentralization. The consequences of the new technologies are felt by women both in the loss of the family (male) wage (if they ever had access to this white privilege) and in the character of their own jobs, which are becoming capital-intensive, e.g., office work and nursing.

The new economic and technological arrangements are also related to the collapsing welfare state and the ensuing intensification of demands on women to sustain daily life for themselves as well as for men, children, and old people. The feminization of poverty—generated by dismantling the welfare state, by the homework economy where stable jobs become the exception, and sustained by the expectation that women's wage will not be matched by a male income for the support of children—has become an urgent focus. The causes of various women-headed households are a function of race, class, or sexuality; but their increasing generality is a ground for coalitions of women on many issues. That women regularly sustain daily life partly as a function of their enforced status as mothers is hardly new; the kind of integration with the overall capitalist and progressively war-based economy is new. The particular pressure, for example, on U.S. black women, who have achieved an escape from (barely) paid domestic service and who now hold clerical and similar jobs in large numbers, has large implications for continued enforced black poverty *with* employment. Teenage women in industrializing areas of the third world increasingly find themselves the sole or major source of a cash wage for their families, while access to land is ever more problematic. These developments must have major consequences in the psychodynamics and politics of gender and race.

Within the framework of three major stages of capitalism (commercial/early industrial, monopoly, multinational)—tied to nationalism, imperialism, and multinationalism, and related to Jameson's three dominant aesthetic periods of realism, modernism, and post-modernism—I would argue that specific forms of families dialectically relate to forms of capital and to its political and cultural concomitants. Although lived problematically and unequally, ideal forms of these families might be schematized as (1) the patriarchal nuclear family, structured by the dichotomy between public and private and accompanied by the white bourgeois ideology of separate spheres¹ and nineteenth-century Anglo-American bourgeois feminism; (2) the modern family mediated (or enforced) by the welfare state and institutions like the family wage, with a flowering of a-feminist heterosexual ideologies, including their radical versions represented in Greenwich Village² around World War I; and (3) the "family" of the homework economy with its oxy-moronic structure of women-headed households and its explosion of feminisms and the paradoxical intensification and erosion of gender itself.

1. That is, the division of life into the public sphere of work and the private sphere of the home, where authority was said to be held by men and by women, respectively.

2. A neighborhood in New York City (in Lower Manhattan), which for much of the 20th century was associated with unconventional artists and radicals.

This is the context in which the projections for worldwide structural unemployment stemming from the new technologies are part of the picture of the homework economy. As robotics and related technologies put men out of work in "developed" countries and exacerbate failure to generate male jobs in third-world "development," and as the automated office becomes the rule even in labor-surplus countries, the feminization of work intensifies. Black women in the United States have long known what it looks like to face the structural underemployment ("feminization") of black men, as well as their own highly vulnerable position in the wage economy. It is no longer a secret that sexuality, reproduction, family, and community life are interwoven with this economic structure in myriad ways which have also differentiated the situations of white and black women. Many more women and men will contend with similar situations, which will make cross-gender and race alliances on issues of basic life support (with or without jobs) necessary, not just nice.

The new technologies also have a profound effect on hunger and on food production for subsistence worldwide. Rae Lessor Blumberg estimates that women produce about fifty per cent of the world's subsistence food.³ Women are excluded generally from benefiting from the increased high-tech commodification of food and energy crops, their days are made more arduous because their responsibilities to provide food do not diminish, and their reproductive situations are made more complex. Green Revolution technologies interact with other high-tech industrial production to alter gender divisions of labor and differential gender migration patterns.

The new technologies seem deeply involved in the forms of "privatization" that Ros Petchesky has analyzed, in which militarization, right-wing family ideologies and policies, and intensified definitions of corporate property as private synergistically interact.⁴ The new communications technologies are fundamental to the eradication of "public life" for everyone. This facilitates

Rae Lessor Blumberg, "A General Theory of Sex and Its Application to the Position of Women in Today's World Economy," paper delivered to Sociology Board, UCSC, February 1983 ["A General Theory of Gender Stratification," *Sociological Theory* 2 (1984): 23–101]. Also Blumberg, *Stratification: Socioeconomic and Sexual Inequality* (Boston: Brown, 1981). See also Sally Hacker, "Doing It the Hard Way: Ethnographic Studies in the Agribusiness and Engineering Classroom," California American Studies Association, Pomona, 1984 [in her *Doing It the Hard Way: Investigations of Gender and Technology* (Boston: Unwin Hyman, 1990)]; S. Hacker and Lisa Bovit, "Agriculture to Agribusiness: Technical Imperatives and Changing Roles," *Proceedings of the Society for the History of Technology*, Milwaukee, 1981; Lawrence Busch and William Lacy, *Science, Agriculture, and the Politics of Research* (Boulder, Colo.: Westview Press, 1983); Denis Wilfred, "Capital and Agriculture, a Review of Marxian Problematics," *Studies in Political Economy*, no. 7 (1982), pp. 127–54; Carolyn Sachs, *The Invisible Farmers: Women in Agricultural Production* (Totowa, N.J.: Rowman & Allanheld, 1983). Thanks to Elizabeth Bird, "Green Revolution Imperialism," I & II, ms., UCSC, 1984. The conjunction of the Green Revolution's social relations with biotechnologies like

plant genetic engineering makes the pressures on land in the third world increasingly intense. AID's [Agency for International Development] estimates (*New York Times*, 14 October 1984) used at the 1984 World Food Day are that in Africa, women produce about 90 per cent of rural food supplies, about 60–80 per cent in Asia, and provide 40 per cent of agricultural labor in the Near East and Latin America. Blumberg charges that world organizations' agricultural politics, as well as those of multinationals and national governments in the third world, generally ignore fundamental issues in the sexual division of labor. The present tragedy of famine in Africa might owe as much to male supremacy as to capitalism, colonialism, and rain patterns. More accurately, capitalism and racism are usually structurally male dominant [Haraway's note]. The Green Revolution: the Western campaign of the 1960s that introduced high-yield varieties of specific staple crops and promoted pesticides to increase food production in developing countries.

the mushrooming of a permanent high-tech military establishment at the cultural and economic expense of most people, but especially of women. Technologies like video games and highly miniaturized television seem crucial to production of modern forms of "private life." The culture of video games is heavily oriented to individual competition and extraterrestrial warfare. High-tech, gendered imaginations are produced here, imaginations that can contemplate destruction of the planet and a sci-fi escape from its consequences. More than our imaginations is militarized; and the other realities of electronic and nuclear warfare are inescapable.

The new technologies affect the social relations of both sexuality and of reproduction, and not always in the same ways. The close ties of sexuality and instrumentality, of views of the body as a kind of private satisfaction- and utility-maximizing machine, are described nicely in sociobiological origin stories that stress a genetic calculus and explain the inevitable dialectic of domination of male and female gender roles.⁵ These sociobiological stories depend on a high-tech view of the body as a biotic component or cybernetic communications system. Among the many transformations of reproductive situations is the medical one, where women's bodies have boundaries newly permeable to both "visualization" and "intervention." Of course, who controls the interpretation of bodily boundaries in medical hermeneutics is a major feminist issue. The speculum⁶ served as an icon of women's claiming their bodies in the 1970s; that hand-craft tool is inadequate to express our needed body politics in the negotiation of reality in the practices of cyborg reproduction. Self-help is not enough. The technologies of visualization recall the important cultural practice of hunting with the camera and the deeply predatory nature of a photographic consciousness.⁷ Sex, sexuality, and reproduction are central actors in high-tech myth systems structuring our imaginations of personal and social possibility.

* * *

Women in the Integrated Circuit

Let me summarize the picture of women's historical locations in advanced industrial societies, as these positions have been restructured partly through the social relations of science and technology. If it was ever possible ideologically to characterize women's lives by the distinction of public and private domains—suggested by images of the division of working-class life into

5. For a feminist version of this logic, see Sarah Blaffer Hrdy, *The Woman That Never Evolved* (Cambridge, Mass.: Harvard University Press, 1981). For an analysis of scientific women's storytelling practices, especially in relation to sociobiology, in evolutionary debates around child abuse and infanticide, see Donna Haraway, "The Contest for Primate Nature: Daughters of Man the Hunter in the Field, 1960–80," in Mark Kann, ed., *The Future of American Democracy* (Philadelphia: Temple University Press, 1983), pp. 175–208 [Haraway's note].

6. A medical instrument used in vaginal examinations; feminist books such as *Our Bodies, Ourselves* (3 eds. in the 1970s) advocated self-examination.

7. For the moment of transition of hunting with guns to hunting with cameras in the construction of popular meanings of nature for an American urban immigrant public, see Donna Haraway, "Teddy Bear Patriarchy," *Social Text*, [no. 11 (Winter 1984–85)], pp. 20–64; Roderick Nash, "The Exporting and Importing of Nature: Nature-Appreciation as a Commodity, 1850–1980," *Perspectives in American History*, vol. 3 (1979), pp. 517–60; Susan Sontag, *On Photography* (New York: Dell, 1977); and Douglas Preston, "Shooting in Paradise," *Natural History*, vol. 93, no. 12 (December 1984), pp. 14–19 [Haraway's note].

factory and home, of bourgeois life into market and home, and of gender existence into personal and political realms—it is now a totally misleading ideology, even to show how both terms of these dichotomies construct each other in practice and in theory. I prefer a network ideological image, suggesting the profusion of spaces and identities and the permeability of boundaries in the personal body and in the body politic. “Networking” is both a feminist practice and a multinational corporate strategy—weaving is for oppositional cyborgs.

The only way to characterize the informatics of domination is as a massive intensification of insecurity and cultural impoverishment, with common failure of subsistence networks for the most vulnerable. Since much of this picture interweaves with the social relations of science and technology, the urgency of a socialist-feminist politics addressed to science and technology is plain. There is much now being done, and the grounds for political work are rich. For example, the efforts to develop forms of collective struggle for women in paid work, like SEIU’s District 925,⁸ should be a high priority for all of us. These efforts are profoundly tied to technical restructuring of labor processes and reformations of working classes. These efforts also are providing understanding of a more comprehensive kind of labor organization, involving community, sexuality, and family issues never privileged in the largely white male industrial unions.

The structural rearrangements related to the social relations of science and technology evoke strong ambivalence. But it is not necessary to be ultimately depressed by the implications of late-twentieth-century women’s relation to all aspects of work, culture, production of knowledge, sexuality, and reproduction. For excellent reasons, most Marxisms see domination best and have trouble understanding what can only look like false consciousness⁹ and people’s complicity in their own domination in late capitalism. It is crucial to remember that what is lost, perhaps especially from women’s points of view, is often virulent forms of oppression, nostalgically naturalized in the face of current violation. Ambivalence toward the disrupted unities mediated by high-tech culture requires not sorting consciousness into categories of “clear-sighted critique grounding a solid political epistemology” versus “manipulated false consciousness,” but subtle understanding of emerging pleasures, experiences, and powers with serious potential for changing the rules of the game.

There are grounds for hope in the emerging bases for new kinds of unity across race, gender, and class, as these elementary units of socialist-feminist analysis themselves suffer protean transformations. Intensifications of hardship experienced worldwide in connection with the social relations of science and technology are severe. But what people are experiencing is not transparently clear, and we lack sufficiently subtle connections for collectively building effective theories of experience. Present efforts—Marxist, psychoanalytic, feminist, anthropological—to clarify even “our” experience are rudimentary.

8. The division of the Service Employees International Union formed in 1981 that represents librarians, college and university support staff, employees of local government, and other office workers.

9. A Marxist term referring to an individual’s tendency to view reality in ways congruent with the interests of the dominant orthodoxy rather than in ways that reflect his or her own class interest.

I am conscious of the odd perspective provided by my historical position—a Ph.D. in biology for an Irish Catholic girl was made possible by Sputnik's¹ impact on U.S. national science-education policy. I have a body and mind as much constructed by the post–World War II arms race and cold war as by the women's movements. There are more grounds for hope by focusing on the contradictory effects of politics designed to produce loyal American technocrats, which as well produced large numbers of dissidents, rather than by focusing on the present defeats.

The permanent partiality of feminist points of view has consequences for our expectations of forms of political organization and participation. We do not need a totality in order to work well. The feminist dream of a common language, like all dreams for a perfectly true language, of perfectly faithful naming of experience, is a totalizing and imperialist one. In that sense, dialectics² too is a dream language, longing to resolve contradiction. Perhaps, ironically, we can learn from our fusions with animals and machines how not to be Man, the embodiment of Western logos.³ From the point of view of pleasure in these potent and taboo fusions, made inevitable by the social relations of science and technology, there might indeed be a feminist science.

Cyborgs: A Myth of Political Identity

* * *

To recapitulate, certain dualisms have been persistent in Western traditions; they have all been systemic to the logics and practices of domination of women, people of color, nature, workers, animals—in short, domination of all constituted as *others*, whose task is to mirror the self. Chief among these troubling dualisms are self/other, mind/body, culture/nature, male/female, civilized/primitive, reality/appearance, whole/part, agent/resource, maker/made, active/passive, right/wrong, truth/illusion, total/partial, God/man. The self is the One who is not dominated, who knows that by the service of the other; the other is the one who holds the future, who knows that by the experience of domination, which gives the lie to the autonomy of the self. To be One is to be autonomous, to be powerful, to be God; but to be One is to be an illusion, and so to be involved in a dialectic of apocalypse with the other. Yet to be other is to be multiple, without clear boundary, frayed, insubstantial. One is too few, but two are too many.

High-tech culture challenges these dualisms in intriguing ways. It is not clear who makes and who is made in the relation between human and machine. It is not clear what is mind and what body in machines that resolve into coding practices. Insofar as we know ourselves in both formal discourse (e.g., biology) and in daily practice (e.g., the homework economy in the integrated circuit), we find ourselves to be cyborgs, hybrids, mosaics, chimeras.

1. The first artificial satellite, launched by the Soviet Union on October 4, 1957; its launch spurred the United States to invest in science and science education and to begin the space race.

2. Marxist dialectics relates society's cultural sphere (its politics, arts, philosophy, and religion) directly to its socioeconomic foundations, depict-

ing society—including its apparent contradictions—as a coherent total system.

3. Haraway alludes to the French philosopher JACQUES DERRIDA (1930–2004), who deconstructs Western logos (literally, “word, discourse, reason,” from the Greek) and its partial conception of “Man.”

Biological organisms have become biotic systems, communications devices like others. There is no fundamental, ontological separation in our formal knowledge of machine and organism, of technical and organic.

One consequence is that our sense of connection to our tools is heightened. The trance state experienced by many computer users has become a staple of science-fiction film and cultural jokes. Perhaps paraplegics and other severely handicapped people can (and sometimes do) have the most intense experiences of complex hybridization with other communication devices. Anne McCaffrey's *The Ship Who Sang*⁴ explored the consciousness of a cyborg, hybrid of girl's brain and complex machinery, formed after the birth of a severely handicapped child. Gender, sexuality, embodiment, skill: all were reconstituted in the story. Why should our bodies end at the skin, or include at best other beings encapsulated by skin? From the seventeenth century till now, machines could be animated—given ghostly souls to make them speak or move or to account for their orderly development and mental capacities. Or organisms could be mechanized—reduced to body understood as resource of mind. These machine/organism relationships are obsolete, unnecessary. For us, in imagination and in other practice, machines can be prosthetic devices, intimate components, friendly selves. We don't need organic holism to give impermeable wholeness, the total woman and her feminist variants (mutants?).

* * *

Monsters have always defined the limits of community in Western imaginations. The Centaurs and Amazons⁵ of ancient Greece established the limits of the centered polis of the Greek male human by their disruption of marriage and boundary pollutions of the warrior with animality and woman. Unseparated twins and hermaphrodites were the confused human material in early modern France who grounded discourse on the natural and supernatural, medical and legal, portents and diseases—all crucial to establishing modern identity.⁶ The evolutionary and behavioral sciences of monkeys and apes have marked the multiple boundaries of late-twentieth-century industrial identities. Cyborg monsters in feminist science fiction define quite different political possibilities and limits from those proposed by the mundane fiction of Man and Woman.

There are several consequences to taking seriously the imagery of cyborgs as other than our enemies. Our bodies, ourselves; bodies are maps of power and identity. Cyborgs are no exceptions. A cyborg body is not innocent; it was not born in a garden; it does not seek unitary identity and so generate antagonistic dualisms without end (or until the world ends); it takes irony for granted. One is too few, and two is only one possibility. Intense pleasure in skill, machine skill, ceases to be a sin, but an aspect of embodiment. The machine is not an *it* to be animated, worshiped and dominated. The machine

4. A 1969 novel by McCaffrey (1926–2011).

5. In Greek mythology, female warriors. Centaurs: creatures with the body of a horse and the torso and upper body of a man.

6. Page DuBois, *Centaurs and Amazons* (Ann Arbor: University of Michigan Press, 1982); Lorraine Daston and Katharine Park, "Hermaphro-

dites in Renaissance France," [*Critical Matrix* 1, no. 5 (1985), pp. 1–19]; Katharine Park and Lorraine Daston, "Unnatural Conceptions: The Study of Monsters in 16th and 17th Century France and England," *Past and Present*, no. 92 (August 1981), pp. 20–54 [Haraway's note].

is us, our processes, an aspect of our embodiment. We can be responsible for machines; *they* do not dominate or threaten us. We are responsible for boundaries; we are *they*. Up till now (once upon a time), female embodiment seemed to be given, organic, necessary; and female embodiment seemed to mean skill in mothering and its metaphoric extensions. Only by being out of place could we take intense pleasure in machines, and then with excuses that this was organic activity after all, appropriate to females. Cyborgs might consider more seriously the partial, fluid, sometimes aspect of sex and sexual embodiment. Gender might not be global identity after all.

The ideologically charged question of what counts as daily activity, as experience, can be approached by exploiting the cyborg image. Feminists have recently claimed that women are given to dailiness, that women more than men somehow sustain daily life, and so have a privileged epistemological position potentially. There is a compelling aspect to this claim, one that makes visible unvalued female activity and names it as the ground of life. But *the* ground of life? What about all the ignorance of women, all the exclusions and failures of knowledge and skill? What about men's access to daily competence, to knowing how to build things, to take them apart, to play? What about other embodiments? Cyborg gender is a local possibility taking a global vengeance. Race, gender, and capital require a cyborg theory of wholes and parts. There is no drive in cyborgs to produce total theory, but there is an intimate experience of boundaries, their construction and deconstruction. There is a myth system waiting to become a political language to ground one way of looking at science and technology and challenging the informatics of domination.

One last image: organisms and organismic, holistic politics depend on metaphors of rebirth and invariably call on the resources of reproductive sex. I would suggest that cyborgs have more to do with regeneration and are suspicious of the reproductive matrix and of most birthing. For salamanders, regeneration after injury, such as the loss of a limb, involves regrowth of structure and restoration of function with the constant possibility of twinning or other odd topographical productions at the site of former injury. The regrown limb can be monstrous, duplicated, potent. We have all been injured, profoundly. We require regeneration, not rebirth, and the possibilities for our reconstitution include the utopian dream of the hope for a monstrous world without gender.

Cyborg imagery can help express two crucial arguments in this essay: (1) the production of universal, totalizing theory is a major mistake that misses most of reality, probably always, but certainly now; (2) taking responsibility for the social relations of science and technology means refusing an anti-science metaphysics, a demonology of technology, and so means embracing the skillful task of reconstructing the boundaries of daily life, in partial connection with others, in communication with all of our parts. It is not just that science and technology are possible means of great human satisfaction, as well as a matrix of complex dominations. Cyborg imagery can suggest a way out of the maze of dualisms in which we have explained our bodies and our tools to ourselves. This is a dream not of a common language, but of a powerful infidel heteroglossia. It is an imagination of a feminist speaking in tongues to strike fear into the circuits of the super-savers of the new right. It means both building and destroying machines, identities, categories, rela-

tionships, spaces, stories. Though both are bound in the spiral dance, I would rather be a cyborg than a goddess.

1985

From The Companion Species Manifesto: Dogs, People, and Significant Otherness

Companions

In "The Cyborg Manifesto,"¹ I tried to write a surrogacy agreement, a trope,² a figure for living within and honoring the skills and practices of contemporary technoculture without losing touch with the permanent war apparatus of a non-optional, post-nuclear world and its transcendent, very material lies. Cyborgs can be figures for living within contradictions, attentive to the naturecultures³ of mundane practices, opposed to the dire myths of self-birthing, embracing mortality as the condition for life, and alert to the emergent historical hybridities actually populating the world at all its contingent scales.

However, cyborg refigurations hardly exhaust the tropic work required for ontological⁴ choreography in technoscience. I have come to see cyborgs as junior siblings in the much bigger, queer family of companion species, in which reproductive biotechnopolitics are generally a surprise, sometimes even a nice surprise. I know that a US middle-aged white woman with a dog playing the sport of agility is no match for the automated warriors, terrorists, and their transgenic kin in the annals of philosophical inquiry or the ethnography⁵ of naturecultures. Besides, (1) self-figuration is not my task; (2) transgenics are not the enemy; and (3) contrary to lots of dangerous and unethical projection in the Western world that makes domestic canines into furry children, dogs are not about oneself. Indeed, that is the beauty of dogs. They are not a projection, nor the realization of an intention, nor the telos of anything. They are dogs; i.e., a species in obligatory, constitutive, historical, protean relationship with human beings. The relationship is not especially nice; it is full of waste, cruelty, indifference, ignorance, and loss, as well as of joy, invention, labor, intelligence, and play. I want to learn how to narrate this co-history and how to inherit the consequences of co-evolution in natureculture.

There cannot be just one companion species; there have to be at least two to make one. It is in the syntax; it is in the flesh. Dogs are about the inescapable, contradictory story of relationships—co-constitutive relationships in which none of the partners pre-exist the relating, and the relating is never done once and for all. Historical specificity and contingent mutability rule

1. "A Manifesto for Cyborgs: Science, Technology, and Socialist Feminism in the 1980s," *Socialist Review* 15.2 (1985): 65–107 (excerpted above).

2. A figure of speech. "Surrogacy agreement": a legal contract of the kind that governs surrogate motherhood.

3. Haraway's coinage that emphasizes the inextricable entanglements of nature and culture, of

the material and semiotic, and of body and mind. "Cyborgs": cybernetic organisms, both mechanical and organic.

4. Concerned with the nature of being.

5. Descriptive study of a culture or people (a form of anthropology). "Transgenic kin": those whose genomes have been altered by the addition of a gene from an unrelated species.

all the way down, into nature and culture, into naturecultures. There is no foundation; there are only elephants supporting elephants all the way down.⁶

Companion animals comprise only one kind of companion species, and neither category is very old in American English. In United States English, the term "companion animal" emerges in medical and psycho-sociological work in veterinary schools and related sites from the middle 1970s. This research told us that, except for those few non-dog loving New Yorkers who obsess about unscooped dog shit in the streets, having a dog lowers one's blood pressure and ups one's chances of surviving childhood, surgery, and divorce.

Certainly, references in European languages to animals serving as companions, rather than as working or sporting dogs, predate this US biomedical, techno-scientific literature by centuries. Further, in China, Mexico, and elsewhere in the ancient and contemporary world, the documentary, archaeological, and oral evidence for dogs as pets, in addition to a myriad of other jobs, is strong. In the early Americas dogs assisted in hauling, hunting, and herding for various peoples. For others, dogs were food or a source of fleece. Dog people like to forget that dogs were also lethal guided weapons and instruments of terror in the European conquest of the Americas, as well as in Alexander the Great's⁷ paradigm-setting imperial travels. With combat history in Viet Nam as an officer in the US marines,⁸ Akita breeder and dog writer John Cargill reminds us that before cyborg warfare, trained dogs were among the best intelligent weapons systems. And tracking hounds terrorized slaves and prisoners, as well as rescued lost children and earthquake victims.

Listing these functions does not begin to get at the heterogeneous history of dogs in symbol and story all over the world, nor does the list of jobs tell us how dogs were treated or how they regarded their human associates. In *A History of Dogs in the Early Americas* (Yale, 1997), Marion Schwartz writes that some American Indian hunting dogs went through similar rituals of preparation as did their humans, including among the Achuar⁹ of South America the ingestion of a hallucinogen. In *In the Company of Animals* (Cambridge, 1986), James Serpell relates that for the nineteenth-century Comanche¹ of the Great Plains, horses were of great practical value. But horses were treated in a utilitarian way, while dogs, kept as pets, merited fond stories and warriors mourned their deaths. Some dogs were and are vermin; some were and are buried like people. Contemporary Navajo² herding dogs relate to their landscape, their sheep, their people, coyotes, and dog or human strangers in historically specific ways. In cities, villages, and rural areas all over the world, many dogs live parallel lives among people, more or less tolerated, sometimes used and sometimes abused. No one term can do justice to this history.

6. This phrase combines a view about Hindu cosmology—that the world is supported on the backs of elephants who stand on a turtle—with the more common expression of infinite regress, "Turtles all the way down."

7. The greatest general of antiquity (356–323 B.C.E.); king of Macedonia, his conquests extended as far as Egypt and India.

8. U.S. combat troops were overtly engaged in the

conflict between North and South Vietnam from 1964 to 1975.

9. Indigenous Amazonian community dwelling on the border between Ecuador and Peru.

1. Indigenous tribe of North America, who in the 18th and 19th centuries were equestrian nomads ranging over the southern Great Plains.

2. An indigenous tribe of the southwestern United States.

However, the term “companion animal” enters US technoculture through the post–Civil War land-grant academic institutions housing the vet schools. That is, “companion animal” has the pedigree of the mating between technoscientific expertise and late industrial pet-keeping practices, with their democratic masses in love with their domestic partners, or at least with the non-human ones. Companion animals can be horses, dogs, cats, or a range of other beings willing to make the leap to the biosociality of service dogs, family members, or team members in cross-species sports. Generally speaking, one does not eat one’s companion animals (nor get eaten by them); and one has a hard time shaking colonialist, ethnocentric, ahistorical attitudes toward those who do (eat or get eaten).

From *Species*

“Companion species” is a bigger and more heterogeneous category than companion animal, and not just because one must include such organic beings as rice, bees, tulips, and intestinal flora, all of whom make life for humans what it is—and vice versa. I want to write the keyword entry for “companion species” to insist on four tones simultaneously resonating in the linguistic, historical voice box that enables uttering this term. First, as a dutiful daughter of Darwin,³ I insist on the tones of the history of evolutionary biology, with its categories of populations, rates of gene flow, variation, selection, and biological species. The debates in the last 150 years about whether the category “species” denotes a real biological entity or merely figures a convenient taxonomic box sound the over- and undertones. Species is about biological kind, and scientific expertise is necessary to that kind of reality. Post-cyborg, what counts as biological kind troubles previous categories of organism. The machinic and the textual are internal to the organic and vice versa in irreversible ways.

Second, schooled by Thomas Aquinas and other Aristotelians,⁴ I remain alert to species as generic philosophical kind and category. Species is about defining difference, rooted in polyvocal fugues of doctrines of cause.

Third, my soul indelibly marked by a Catholic formation, I hear in species the doctrine of the Real Presence⁵ under both species, bread and wine, the transubstantiated signs of the flesh. Species is about the corporeal join of the material and the semiotic in ways unacceptable to the secular Protestant sensibilities of the American academy and to most versions of the human science of semiotics.

Fourth, converted by Marx and Freud⁶ and a sucker for dubious etymologies, I hear in species filthy lucre, specie, gold, shit, filth, wealth. In *Love’s Body*, Norman O. Brown⁷ taught me about the join of Marx and Freud in shit and gold, in primitive scat and civilized metal, in specie. I met this join

3. Charles Darwin (1809–1882), English naturalist and theorist of evolution.

4. Followers of the Greek philosopher ARISTOTLE (384–322 B.C.E.), whose writings on science dominated European thought until the Renaissance. AQUINAS (1225–1274 C.E.), medieval Scholastic philosopher and Dominican theologian.

5. The belief, in some Christian religions, that the flesh-and-blood Jesus Christ is in reality and not merely symbolically present in Eucharistic bread

and wine. In the Catholic Church, this is called the doctrine of transubstantiation.

6. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis. KARL MARX (1818–1883), German economic and political theorist and revolutionary.

7. American philosopher (1913–2002) whose work wedded psychoanalysis and Marxism. *Love’s Body* (1966) explores the role of eroticism in human history.

again in modern US dog culture, with its exuberant commodity culture; its vibrant practices of love and desire; its structures that tie together the state, civil society, and the liberal individual; its mongrel technologies of purebred subject- and object-making. As I glove my hand in the plastic film—courtesy of the research empires of industrial chemistry—that protects my morning *New York Times* to pick up the microcosmic ecosystems, called scat, produced anew each day by my dogs, I find pooper scoopers quite a joke, one that lands me back in the histories of the incarnation, political economy, technoscience, and biology.

In sum, “companion species” is about a four-part composition, in which co-constitution, finitude, impurity, historicity, and complexity are what is.

The Companion Species Manifesto is, thus, about the implosion of nature and culture in the relentlessly historically specific, joint lives of dogs and people, who are bonded in significant otherness. Many are interpellated into that story, and the tale is instructive also for those who try to keep a hygienic distance. I want to convince my readers that inhabitants of technoculture become who we are in the symbiogenetic tissues of naturecultures, in story and in fact.

I take “interpellation” from the French post-structuralist and Marxist philosopher Louis Althusser’s⁸ theory for how subjects are constituted from concrete individuals by being “hailed” through ideology into their subject positions in the modern state. Today, through our ideologically loaded narratives of their lives, animals “hail” us to account for the regimes in which they and we must live. We “hail” them into our constructs of nature and culture, with major consequences of life and death, health and illness, longevity and extinction. We also live with each other in the flesh in ways not exhausted by our ideologies. Stories are much bigger than ideologies. In that is our hope.

In this long philosophical introduction, I am violating a major rule of “Notes of a Sports Writer’s Daughter,” my doggish scribbblings in honor of my sports writer father, which pepper this manifesto. The “Notes” require there to be no deviation from the animal stories themselves. Lessons have to be inextricably part of the story; it’s a rule of truth as a genre for those of us—practicing and lapsed Catholics and their fellow travelers—who believe that the sign and the flesh are one.

Reporting the facts, telling a true story, I write “Notes of a Sports Writer’s Daughter.” A sports writer’s job is, or at least was, to report the game story. I know this because as a child I sat in the press box in the AAA baseball club’s Denver Bears⁹ Stadium late at night watching my father write and file his game stories. A sports writer, perhaps more than other news people, has a curious job—to tell what happened by spinning a story that is just the facts. The more vivid the prose, the better; indeed, if crafted faithfully, the more potent the tropes, the truer the story. My father did not want to have a sports column, a more prestigious activity in the newspaper business. He wanted to write the game stories, to stay close to the action, to tell it like it is, not to look for the scandals and the angles for the meta-story, the column. My father’s faith was in the game, where fact and story cohabit.

8. French philosopher (1918–1990); see above.

9. A team that played in Denver, Colorado, in what was called Bears Stadium from 1948 until

1968; it was the highest-level minor league affiliate of a number of different major league teams.

I grew up in the bosom of two major institutions that counter the modernist belief in the no-fault divorce, based on irrevocable differences, of story and fact. Both of these institutions—the Church and the Press—are famously corrupt, famously scorned (if constantly used) by Science, and nonetheless indispensable in cultivating a people's insatiable hunger for truth. Sign and flesh; story and fact. In my natal house, the generative partners could not separate. They were, in down-and-dirty dog talk, tied. No wonder culture and nature imploded for me as an adult. And nowhere did that implosion have more force than in living the relationship and speaking the verb that passes as a noun: companion species. Is this what John meant when he said, "The Word was made flesh"?¹ In the bottom of the ninth inning, the Bears down by two runs, with three on, two out, and two strikes, with the time deadline for filing the story five minutes away?

I also grew up in the house of Science and learned at around the time my breast buds erupted about how many underground passages there are connecting the Estates² and how many couplings keep sign and flesh, story and fact, together in the palaces of positive knowledge, falsifiable hypothesis, and synthesizing theory. Because my science was biology, I learned early that accounting for evolution, development, cellular function, genome complexity, the molding of form across time, behavioral ecology, systems communication, cognition—in short, accounting for anything worthy of the name of biology—was not so different from getting a game story filed or living with the conundrums of the incarnation.³ To do biology with any kind of fidelity, the practitioner *must* tell a story, *must* get the facts, and *must* have the heart to stay hungry for the truth and to abandon a favorite story, a favorite fact, shown to be somehow off the mark. The practitioner must also have the heart to stay with a story through thick and thin, to inherit its discordant resonances, to live its contradictions, when that story gets at a truth about life that matters. Isn't that kind of fidelity what has made the science of evolutionary biology flourish and feed my people's corporeal hunger for knowledge over the last hundred and fifty years?

Etymologically, facts refer to performance, action, deeds done—feats, in short. A fact is a past participle,⁴ a thing done, over, fixed, shown, performed, accomplished. Facts have made the deadline for getting into the next edition of the paper. Fiction, etymologically, is very close, but differs by part-of-speech and tense. Like facts, fiction refers to action, but fiction is about the act of fashioning, forming, inventing, as well as feigning or feinting. Drawn from a present participle,⁵ fiction is in process and still at stake, not finished, still prone to falling afoul of facts, but also liable to showing something we do not yet know to be true, but will know. Living with animals, inhabiting their/our stories, trying to tell the truth about relationship, cohabiting an active history: that is the work of companion species, for whom "the relation" is the smallest possible unit of analysis.

1. John 1.14, a gospel traditionally attributed to the apostle St. John (1st c. century C.E.). "The Word": identified with Jesus Christ.

2. The orders (*états*) of the realm in France before the Revolution of 1789: the clergy, the nobility, and commoners. (In the 19th century, British writers began referring to the press as the "fourth estate.")

3. The Christian doctrine according to which God "became flesh" in Mary's womb as Jesus Christ, at once fully human and divine.

4. "Fact" is derived from *factum*, the past participle of the Latin verb meaning "to do" (*facere*).

5. "Fiction" is derived from *factio*, the noun meaning "fashioning, forming," itself derived from the verb "to fashion" (*ingere*).

So, I file dog stories for a living these days. All stories traffic in tropes, i.e., figures of speech necessary to say anything at all. Trope (Greek: *tropós*) means swerving or tripping. All language swerves and trips; there is never direct meaning; only the dogmatic think that trope-free communication is our province. My favorite trope for dog tales is “metaplasma.” Metaplasma means a change in a word, for example by adding, omitting, inverting, or transposing its letters, syllables, or sounds. The term is from the Greek *met-aplasmos*, meaning remodeling or remolding. Metaplasma is a generic term for almost any kind of alteration in a word, intentional or unintentional. I use metaplasma to mean the remodeling of dog and human flesh, remolding the codes of life, in the history of companion-species relating.

Compare and contrast “protoplasm,” “cytoplasm,” “neoplasm,” and “germ-plasm.”⁶ There is a biological taste to “metaplasma”—just what I like in words about words. Flesh and signifier, bodies and words, stories and worlds: these are joined in naturecultures. Metaplasma can signify a mistake, a stumbling, a troping that makes a fleshly difference. For example, a substitution in a string of bases in a nucleic acid⁷ can be a metaplasma, changing the meaning of a gene and altering the course of a life. Or, a remolded practice among dog breeders, such as doing more outcrosses and fewer close line breedings,⁸ could result from changed meanings of a word like “population” or “diversity.” Inverting meanings; transposing the body of communication; remolding, remodeling; swervings that tell the truth: I tell stories about stories, all the way down. Woof.

Implicitly, this manifesto is about more than the relation of dogs and people. Dogs and people figure a universe. Clearly, cyborgs—with their historical congealings of the machinic and the organic in the codes of information, where boundaries are less about skin than about statistically defined densities of signal and noise—fit within the taxon⁹ of companion species. That is to say, cyborgs raise all the questions of histories, politics, and ethics that dogs require. Care, flourishing, differences in power, scales of time—these matter for cyborgs. For example, what kind of temporal scale-making could shape labor systems, investment strategies, and consumption patterns in which the generation time of information machines became compatible with the generation times of human, animal, and plant communities and ecosystems? What is the right kind of pooper-scooper for a computer or a personal digital assistant? At the least, we know it is not an electronics dump in Mexico or India, where human scavengers get paid less than nothing for processing the ecologically toxic waste of the well informed.

* * *

So, in *The Companion Species Manifesto*, I want to tell stories about relating in significant otherness, through which the partners come to be who we are in flesh and sign. The following shaggy dog stories about evolution, love, training, and kinds or breeds help me think about living well together with

6. Living genetic material preserved for the purposes of breeding or research. “Protoplasm”: a general term for cytoplasm, the liquid that fills all cells and is surrounded by the cell membrane. “Neoplasm”: a new or abnormal growth of tissue in the body, generally associated with cancer.

7. A complex organic acid composed of nucleotide chains (e.g., DNA); these acids are the main information-carrying molecules in the cell.

8. The matings of related dogs. “Outcrosses”: the matings of unrelated dogs.

9. That is, the classification.

the host of species with whom human beings emerge on this planet at every scale of time, body, and space. The accounts I offer are idiosyncratic and indicative rather than systematic, tendentious more than judicious, and rooted in contingent foundations rather than clear and distinct premises. Dogs are my story here, but they are only one player in the large world of companion species. Parts don't add up to wholes in this manifesto—or in life in naturecultures. Instead, I am looking for Marilyn Strathern's "partial connections,"¹ which are about the counter-intuitive geometries and incongruent translations necessary to getting on together, where the god-tricks of self certainty and deathless communion are not an option.

2003

1. The title of a 1991 book by the British anthropologist Strathern (b. 1941); it argues that our accounts of the relations between entities, people, and cultures are always partial, never whole.

N. KATHERINE HAYLES

b. 1943

Repeating a memorable phrase from William Gibson's *Neuromancer* (1984), the founding novel of cyberpunk fiction, N. Katherine Hayles describes the posthuman body as "data made flesh." She argues that the post-World War II era marks an epistemic shift in the history of science and technology. This new cultural condition of virtuality is characterized by the increasing permeation of material reality by information codes and patterns. In the wake of cybernetic theories that erase the boundaries between human existence and computer simulation, subjectivity comes to be recast in terms of information paradigms. For Hayles, the contemporary technoscientific mutation of subjectivity initiates a dismantling of the liberal humanist individual and the birth of a new age of the posthuman. But unlike other posthumanists, who entertain dehumanizing fantasies of scientific power and of immortality, Hayles stresses the importance of concrete material embodiment. This emphasis ensures that the subject retains both agency and singularity. Literary texts play a central role for Hayles: as cultural documents, revealing and often prophetic, they cast light on today's ongoing transformations at the intersection of technology, the body, and culture. But literary reading in our time has undergone mutations.

Hayles holds degrees in science and literature. She received a B.S. in chemistry from the Rochester Institute of Technology in 1966, an M.S. in chemistry from the California Institute of Technology in 1969, an M.A. in English from Michigan State University in 1970, and a Ph.D. in English from the University of Rochester in 1977. After teaching at Dartmouth College, the University of Missouri at Rolla, the University of Iowa, the California Institute of Technology, and the University of California at Los Angeles, where she was a professor of English and design/media arts from 1992 to 2008, she joined Duke University's Program in Literature. Hayles's numerous honors and awards include two National Endowment for the Humanities Fellowships, a Guggenheim Fellowship, a Fellowship at the National Humanities Center, and a Medal of Honor from the University of Helsinki. Her influential book *How We Became Posthuman: Virtual Bodies in Cybernetics, Literature, and Informatics* (1999) received the René Wellek Prize for the Best Book in Literary

Theory from the American Comparative Literature Association and the Eaton Award for the Best Book in Science Fiction Criticism and Theory from the University of California at Riverside. Hayles is past president of the Society for Literature, Science, and the Arts. She was elected in 2015 to the American Academy of Arts and Sciences.

Like DONNA HARAWAY's pioneering writings on cyborg theory, Hayles's work treats the miscegenation of human and machine as an occasion for reconsidering traditional humanist accounts of subjectivity and reading. While Haraway adopts the cyborg (human+machine) as an "ironic political myth" in the service of socialist feminism, Hayles uses it to examine the philosophical assumptions underlying cybernetic research and textual analysis. In *How We Became Posthuman*, for example, she sees the cyborg as a cultural icon of postmodern society that is closely linked to developments in science—specifically, how "information lost its body." She posits three historical phases of human and machine relations in cybernetics: homeostasis or autonomy of the human body, from 1945 to 1960; reflexivity or integration of machine and body, from 1960 to 1980; and virtuality or symbiosis, from 1980 to the present. The progression is toward increasingly disembodied states of human existence. But Hayles warns against dematerialized definitions of information and corporeality, which she condemns as ill-advised philosophical extensions of the Cartesian separation of mind and body. Characteristically, she seeks balance, reconciliation, and synthesis.

Hayles's posthuman theory resonates with the critique of the unified, universal human subject—a legacy of the Enlightenment—that has been mounted in contemporary times by poststructuralist, feminist, postcolonial, and other postmodern thinkers, notably ROSI BRAIDOTTI. It amplifies the conception of subjectivity as fragmented and heterogeneous, embedded at once in embodied existence, in materialized sets of cultural codes, in social institutions, and in technoscientific devices. In emphasizing posthuman *embodiment*, Hayles sees her project as a "rememory" of the sometimes overlooked engineering as well as broader cultural factors conducive to the condition of virtuality. The multiple interchanges between science and literature help illuminate these historical contingencies of virtuality. To counter abstract models of cybernetics, Hayles draws on narrative fiction such as Bernard Wolfe's *Limbo* (1952) and Philip K. Dick's major novels of the 1960s. These texts offer, in her view, "embodied forms of discourse" that broach a range of social, political, and psychological issues by connecting scientific concepts to particular real-life situations.

Like other leading theorists of the posthuman body, Hayles works in the context of postindustrial society. This is a world in which water is fluoridated; the air inside and outside buildings is tainted by innumerable chemicals (human-made and natural); and food is subjected to genetic modifications as well as other enhancements such as chemical fertilizers and antibiotics. Beginning at an early age, individuals receive multiple immunizations. Prostheses—from dental fillings and contact lenses to stents and hip replacements to transplanted body parts—modify human flesh. Under such conditions the sharply etched classical binary distinctions—man/machine, nature/culture, purity/contamination, private/public—implode and intermix. Where some theorists of the posthuman body see utopia over the horizon, others glimpse dystopia. Hayles characteristically takes a middle road, expressing both exaltation and concern, wonder and anxiety.

In our selection, "How We Read: Close, Hyper, Machine," Hayles argues that digital media create new challenges but also new possibilities when it comes to established reading practices and paradigms that have long defined and shaped literary studies in the United States. Gently casting present-day zealots of print-based close and surface reading as remnants of a bygone era while also cautioning against unbridled faith in digital forms of literacy, such as hyperreading and machine reading, Hayles maintains that all reading practices can and should complement each

other, especially if we are to do justice to the tangible cultural and neurological effects of living with and alongside new media. The reality is that students who are expected to develop deep attention by performing close readings of canonical print texts in the classroom may find doing so difficult and even meaningless, for they are in fact already quite skilled in the hyperattention they need in order to skim through the Web in search of keywords and to read fragments of digital texts in truncated contexts. As these new forms of reading have increasingly become mainstream, evidence suggests that digital literacy leads to significant changes in brain architecture in ways that make traditional close reading perhaps more arduous than ever before.

Where others might see an unbridgeable gulf between different modes of reading, however, Hayles discerns new prospects for transforming the discipline of literary studies. In this respect, her work resonates with FRANCO MORETTI's computational criticism, which seeks to find new ways for processing massive amounts of data through distant reading aided by computers. But unlike Moretti, who seems to abandon close reading altogether, Hayles adopts a more balanced approach, one that recognizes distinct advantages and disadvantages of print, digital, and machine literacies, believing the interaction among them to be mutually beneficial and to lead to increased effectiveness in analyzing texts.

As her essay unfolds, Hayles carefully defines close reading, hyperreading, and machine reading in the context of the mounting information overload and distraction of twenty-first-century life. Her aim is to reconfigure reading to encompass all its modes and techniques. As a result, she does not fret, as do some of the respected literacy theorists she cites, over ubiquitous skimming, rapid scrolling, and endless hyperlinks. Yet as broad as her definition of reading turns out to be, Hayles quickly dispatches the "surface reading" famously advocated by STEPHEN BEST and SHARON MARCUS, which she reduces in passing to pleasurable and appreciative reading. Similarly, her plan for reading gives short shrift to ideology critique, also known as symptomatic reading, or cultural critique. In the end, no space is allotted for critical reading, its definition, its dynamics, or its value. But despite these shortcomings, Hayles addresses head-on the growing crisis in present-day traditional literary reading prompted by the rise of both hyper and machine reading while taking into account tweets, blogs, email, and Facebook as well as the powerful computer programs that aggregate keywords, phrase frequencies, and all manner of patterns relevant to literature.

***How We Read: Close, Hyper, Machine* Keywords:** The Body, Interpretation Theory, Media, Postmodernity, Print Culture, Reception Theory

How We Read: Close, Hyper, Machine

The evidence is mounting: people in general, and young people in particular, are doing more screen reading of digital materials than ever before. Meanwhile, the reading of print books and of literary genres (novels, plays, and poems) has been declining over the last twenty years. Worse, reading skills (as measured by the ability to identify themes, draw inferences, etc.) have been declining in junior high, high school, college, and even graduate schools for the same period. Two flagship reports from the National Endowment for the Arts,¹ *Reading at Risk*, reporting the results of their own surveys, and *To Read or Not to Read*, drawing together other large-scale surveys,

1. An independent federal agency established by Congress in 1965 that offers funding and support for projects exhibiting artistic excellence.

show that over a wide range of data-gathering instruments the results are consistent: people read less print, and they read print less well [see Works Cited]. This leads the NEA chairman, Dana Gioia,² to suggest that the *correlation* between decreased literary reading and poorer reading ability is indeed a *causal* connection. The NEA argues (and I of course agree) that literary reading is a good in itself, insofar as it opens the portals of a rich literary heritage (see Griswold, McDonnell, and Wright for the continued high cultural value placed on reading). When decreased print reading, already a cultural concern, is linked with reading problems, it carries a double whammy.

Fortunately, the news is not all bad. A newer NEA report, *Reading on the Rise*, shows for the first time in more than two decades an uptick in novel reading (but not plays or poems), including among the digitally native young adult cohort (ages 18–24). The uptick may be a result of the Big Read initiative by the NEA and similar programs by other organizations; whatever the reason, it shows that print can still be an alluring medium. At the same time, reading scores among fourth and eighth graders remain flat, despite the No Child Left Behind initiative.³ Notwithstanding the complexities of the national picture, it seems clear that a critical nexus occurs in the juncture of digital reading (exponentially increasing among all but the oldest cohort) and print reading (downward trending with a slight uptick recently). The crucial questions are these: how to convert the increased digital reading into increased reading ability and how to make effective bridges between digital reading and the literacy traditionally associated with print.

Mark Bauerlein (a consultant on the *Reading at Risk* report), in the offensively titled *The Dumbest Generation: How the Digital Age Stupefies Young Americans and Jeopardizes Our Future*, makes no apology for linking the decline of reading skills directly to a decrease in print reading, issuing a stinging indictment to teachers, professors, and other mentors who think digital reading might encourage skills of its own. Not only is there no transfer between digital reading and print reading skills in his view, but digital reading does not even lead to strong *digital* reading skills (93–111). I found *The Dumbest Generation* intriguing and infuriating in equal measure. The book is valuable for its synthesis of a great deal of empirical evidence, going well beyond the 2009 NEA report in this regard; it is infuriating in its tendentious refusal to admit any salutary effects from digital reading. As Bauerlein moves from the solid longitudinal data on the decline in print reading to the digital realm, the evidence becomes scantier and the anecdotes more frequent, with examples obviously weighted toward showing the inanity of online chats, blogs, and *Facebook*⁴ entries. It would, of course, be equally possible to harvest examples showing the depth, profundity, and brilliance of online discourse, so Bauerlein's argument here fails to persuade. The two earlier NEA reports (*Reading at Risk*; *To Read*) suffer from their own problems; their data do not clearly distinguish between print and digital reading, and they fail to measure how much digital reading is going on or its effects on reading abilities (Kirschenbaum). Nevertheless, despite these lim-

2. American poet and critic (b. 1950); former chairman of the NEA (2003–09).

3. Legislation passed by Congress in 2001 that increased the federal government's role in hold-

ing public elementary and secondary schools accountable for student outcomes.

4. The world's largest online and social networking service, launched in 2004.

itations and distortions, few readers are likely to come away unconvinced that there is something like a national crisis in reading and that it is especially acute with teen and young adult readers.

At this point, scholars in literary studies should be jumping on their desks and waving their hands in the air, saying “Hey! Look at us! We know how to read *really* well, and we know how to teach students to read. There’s a national crisis in reading? We can help.” Yet there is little evidence that the profession of literary studies has made a significant difference in the national picture, including on the college level, where reading abilities continue to decline even into graduate school. This is strange. The inability to address the crisis successfully no doubt has multiple causes, but one in particular strikes me as vitally important. While literary studies continues to teach close reading to students, it does less well in exploiting the trend toward the digital. Students read incessantly in digital media and write in it as well, but only infrequently are they encouraged to do so in literature classes or in environments that encourage the transfer of print reading abilities to digital and vice versa. The two tracks, print and digital, run side by side, but messages from either track do not leap across to the other side.

Close Reading and Disciplinary Identity

To explore why this should be so and open possibilities for synergistic interactions,⁵ I begin by revisiting that sacred icon of literary studies, close reading. When literary studies expanded its purview in the 1970s and 1980s, it turned to reading many different kinds of “texts,” from Donald Duck⁶ to fashion clothing, television programs to prison architecture (see Scholes). This expansion into diverse textual realms meant that literature was no longer the de facto center of the field. Faced with the loss of this traditional center, literary scholars found a replacement in close reading, the one thing virtually all literary scholars know how to do well and agree is important. Close reading then assumed a preeminent role as the essence of the disciplinary identity.

Jane Gallop undoubtedly speaks for many when she writes, “I would argue that the most valuable thing English ever had to offer was the very thing that made us a discipline, that transformed us from cultured gentlemen into a profession [i.e., close reading]. . . . Close reading—learned through practice with literary texts, learned in literature classes—is a widely applicable skill, of real value to students as well as to scholars in other disciplines” (15). Barbara Johnson, in her well-known essay “Teaching Deconstructively,” goes further: “This [close reading] is the only teaching that can properly be called literary; anything else is history of ideas, biography, psychology, ethics, or bad philosophy” (140). For Gallop, Johnson, and many others, close reading not only assures the professionalism of the profession but also makes literary studies an important asset to the culture. As such, close reading justifies the discipline’s continued existence in the academy, including the monies spent to support literature faculty and departments. More broadly, close reading in this view constitutes the major part of the cultural capital that literary studies relies on to prove its worth to society.

5. That is, interactions of discrete agencies, agents, or conditions such that the total effect is greater than the sum of the individual effects.

6. Cartoon character created in 1934 by Walt Disney, a cartoonist and founder of an entertainment conglomerate.

Literary scholars generally think they know what is meant by *close reading*, but, looked at more closely, it proves not so easy to define or exemplify. Jonathan Culler, quoting Peter Middleton, observes that “close reading is our contemporary term for a heterogeneous and largely unorganized set of practices and assumptions” (20). John Guillory is more specific when he historicizes close reading, arguing that “close reading is a modern academic practice with an inaugural moment, a period of development, and now perhaps a period of decline” (“Close Reading” 8). He locates its prologue in the work of I. A. Richards,⁷ noting that Richards contrasted close reading with the media explosion of his day, television. If that McLuhanesque view⁸ of media is prologue, then digital technologies, Guillory suggests, may be launching the epilogue. Citing my work on hyperattention (more on that shortly), Guillory sets up a dichotomy between the close reading recognizable to most literary scholars—detailed and precise attention to rhetoric, style, language choice, and so forth through a word-by-word examination of a text’s linguistic techniques—to the digital world of fast reading and sporadic sampling. In this he anticipates the close versus digital reading flagrantly on display in Bauerlein’s book.

Amid the heterogeneity of close reading techniques, perhaps the dominant one in recent years has been what Stephen Best and Sharon Marcus call “symptomatic reading.” In a special issue of *Representations*, Best and Marcus launch a frontal assault on symptomatic reading as it was inaugurated by Fredric Jameson’s immensely influential *The Political Unconscious*.⁹ For Jameson, with his motto “Always historicize,” the text is an alibi for ideological formations that are subtextual. The heroic task of the critic is to wrench a text’s ideology into the light, “massy and dripping,” as Jameson puts it (245; qtd. in Crane 92), so that it can be unveiled and resisted (see Crane for a close analysis of Jameson’s metaphors). The trace of symptomatic reading may be detected in Johnson: listing textual features that merit special attention for close reading, she includes such constructions as “ambiguous words,” “undecidable syntax,” and “incompatibilities between what a text says and what it does” (141–42). Most if not all these foci are exactly the places where scholars doing symptomatic reading would look for evidence of a text’s subsurface ideology.

After more than two decades of symptomatic reading, however, many literary scholars are not finding it a productive practice, perhaps because (like many deconstructive readings¹) its results have begun to seem formulaic, leading to predictable conclusions rather than compelling insights. In a paraphrase of Gilles Deleuze and Félix Guattari’s famous remark, “We are tired of trees,”² the *Representations* special issue declared, We are tired of symp-

tomatic reading. The issue's contributors are not the only ones who feel this way. In panel after panel at the conference sponsored by the National Humanities Center³ in spring 2010, entitled "The State and Stakes of Literary Studies," presenters expressed similar views and urged a variety of other reading modes, including "surface reading," in which the text is examined not for hidden clues but its overt messages; reading aimed at appreciation and articulation of the text's aesthetic value; and a variety of other reading strategies focusing on affect, pleasure, and cultural value.

Digital and Print Literacies

If one chapter of close reading is drawing to an end, what new possibilities are arising? Given the increase in digital reading, obvious sites for new kinds of reading techniques, pedagogical strategies, and initiatives are the interactions between digital and print literacies. Literary studies has been slow to address these possibilities, however, because it continues to view close reading of print texts as the field's essence. As long as this belief holds sway, digital reading will at best be seen as peripheral to our concerns, pushed to the margins as not "really" reading or at least not compelling or interesting reading. Young people, who vote with their feet in college, are marching in another direction—the digital direction. No doubt those who already read well will take classes based on close reading and benefit from them, but what about others whose print-reading skills are not as highly developed? To reach them, we must start close to where they are, rather than where we imagine or hope they might be. As David Laurence observes, "good teachers deliberately focus on what the reader can do, make sure that both teacher and student recognize and acknowledge it, and use it as a platform of success from which to build" (4).

This principle was codified by the Belarusian psychologist L. S. Vygotsky in the 1930s as the "zone of proximal development." In *Mind in Society: The Development of Higher Psychological Processes*, he defined this zone as "[t]he distance between the actual developmental level as determined by independent problem solving and the level of potential development as determined through problem solving under adult guidance, or in collaboration with more capable peers" (86). The concept implies that if the distance is too great between what one wants someone else to learn and where instruction begins, the teaching will not be effective. Imagine, for example, trying to explain *Hamlet*⁴ to a three-year-old (an endless string of "Why?" would no doubt result, the all-purpose response of young children to the mysterious workings of the adult world). More recent work on "scaffolding" (Robertson, Fluck, and Webb) and Ron Tinsley and Kimberly Lebak on the "zone of reflective capacity" extends the idea and amplifies it with specific learning strategies. These authors agree that for learning to occur, the distance between instruction and available skills must be capable of being bridged, either through direct instruction or, as Vygotsky notes, through working with "more capable" peers. Bauerlein instances many responses from young people as they encounter difficult print texts to the effect the works are "boring" or

3. A private, nonprofit U.S. organization dedicated to advanced study in the humanities (established in 1978).

4. English tragedy (ca. 1600) by William Shakespeare, one of the best-known and most exhaustively interpreted works in world literature.

not worth the trouble. How can we convey to such students the deep engagement we feel with challenging literary texts? I argue that we cannot do this effectively if our teaching does not take place in the zone of proximal development, that is, if we are focused exclusively on print close reading. Before opinion solidifies behind new versions of close reading, I want to argue for a disciplinary shift to a broader sense of reading strategies and their interrelation.

In 1999, James Sosnoski presciently introduced the concept of hyperreading, which he defined as “reader-directed, screen-based, computer-assisted reading” (167). Examples include search queries (as in a *Google*⁵ search), filtering by keywords, skimming, hyperlinking, “pecking” (pulling out a few items from a longer text), and fragmenting (163–72). Updating his model, we may add juxtaposing, as when several open windows allow one to read across several texts, and scanning, as when one reads rapidly through a blog to identify items of interest. There is considerable evidence that hyperreading differs significantly from typical print reading, and moreover that hyperreading stimulates different brain functions than print reading.

For example, Jakob Nielsen’s consulting team, which advises companies and others on effective Web design, does usability research by asking test subjects to deliver running verbal commentaries as they encounter Web pages. Their reactions are recorded by a (human) tester; at the same time, eye-tracking equipment records their eye movements. The research shows that Web pages are typically read in an F pattern (Nielsen, “F-Shaped”). A person reads the first two or three lines across the page, but as the eye travels down the screen, the scanned length gets smaller, and, by the time the bottom of the page is reached, the eye is traveling in a vertical line aligned with the left margin. (Therefore the worst location for important information on a Web page is on the bottom right corner.) In Bauerlein’s view, this research confirms that digital reading is sloppy in the extreme; Bauerlein would no doubt appreciate Woody Allen’s⁶ quip, “I took a speed reading course and was able to read *War and Peace*⁷ in twenty minutes. It involves Russia” (qtd. in Dehaene 18). Nevertheless, other research not cited by Bauerlein indicates that this and similar strategies work well to identify pages of interest and to distinguish them from pages with little or no relevance to the topic at hand (Sillence, Briggs, Harris, and Fishwick).

As a strategic response to an information-intensive environment, hyperreading is not without precedent. John Guillory, in “How Scholars Read,” notes that “[t]he fact of quantity is an intractable empirical given that must be managed by a determined method if analysis or interpretation is to be undertaken” (13). He is not talking here about digital reading but about archival research that requires a scholar to move through a great deal of material quickly to find the relevant texts or passages. He identifies two techniques in particular, scanning (looking for a particular keyword, image, or other textual feature) and skimming (trying to get the gist quickly). He also mentions the book wheel, a physical device invented in the Renaissance to cope with the information explosion when the number of books increased

5. The software, created by Google, Inc., that is the most commonly used Web search engine.

exponentially with the advent of print. Resembling a five-foot-high Ferris wheel,⁸ the book wheel held several books on different shelves and could be spun around to make different texts accessible, in a predigital print version of hyperreading.

In contemporary digital environments, the information explosion of the Web has again made an exponentially great number of texts available, dwarfing the previous amount of print materials by several orders of magnitude. In digital environments, hyperreading has become a necessity. It enables a reader quickly to construct landscapes of associated research fields and sub-fields; it shows ranges of possibilities; it identifies texts and passages most relevant to a given query; and it easily juxtaposes many different texts and passages. *Google* searches and keyword filters are now as much part of the scholar's tool kit as hyperreading itself. Yet hyperreading may not sit easily alongside close reading. Recent studies indicate that hyperreading not only requires different reading strategies than close reading but also may be involved with changes in brain architecture that makes close reading more difficult to achieve.

Much of this evidence is summarized by Nicholas Carr in *The Shallows: What the Internet Is Doing to Our Brains*. More judicious than Bauerlein, he readily admits that Web reading has enormously increased the scope of information available, from global politics to scholarly debates. He worries, however, that hyperreading leads to changes in brain function that make sustained concentration more difficult, leaving us in a constant state of distraction in which no problem can be explored for very long before our need for continuous stimulation kicks in and we check e-mail, scan blogs, message someone, or check our RSS feeds.⁹ The situation is reminiscent of Kurt Vonnegut's satirical short story "Harrison Bergeron,"¹ in which the pursuit of equality has led to a society that imposes handicaps on anyone with exceptional talents. The handsome, intelligent eponymous protagonist must among other handicaps wear eyeglasses that give him headaches; other brainiacs have radio transmitters implanted in their ears, which emit shrieking sounds two or three times every minute, interrupting their thoughts and preventing sustained concentration. The final satirical punch comes in framing the story from the perspective of Bergeron's parents, Hazel and George, who see their son on TV when he proclaims his anti-handicap manifesto (with fatal results for him), but, hampered by their own handicaps, they cannot concentrate enough to remember it.

The story's publication in 1961 should give us a clue that a media-induced state of distraction is not a new phenomenon. Walter Benjamin² in "The Work of Art in the Age of Mechanical Reproduction" (1968), wrote about the ability of mass entertainment forms such as cinema to make distracted viewing into a habit (as opposed to the contemplative viewing of a single work of art). Even though distraction, as Jonathan Crary (2001) has shown, has been a social concern since the late 1800s, there are some new features of

Web reading that make it a powerful practice for rewiring the brain (see Greenfield for a summary). Among these are hyperlinks that draw attention away from the linear flow of an article, very short forms such as tweets that encourage distracted forms of reading, small habitual actions such as clicking and navigating that increase the cognitive load, and, most pervasively, the enormous amount of material to be read, leading to the desire to skim everything because there is way too much material to pay close attention to anything for very long.

Reading on the Web

What evidence indicates that these Web-specific effects are making distraction a contemporary cultural condition? Several studies have shown that, contrary to the claims of early hypertext enthusiasts such as George Landow,³ hyperlinks tend to degrade comprehension rather than enhance it. The following studies, cited by Carr in *The Shallows*, demonstrate the trend. Erping Zhu, coordinator of instructional development at the Center for Research on Learning and Teaching at the University of Michigan, had test subjects read the same online passage but varied the number of links. As the number of links increased, comprehension declined, as measured by writing a summary and completing a multiple-choice test. Similar results were found by two Canadian scholars, David S. Miall and Teresa Dobson, who asked seventy people to read Elizabeth Bowen's short story "The Demon Lover."⁴ One group read it in a linear version, and a second group with links. The first group outperformed the second on comprehension and grasp of the story's plot; it also reported liking the story more than the second group. We may object that a print story would of course be best understood in a print-like linear mode; other evidence, however, indicates that a similar pattern obtains for digital-born material. D. S. Niederhauser, R. E. Reynolds, D. J. Salmen, and P. Skolmoski had test subjects read two online articles, one arguing that "knowledge is objective," and the other that "knowledge is relative." Each article had links allowing readers to click between them. The researchers found that those who used the links, far from gaining a richer sense of the merits and limitations of the two positions, understood them less well than readers who chose to read the two in linear fashion. Comparable evidence was found in a review of thirty-eight experiments on hypertext reading by Diana DeStefano and Jo-Anne LeFevre, psychologists with the Centre for Applied Cognitive Research at Canada's Carleton University. Carr summarizes their results, explaining that in general the evidence did not support the claim that hypertext led to "an enriched experience of the text" (qtd. in Carr 129). One of their conclusions was that "increased demands of decision-making and visual processing in hypertext impaired reading performance," especially in relation to "traditional print presentation" (qtd. in Carr 129).

Why should hypertext and Web reading in general lead to poorer comprehension? The answer, Carr believes, lies in the relation of working memory (i.e., the contents of consciousness) to long-term memory. Material is held

3. A scholar of Victorian literature and art history (b. 1940), who helped pioneer hypermedia studies; his book *Hypertext* (1992) was the first to com-

bine literary theory and computer technology.

in working memory for only a few minutes, and the capacity of working memory is severely limited. For a simple example, I think of the cell-phone directory function that allows me to get phone numbers, which are given orally (there is an option to have a text message sent of the number, but for this the company charges an additional fee, and being of a frugal disposition, I don't go for that option). I find that if I repeat the numbers out loud several times so they occupy working memory to the exclusion of other things, I can retain them long enough to punch the number. For retention of more complex matters, the contents of working memory must be transferred to long-term memory, preferably with repetitions to facilitate the integration of the new material with existing knowledge schemas. The small distractions involved with hypertext and Web reading—clicking on links, navigating a page, scrolling down or up, and so on—increase the cognitive load on working memory and thereby reduce the amount of new material it can hold. With linear reading, by contrast, the cognitive load is at a minimum, precisely because eye movements are more routine and fewer decisions need to be made about how to read the material and in what order. Hence the transfer to long-term memory happens more efficiently, especially when readers reread passages and pause to reflect on them as they go along.

Supplementing this research are other studies showing that small habitual actions, repeated over and over, are extraordinarily effective in creating new neural pathways. Carr recounts the story told by Norman Doidge in *The Brain That Changes Itself*⁵ of an accident victim, Michael Bernstein, who had a stroke that damaged his brain's right side, rendering his left hand and leg crippled (30–31). He entered an experimental therapy program that had him performing routine tasks with his left arm and leg over and over, such as washing a window and tracing alphabet letters. "The repeated actions," Carr reports, "were a means of coaxing his neurons and synapses to form new circuits that would take over the functions once carried out by the circuits in the damaged area in his brain" (30). Eventually, Bernstein was able to regain most of the functionality of his unresponsive limbs. We may remember in *The Karate Kid* film (1984) when Daniel LaRusso (Ralph Macchio) is made to do the same repetitive tasks over and over again by his kung fu teacher, Mr. Miagi (Pat Morita). In contemporary neurological terms, Mr. Miagi is retraining the young man's neural circuits so he can master the essentials of kung fu movements.

These results are consistent with a large body of research on the impact of (print) reading on brain function. In a study cited by the French neurophysiologist Stanislas Dehaene, a world-renowned expert in this area, researchers sought out siblings from poor Portuguese families that had followed the traditional custom of having an elder sister stay home and watch the infant children while her younger sister went to school. Raised in the same family, the sisters could be assumed to have grown up in very similar environments, thus serving as a way to control other variables. Using as test subjects six pairs of illiterate-literate sisters, researchers found that literacy had strengthened the ability to understand the phonemic structure of language. Functional magnetic resonance (fMRI) scans showed pronounced

5. Best-selling book on neuroplasticity (2007) by the Canadian-born psychiatrist and psychoanalyst Doidge.

differences in the anterior insula, adjacent to Broca's area (a part of the brain associated with language use). "The literate brain," Dehaene summarizes, "obviously engages many more left hemispheric resources than the illiterate brain, even when we only *listen* to speech. . . . The macroscopic finding implies a massive increase in the exchange of information across the two hemispheres" (209).

Equally intriguing is Dehaene's "neural recycling" hypothesis, which suggests that reading repurposes existing brain circuits that evolved independently of reading (because literacy is a mere eye blink in our evolutionary history, it did not play a role in shaping the genetics of our Pleistocene⁶ brains but rather affects us epigenetically⁷ through environmental factors). Crucial in this regard is an area he calls the brains' "letterbox," located in the left occipito-temporal region at the back of the brain. This area, fMRI data show, is responsible for letter and phonemic recognition, transmitting its results to other distant areas through fiber bundles. He further argues that brain architecture imposes significant constraints on the physical shapes that will be easily legible to us. He draws on research demonstrating that 115 of the world's diverse writing systems (alphabetical and ideographic⁸) use visual symbols consisting mostly of three strokes (plus or minus one). Moreover, the geometry of these strokes mirrors in their distribution the geometry of shapes in the natural environment. The idea, then, is that our writing systems evolved in the context of our ability to recognize natural shapes and that scribal experimentation used this correspondence to craft writing systems that would most effectively repurpose existing neural circuitry. Dehaene thus envisions "a massive selection process: over time, scribes developed increasingly efficient notations that fitted the organization of our brains. In brief, our cortex did not specifically evolve for writing. Rather, writing evolved to fit the cortex" (171).

Current evidence suggests that we are now in a new phase of the dance between epigenetic changes in brain function and the evolution of new reading and writing modalities on the Web. Think, for example, of the F pattern of Web reading that the Nielsen research revealed. Canny Web designers use this information to craft Web pages, and reading such pages further intensifies this mode of reading. How quickly neural circuits may be repurposed by digital reading is suggested by Gary Small's experiments at the University of California, Los Angeles, on the effects of Web reading on brain functionality. Small and his colleagues were looking for digitally naive subjects; they recruited three volunteers in their fifties and sixties who had never performed *Google* searches (Small and Vorgan 15–17). This group was first tested with fMRI brain scans, wearing goggles onto which were projected Web pages. Their scans differed significantly from another group of comparable age and background who were Web savvy. Then the naive group was asked to search the Internet for an hour a day for five days. When retested, their brain scans showed measurable differences in some brain areas, which the exper-

imenters attributed to new neural pathways catalyzed by Web searching. Citing this study among others, Carr concludes that “[k]nowing what we know today, if you were to set out to invent a medium that would rewire our mental circuits as quickly and thoroughly as possible, you would probably end up designing something that looks and works a lot like the Internet” (116).

How valid is this conclusion? Although Carr’s book is replete with many different kinds of studies, we should be cautious about taking his conclusions at face value. For example, in the fMRI study done by Small and his colleagues, many factors might skew the results. I don’t know if you have had a brain scan, but I have. As Small mentions, brain scans require that you be shoved into a tube just big enough to accommodate your supine body but not big enough for you to turn over. When the scan begins, supercooled powerful electromagnets generate a strong magnetic field, which, combined with a radio frequency emitter, allows minute changes in blood oxygen levels in the brain to be detected and measured. When the radio frequency emitter begins pulsing, it sounds as though a jackhammer is ripping up pavement next to your ear. These are hardly typical conditions for Web reading. In addition, there is considerable evidence that fMRI scans, valuable as they are, are also subject to a number of interpretive errors and erroneous conclusions (Sanders). Neural activity is not measured directly by fMRI scans (as a microelectrode might, for example). Rather, the most widely used kind of fMRI, BOLD (blood-oxygen-level dependent), measures tiny changes in oxygenated blood as a correlate for brain activity. BOLD research assumes that hardworking neurons require increased flows of oxygen-rich blood and that protons in hemoglobin molecules carrying oxygen respond differently to magnetic fields than protons in oxygen-depleted blood. These differences are tabulated and then statistically transformed into colored images, with different colors showing high levels of oxygen-rich compared with oxygen-depleted blood.

The chain of assumptions that led Small, for example, to conclude that brain function changed as a result of *Google* searches can go wrong in several different ways (see Sanders for a summary of these criticisms). First, researchers assume that the *correlation* between activity in a given brain area is *caused* by a particular stimulus; however, most areas of the brain respond similarly to several different kinds of stimuli, so another stimulus could be activating the change rather than the targeted one. Second, fMRI data sets typically have a lot of noise, and if the experiment is not repeated, the observed phenomenon may be a chimera rather than a genuine result (in Small’s case, the experiment was repeated later with eighteen additional volunteers). Because the data sets are large and unwieldy, researchers may resort to using sophisticated statistical software packages they do not entirely understand. Finally, they may be using a circular methodology in which the hypothesis affects how the data is seen (an effect called nonindependence). When one group of researchers went back through fMRI research that had been published in the premier journals *Nature*, *Science*, *Nature Neuroscience*, *Neuron*, and the *Journal of Neuroscience*, it found interpretive errors resulting from nonindependence in forty-two percent of the papers (Sanders).

Relying on summaries of research in books such as Carr’s creates additional hazards. I mentioned earlier a review of hypertext experiments (DeStefano and LeFevre) cited by Carr, which he uses to buttress his claim that

hypertext reading is not as good as linear reading. Consulting the review itself reveals that Carr has tilted the evidence to support his view. The authors state, for example, that “[t]here may be cases in which enrichment or complexity of the hypertext experience is more desirable than maximizing comprehension and ease of navigation,” remarking that this may be especially true for students who already read well. They argue not for abandoning hypertext but rather for “good hypertext design” that takes cognitive load into account “to ensure hypermedia provide *at least as good* a learning environment as more traditional text” (1636; emphasis added). Having read through most of Carr’s primary sources, I can testify that he is generally conscientious in reporting research results; nevertheless, the example illustrates the unsurprising fact that reading someone else’s synthesis does not give as detailed or precise a picture as reading the primary sources themselves.

The Importance of Anecdotal Evidence

Faced with these complexities, what is a humanist to do? Obviously, few scholars in the humanities have the time—or the expertise—to backtrack through cited studies and evaluate them for correctness and replicability. In my view, these studies may be suggestive indicators but should be subject to the same kind of careful scrutiny we train our students to use with Web research (reliability of sources, consensus among many different researchers, etc.). Perhaps our most valuable yardstick for evaluating these results, however, is our own experience. We know how we react to intensive Web reading, and we know through repeated interactions with our students how they are likely to read, write, and think as they grapple with print and Web materials. As teachers (and parents), we make daily observations that either confirm or disconfirm what we read in the scientific literature. The scientific research is valuable and should not be ignored, but our experiences are also valuable and can tell us a great deal about the advantages and disadvantages of hyperreading compared with close reading, as well as the long-term effects of engaging in either or both of these reading strategies.

Anecdotal evidence hooked me on this topic five years ago, when I was a Phi Beta Scholar⁹ for a year and in that capacity visited many different types of colleges and universities. Everywhere I went, I heard teachers reporting similar stories: “I can’t get my students to read long novels anymore, so I’ve taken to assigning short stories”; “My students won’t read long books, so now I assign chapters and excerpts.” I hypothesized then that a shift in cognitive modes is taking place, from the deep attention characteristic of humanistic inquiry to the hyperattention characteristic of someone scanning Web pages (Hayles, “Hyper and Deep Attention”). I further argued that the shift in cognitive modes is more pronounced the younger the age cohort. Drawing from anecdotal evidence as well as such surveys as the Kaiser Foundation’s¹ *Gen M* report (Roberts, Foehr, and Rideout), I suggested that the shift toward hyperattention is now noticeable with college students. Since then, the trend has become even more

9. A participant in a program overseen by Phi Beta Kappa, the U.S. academic honor society for college and university students, in which distinguished scholars lecture at institutions with Phi

Beta Kappa chapters.

apparent, and the flood of surveys, books, and articles on the topic of distraction is now so pervasive as to be, well, distracting.

For me, the topic is much more than the latest research fad, because it hits me where I live: the college classroom. As a literary scholar, I deeply believe in the importance of writing and reading, so any large-scale change in how young people read and write is bound to capture my attention. In my work on hyperattention (published just when the topic was beginning to appear on the national radar), I argued that deep and hyperattention each have distinctive advantages. Deep attention is essential for coping with complex phenomena such as mathematical theorems, challenging literary works, and complex musical compositions; hyperattention is useful for its flexibility in switching between different information streams, its quick grasp of the gist of material, and its ability to move rapidly among and between different kinds of texts.² As contemporary environments become more information intensive, it is no surprise that hyperattention (and its associated reading strategy, hyperreading) is growing and that deep attention (and its correlated reading strategy, close reading) is diminishing, particularly among young adults and teens. The problem, as I see it, lies not in hyperattention/hyperreading as such, but rather in the challenges the situation presents for parents and educators to ensure that deep attention and close reading continue to be vibrant components of our reading cultures and interact synergistically with the kind of Web and hyperreading in which our young people are increasingly immersed.

Yet hyper- and close reading are not the whole story. I earlier referred to Sosnoski's definition of hyperreading as "computer-assisted." More precisely, it is computer-assisted human reading. The formulation alerts us to a third component of contemporary reading practices: human-assisted computer reading, that is, computer algorithms used to analyze patterns in large textual corpora where size makes human reading of the entirety impossible. Machine reading ranges from algorithms for word-frequency counts to more sophisticated programs that find and compare phrases, identify topic clusters, and are capable of learning. Given the scope, pervasiveness, and sophistication of contemporary programs used to parse texts, it seems to me quite reasonable to say that machines can read. One could, of course, restrict "read" to human beings, arguing that reading implies comprehension and that machines calculate but do not comprehend. However, some human readers (beginners, for example) may also read with minimum or no comprehension. Moreover, the line between (human) interpretation and (machine) pattern recognition is a porous boundary, with each interacting with the other. Hypotheses about meaning help shape the design of computer algorithms, and the results of algorithmic analyses refine, extend, and occasionally challenge intuitions about meaning that formed the starting point for algorithmic design. Putting human reading in a leakproof container and isolating machine reading in another makes it difficult to see these interactions

2. Researchers in the field of attention studies identify three major types of attention: controlled attention, capable of being focused through conscious effort; stimulus-driven attention, a mode of attentiveness involuntarily attracted by environmental events, such as a loud noise; and

arousal, a general level of alertness (see Klingberg 21 for a summary). In these terms, deep attention is a subset of controlled attention, and hyperattention bridges controlled and stimulus-driven attention [Hayles's note].

and understand their complex synergies. Given these considerations, saying computers cannot read is from my point of view merely species chauvinism.

In a field like literary studies, misunderstandings of the efficacy and importance of machine reading are commonplace. Even such a perceptive critic as Culler falls back on caricature when, in writing about close reading, he suggests, "It may be especially important to reflect on the varieties of close reading and even to propose explicit models, in an age where electronic resources make it possible to do literary research without reading at all: find all the instances of the words *beg* and *beggar* in novels by two different authors and write up your conclusions" (24). In other words, close reading is the garlic that will ward off the vampire of machine reading. The anxiety here is palpable, nowhere more so than in his final phrase ("write up your conclusions"), which implies that drawing conclusions from machine analysis is a mechanical exercise devoid of creativity, insight, or literary value. Even Guillory, a brilliant theorist and close reader, while acknowledging that machine reading is a useful "prosthesis for the cognitive skill of scanning," concludes that "the gap in cognitive level between the keyword search and interpretation is for the present immeasurable" ("How" 13). There are two misapprehensions here: that keyword searches exhaust the repertoire of machine reading and that the gap between analysis and interpretation yawns so wide as to form an unbridgeable chasm rather than a dynamic interaction.

Given these misconceptions, explicit recapitulation of the value of machine reading is useful. Although it may be used with a single text and reveal interesting patterns, its more customary use is in analyzing large corpora too vast to be read by a single person. Preeminent in this regard is the work of Franco Moretti,³ who uses the term "distant reading," an obvious counterpoise to close reading (*Graphs*). Careful reading of his work reveals that this construction lumps together human and machine reading; both count as "distant" if the scale is large. I think it is useful to distinguish between human and machine reading because the two situations (one done by a human assisted by machines, the other done by computer algorithms assisted by humans) have different functionalities, limitations, and possibilities. Hyperreading may not be useful for large corpora, and machine algorithms have limited interpretive capabilities.

If we look carefully at Moretti's methodology, we see how firmly it refutes the misunderstandings referred to above. His algorithmic analysis is usually employed to pose questions. Why are the lifetimes of many different genres limited to about thirty years (*Graphs*)? Why do British novels in the mid-eighteenth century use many words in a title and then, within a few decades, change so that titles are no more than three or four words long ("Style")? How to explain changes in narrative conventions such as free indirect discourse⁴ when the novel moves from Britain to British colonies (*Graphs*)? I find Moretti's work intriguing for the patterns he uncovers, but I am flat out delighted by the ingenious explanations he devises to account for them. So far beyond the mechanical exercises Culler imagines are these explanations that

3. Italian literary theorist and historian (b. 1950); his *Graphs, Maps, Trees* is excerpted below.

4. A mode of third-person narration in which

characters' thoughts and feelings are reported in their own voice.

I would not hesitate to call many of them brilliant. When the explanations fail to persuade (as Moretti candidly confesses is sometimes the case even for him), the patterns nevertheless stand revealed as entry points for interpretations advanced by other scholars who find them interesting.

I now turn to explore the interrelations between the components of an expanded repertoire of reading strategies that includes close, hyper, and machine reading. The overlaps between them are as revealing as the differences. Close and hyperreading operate synergistically when hyperreading is used to identify passages or to home in on a few texts of interest, whereupon close reading takes over. As Guillory observed, skimming and scanning here alternate with in-depth reading and interpretation ("How"). Hyperreading overlaps with machine reading in identifying patterns. This might be done in the context of a *Google* keyword search, for example when one notices that most of the work on a given topic has been done by X, or it might be done when machine analysis confirms a pattern already detected by hyper (or close) reading. Indeed, skimming, scanning, and pattern identification are likely to occur with all three reading strategies; their prevalence in one or another is a matter of scale and emphasis rather than clear-cut boundary.

Since patterns have now entered the discussion, we may wonder what a pattern is. This is not a trivial question, largely because of the various ways in which patterns become manifest. Patterns in large data sets may be so subtle that only sophisticated statistical analysis can reveal them; complex patterns may nevertheless be apprehended quickly and easily when columns of numbers are translated into visual forms, as with fMRI scans. Verbal patterns may be discerned through the close reading of a single textual passage or grasped through hyperreading of an entire text or many texts. An anecdote may be useful in clarifying the nature of pattern. I once took a pottery class, and the instructor asked each participant to make several objects that would constitute a series. The series might, for example, consist of vases with the same shapes but different sizes, or it might be vases of the same size in which the shapes underwent a consistent set of deformations. The example shows that differences are as important as similarities, for they keep a pattern from being merely a series of identical items. I therefore propose the following definition: a pattern consists of regularities that appear through a series of related differences and similarities.

Related to the idea of pattern is the question of meaning. Since entire books have been written on the subject, I will not attempt to define meaning but merely observe that wherever and however it occurs, meaning is sensitively dependent on context. The same sentence, uttered in two different contexts, may mean something entirely different in one compared with the other. Close reading typically occurs in a mono-local context (that is, with a single text). Here the context is quite rich, including the entire text and other texts connected with it through networks of allusions, citations, and iterative quotations. Hyperreading, by contrast, typically occurs in a multilocal context. Because many textual fragments are juxtaposed, context is truncated, often consisting of a single phrase or sentence, as in a *Google* search. In machine reading, the context may be limited to a few words or eliminated altogether, as in a word-frequency list. Relatively context-poor, machine reading is enriched by context-rich close reading when close read-

ing provides guidance for the construction of algorithms; Margaret Cohen points to this synergy when she observes that for computer programs to be designed, “the patterns still need to be observed [by close reading]” (59). On the other hand, machine reading may reveal patterns overlooked in close reading, a point Willard McCarty makes in relation to his work on personification in Ovid’s *Metamorphoses*⁵ (53–72). The more the emphasis falls on pattern (as in machine reading), the more likely it is that context must be supplied from outside (by a human interpreter) to connect pattern with meaning; the more the emphasis falls on meaning (as in close reading), the more pattern assumes a subordinate role. In general, the different distributions between pattern, meaning, and context provide a way to think about interrelations between close, hyper, and machine reading.

The larger point is that close, hyper, and machine reading each have distinctive advantages and limitations: nevertheless, they also overlap and can be made to interact synergistically with one another. Maryanne Wolfe reaches a similar conclusion when, at the end of *Proust and the Squid*, she writes,

We must teach our children to be bitextual or multitextual, able to read and analyze texts flexibly in different ways, with more deliberate instruction at every stage of development on the inferential, demanding aspects of any text. Teaching children to uncover the invisible world that resides in written words needs to be both explicit and part of a dialogue between learner and teacher, if we are to promote the processes that lead to fully formed expert reading in our citizenry. (226)

I agree wholeheartedly with the goal: the question is how, precisely, to accomplish it?

Synergies between Close, Hyper-, and Machine Reading

Starting from a traditional humanistic basis in literature, Alan Liu in the English department at the University of California, Santa Barbara, has been teaching undergraduate and graduate courses that he calls Literature+, which adopt as a pedagogical method the interdisciplinarity facilitated by digital media. He asks students “to choose a literary work and treat it according to one or more of the research paradigms prevalent in other fields of study,” including visualization, storyboarding, simulation, and game design. Starting with close reading, he encourages students to compare it with methodologies in other fields, including the sciences and engineering. He also has constructed a “tool kit” on his Web site that includes links to software packages enabling students with little or no programming experience to create different modes of representation of literary texts, including tools for text analysis, visualization, mapping, and social-network diagramming. The approach is three-fold: it offers students traditional literary training; it expands their sense of how they can use digital media to analyze literary texts; and it encourages them to connect literary methodologies with those of other fields they

5. The *Metamorphoses* (ca. 10 C.E.) by the Roman poet Ovid (43 B.C.E.–17 C.E.), an epic-length collection of stories from classical myth and legend.

may be entering. It offers close reading not as an unquestioned good but as one methodology among several, with distinctive capabilities and limitations. Moreover, because decisions about how to encode and analyze texts using software programs require precise thinking about priorities, goals, and methodologies, it clarifies the assumptions that undergird close reading by translating them into algorithmic analysis.

An example of how the “Literature+” approach works in practice is the project entitled “*Romeo and Juliet: A Facebook Tragedy*” (Skura, Nierle, and Gin). Three students working collaboratively adapted Shakespeare’s play to the *Facebook* model, creating maps of social networks using the Friend Wheel⁶ (naturally, the Montagues are all “friends” to each other, and so are the Capulets⁷), filling out profiles for the characters (Romeo is interpreted as a depressive personality who has an obsessive attachment to his love object and who has corresponding preferences for music, films, and other cultural artifacts that express this sensibility), and having a fight break out on the message-board forum using a Group called The Streets of Verona. The Wall feature⁸ was used to incorporate dialogue in which characters speak directly to one another, and the Photos section allowed one character to comment on the attributes of another. The masque at which Romeo and Juliet meet became an Event,⁹ to which Capulet invited friends in his Friend Wheel. From a pedagogical point of view, the students were encouraged to use software with which they were familiar in unfamiliar ways, thus increasing their awareness of its implications. The exercise also required them to make interpretive judgments about which features of the play were most essential (since not everything could be included) and to be precise about interactions between relationships, events, and characters. Linking traditional literary reading skills with digital encoding and analysis, the “Literature+” approach strengthens the ability to understand complex literature at the same time it encourages students to think reflectively on digital capabilities. Here digital and print literacies mutually reinforce and extend each other.

Lev Manovich’s “Cultural Analytics” is a series of projects that starts from the premise that algorithmic analyses of large data sets (up to several terabytes in size), originally developed for work in the sciences and social sciences, should be applied to cultural objects, including the analysis of real-time data flows. In many academic institutions, high-end computational facilities have programs that invite faculty members and graduate students in the arts and humanities to use them. For example, at the University of California, San Diego, where Manovich teaches, the Supercomputer Center sponsored a summer workshop in 2006, Cyberinfrastructure for the Humanities, Arts, and Social Sciences. At Duke University, where

6. An application in Facebook that shows in a color diagram the links between all the friends of a particular user.

7. The play’s two feuding families, who make peace only after Romeo (a Montague) and Juliet (a Capulet) meet, fall in love, and die.

8. That is, the original profile space where Facebook users’ content was displayed until Decem-

ber 2011, when it was replaced by Timeline, the new virtual space in which all the content of Facebook users is organized and shown.

9. Facebook application that enables members to let their friends know about upcoming events in their community and to organize social gatherings.

I teach, the Renaissance Computing Institute (RENCI) offers accounts to faculty members and students in the arts and humanities that allow them to use computationally intense analysis. In my experience, researchers at these kinds of facilities are delighted when humanists come to them with projects. Because their mission is to encourage widespread use across and among campuses and to foster collaborations among academic, government, corporate, and community stakeholders, they see humanistic inquiry and artistic creation as missing parts of the picture that enrich the mix. This opens the door to analysis of large cultural data sets such as visual images, media content, and geospatial mapping combined with various historical and cultural overlays.

An example is Manovich's analysis of *Time* magazine covers from 1923–89. As Manovich observes, ideal sites for cultural analytics are large data sets that are well structured and include metadata about date, publication venue, and so forth. The visualization tools that he uses allow the *Time* covers to be analyzed according to subject (for example, portraits versus other types of covers), color gradients, black-and-white gradients, amount of white space, and in other ways. One feature is particularly useful for building bridges between close reading and machine analysis: the visualization tool allows the user both to see large-scale patterns and to zoom in to see a particular cover in detail, thus enabling analyses across multiple scale levels. Other examples include Manovich's analysis of one million manga pages using the Mondrian software,¹ sorted according to gray-scale values; another project analyzes scene lengths and gray scale values in classic black-and-white films. While large-scale data analyses are not new, their applications in the humanities and arts are still in their infancy, making cultural analytics a frontier of knowledge construction.

Of course, not everyone has access to computation-intensive facilities, including most parents and teachers at smaller colleges and universities. A small-scale example that anyone could implement will be helpful. In teaching an honors writing class, I juxtaposed Mary Shelley's *Frankenstein* with Shelley Jackson's *Patchwork Girl*,² an electronic hypertext fiction written in proprietary *Storyspace* software.³ Since these were honors students, many of them had already read *Frankenstein* and were, moreover, practiced in close reading and literary analysis. When it came to digital reading, however, they were accustomed to the scanning and fast skimming typical of hyperreading; they therefore expected that it might take them, oh, half an hour to go through Jackson's text. They were shocked when I told them a reasonable time to spend with Jackson's text was about the time it would take them to read *Frankenstein*, say, ten hours or so. I divided them into teams and assigned a section of Jackson's text to each team, telling them that I wanted them to discover *all* the lexias (i.e., blocks of digital text) in their section

1. General-purpose statistical data visualization software for interactive data visualization. "Manga": comics originating in a style developed in Japan in the late 19th century (literally, "whimsical, impromptu"; Japanese).

2. A 1995 work by the American author Jackson (b. 1963) that uses as its jumping-off point Shel-

ley's (1797–1851) 1818 tale of the young doctor, Victor Frankenstein, who reanimates a pieced-together human body.

3. Computer program written in the 1980s by Jay David Bolter and Michael Joyce for creating, editing, and reading hypertext fiction.

and warning them that the *Storyspace* software allows certain lexias to be hidden until others are read. Finally, I asked them to diagram interrelations between lexias, drawing on all three views that the *Storyspace* software enables.

As a consequence, the students were not only required to read closely but also to analyze the narrative strategies Jackson uses to construct her text. Jackson focuses some of her textual sections on a narrator modeled on the female creature depicted in *Frankenstein*, when Victor, at the male creature's request, begins to assemble a female body as a companion to his first creation (Hayles, "Invention"). As Victor works, he begins to think about the two creatures mating and creating a race of such creatures. Stricken with sexual nausea, he tears up the female body while the male creature watches, howling, from the window; throws the pieces into a basket; and rows out onto a lake, where he dumps them. In her text Jackson reassembles and reanimates the female creature, playing with the idea of fragmentation as an inescapable condition not only for her narrator but for all human beings. The idea is reinforced by the visual form of the narrative, which (in the *Storyspace* map view) is visualized as a series of titled text blocks connected by webs of lines. Juxtaposing this text with *Frankenstein* encouraged discussions about narrative framing, transitions, strategies, and characterization. By the end the students, who already admired *Frankenstein* and were enthralled by Mary Shelley's narrative, were able to see that electronic literature might be comparably complex and would also repay close attention to its strategies, structure, form, rhetoric, and themes. Here already-existing print literacies were enlisted to promote and extend digital literacy.

These examples merely scratch the surface of what can be done to create productive interactions between close, hyper, and machine reading. Close and hyperreading are already part of a literary scholar's tool kit (although hyperreading may not be recognized or valued as such). Many good programs are now available for machine reading, such as *Wordle*, which creates word clouds⁴ to display word-frequency analysis, the advanced version of the *Hermetic Word Frequency Counter*, which has the ability to count words in multiple files and to count phrases as well as words, and other text-analysis tools available through the TAPoR text-analysis portal⁵ (<http://digitalresearchtools.pbworks.com/Text+Analysis+Tools>). Most of these programs are not difficult to use and provide the basis for wide-ranging experimentation by students and teachers alike. As Manovich says about cultural analytics and Moretti proclaims about distant reading, machine analysis opens the door to new kinds of discoveries that were not possible before and that can surprise and intrigue scholars accustomed to the delights of close reading.

What transformed disciplinary coherence might literary studies embrace? Here is a suggestion: literary studies teaches literacies across a range of

4. Visual representations of text data that give greater prominence to words that appear more frequently in the source text (also called "tag clouds" or "weighted lists").

5. Web portal based and developed at McMaster University where researchers can experiment with text analysis tools.

media forms, including print and digital, and focuses on interpretation and analysis of patterns, meaning, and context through close, hyper-, and machine reading practices. Reading has always been constituted through complex and diverse practices. Now it is time to rethink what reading is and how it works in the rich mixtures of words and images, sounds and animations, graphics and letters that constitute the environments of twenty-first-century literacies.

SUSAN BORDO

b. 1947

Among the founders of "body studies," Susan Bordo stands out for her work's close attention to the ways that cultural images and expectations shape how both sexes understand a female body as "desirable." Although strongly influenced by MICHEL FOUCAULT, Bordo is wary of theory and the academy. She advocates a politically active feminism that highlights the concrete impact of social forces on women's bodies and considers possible forms of resistance. Writing in a steely, lucid prose that reaches out to nonacademic audiences, she works against both cultural self-congratulation ("you've come a long way, baby") and the abstractions of French feminism. She insists on the practical consequences for women's daily lives of feminism's analyses of contemporary culture. Bordo's work introduces a crucial gendered element into contemporary literary and cultural theory's interest in the processes involved in the formation of social subjects.

Bordo was educated at Carleton College and the State University of New York at Stony Brook, from which she received her Ph.D. in 1982. She has taught at Le Moyne College and the University of Kentucky. Her *Unbearable Weight* (1993) was a New York Times Notable Book of the Year. Trained as a philosopher, she now describes her work as "gender studies," which is "part of cultural studies." "But neither gender studies nor cultural studies," she writes, "can be of much significance unless they reach outside the academic world." She calls the "slow unlearning" of the "language" and "arrogance" of the academy her "second and ongoing education."

Bordo's early work explored the exclusionary use of terms such as "rationality" and "objectivity" in the philosophical tradition. Like others studying what came to be called "feminist epistemology," she argued that knowledge is not something achieved by a pure mind that "distances" itself from the object it studies. Rather, knowledge is "embodied," produced from a "standpoint" by a body that is located as a material entity among other material entities. It was a short step from standpoint theory to body studies.

Not all bodies are alike. Different bodies are assigned to different locations, are represented differently in prevailing cultural codes, and are accorded different authority as producers of knowledge. One crucial way to differentiate bodies is, of course, gender. Bordo turns her attention to the ways in which the body is a "text of culture." Prevailing and enforced cultural notions of gender differences are inscribed on the body, as it shapes itself to fit conventions of proper appearance, deportment, and physical activity.

Psychoanalytic feminists tend to discuss the shaping of the girl's body and of her relation to it in generalized terms that posit a triangular familial relation (mother–father–daughter) and an overarching patriarchal Law (the law of the father, compulsory heterosexuality, or the incest taboo). Bordo eschews this focus on the family, contending instead that a variety of social forces converge in the shaping of bodies—and that this constellation of forces shifts over time and from one society to another. The decline in hysteria and the recent rise in anorexia and bulimia point to changes in the cultural nexus within which bodies are produced. Like others who adopt a “social constructivist” position, Bordo argues that the body does not have a fixed and enduring nature; bodies are plastic and change in response to the social demands placed on them.

Bordo follows other contemporary feminists (such as SANDRA M. GILBERT and SUSAN GUBAR) in noting that women over the past two hundred years are more prone than men to suffer from a number of illnesses that occupy an ill-defined terrain between the physical and the psychological. In our selection from her book *Unbearable Weight*, Bordo focuses on three such illnesses: hysteria (extreme emotional excitability), anorexia (inability or refusal to eat), and agoraphobia (inability to enter public places). She strives to demonstrate that these “pathologies of resistance” mark the ways individual women *both* insert their bodies into “the network of practices, institutions, and technologies” within which bodies are produced *and* struggle against those very networks.

Her analysis of anorexia provides an example of this doubleness. Contemporary women in the United States, Bordo argues, are pulled in multiple directions as competing demands are made on them. The anorectic's refusal to eat is tied directly to the peculiar “double bind” in which today's young woman is placed. She is expected to emulate the impossibly thin body that is presented as the ideal in countless media images, while she is also urged—in a kind of demonic parody of feminism—to take control of her own life, to be strong, to become a superwoman. The conflicting message is that only one ideal is acceptable, but you are supposed to be your own woman. Anorexia for Bordo is not solely, as in some popular accounts, the result of an obsession with thinness; it is also, crucially, a comprehensible response to powerlessness. The young woman dramatically enacts her powerlessness by playing the female role to its extreme, making its destructive underpinnings obvious. Paradoxically, this strategy also secures for her a modicum of power as she gains control over her appetite and directly resists (albeit in a self-destructive way) the family, friends, and therapists who urge her to eat.

Bordo is careful to say that cultural images are not everything. “Anorexia,” she writes, “clearly contains a dimension of physical addiction to the biochemical effects of starvation.” But like Foucault, she focuses on the discourses through which society produces, understands, defines, and interprets the female body. Social codings of beauty, of motherhood, of sexual modesty or its opposite place the individual woman in relation to the prevailing images and conventions. Even if that relation is one of negation and resistance, the power of the categories is still felt as the individual struggles against them. Every body is marked by its relation to the “constitutive mechanisms” of a “power” that “shapes.” Femininity, for Bordo, is ideology (a culture's dominant notions of the feminine) inscribed on the body.

In presenting anorexia as a parodic demonstration of the destructive energy stored in our cultural categories, Bordo appears close to JUDITH BUTLER's influential discussion of how homosexual cross-dressing “troubles” gender categories. But Bordo has been sharply critical of Butler because she believes that Butler vastly underestimates the suffering the parodic body endures and vastly overestimates the cultural or political effectiveness of parody. Anorexia, as analyzed by Bordo, may be an eloquent bodily articulation of the unreasonable demands our society places on women, but that articulation through parody can hardly be celebrated or encouraged when its practical effects “utterly defeat rebellion and subvert protest.” Anorexia is self-destructive and

does nothing in itself to alter the cultural order that calls it forth. Action, Bordo insists, must come on other fronts, especially those of feminist critique and feminist political activism. In this respect, Bordo self-consciously looks back to the feminism of the late 1960s and early 1970s as a model.

The fundamental dispute between Bordo and Butler, or more widely between Anglo-American and French-oriented feminisms, rests on the question of how political and cultural transformation should be attempted. Bordo honors "female praxis": individual and collective action with clear, conscious goals that are pursued through a series of purposive strategies. Similarly, she aims for subjects who are reasonably at home in their bodies, who can experience their bodies as aligned with their purposes and aspirations in life. The anorectic demonstrates how difficult American culture makes it for women to achieve such selfhood and such a relation to their bodies, but the example of the anorectic does not lead Bordo to think the basic goal unattainable. French feminists and those influenced by them believe that such desires for self-unity are themselves symptoms of the repressive patriarchal cultural order of intelligibility that must be transformed. All ideals of coherence, of unity, of conscious control must be problematized if we are not to repeat endlessly the enforcement of differences that characterizes existing male cultural domination. The two sides share the conviction that cultural codings are powerful and that feminism begins with an analysis of how those codings exercise power, especially over the ongoing social construction of bodies. Their disagreements over the site of the most effective cultural and political interventions continue to resonate throughout feminist theory.

Chapter 5. The Body and the Reproduction of Femininity

RECONSTRUCTING FEMINIST DISCOURSE ON THE BODY

The body—what we eat, how we dress, the daily rituals through which we attend to the body—is a medium of culture. The body, as anthropologist Mary Douglas has argued, is a powerful symbolic form, a surface on which the central rules, hierarchies, and even metaphysical commitments of a culture are inscribed and thus reinforced through the concrete language of the body.¹ The body may also operate as a metaphor for culture. From quarters as diverse as Plato and Hobbes to French feminist Luce Irigaray,² an imagination of body morphology has provided a blueprint for diagnosis and/or vision of social and political life.

The body is not only a *text* of culture. It is also, as anthropologist Pierre Bourdieu and philosopher Michel Foucault³ (among others) have argued, a *practical*, direct locus of social control. Banally, through table manners and

Hobbes (1588–1679), English political philosopher [editor's note].

3. French philosopher and historian of ideas (1926–1984; see above). BOURDIEU (1930–2002), French social theorist [editor's note].

toilet habits, through seemingly trivial routines, rules, and practices, culture is “made body,” as Bourdieu puts it—converted into automatic, habitual activity. As such it is put “beyond the grasp of consciousness . . . [untouchable] by voluntary, deliberate transformations.”⁴ Our conscious politics, social commitments, strivings for change may be undermined and betrayed by the life of our bodies—not the craving, instinctual body imagined by Plato, Augustine, and Freud,⁵ but what Foucault calls the “docile body,” regulated by the norms of cultural life.⁶

Throughout his later “genealogical” works (*Discipline and Punish*, *The History of Sexuality*), Foucault constantly reminds us of the primacy of practice over belief. Not chiefly through ideology, but through the organization and regulation of the time, space, and movements of our daily lives, our bodies are trained, shaped, and impressed with the stamp of prevailing historical forms of selfhood, desire, masculinity, femininity. Such an emphasis casts a dark and disquieting shadow across the contemporary scene. For women, as study after study shows, are spending more time on the management and discipline of our bodies than we have in a long, long time. In a decade marked by a reopening of the public arena to women, the intensification of such regimens appears diversionary and subverting. Through the pursuit of an ever-changing, homogenizing, elusive ideal of femininity—a pursuit without a terminus, requiring that women constantly attend to minute and often whimsical changes in fashion—female bodies become docile bodies—bodies whose forces and energies are habituated to external regulation, subjection, transformation, “improvement.” Through the exacting and normalizing disciplines of diet, makeup, and dress—central organizing principles of time and space in the day of many women—we are rendered less socially oriented and more centripetally focused on self-modification. Through these disciplines, we continue to memorize on our bodies the feel and conviction of lack, of insufficiency, of never being good enough. At the farthest extremes, the practices of femininity may lead us to utter demoralization, debilitation, and death.

Viewed historically, the discipline and normalization of the female body—perhaps the only gender oppression that exercises itself, although to different degrees and in different forms, across age, race, class, and sexual orientation—has to be acknowledged as an amazingly durable and flexible strategy of social control. In our own era, it is difficult to avoid the recognition that the contemporary preoccupation with appearance, which still affects women far more powerfully than men, even in our narcissistic and visually oriented culture, may function as a backlash phenomenon, reasserting existing gender configurations against any attempts to shift or transform power relations.⁷

4. Pierre Bourdieu, *Outline of a Theory of Practice* (Cambridge: Cambridge University Press, 1977), p. 94 (emphasis in original).

5. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis. AUGUSTINE (354–430), Christian theologian. The three thinkers all evidenced a disgust with the body, especially the female body [editor's note].

6. On docility, see Michel Foucault, *Discipline and Punish* (New York: Vintage, 1979), pp. 135–69. For a Foucauldian analysis of feminine practice, see Sandra Bartky, “Foucault, Femininity, and the Modernization of Patriarchal Power,” in her *Femininity and Domination* (New York:

Routledge, 1990); see also Susan Brownmiller, *Femininity* (New York: Ballantine, 1984).

7. During the late 1970s and 1980s, male concern over appearance undeniably increased. Study after study confirms, however, that there is still a large gender gap in this area. Research conducted at the University of Pennsylvania in 1985 found men to be generally satisfied with their appearance, often, in fact, “distorting their perceptions [of themselves] in a positive, self-aggrandizing way” (“Dislike of Own Bodies Found Common among Women,” *New York Times*, March 19, 1985, p. C1). Women, however, were found to exhibit extreme negative assessments and distor-

Surely we are in the throes of this backlash today. In newspapers and magazines we daily encounter stories that promote traditional gender relations and prey on anxieties about change: stories about latch-key children, abuse in day-care centers, the “new woman’s” troubles with men, her lack of marriageability, and so on. A dominant visual theme in teenage magazines involves women hiding in the shadows of men, seeking solace in their arms, willingly contracting the space they occupy. The last, of course, also describes our contemporary aesthetic ideal for women, an ideal whose obsessive pursuit has become the central torment of many women’s lives. In such an era we desperately need an effective political discourse about the female body, a discourse adequate to an analysis of the insidious, and often paradoxical, pathways of modern social control.

Developing such a discourse requires reconstructing the feminist paradigm of the late 1960s and early 1970s, with its political categories of oppressors and oppressed, villains and victims. Here I believe that a feminist appropriation of some of Foucault’s later concepts can prove useful. Following Foucault, we must first abandon the idea of power as something possessed by one group and leveled against another; we must instead think of the network of practices, institutions, and technologies that sustain positions of dominance and subordination in a particular domain.

Second, we need an analytics adequate to describe a power whose central mechanisms are not repressive, but *constitutive*: “a power bent on generating forces, making them grow, and ordering them, rather than one dedicated to impeding them, making them submit, or destroying them.” Particularly in the realm of femininity, where so much depends on the seemingly willing acceptance of various norms and practices, we need an analysis of power “from below,” as Foucault puts it; for example, of the mechanisms that shape and proliferate—rather than repress—desire, generate and focus our energies, construct our conceptions of normalcy and deviance.⁸

And, third, we need a discourse that will enable us to account for the subversion of potential rebellion, a discourse that, while insisting on the necessity of objective analysis of power relations, social hierarchy, political backlash, and so forth, will nonetheless allow us to confront the mechanisms by which the subject at times becomes enmeshed in collusion with forces that sustain her own oppression.

This essay will not attempt to produce a general theory along these lines. Rather, my focus will be the analysis of one particular arena where the interplay of these dynamics is striking and perhaps exemplary. It is a limited and unusual arena, that of a group of gender-related and historically localized

tions of body perception. Other studies have suggested that women are judged more harshly than men when they deviate from dominant social standards of attractiveness. Thomas Cash et al., in “The Great American Shape-Up,” *Psychology Today*, April 1986, p. 34, report that although the situation for men has changed, the situation for women has more than proportionally worsened. Citing results from 30,000 responses to a 1985 survey of perceptions of body image and comparing similar responses to a 1972 questionnaire, they report that the 1985 respondents were con-

siderably more dissatisfied with their bodies than the 1972 respondents, and they note a marked intensification of concern among men. Among the 1985 group, the group most dissatisfied of all with their appearance, however, were teenage women. Women today constitute by far the largest number of consumers of diet products, attenders of spas and diet centers, and subjects of intestinal by-pass and other fat-reduction operations.

8. Michel Foucault, *The History of Sexuality*, vol. 1, *An Introduction* (New York: Vintage, 1980), pp. 136, 94.

disorders: hysteria, agoraphobia, and anorexia nervosa.⁹ I recognize that these disorders have also historically been class- and race-biased, largely (although not exclusively) occurring among white middle- and upper-middle-class women. Nonetheless, anorexia, hysteria, and agoraphobia may provide a paradigm of one way in which potential resistance is not merely undercut but *utilized* in the maintenance and reproduction of existing power relations.¹

The central mechanism I will describe involves a transformation (or, if you wish, duality) of meaning, through which conditions that are objectively (and, on one level, experientially) constraining, enslaving, and even murderous, come to be experienced as liberating, transforming, and life-giving. I offer this analysis, although limited to a specific domain, as an example of how various contemporary critical discourses may be joined to yield an understanding of the subtle and often unwitting role played by our bodies in the symbolization and reproduction of gender.

THE BODY AS A TEXT OF FEMININITY

The continuum between female disorder and "normal" feminine practice is sharply revealed through a close reading of those disorders to which women have been particularly vulnerable. These, of course, have varied historically: neurasthenia² and hysteria in the second half of the nineteenth century; agoraphobia and, most dramatically, anorexia nervosa and bulimia in the second half of the twentieth century. This is not to say that anorectics did not exist in the nineteenth century—many cases were described, usually in the context of diagnoses of hysteria³—or that women no longer suffer from classical hysterical symptoms in the twentieth century. But the taking up of eating disorders on a mass scale is as unique to the culture of the 1980s as the epidemic of hysteria was to the Victorian era.⁴

The symptomatology of these disorders reveals itself as textuality. Loss of mobility, loss of voice, inability to leave the home, feeding others while

9. On the gendered and historical nature of these disorders: the number of female to male hysterics has been estimated at anywhere from 2:1 to 4:1, and as many as 80 percent of all agoraphobics are female (Annette Brodsky and Rachel Hare-Mustin, *Women and Psychotherapy* [New York: Guilford Press, 1980], pp. 116, 122). Although more cases of male eating disorders have been reported in the late eighties and early nineties, it is estimated that close to 90 percent of all anorectics are female (Paul Garfinkel and David Garner, *Anorexia Nervosa: A Multidimensional Perspective* [New York: Brunner/Mazel, 1982], pp. 112–13). For a sophisticated account of female psychopathology, with particular attention to nineteenth-century disorders but, unfortunately, little mention of agoraphobia or eating disorders, see Elaine Showalter, *The Female Malady: Women, Madness and English Culture, 1830–1980* (New York: Pantheon, 1985). For a discussion of social and gender issues in agoraphobia, see Robert Seidenberg and Karen DeCrow, *Women Who Marry Houses: Panic and Protest in Agoraphobia* (New York: McGraw-Hill, 1983). On the history of anorexia nervosa, see Joan Jacobs Brumberg, *Fasting Girls: The Emergence of Anorexia Ner-*

vosa as a Modern Disease (Cambridge: Harvard University Press, 1988). ["Hysteria": a psychoneurosis marked by emotional excitability. The word derives from the Greek word for womb; it was thought that such ailments were peculiar to women and caused by disturbances of the uterus—editor's note.]

1. In constructing such a paradigm I do not pretend to do justice to any of these disorders in its individual complexity. My aim is to chart some points of intersection, to describe some similar patterns, as they emerge through a particular reading of the phenomenon—a political reading, if you will.

2. An emotional and psychic disorder characterized by easy fatigability and often by lack of motivation, as well as feelings of inadequacy [editor's note].

3. Showalter, *The Female Malady*, pp. 128–29.

4. On the epidemic of hysteria and neurasthenia, see Showalter, *The Female Malady*; Carroll Smith-Rosenberg, "The Hysterical Woman: Sex Roles and Role Conflict in Nineteenth-Century America," in her *Disorderly Conduct: Visions of Gender in Victorian America* (Oxford: Oxford University Press, 1985).

starving oneself, taking up space, and whittling down the space one's body takes up—all have symbolic meaning, all have *political* meaning under the varying rules governing the historical construction of gender. Working within this framework, we see that whether we look at hysteria, agoraphobia, or anorexia, we find the body of the sufferer deeply inscribed with an ideological construction of femininity emblematic of the period in question. The construction, of course, is always homogenizing and normalizing, erasing racial, class, and other differences and insisting that all women aspire to a coercive, standardized ideal. Strikingly, in these disorders the construction of femininity is written in disturbingly concrete, hyperbolic terms: exaggerated, extremely literal, at times virtually caricatured presentations of the ruling feminine mystique. The bodies of disordered women in this way offer themselves as an aggressively graphic text for the interpreter—a text that insists, actually demands, that it be read as a cultural statement, a statement about gender.

Both nineteenth-century male physicians and twentieth-century feminist critics have seen, in the symptoms of neurasthenia and hysteria (syndromes that became increasingly less differentiated as the century wore on), an exaggeration of stereotypically feminine traits. The nineteenth-century “lady” was idealized in terms of delicacy and dreaminess, sexual passivity, and a charmingly labile and capricious emotionality.⁵ Such notions were formalized and scientized in the work of male theorists from Acton and Krafft-Ebing⁶ to Freud, who described “normal,” mature femininity in such terms.⁷ In this context, the dissociations, the drifting and fogging of perception, the nervous tremors and faints, the anesthetics,⁸ and the extreme mutability of symptomatology associated with nineteenth-century female disorders can be seen to be concretizations of the feminine mystique of the period, produced according to rules that governed the prevailing construction of femininity. Doctors described what came to be known as the hysterical personality as “impressionable, suggestible, and narcissistic; highly labile, their moods changing suddenly, dramatically, and seemingly for inconsequential reasons . . . egocentric in the extreme . . . essentially asexual and not uncommonly frigid”⁹—all characteristics normative of femininity in this era. As Elaine Showalter points out, the term *hysterical* itself became almost interchangeable with the term *feminine* in the literature of the period.¹

Wyke, “A Study of Victorian Prostitution and Venereal Disease,” in Vicinus, *Suffer and Be Still*, p. 82. For more general discussions, see Peter Gay, *The Bourgeois Experience: Victoria to Freud*, vol. 1, *Education of the Senses* (New York: Oxford University Press, 1984),

esp. pp. 109–68; Showalter, *The Female Malady*, esp. pp. 121–44. The delicate lady, an ideal that had very strong class connotations (as does slenderness today), is not the only conception of femininity to be found in Victorian cultures. But it was arguably the single most powerful ideological representation of femininity in that era, affecting women of all classes, including those without the material means to realize the ideal fully. See Helena Mitchie, *The Flesh Made Word* (New York: Oxford University Press, 1987), for discussions of the control of female appetite and Victorian constructions of femininity.

8. Losses of feeling in various parts of the body [editor’s note].

9. Smith-Rosenberg, *Disorderly Conduct*, p. 203.

1. Showalter, *The Female Malady*, p. 129.

The hysteric's embodiment of the feminine mystique of her era, however, seems subtle and ineffable compared to the ingenious literalism of agoraphobia and anorexia. In the context of our culture this literalism makes sense. With the advent of movies and television, the rules for femininity have come to be culturally transmitted more and more through standardized visual images. As a result, femininity itself has come to be largely a matter of constructing, in the manner described by Erving Goffman, the appropriate surface presentation of the self.² We are no longer given verbal descriptions or exemplars of what a lady is or of what femininity consists. Rather, we learn the rules directly through bodily discourse: through images that tell us what clothes, body shape, facial expression, movements, and behavior are required.

In agoraphobia and, even more dramatically, in anorexia, the disorder presents itself as a virtual, though tragic, parody of twentieth-century constructions of femininity. The 1950s and early 1960s, when agoraphobia first began to escalate among women, was a period of reassertion of domesticity and dependency as the feminine ideal. *Career woman* became a dirty word, much more so than it had been during the war, when the economy depended on women's willingness to do "men's work." The reigning ideology of femininity, so well described by Betty Friedan and perfectly captured in the movies and television shows of the era, was childlike, nonassertive, helpless without a man, "content in a world of bedroom and kitchen, sex, babies and home."³ The housebound agoraphobic lives this construction of femininity literally. "You want me in this home? You'll have me in this home—with a vengeance!" The point, upon which many therapists have commented, does not need belaboring. Agoraphobia, as I. G. Fodor has put it, seems "the logical—albeit extreme—extension of the cultural sex-role stereotype for women" in this era.⁴

The emaciated body of the anorectic, of course, immediately presents itself as a caricature of the contemporary ideal of hyperslenderness for women, an ideal that, despite the game resistance of racial and ethnic difference, has become the norm for women today. But slenderness is only the tip of the iceberg, for slenderness itself requires interpretation. "C'est le sens qui fait vendre," said Barthes, speaking of clothing styles—it is meaning that makes the sale.⁵ So, too, it is meaning that makes the body admirable. To the degree that anorexia may be said to be "about" slenderness, it is about slenderness, as a citadel of contemporary and historical meaning, not as an empty fashion ideal. As such, the interpretation of slenderness yields multiple readings, some related to gender, some not. For the purposes of this essay I will offer an abbreviated, gender-focused reading. But I must stress that this reading illuminates only partially, and that many other currents not discussed

here—economic, psychosocial, and historical, as well as ethnic and class dimensions—figure prominently.⁶

We begin with the painfully literal inscription, on the anorectic's body, of the rules governing the construction of contemporary femininity. That construction is a double bind⁷ that legislates contradictory ideals and directives. On the one hand, our culture still widely advertises domestic conceptions of femininity, the ideological moorings for a rigorously dualistic sexual division of labor that casts woman as chief emotional and physical nurturer. The rules for this construction of femininity (and I speak here in a language both symbolic and literal) require that women learn to feed others, not the self, and to construe any desires for self-nurturance and self-feeding as greedy and excessive.⁸ Thus, women must develop a totally other-oriented emotional economy. In this economy, the control of female appetite for food is merely the most concrete expression of the general rule governing the construction of femininity: that female hunger—for public power, for independence, for sexual gratification—be contained, and the public space that women be allowed to take up be circumscribed, limited. * * *⁹ [S]lenderness, set off against the resurgent muscularity and bulk of the current male body-ideal, carries connotations of fragility and lack of power in the face of a decisive male occupation of social space. On the body of the anorexic woman such rules are grimly and deeply etched.

On the other hand, even as young women today continue to be taught traditionally "feminine" virtues, to the degree that the professional arena is open to them they must also learn to embody the "masculine" language and values of that arena—self-control, determination, cool, emotional discipline, mastery, and so on. Female bodies now speak symbolically of this necessity in their slender spare shape and the currently fashionable men's-wear look. * * * Our bodies, too, as we trudge to the gym every day and fiercely resist both our hungers and our desire to soothe ourselves, are becoming more and more practiced at the "male" virtues of control and self-mastery. * * * The anorectic pursues these virtues with single-minded, unswerving dedication. "Energy, discipline, my own power will keep me going," says ex-anorectic Aimee Liu, recreating her anorexic days. "I need nothing and no one else. . . . I will be master of my own body, if nothing else, I vow."¹

The ideal of slenderness, then, and the diet and exercise regimens that have become inseparable from it offer the illusion of meeting, through the body, the contradictory demands of the contemporary ideology of femininity. Popular images reflect this dual demand. In a single issue of *Complete Woman* magazine, two articles appear, one on "Feminine Intuition," the other

6. For other interpretive perspectives on the slenderness ideal, see "Reading the Slender Body" in *Unbearable Weight* (1993); Kim Chernin, *The Obsession: Reflections on the Tyranny of Slenderness* (New York: Harper and Row, 1981); Susie Orbach, *Hunger Strike: The Anorectic's Struggle as a Metaphor for Our Age* (New York: W. W. Norton, 1985).

7. A psychological predicament in which a person receives from a single source conflicting messages that allow no appropriate response. First coined in 1956 by the Scottish psychologist R. D. Laing in his study of schizophrenic chil-

dren, the term is now used more broadly [editor's note].

8. See my "Hunger as Ideology" in *Unbearable Weight* for a discussion of how this construction of femininity is reproduced in contemporary commercials and advertisements concerning food, eating, and cooking.

9. In this selection, all ellipses replace references to figures not reproduced here [editor's note].

1. Aimee Liu, *Solitaire* (New York: Harper and Row, 1979), p. 123.

asking, "Are You the New Macho Woman?" In *Vision Quest*,² the young male hero falls in love with the heroine, as he says, because "she has all the best things I like in girls and all the best things I like in guys," that is, she's tough and cool, but warm and alluring. In the enormously popular *Aliens*, the heroine's personality has been deliberately constructed, with near-comic book explicitness, to embody traditional nurturant femininity alongside breathtaking macho prowess and control; Sigourney Weaver, the actress who portrays her, has called the character "Rambolina."³

In the pursuit of slenderness and the denial of appetite the traditional construction of femininity intersects with the new requirement for women to embody the "masculine" values of the public arena. The anorectic, as I have argued, embodies this intersection, this double bind, in a particularly painful and graphic way.⁴ I mean *double bind* quite literally here. "Masculinity" and "femininity," at least since the nineteenth century and arguably before, have been constructed through a process of mutual exclusion. One cannot simply add the historically feminine virtues to the historically masculine ones to yield a New Woman, a New Man, a new ethics, or a new culture. Even on the screen or on television, embodied in created characters like the *Aliens* heroine, the result is a parody. Unfortunately, in this image-bedazzled culture, we find it increasingly difficult to discriminate between parodies and possibilities for the self. Explored as a possibility for the self, the "androgynous" ideal ultimately exposes its internal contradiction and becomes a war that tears the subject in two—a war explicitly thematized, by many anorectics, as a battle between male and female sides of the self.⁵

PROTEST AND RETREAT IN THE SAME GESTURE

In hysteria, agoraphobia, and anorexia, then, the woman's body may be viewed as a surface on which conventional constructions of femininity are exposed starkly to view, through their inscription in extreme or hyperliteral form. They are written, of course, in languages of horrible suffering. It is as though these bodies are speaking to us of the pathology and violence that lurks just around the corner, waiting at the horizon of "normal" femininity. It is no wonder that a steady motif in the feminist literature on female disorder is that of pathology as embodied *protest*—unconscious, inchoate, and counterproductive protest without an effective language, voice, or politics, but protest nonetheless.

2. A 1985 film directed by Harold Becker [editor's note].

3. That is, a feminine version of the excessively masculine hero (played by Sylvester Stallone) of the popular Rambo movies: *First Blood* (1982), *Rambo: First Blood Part II* (1985), and *Rambo III* (1988). *Aliens* (1986), a film directed by James Cameron [editor's note].

4. Striking, in connection with this, is Catherine Steiner-Adair's 1984 study of high-school women, which reveals a dramatic association between problems with food and body image and emulation of the cool, professionally "together" and gorgeous superwoman. On the basis of a series of interviews, the high schoolers were classified into

two groups: one expressed skepticism over the superwoman ideal, the other thoroughly aspired to it. Later administrations of diagnostic tests revealed that 94 percent of the pro-superwoman group fell into the eating-disordered range of the scale. Of the other group, 100 percent fell into the noneating-disordered range. Media images notwithstanding, young women today appear to sense, either consciously or through their bodies, the impossibility of simultaneously meeting the demands of two spheres whose values have been historically defined in utter opposition to each other.

5. See my "Anorexia Nervosa" in *Unbearable Weight*.

American and French feminists⁶ alike have heard the hysteric speaking a language of protest, even or perhaps especially when she was mute. Dianne Hunter interprets Anna O.'s⁷ aphasia, which manifested itself in an inability to speak her native German, as a rebellion against the linguistic and cultural rules of the father and a return to the "mother-tongue": the semiotic babble of infancy, the language of the body. For Hunter, and for a number of other feminists working with Lacanian categories, the return to the semiotic level is both regressive and, as Hunter puts it, an "expressive" communication "addressed to patriarchal thought," "a self-repudiating form of feminine discourse in which the body signifies what social conditions make it impossible to state linguistically."⁸ "The hysterics are accusing; they are pointing," writes Catherine Clément in *The Newly Born Woman*; they make a "mockery of culture."⁹ In the same volume, Hélène Cixous speaks of "those wonderful hysterics, who subjected Freud to so many voluptuous moments too shameful to mention, bombarding his mosaic statute/law of Moses with their carnal, passionate body-words, haunting him with their inaudible thundering denunciations." For Cixous, Dora, who so frustrated Freud, is "the core example of the protesting force in women."¹

The literature of protest includes functional as well as symbolic approaches. Robert Seidenberg and Karen DeCrow, for example, describe agoraphobia as a "strike" against "the renunciations usually demanded of women" and the expectations of housewifely functions such as shopping, driving the children to school, accompanying their husband to social events.² Carroll Smith-Rosenberg presents a similar analysis of hysteria, arguing that by preventing the woman from functioning in the wifely role of caretaker of others, of "ministering angel" to husband and children, hysteria "became one way in which conventional women could express—in most cases unconsciously—dissatisfaction with one or several aspects of their lives."³ A number of feminist writers, among whom Susie Orbach is the most articulate and forceful, have interpreted anorexia as a species of unconscious feminist protest. The anorectic is engaged in a "hunger strike," as Orbach calls it, stressing that this is a political discourse, in which the action of food refusal and dramatic transformation of body size "expresses with [the] body what [the anorectic] is unable to tell us with words"—her indictment of a culture that disdains and suppresses female hunger, makes women ashamed of their appetites and

6. That is, feminists whose approach is primarily sociological ("American") and feminists whose orientation is more psychoanalytic ("French") [editor's note].

needs, and demands that women constantly work on the transformation of their body.⁴

The anorectic, of course, is unaware that she is making a political statement. She may, indeed, be hostile to feminism and any other critical perspectives that she views as disputing her own autonomy and control or questioning the cultural ideals around which her life is organized. Through embodied rather than deliberate demonstration she exposes and indicts those ideals, precisely by pursuing them to the point at which their destructive potential is revealed for all to see.

The same gesture that expresses protest, moreover, can also signal retreat; this, indeed, may be part of the symptom's attraction. Kim Chernin, for example, argues that the debilitating anorexic fixation, by halting or mitigating personal development, assuages this generation's guilt and separation anxiety over the prospect of surpassing our mothers, of living less circumscribed, freer lives.⁵ Agoraphobia, too, which often develops shortly after marriage, clearly functions in many cases as a way to cement dependency and attachment in the face of unacceptable stirrings of dissatisfaction and restlessness.

Although we may talk meaningfully of protest, then, I want to emphasize the counterproductive, tragically self-defeating (indeed, self-deconstructing) nature of that protest. Functionally, the symptoms of these disorders isolate, weaken, and undermine the sufferers; at the same time they turn the life of the body into an all-absorbing fetish, beside which all other objects of attention pale into unreality. On the symbolic level, too, the protest collapses into its opposite and proclaims the utter capitulation of the subject to the contracted female world. The muteness of hysterics and their return to the level of pure, primary bodily expressivity have been interpreted, as we have seen, as rejecting the symbolic order of the patriarchy and recovering a lost world of semiotic, maternal value. But *at the same time*, of course, muteness is the condition of the silent, uncomplaining woman—an ideal of patriarchal culture. Protesting the stifling of the female voice through one's own voicelessness—that is, employing the language of femininity to protest the conditions of the female world—will always involve ambiguities of this sort.

4. Orbach, *Hunger Strike*, p. 102. When we look into the many autobiographies and case studies of hysterics, anorectics, and agoraphobics, we find that these are indeed the sorts of women one might expect to be frustrated by the constraints of a specified female role. Sigmund Freud and Joseph Breuer, in *Studies on Hysteria* (New York: Avon, 1966), and Freud, in the later *Dora: An Analysis of a Case of Hysteria* (New York: Macmillan, 1963), constantly remark on the ambitiousness, independence, intellectual ability, and creative strivings of their patients. We know, moreover, that many women who later became leading social activists and feminists of the nineteenth century were among those who fell ill with hysteria and neurasthenia. It has become a virtual cliché that the typical anorectic is a perfectionist, driven to excel in all areas of her life. Though less prominently, a similar theme runs throughout the literature on agoraphobia.

One must keep in mind that in drawing on case studies, one is relying on the perceptions of other acculturated individuals. One suspects, for example, that the popular portrait of the anorectic as a relentless overachiever may be colored by the lingering or perhaps resurgent Victorianism of our culture's attitudes toward ambitious women. One does not escape this hermeneutic problem by turning to autobiography. But in autobiography one is at least dealing with social constructions and attitudes that animate the subject's own psychic reality. In this regard the autobiographical literature on anorexia, drawn on in a variety of places in *Unbearable Weight*, is strikingly full of anxiety about the domestic world and other themes that suggest deep rebellion against traditional notions of femininity.

5. Kim Chernin, *The Hungry Self: Women, Eating, and Identity* (New York: Harper and Row, 1985), esp. pp. 41–93.

Perhaps this is why symptoms crystallized from the language of femininity are so perfectly suited to express the dilemmas of middle-class and upper-middle-class women living in periods poised on the edge of gender change, women who have the social and material resources to carry the traditional construction of femininity to symbolic excess but who also confront the anxieties of new possibilities. The late nineteenth century, the post–World War II period, and the late twentieth century are all periods in which gender becomes an issue to be discussed and in which discourse proliferates about “the Woman Question,” “the New Woman,” “What Women Want,” “What Femininity Is.”

COLLUSION, RESISTANCE, AND THE BODY

The pathologies of female protest function, paradoxically, as if in collusion with the cultural conditions that produce them, reproducing rather than transforming precisely that which is being protested. In this connection, the fact that hysteria and anorexia have peaked during historical periods of cultural backlash against attempts at reorganization and redefinition of male and female roles is significant. Female pathology reveals itself here as an extremely interesting social formation through which one source of potential for resistance and rebellion is pressed into the service of maintaining the established order.

In our attempt to explain this formation, objective accounts of power relations fail us. For whatever the objective social conditions are that create a pathology, the symptoms themselves must still be produced (however unconsciously or inadvertently) by the subject. That is, the individual must invest the body with meanings of various sorts. Only by examining this productive process on the part of the subject can we, as Mark Poster has put it, “illuminate the mechanisms of domination in the processes through which meaning is produced in everyday life”; that is, only then can we see how the desires and dreams of the subject become implicated in the matrix of power relations.⁶

Here, examining the context in which the anorexic syndrome is produced may be illuminating. Anorexia will erupt, typically, in the course of what begins as a fairly moderate diet regime, undertaken because someone, often the father, has made a casual critical remark. Anorexia *begins in*, emerges out of, what is, in our time, conventional feminine practice. In the course of that practice, for any number of individual reasons, the practice is pushed a little beyond the parameters of moderate dieting. The young woman discovers what it feels like to crave and want and need and yet, through the exercise of her own will, to triumph over that need. In the process, a new realm of meanings is discovered, a range of values and possibilities that Western culture has traditionally coded as “male” and rarely made available to women: an ethic and aesthetic of self-mastery and self-transcendence, expertise, and power over others through the example of superior will and control. The experience is intoxicating, habit-forming.

At school the anorectic discovers that her steadily shrinking body is admired, not so much as an aesthetic or sexual object, but for the strength of will and self-control it projects. At home she discovers, in the inevitable battles her parents fight to get her to eat, that her actions have enormous power

6. Mark Poster, *Foucault, Marxism, and History* (Cambridge: Polity Press, 1984), p. 28.

over the lives of those around her. As her body begins to lose its traditional feminine curves, its breasts and hips and rounded stomach, begins to feel and look more like a spare, lanky male body, she begins to feel untouchable, out of reach of hurt, "invulnerable, clean and hard as the bones etched into my silhouette," as one student described it in her journal. She despises, in particular, all those parts of her body that continue to mark her as female. "If only I could eliminate [my breasts]," says Liu, "cut them off if need be."⁷ For her, as for many anorexics, the breasts represent a bovine, unconscious, vulnerable side of the self. Liu's body symbolism is thoroughly continuous with dominant cultural associations. Brett Silverstein's studies on the "Possible Causes of the Thin Standard of Bodily Attractiveness for Women"⁸ testify empirically to what is obvious from every comedy routine involving a dramatically shapely woman: namely, our cultural association of curvaceousness with incompetence. The anorectic is also quite aware, of course, of the social and sexual vulnerability involved in having a female body; many, in fact, were sexually abused as children.

Through her anorexia, by contrast, she has unexpectedly discovered an entry into the privileged male world, a way to become what is valued in our culture, a way to become safe, to rise above it all—for her, they are the same thing. She has discovered this, paradoxically, by pursuing conventional feminine behavior—in this case, the discipline of perfecting the body as an object—to excess. At this point of excess, the conventionally feminine deconstructs, we might say, into its opposite and opens onto those values our culture has coded as male. No wonder the anorexia is experienced as liberating and that she will fight family, friends, and therapists in an effort to hold onto it—fight them to the death, if need be. The anorectic's experience of power is, of course, deeply and dangerously illusory. To reshape one's body into a male body is *not* to put on male power and privilege. To *feel* autonomous and free while harnessing body and soul to an obsessive body-practice is to serve, not transform, a social order that limits female possibilities. And, of course, for the female to become male is only for her to locate herself on the other side of a disfiguring opposition. The new "power look" of female body-building, which encourages women to develop the same hulk-like, triangular shape that has been the norm for male body-builders, is no less determined by a hierarchical, dualistic construction of gender than was the conventionally "feminine" norm that tyrannized female body-builders such as Bev Francis for years.⁹

Although the specific cultural practices and meanings are different, similar mechanisms, I suspect, are at work in hysteria and agoraphobia. In these cases too, the language of femininity, when pushed to excess—when shouted and asserted, when disruptive and demanding—deconstructs into its opposite and makes available to the woman an illusory experience of power previously forbidden to her by virtue of her gender. In the case of nineteenth-century femininity, the forbidden experience may have been the bursting of fetters—particularly moral and emotional fetters. John Conolly, the asylum

reformer, recommended institutionalization for women who “want that restraint over the passions without which the female character is lost.”¹ Hysterics often infuriated male doctors by their lack of precisely this quality. S. Weir Mitchell described these patients as “the despair of physicians,” whose “despotic selfishness wrecks the constitution of nurses and devoted relatives, and in unconscious or half-conscious self-indulgence destroys the comfort of everyone around them.”² It must have given the Victorian patient some illicit pleasure to be viewed as capable of such disruption of the staid nineteenth-century household. A similar form of power, I believe, is part of the experience of agoraphobia.

This does not mean that the primary reality of these disorders is not one of pain and entrapment. Anorexia, too, clearly contains a dimension of physical addiction to the biochemical effects of starvation. But whatever the physiology involved, the ways in which the subject understands and thematizes her experience cannot be reduced to a mechanical process. The anorectic's ability to live with minimal food intake allows her to feel powerful and worthy of admiration in a “world,” as Susie Orbach describes it, “from which at the most profound level [she] feels excluded” and unvalued.³ The literature on both anorexia and hysteria is strewn with battles of will between the sufferer and those trying to “cure” her; the latter, as Orbach points out, very rarely understand that the psychic values she is fighting for are often more important to the woman than life itself.

TEXTUALITY, PRAXIS, AND THE BODY

The “solutions” offered by anorexia, hysteria, and agoraphobia, I have suggested, develop out of the practice of femininity itself, the pursuit of which is still presented as the chief route to acceptance and success for women in our culture. Too aggressively pursued, that practice leads to its own undoing, in one sense. For if femininity is, as Susan Brownmiller has said, at its core a “tradition of imposed limitations,”⁴ then an unwillingness to limit oneself, even in the pursuit of femininity, breaks the rules. But, of course, in another sense the rules remain fully in place. The sufferer becomes wedded to an obsessive practice, unable to make any effective change in her life. She remains, as Toril Moi has put it, “gagged and chained to [the] feminine role,” a reproducer of the docile body of femininity.⁵

This tension between the psychological meaning of a disorder, which may enact fantasies of rebellion and embody a language of protest, and the practical life of the disordered body, which may utterly defeat rebellion and subvert protest, may be obscured by too exclusive a focus on the symbolic dimension and insufficient attention to praxis. As we have seen in the case of some Lacanian feminist readings of hysteria, the result of this can be a one-sided interpretation that romanticizes the hysteric's symbolic subversion of the phallogentric⁶ order while confined to her bed. This is not to say

6. Patriarchal; specifically, characterized by the authority of the phallus in the primal family made up of the dominant father and the subordinate mother and child [editor's note].

that confinement in bed has a transparent, univocal meaning—in powerlessness, debilitation, dependency, and so forth. The “practical” body is no brute biological or material entity. It, too, is a culturally mediated form; its activities are subject to interpretation and description. The shift to the practical dimension is not a turn to biology or nature, but to another “register,” as Foucault puts it, of the cultural body, the register of the “useful body” rather than the “intelligible body.”⁷ The distinction can prove useful, I believe, to feminist discourse.

The intelligible body includes our scientific, philosophic, and aesthetic representations of the body—our cultural *conceptions* of the body, norms of beauty, models of health, and so forth. But the same representations may also be seen as forming a set of *practical* rules and regulations through which the living body is “trained, shaped, obeys, responds,” becoming, in short, a socially adapted and “useful body.”⁸ Consider this particularly clear and appropriate example: the nineteenth-century hourglass figure, emphasizing breasts and hips against a wasp waist, was an intelligible *symbolic* form, representing a domestic, sexualized ideal of femininity. The sharp cultural contrast between the female and the male form, made possible by the use of corsets and bustles, reflected, in symbolic terms, the dualistic division of social and economic life into clearly defined male and female spheres. At the same time, to achieve the specified look, a particular feminine *praxis* was required—straitlacing, minimal eating, reduced mobility—rendering the female body unfit to perform activities outside its designated sphere. This, in Foucauldian terms, would be the “useful body” corresponding to the aesthetic norm.

The intelligible body and the useful body are two arenas of the same discourse; they often mirror and support each other, as in the above illustration. Another example can be found in the seventeenth-century philosophic conception of the body as a machine, mirroring an increasingly more automated productive machinery of labor. But the two bodies may also contradict and mock each other. A range of contemporary representations and images, as noted earlier, have coded the transcendence of female appetite and its public display in the slenderness ideal in terms of power, will, mastery, the possibilities of success in the professional arena. These associations are carried visually by the slender superwomen of prime-time television and popular movies and promoted explicitly in advertisements and articles appearing routinely in women’s fashion magazines, diet books, and weight-training publications. Yet the thousands of slender girls and women who strive to embody these images and who in that service suffer from eating disorders, exercise compulsions, and continual self-scrutiny and self-castigation are anything *but* the “masters” of their lives.

Exposure and productive cultural analysis of such contradictory and mystifying relations between image and practice are possible only if the analysis includes attention to and interpretation of the “useful” or, as I prefer to call it, the practical body. Such attention, although often in inchoate and theoretically unsophisticated form, was central to the beginnings of the contemporary feminist movement. In the late 1960s and early 1970s the objectification

7. Foucault, *Discipline and Punish*, p. 136.

8. Foucault, *Discipline and Punish*, p. 136.

of the female body was a serious political issue. All the cultural paraphernalia of femininity, of learning to please visually and sexually through the practices of the body—media imagery, beauty pageants, high heels, girdles, makeup, simulated orgasm—were seen as crucial in maintaining gender domination.

Disquietingly, for the feminists of the present decade, such focus on the politics of feminine praxis, although still maintained in the work of individual feminists, is no longer a centerpiece of feminist cultural critique.⁹ On the popular front, we find *Ms. magazine*¹ presenting issues on fitness and “style,” the rhetoric reconstructed for the 1980s to pitch “self-expression” and “power.” Although feminist theory surely has the tools, it has not provided a critical discourse to dismantle and demystify this rhetoric. The work of French feminists has provided a powerful framework for understanding the inscription of phallogentric, dualistic culture on gendered bodies, but it has offered very little in the way of concrete analyses of the female body as a locus of practical cultural control. Among feminist theorists in this country, the study of cultural representations of the female body has flourished, and it has often been brilliantly illuminating and instrumental to a feminist rereading of culture.² But the study of cultural representations alone, divorced from consideration of their relation to the practical lives of bodies, can obscure and mislead.

Here, Helena Mitchie’s significantly titled *The Flesh Made Word* offers a striking example. Examining nineteenth-century representations of women, appetite, and eating, Mitchie draws fascinating and astute metaphorical connections between female eating and female sexuality. Female hunger, she argues, and I agree, “figures unspeakable desires for sexuality and power.”³ The Victorian novel’s “representational taboo” against depicting women eating (an activity, apparently, that only “happens offstage,” as Mitchie puts it) thus functions as a “code” for the suppression of female sexuality, as does the general cultural requirement, exhibited in etiquette and sex manuals of the day, that the well-bred woman eat little and delicately. The same coding is drawn on, Mitchie argues, in contemporary feminist “inversions” of Victorian values, inversions that celebrate female sexuality and power through images exulting in female eating and female hunger, depicting it explicitly, lushly, and joyfully.

Despite the fact that Mitchie’s analysis centers on issues concerning women’s hunger, food, and eating practices, she makes no mention of the grave eating disorders that surfaced in the late nineteenth century and that are ravaging the lives of young women today. The practical arena of women dieting, fasting, straitlacing, and so forth is, to a certain extent, implicit in her

9. A focus on the politics of sexualization and objectification remains central to the anti-pornography movement (e.g., in the work of Andrea Dworkin, Catharine MacKinnon). Feminists exploring the politics of appearance include Sandra Bartky, Susan Brownmiller, Wendy Chapkis, Kim Chernin, and Susie Orbach. And a developing feminist interest in the work of Michel Foucault has begun to produce a poststructuralist feminism oriented toward practice; see, for example, Irene Diamond and Lee Quinby, *Feminism and Foucault: Reflections on Resistance* (Boston:

Northeastern University Press, 1988).

1. At first a mass-market magazine (founded 1972) that also took a fairly consistent feminist approach, *Ms.* became more and more like a traditional “woman’s magazine” before folding in 1989. It was revived in an advertising-free form closer to its original in 1990 [editor’s note].

2. See, for example, Susan Suleiman, ed., *The Female Body in Western Culture* (Cambridge: Harvard University Press, 1986).

3. Mitchie, *The Flesh Made Word*, p. 13.

examination of Victorian gender ideology. But when Mitchie turns, at the end of her study, to consider contemporary feminist literature celebrating female eating and female hunger, the absence of even a passing glance at how women are *actually* managing their hungers today leaves her analysis adrift, lacking any concrete social moorings. Mitchie's sole focus is on the inevitable failure of feminist literature to escape "phallic representational codes."⁴ But the feminist celebration of the female body did not merely deconstruct on the written page or canvas. Largely located in the feminist counterculture of the 1970s, it has been culturally displaced by a very different contemporary reality. Its celebration of female flesh now presents itself in jarring dissonance with the fact that women, feminists included, are starving themselves to death in our culture.

This is not to deny the benefits of diet, exercise, and other forms of body management. Rather, I view our bodies as a site of struggle, where we must *work* to keep our daily practices in the service of resistance to gender domination, not in the service of docility and gender normalization. This work requires, I believe, a determinedly skeptical attitude toward the routes of seeming liberation and pleasure offered by our culture. It also demands an awareness of the often contradictory relations between image and practice, between rhetoric and reality. Popular representations, as we have seen, may forcefully employ the rhetoric and symbolism of empowerment, personal freedom, "having it all." Yet female bodies, pursuing these ideals, may find themselves as distracted, depressed, and physically ill as female bodies in the nineteenth century were made when pursuing a feminine ideal of dependency, domesticity, and delicacy. The recognition and analysis of such contradictions, and of all the other collusions, subversions, and enticements through which culture enjoins the aid of our bodies in the reproduction of gender, require that we restore a concern for female praxis to its formerly central place in feminist politics.

BRUNO LATOUR

b. 1947

Bruno Latour has been one of the most innovative thinkers in science studies, an interdisciplinary field that situates the sciences within their social, historical, political, and philosophic contexts as it examines how scientific knowledge is created, circulated, and put into practice. While the ostensible subject of most of Latour's writing is technoscience, the consequences of his ideas go beyond disciplinary boundaries. His work draws on and illuminates several important concepts in cultural theory, especially in its reassessment of the relationships between nature and culture, fact and fable, existence and language, and "realism" (the belief in a mind-independent reality) and social constructivism (the idea that reality and

knowledge are constructed through human activity). Initially associated with social constructivism, Latour, in recent years, has softened and complicated his position. In "Why Has Critique Run Out of Steam? From Matters of Fact to Matters of Concern" (2004), he laments the appropriation of contemporary critique by conspiracy theorists, global capitalists, and right-wing extremists to such ends as debunking global warming. Both the demystifying iconoclasm and the social constructivism of the modern critique disseminated by university intellectuals, whether stemming from Marxism, psychoanalysis, feminism, deconstruction, postcolonial theory, cultural studies, or some combination of those approaches, have lately lost their critical function and are now used to jeopardize our lives. But despite his suspicion of popularizations of critique, Latour still describes his interdisciplinary project as an attempt "to account for the various ways in which truth is built." Our world, he writes in *We Have Never Been Modern* (1991; trans. 1993), is "simultaneously real, like nature, narrated, like discourse, and collective, like society."

Born in Beaune in Burgundy into a wine-growing family, Latour initially studied philosophy and theology in Dijon. After passing the agrégation, which certified him to teach philosophy, he received a doctorate in philosophy from the University of Tours in 1975. While stationed in Africa for military service, he developed an interest in anthropology, learning through practice by undertaking fieldwork in Côte d'Ivoire. In the mid-1970s he completed an ethnographic study of French methods of industrial education used in the country's largest city and then-capital, Abidjan. In the late 1970s he turned his anthropological lens onto laboratory scientists, attempting the first detailed study of the daily activities of scientists in their natural habitat. It resulted in the 1979 publication of the book that first brought him to prominence: *Laboratory Life: The Social Construction of Scientific Facts*, written with Steve Woolgar. From 1982 until 2006 Latour was a professor at the École Nationale Supérieure des Mines (National Advanced School of Mines) in Paris. In 2006 he moved to the Institute d'Études Politiques de Paris (Institute for Political Studies of Paris, familiarly known as Sciences Po). Since 2013, he has been part-time Centennial Professor at the London School of Economics, as well as Andrew D. White Professor-at-Large at Cornell University. In addition, he has curated two international exhibits in Karlsruhe, Germany, at the Zentrum für Kunst und Medientechnologie (Center for Art and Media Technology): *Iconoclasm* (2002) and, with Peter Weibel, *Making Things Public* (2005). Among his numerous awards are the Legion of Honor (2012) and the Holberg Memorial Prize (2013).

Based on two years of ethnographic study at the Salk Institute in California, *Laboratory Life* analyzes scientists at work. This innovative study combined the participant-observer methods of anthropology with paradigms borrowed from the emerging fields of social constructivism and the sociology of scientific knowledge to examine not the ways in which scientists describe what they do—the scientific method—but what scientists working in their laboratories actually do. In the 1980s his focus shifted to history and theory building, and he produced two other groundbreaking studies of science in action. In 1984 he published a volume about France's most famous scientist, Louis Pasteur, and the discovery of microbes titled *Les Microbes: Guerre et paix* (*Microbes: War and Peace*), which challenged the lone genius model of scientific discovery; it was translated into English as *The Pasteurization of France* (1988). In 1987 he published perhaps his most direct statement about how science really works—*Science in Action: How to Follow Scientists and Engineers through Society*; it examines the rhetoric of scientific literature and collaborative networking between human and nonhuman actors. This book is the earliest elaboration of what he later would call Actor Network Theory (ANT). His next major work, *We Have Never Been Modern* (1991; trans. 1993), does not so much abandon science studies as seek to supplement and expand it by uncovering the ways in which modernity was constructed during the Enlightenment on a spurious break between politics and sci-

ence, culture and nature. Here Latour's readings of the seventeenth-century figures Thomas Hobbes and Robert Boyle, the latter both a political theorist and a chemist, explore the complex interrelations between the two realms. More recently, Latour has begun to question his own social constructivism, complicating it in order to fashion a new realism. In *Pandora's Hope: Essays on the Reality of Science Studies* (1999), Latour revisits the relationship between nature, culture, and artifacts to articulate a view of reality that avoids the oversimplifications both of traditional realism and of constructivism. In *Reassembling the Social: An Introduction to Actor-Network-Theory* (2005), Latour provides a systematic, ordered, and detailed introduction to his material-semiotic approach, Actor Network Theory. He covers its methodological rules, key concepts, and relationships with other theoretical positions. The work analyzes ANT's consequences—theoretical, methodological, and political—for social theory in general.

Latour's influences are eclectic and wide-ranging. The nineteenth-century French sociologist Gabriel Tarde, who was overshadowed by his younger rival, Émile Durkheim, appeared to Latour to lay the groundwork for Actor Network Theory, especially by arguing that the nature/culture divide is irrelevant to the study of human interaction. In the sciences Latour draws from the English mathematician and philosopher Alfred North Whitehead (1861–1947), founder of process philosophy; from Alan Turing (1912–1954), the English cryptologist and pioneer of computer theory; and from a number of twentieth-century thinkers, including the French philosophers of science Gaston Bachelard and Michel Serres, and the Lithuanian semiotician and linguist A. J. Greimas. While he is sometimes critical of literary theory, Latour's work in science studies bears some resemblance to STANLEY FISH's notion of interpretive communities and MICHEL FOUCAULT's idea of discursive formations. Latour himself has influenced a generation of scholars in the cultural studies of science, including Steve Woolgar and members of the so-called Edinburgh School of the sociology of science studies, as well as DONNA HARAWAY and N. KATHERINE HAYLES.

Our selection, "Why Has Critique Run Out of Steam?," is a good example of Latour's mature attempts to rethink his commitment to the social constructionist viewpoint in the sciences. Social constructivism is a sociological theory of knowledge; it argues that things in the world—from microbes to bodies to gender roles—that appear to have an independent biological existence are the product of ongoing social and historical processes of interaction and thus possess neither fixed meanings nor the status of isolated objects. Latour opposes this perspective to philosophical realism, which posits a reality (or nature) independent of social, psychological, and historical apprehensions and argues for the objective existence of what philosophers call "natural kinds." These two positions set the terms of the so-called science wars—the debate in recent decades between those scholars in the social studies of science who draw on discourse and cultural theory to understand how science works and those who want to hold on to a traditional positivist ideal of science. Though social constructivism has always been controversial in the sciences, it is closely associated in literary theory with poststructuralism, feminism, cultural studies, queer theory, and the New Historicism. In recent years, theorists have relied on social constructivism to deconstruct fixed truths and master narratives based on naturalized facts (about gender, race, law, canons, history, and so on). This process is what Latour calls "critique," whose proponents—especially Stanley Fish and JEAN BAUDRILLARD—are the main unnamed targets of his essay.

Latour also takes to task conservative writers who use simplified versions of social constructivism to dismiss scientific work in areas such as global warming and evolution as merely unproven theories. Having dedicated his career to exploring the lack of scientific certainty inherent in the constitution of scientific facts, he is dismayed by the strategic use of the claim that one cannot know anything in

science with certainty to artificially maintain controversies. Latour does not want simply to overlook or dismiss these abuses of critique by individuals who will “use any weapon at hand, naturalized facts when it suits them and social construction when it suits them.” Rather, he insists that we should “bring the sword of criticism to criticism itself.” Like Donna Haraway, he advocates a more sophisticated understanding of realism that recognizes the historical contingency of knowledge claims and the semiotic technologies for making meaning of the world, but at the same time allows us to make the claim that some versions of reality work better than others, and that some controversies can at least provisionally be considered closed.

In “Why Has Critique Run out of Steam?” Latour attempts to articulate a sophisticated and useful concept of realism by distinguishing between matters of fact and matters of concern. The Enlightenment, he argues, accepted a too uncritical view that reduced reality to matters of fact. Because they are abstractions of reality, generalizable and universal, facts, for Latour, are partial, polemical, and interested renderings of reality: they are reality reduced to a bare minimum. A fact is an utterance that renders invisible a “gathering,” a network of human and nonhuman actors, as well as the many controversies, struggles, conflicts, debates, alliances, negotiations, and trials of strength that went into the network’s making. So it merely appears that the fact “speaks for itself” and is self-evident. ANT shows otherwise. The task of science studies—and theories of knowledge—should be to unpack the process by which matters of fact emerge out of matters of concern. Here Latour provocatively subverts common sense and understanding. To elucidate the difference between matters of fact and matters of concern, he explores the etymology of the word *thing*, which in all European languages denotes both an object in the world and a “gathering”: it refers not just to an object, act, deed, or event but also to an affair, a lawsuit, a case, the subject of debate in an assembly, and the legislative assembly itself (for instance, Iceland’s *Althing*, the world’s oldest parliament). The word etymologically reconnects the realm of nature (of science and already-constituted objects) to the world of culture (politics, association, and debate).

Broadening his frame, Latour argues that modernity enabled us to forget temporarily the complexity of the Thing. Modernity was constituted by the Enlightenment break between mind and body, subject and object, nature and culture, the spheres of science and politics. It separated a world of social phenomena shaped by human actors (politics) from a natural world that science was supposed to uncover, a world of generalizable facts. At one level, our theories of knowledge struggle to keep these two realms distinct. At another, Latour declares, we have never really been modern, because we are constantly creating monstrous hybrids of nature/culture that trouble all neat epistemological distinctions. “Things” or “gatherings”—like global warming or AIDS drugs—are, of necessity, “simultaneously real, social, and narrative.” Either we can continue to hurl rocks at one another to convince ourselves that clear and simple reality exists, or we can more sensibly try to unravel the complex social and technoscientific networks—the gatherings of science, economy, politics, law, religion, technology, and narrative—that make up such controversies as global warming and evolution, or even “things” like moon rocks.

Yet the project of articulating (in both senses of the word) these technoscientific gatherings, these matters of concern, seems often to detract from rather than add to reality. Latour blames this problem, in part, on the excesses of critique, issuing a scathing indictment of what he sees as inconsistencies in the social constructionist debate. Such debates have come to rely on two contradictory critical gestures whose contradictions go unnoticed because the moves are never performed at the same time. In one critical gesture, objects are dismissed as mere fetishes onto which individuals project their own desires. In a second, individuals are shown to be at the

mercy of objective forces—genes, drives, race, class, gender—over which they have no control. Thus the rather vague targets of Latour's criticism (he rarely names specific approaches or critics) end up being at one and the same time both constructivist and realist. Latour is not the first theorist to notice the ways in which arguments in the social sciences veer between voluntarism and determinism, between agency and structure, between representations of powerful subjects acting on weak objects and weak subjects being acted on by powerful social forces.

However, the failure to develop more complex conceptions of reality that join matters of fact with matters of concern cannot be blamed solely on the shortcomings of the social sciences. Scientific ways of understanding reality are grounded in a long philosophic tradition, stemming from René Descartes's *Meditations* (1641–42), that sets up the disembodied mind as observer, detached from the very world at which it gazes. This tradition favors the general over the specific, the universal over the particular, the static object over change. It attempts to understand reality at its broadest, most general, most comprehensive level. Such an attitude relegates process to mere accident, history to a mere record. For an alternative tradition Latour looks to Alfred North Whitehead and his process philosophy, in which a plausible account of reality requires not only matters of fact but also matters of concern. Here, critics no longer simply debunk; instead, they gather and assemble. The work of science studies, and by extension of literary theory as well, is to study associations—gatherings of actors, both human and nonhuman, along with their interchanges, conflicts, alliances, negotiations, and trials of strength.

Although Latour has been influential in the emerging fields of science studies and of literature and science, his work has been controversial among scientists, whose response is often an almost visceral rejection. Latour has repeatedly denied that he dismisses reality as mere fiction, asserting that he seeks only a more complex and comprehensive description of reality than that offered by the dominant philosophical tradition. Yet his most vehement critics deplore what they perceive as his refusal to ground science in the investigation of an independent reality, without which, they argue, science becomes meaningless. Latour's casual and, at times, even flippant style contributes at least in part to the extreme reactions to his arguments. Furthermore, despite the sophistication of his ideas and the complexity of the technoscientific networks he tracks, his prose abounds in militaristic metaphors that characterize both science and criticism as arenas of conflict and even open warfare in which only the strongest survive. In spite of the polarized responses he evokes, Latour remains a significant presence in cultural theory for his ingenious attempts to bridge the two-cultures model that divides the humanities from the sciences.

“From Matters of Fact to Matters of Concern” Why Has Critique Run Out of Steam? **Keywords:** Cultural Studies, Defense of Criticism, Ethics, Institutional Studies, Modernity, Popular Culture, Realism, Representation

Why Has Critique Run Out of Steam? From Matters of Fact to Matters of Concern

Wars. So many wars. Wars outside and wars inside. Cultural wars, science wars, and wars against terrorism. Wars against poverty and wars against the poor. Wars against ignorance and wars out of ignorance. My question is simple: Should we be at war, too, we, the scholars, the intellectuals? Is it really our duty to add fresh ruins to fields of ruins? Is it really the task of

the humanities to add deconstruction to destruction? More iconoclasm to iconoclasm? What has become of the critical spirit? Has it run out of steam?¹

Quite simply, my worry is that it might not be aiming at the right target. To remain in the metaphorical atmosphere of the time, military experts constantly revise their strategic doctrines, their contingency plans, the size, direction, and technology of their projectiles, their smart bombs, their missiles; I wonder why we, we alone, would be saved from those sorts of revisions. It does not seem to me that we have been as quick, in academia, to prepare ourselves for new threats, new dangers, new tasks, new targets. Are we not like those mechanical toys that endlessly make the same gesture when everything else has changed around them? Would it not be rather terrible if we were still training young kids—yes, young recruits, young cadets—for wars that are no longer possible, fighting enemies long gone, conquering territories that no longer exist, leaving them ill-equipped in the face of threats we had not anticipated, for which we are so thoroughly unprepared? Generals have always been accused of being on the ready one war late—especially French generals,² especially these days. Would it be so surprising, after all, if intellectuals were also one war late, one critique late—especially French intellectuals, especially now? It has been a long time, after all, since intellectuals were in the vanguard. Indeed, it has been a long time since the very notion of the avant-garde—the proletariat, the artistic—passed away, pushed aside by other forces, moved to the rear guard, or maybe lumped with the baggage train.³ We are still able to go through the motions of a critical avant-garde, but is not the spirit gone?

In these most depressing of times, these are some of the issues I want to press, not to depress the reader but to press ahead, to redirect our meager capacities as fast as possible. To prove my point, I have, not exactly facts, but rather tiny cues, nagging doubts, disturbing telltale signs. What has become of critique, I wonder, when an editorial in the *New York Times* contains the following quote?

Most scientists believe that [global] warming is caused largely by man-made pollutants that require strict regulation. Mr. Luntz [a Republican strategist] seems to acknowledge as much when he says that “the scientific debate is closing against us.” His advice, however, is to emphasize that the evidence is not complete.

“Should the public come to believe that the scientific issues are settled,” he writes, “their views about global warming will change accordingly.

1. For Graham Harman. This text was written for the Stanford presidential lecture held at the humanities center, 7 Apr. 2003. I warmly thank Harvard history of science doctoral students for many ideas exchanged on those topics during this semester [Latour's note]. Harman (b. 1968), American philosopher of metaphysics.

2. France is often used to exemplify the tendency of generals to “fight the last war”; after World War I, France constructed the Maginot Line, border fortifications that provided little defense against

the blitzkrieg—a new form of warfare employed by the Germans in World War II.

3. On what happened to the avant-garde and critique generally, see *Iconoclasm: Beyond the Image Wars in Science, Religion, and Art*, ed. Bruno Latour and Peter Weibel (Cambridge, Mass., 2002). This article is very much an exploration of what could happen beyond the image wars [Latour's note]. “Image wars”: the simultaneous desire in religion, science, and art to produce and destroy images.

Therefore, you need to continue to make the *lack of scientific certainty* a primary issue.”⁴

Fancy that? An artificially maintained scientific controversy to favor a “brownlash,” as Paul and Anne Ehrlich would say.⁵

Do you see why I am worried? I myself have spent some time in the past trying to show “*the lack of scientific certainty*” inherent in the construction of facts. I too made it a “primary issue.” But I did not exactly aim at fooling the public by obscuring the certainty of a closed argument—or did I? After all, I have been accused of just that sin. Still, I’d like to believe that, on the contrary, I intended to *emancipate* the public from prematurely naturalized objectified facts. Was I foolishly mistaken? Have things changed so fast?

In which case the danger would no longer be coming from an excessive confidence in ideological arguments posturing as matters of fact—as we have learned to combat so efficiently in the past—but from an excessive *distrust* of good matters of fact disguised as bad ideological biases! While we spent years trying to detect the real prejudices hidden behind the appearance of objective statements, do we now have to reveal the real objective and incontrovertible facts hidden behind the *illusion* of prejudices? And yet entire Ph.D. programs are still running to make sure that good American kids are learning the hard way that facts are made up, that there is no such thing as natural, unmediated, unbiased access to truth, that we are always prisoners of language, that we always speak from a particular standpoint, and so on, while dangerous extremists are using the very same argument of social construction to destroy hard-won evidence that could save our lives. Was I wrong to participate in the invention of this field known as science studies?⁶ Is it enough to say that we did not really mean what we said? Why does it burn my tongue to say that global warming is a fact whether you like it or not? Why can’t I simply say that the argument is closed for good?

Should I reassure myself by simply saying that bad guys can use any weapon at hand, naturalized facts when it suits them and social construction when it suits them? Should we apologize for having been wrong all along? Or should we rather bring the sword of criticism to criticism itself and do a bit of soul-searching here: what were we really after when we were so intent on showing the social construction of scientific facts? Nothing guarantees,

4. “Environmental Word Games,” *New York Times*, 15 Mar. 2003, p. A16. Luntz seems to have been very successful; I read later in an editorial in the *Wall Street Journal*:

There is a better way [than passing a law that restricts business], which is to keep fighting on the merits. There is no scientific consensus that greenhouse gases cause the world’s modest global warming trend, much less whether that warming will do more harm than good, or whether we can even do anything about it.

Once Republicans concede that greenhouse gases must be controlled, it will only be a matter of time before they end up endorsing more economically damaging regulation. They could always stand on principle and attempt to educate the public instead. [“A Republican

Kyoto,” *Wall Street Journal*, 8 Apr. 2003, p. A14.]

And the same publication complains about the “pathological relation” of the “Arab street” with truth! [Latour’s note; bracketed material his].

5. Paul R. and Anne H. Ehrlich, *Betrayal of Science and Reason: How Anti-Environmental Rhetoric Threatens Our Future* (Washington D.C., 1997), p. 1 [Latour’s note]. Paul (b. 1932) and Anne Ehrlich (b. 1933) are American population researchers; they define “brownlash” as literature that attempts to minimize the seriousness of environmental problems.

6. An interdisciplinary field that situates the sciences within a broad social, historical, cultural, and political context.

after all, that we should be right all the time. There is no sure ground even for criticism.⁷ Isn't this what criticism intended to say: that there is no sure ground anywhere? But what does it mean when this lack of sure ground is taken away from us by the worst possible fellows as an argument against the things we cherish?

Artificially maintained controversies are not the only worrying sign. What has critique become when a French general, no, a marshal of critique, namely, Jean Baudrillard, claims in a published book that the Twin Towers destroyed themselves under their own weight, so to speak, undermined by the utter nihilism inherent in capitalism itself—as if the terrorist planes were pulled to suicide by the powerful attraction of this black hole of nothingness?⁸ What has become of critique when a book that claims that no plane ever crashed into the Pentagon can be a bestseller? I am ashamed to say that the author was French, too.⁹ Remember the good old days when revisionism arrived very late, after the facts had been thoroughly established, decades after bodies of evidence had accumulated? Now we have the benefit of what can be called *instant revisionism*. The smoke of the event has not yet finished settling before dozens of conspiracy theories begin revising the official account, adding even more ruins to the ruins, adding even more smoke to the smoke. What has become of critique when my neighbor in the little Bourbonnais¹ village where I live looks down on me as someone hopelessly naïve because I believe that the United States had been attacked by terrorists? Remember the good old days when university professors could look down on unsophisticated folks because those hillbillies naïvely believed in church, motherhood, and apple pie? Things have changed a lot, at least in my village. I am now the one who naïvely believes in some facts because I am educated, while the other guys are too *unsophisticated* to be gullible: “Where have you been? Don't you know that the Mossad and the CIA did it?”² What has become of critique when someone as eminent as Stanley Fish, the “enemy of promises” as Lindsay Waters calls him, believes he defends science studies, my field, by comparing the laws of physics to the rules of baseball?³ What has become of critique when there is a whole industry denying that the Apollo program landed on the moon? What has become of critique when DARPA uses for its Total Information Awareness project the Baconian slogan *Scientia est potentia*?⁴ Didn't I read that somewhere in

7. The metaphor of shifting sand was used by neomodernists in their critique of science studies; see *A House Built on Sand: Exposing Post-modernist Myths about Science*, ed. Noretta Koertge (Oxford, 1998). The problem is that the authors of this book looked backward, attempting to reenter the solid rock castle of modernism, and not forward to what I call, for lack of a better term, nonmodernism [Latour's note].

8. See Jean Baudrillard, “*The Spirit of Terrorism*” and “*Requiem for the Twin Towers*” (New York, 2002) [Latour's note]. BAUDRILLARD (1929–2007), French sociologist and philosopher; a marshal outranks a general. Twin Towers: One and Two World Trade Center in New York City, destroyed in the terrorist attacks of September 11, 2001.

9. See Thierry Meyssan, *9/11: The Big Lie* (London, 2002). Conspiracy theories have always

existed; what is new in instant revisionism is how much scientific proof they claim to imitate [Latour's note].

1. Historical region of central France.

2. That is, the intelligence services of, respectively, Israel and the United States were responsible for 9/11.

3. See Lindsay Waters, *Enemy of Promises* (forthcoming [Chicago, 2004]); see also Nick Paumgarten, “Dept. of Super Slo-Mo: No Flag on the Play,” *The New Yorker*, 20 Jan. 2003, p. 32 [Latour's note]. FISH (b. 1938), American literary theorist; his comparison appeared in the *New York Times*, May 21, 1996.

4. Knowledge is power (Latin), a paraphrase of an aphorism by the English statesman and philosopher Francis Bacon (1561–1626), “Knowledge itself is power” (*Religious Meditations*, 1597). The phrase was used in the seal of the Information

Michel Foucault? Has knowledge-slash-power been co-opted of late by the National Security Agency? Has *Discipline and Punish* become the bedtime reading of Mr. Ridge?⁵

Let me be mean for a second. What's the real difference between conspiracists and a popularized, that is a teachable version of social critique inspired by a too quick reading of, let's say, a sociologist as eminent as Pierre Bourdieu⁶ (to be polite I will stick with the French field commanders)? In both cases, you have to learn to become suspicious of everything people say because of course we all know that they live in the thralls of a complete *illusion*⁷ of their real motives. Then, after disbelief has struck and an explanation is requested for what is really going on, in both cases again it is the same appeal to powerful agents hidden in the dark acting always consistently, continuously, relentlessly. Of course, we in the academy like to use more elevated causes—society, discourse, knowledge-slash-power, fields of forces, empires, capitalism—while conspiracists like to portray a miserable bunch of greedy people with dark intents, but I find something troublingly similar in the structure of the explanation, in the first movement of disbelief and, then, in the wheeling of causal explanations coming out of the deep dark below. What if explanations resorting automatically to power, society, discourse had outlived their usefulness and deteriorated to the point of now feeding the most gullible sort of critique?⁸ Maybe I am taking conspiracy theories too seriously, but it worries me to detect, in those mad mixtures of knee-jerk disbelief, punctilious demands for proofs, and free use of powerful explanation from the social neverland many of the weapons of social critique. Of course conspiracy theories are an absurd deformation of our own arguments, but, like weapons smuggled through a fuzzy border to the wrong party, these are our weapons nonetheless. In spite of all the deformations, it is easy to recognize, still burnt in the steel, our trademark: *Made in Criticalland*.

Do you see why I am worried? Threats might have changed so much that we might still be directing all our arsenal east or west while the enemy has now moved to a very different place. After all, masses of atomic missiles are transformed into a huge pile of junk once the question becomes how to defend against militants armed with box cutters or dirty bombs.⁹ Why

Awareness Office (2002–03), which lost its funding after only a year of existence when its “Total Information Awareness Program” raised fears of domestic surveillance; it operated within the Defense Advanced Projects Agency (DARPA), which was founded in 1958 to develop advanced technology for the U.S. Department of Defense. (Latour reproduced IAO’s seal as figure 1, not included here.) “Apollo program”: program (1961–72) undertaken by the U.S. National Aeronautics and Space Administration with the goal—achieved in 1969—of conducting crewed missions to the moon.

5. Thomas J. Ridge (b. 1945), first secretary (2003–05) of the Department of Homeland Security, which was formed in response to the attacks of 9/11. FOUCAULT (1926–1984), French philosopher and historian of ideas; his works include *Discipline and Punish: The Birth of the Prison* (1975) and *Power/Knowledge* (1980).

6. French sociologist (1930–2002; see above).

7. Illusion (Latin).

8. Their serious as well as their popularized versions have the defect of using society as an already existing cause instead of as a possible consequence. This was the critique that Gabriel Tarde always made against Durkheim. It is probably the whole notion of social and society that is responsible for the weakening of critique. I have tried to show that in Latour, “Gabriel Tarde and the End of the Social,” in *The Social in Question: New Bearings in History and the Social Sciences*, ed. Patrick Joyce (London, 2002), pp. 117–32 [Latour’s note]. Tarde (1843–1904), French sociologist and social psychologist, whom Latour sees as a potential precursor of his Actor Network Theory. Émile Durkheim (1858–1917), French sociologist often viewed as a founder of sociology.

9. Bombs that use conventional explosives to disperse radioactive material. “Box cutters”: the weapons used by the 9/11 terrorists to hijack 4 airplanes.

would it not be the same with our critical arsenal, with the neutron bombs of deconstruction, with the missiles of discourse analysis? Or maybe it is that critique has been miniaturized like computers have. I have always fancied that what took great effort, occupied huge rooms, cost a lot of sweat and money, for people like Nietzsche and Benjamin,¹ can be had for nothing, much like the supercomputers of the 1950s, which used to fill large halls and expend a vast amount of electricity and heat, but now are accessible for a dime and no bigger than a fingernail. As the recent advertisement of a Hollywood film² proclaimed, "Everything is suspect . . . Everyone is for sale . . . And nothing is what it seems."

What's happening to me, you may wonder? Is this a case of midlife crisis? No, alas, I passed middle age quite a long time ago. Is this a patrician spite for the popularization of critique? As if critique should be reserved for the elite and remain difficult and strenuous, like mountain climbing or yachting, and is no longer worth the trouble if everyone can do it for a nickel? What would be so bad with critique for the people? We have been complaining so much about the gullible masses, swallowing naturalized facts, it would be really unfair to now discredit the same masses for their, what should I call it, gullible criticism? Or could this be a case of radicalism gone mad, as when a revolution swallows its progeny? Or, rather, have we behaved like mad scientists who have let the virus of critique out of the confines of their laboratories and cannot do anything now to limit its deleterious effects; it mutates now, gnawing everything up, even the vessels in which it is contained? Or is it another case of the famed power of capitalism for recycling everything aimed at its destruction? As Luc Boltanski and Eve Chiapello say, the new spirit of capitalism has put to good use the artistic critique that was supposed to destroy it.³ If the dense and moralist cigar-smoking reactionary bourgeois can transform him- or herself into a free-floating agnostic bohemian, moving opinions, capital, and networks from one end of the planet to the other without attachment, why would he or she not be able to absorb the most sophisticated tools of deconstruction, social construction, discourse analysis, postmodernism, postology⁴?

In spite of my tone, I am not trying to reverse course, to become reactionary, to regret what I have done, to swear that I will never be a constructivist any more. I simply want to do what every good military officer, at regular periods, would do: retest the linkages between the new threats he or she has to face and the equipment and training he or she should have in order to meet them—and, if necessary, to revise from scratch the whole paraphernalia. This does not mean for us any more than it does for the officer that we were wrong, but simply that history changes quickly and that there is no greater intellectual crime than to address with the equipment of an older period the challenges of the present one. Whatever the case, our critical equipment deserves as much critical scrutiny as the Pentagon budget.

1. WALTER BENJAMIN (1892–1940), German literary and cultural theorist. FRIEDRICH NIETZSCHE (1844–1900), German philosopher.

2. *L.A. Confidential* (1997; dir. Curtis Hanson), a film about murder and police corruption in the early 1950s.

3. See Luc Boltanski and Eve Chiapello, *Le Nou-*

vel Esprit du capitalisme [*The New Spirit of Capitalism*] (Paris, 1999) [Latour's note]. Boltanski (b. 1940), French professor of social sciences. Chiapello (b. 1965), French professor of management and sociology.

4. Latour's comic coinage.

My argument is that a certain form of critical spirit has sent us down the wrong path, encouraging us to fight the wrong enemies and, worst of all, to be considered as friends by the wrong sort of allies because of a little mistake in the definition of its main target. The question was never to get *away* from facts but *closer* to them, not fighting empiricism but, on the contrary, renewing empiricism.

What I am going to argue is that the critical mind, if it is to renew itself and be relevant again, is to be found in the cultivation of a *stubbornly realist attitude*—to speak like William James⁵—but a realism dealing with what I will call *matters of concern*, not *matters of fact*. The mistake we made, the mistake I made, was to believe that there was no efficient way to criticize matters of fact except by moving *away* from them and directing one's attention *toward* the conditions that made them possible. But this meant accepting much too uncritically what matters of fact were. This was remaining too faithful to the unfortunate solution inherited from the philosophy of Immanuel Kant.⁶ Critique has not been critical enough in spite of all its sore-scratching. Reality is not defined by matters of fact. Matters of fact are not all that is given in experience. Matters of fact are only very partial and, I would argue, very polemical, very political renderings of matters of concern and only a subset of what could also be called *states of affairs*. It is this second empiricism, this return to the realist attitude, that I'd like to offer as the next task for the critically minded.

To indicate the direction of the argument, I want to show that while the Enlightenment profited largely from the disposition of a very powerful descriptive tool, that of matters of fact, which were excellent for *debunking* quite a lot of beliefs, powers, and illusions, it found itself totally disarmed once matters of fact, in turn, were eaten up by the same debunking impetus. After that, the lights of the Enlightenment were slowly turned off, and some sort of darkness appears to have fallen on campuses. My question is thus: Can we devise another powerful descriptive tool that deals this time with matters of concern and whose import then will no longer be to debunk but to protect and to care, as Donna Haraway⁷ would put it? Is it really possible to transform the critical urge in the ethos of someone who *adds* reality to matters of fact and not *subtract* reality? To put it another way, what's the difference between deconstruction and constructivism?

"So far," you could object, "the prospect doesn't look very good, and you, Monsieur Latour, seem the person the least able to deliver on this promise because you spent your life debunking what the other more polite critics had at least respected until then, namely matters of fact and science itself. You can dust your hands with flour as much as you wish, the black fur of the critical wolf will always betray you; your deconstructing teeth have been sharpened on too many of our innocent labs—I mean lambs!—for us to believe you." Well, see, that's just the problem: I have written about a dozen books to inspire respect for, some people have said to uncritically glorify, the objects of science and technology, of art, religion, and, more recently, law, showing every time in great detail the complete

5. American psychologist and philosopher of pragmatism (1842–1910).

6. German philosopher (1724–1804; see above); his "solution" to skepticism about the nature of reality was to set forth the conditions that must be

in place within the perceiving subject if the external world is to be apprehended (see *The Critique of Pure Reason*, 1781).

7. American biologist and feminist theorist of science and technology (b. 1944; see above).

implausibility of their being socially explained, and yet the only noise readers hear is the snapping of the wolf's teeth. Is it really impossible to solve the question, to write not matter-of-factly but, how should I say it, in a matter-of-concern way?⁸

Martin Heidegger,⁹ as every philosopher knows, has meditated many times on the ancient etymology of the word *thing*. We are now all aware that in all the European languages, including Russian, there is a strong connection between the words for thing and a quasi-judiciary assembly. Icelanders boast of having the oldest Parliament, which they call *Althing*, and you can still visit in many Scandinavian countries assembly places that are designated by the word *Ding* or *Thing*. Now, is this not extraordinary that the banal term we use for designating what is out there, unquestionably, a thing, what lies out of any dispute, out of language, is also the oldest word we all have used to designate the oldest of the sites in which our ancestors did their dealing and tried to settle their disputes?¹ A thing is, in one sense, an object out there and, in another sense, an *issue* very much *in* there, at any rate, a *gathering*. To use the term I introduced earlier now more precisely, the same word *thing* designates matters of fact and matters of concern.

Needless to say, although he develops this etymology at length, this is not the path that Heidegger has taken. On the contrary, all his writing aims to make as sharp a distinction as possible between, on the one hand, objects, *Gegenstand*,² and, on the other, the celebrated *Thing*. The handmade jug can be a thing, while the industrially made can of Coke remains an object. While the latter is abandoned to the empty mastery of science and technology, only the former, cradled in the respectful idiom of art, craftsmanship, and poetry, could deploy and gather its rich set of connections.³ This bifurcation is marked many times but in a decisive way in his book on Kant:

Up to this hour such questions have been open. Their questionability is concealed by the results and the progress of scientific work. One of these burning questions concerns the justification and limits of mathematical formalism in contrast to the demand for an immediate return to intuitively given nature.⁴

What has happened to those who, like Heidegger, have tried to find their ways in immediacy, in intuition, in nature would be too sad to retell—and is well known anyway. What is certain is that those pathmarks off the beaten track led indeed nowhere. And, yet, Heidegger, when he takes the jug seriously, offers a powerful vocabulary to talk also about the object he despises so much. What would happen, I wonder, if we tried to talk about the object

8. This is the achievement of the great novelist Richard Powers, whose stories are a careful and, in my view, masterful enquiry into this new "realism." Especially relevant for this paper is Richard Powers, *Plowing the Dark* (New York, 2000) [Latour's note]. Powers (b. 1957), American novelist whose work explores the effects of science and technology.

9. German philosopher (1889–1976; see above).
1. See the erudite study by the remarkable French scholar of Roman law, Yan Thomas, "Res, chose, et patrimoine (note sur le rapport sujet-objet en droit romain)" ["Matter, Thing, and Inheritance

(Note on the Subject-Object Ratio in Roman Law)"], *Archives de philosophie de droit* [*Archives of the Philosophy of Law*] 25 (1980): 413–26 [Latour's note].

2. Object (German): that is, something manufactured rather than handcrafted.

3. See Graham Harman, *Tool-Being: Heidegger and the Metaphysics of Objects* (Chicago, 2002) [Latour's note].

4. Martin Heidegger, *What Is a Thing?* trans. W. B. Barton, Jr., and Vera Deutsch (Chicago, 1967), p. 95 [Latour's note].

of science and technology, the *Gegenstand*, as if it had the rich and complicated qualities of the celebrated *Thing*?

The problem with philosophers is that because their jobs are so hard they drink a lot of coffee and thus use in their arguments an inordinate quantity of pots, mugs, and jugs—to which, sometimes, they might add the occasional rock. But, as Ludwik Fleck remarked long ago, their objects are never complicated enough; more precisely, they are never simultaneously *made* through a complex history and new, real, and *interesting* participants in the universe.⁵ Philosophy never deals with the sort of beings we in science studies have dealt with. And that's why the debates between realism and relativism never go anywhere. As Ian Hacking has recently shown, the engagement of a rock in philosophical talk is utterly different if you take a banal rock to make your point⁶ (usually to lapidate a passing relativist!) or if you take, for instance, dolomite, as he has done so beautifully.⁷ The first can be turned into a matter of fact but not the second. Dolomite is so beautifully complex and entangled that it resists being treated as a matter of fact. It too can be described as a gathering; it too can be seen as engaging the fourfold.⁸ Why not try to portray it with the same enthusiasm, engagement, and complexity as the Heideggerian jug? Heidegger's mistake is not to have treated the jug too well, but to have traced a dichotomy between *Gegenstand* and *Thing* that was justified by nothing except the crassest of prejudices.

Several years ago another philosopher, much closer to the history of science, namely Michel Serres,⁹ also French, but this time as foreign to critique as one can get, meditated on what it would mean to take objects of science in a serious anthropological and ontological fashion. It is interesting to note that every time a philosopher gets closer to an object of science that is at once historical and interesting, his or her philosophy changes, and the specifications for a realist attitude become, at once, more stringent and completely different from the so-called realist philosophy of science concerned with routine or boring objects. I was reading his passage on the *Challenger* disaster in his book *Statues* when another shuttle, *Columbia*, in early 2003 offered me a tragic instantiation of yet another metamorphosis of an object into a thing.¹

What else would you call this sudden transformation of a completely mastered, perfectly understood, quite forgotten by the media, taken-for-granted, matter-of-factual projectile into a sudden shower of debris falling on the United States, which thousands of people tried to salvage in the mud and

5. Although Fleck is the founder of science studies, the impact of his work is still very much in the future because he has been so deeply misunderstood by Thomas Kuhn; see Thomas Kuhn, foreword to Ludwik Fleck, *Genesis and Development of a Scientific Fact* (1935; Chicago, 1979), pp. vii–xi [Latour's note]. Fleck (1896–1961), Polish physician and biologist. Kuhn (1922–1996), American historian and philosopher of science; his best-known work is *The Structure of Scientific Revolutions* (1962; 2d ed., 1970).

6. An approach taken perhaps most famously by SAMUEL JOHNSON (1709–1784), who, according to his biographer James Boswell, responded to the idealist philosophy of George Berkeley by kicking a rock mightily and exclaiming, "I refute it thus."

7. See Ian Hacking, *The Social Construction of What?* (Cambridge, Mass., 1999), in particular

the last chapter [Latour's note]. Hacking (b. 1936), Canadian philosopher of science. "Lapidate": throw stones at.

8. Latour quotes Heidegger on "the fourfold" below.

9. French philosopher of both science and the humanities (b. 1930).

1. See Michel Serres, *Statues: Le Second Livre des fondations* [*Statues: The Second Book of Foundations*] (Paris, 1987). On the reasons why Serres was never critical, see Serres with Latour, *Conversations on Science, Culture, and Time*, trans. Roxanne Lapidus (Ann Arbor, Mich., 1995) [Latour's note]. The *Challenger* disaster: the explosion of the U.S. space shuttle *Challenger* on January 28, 1986, shortly after liftoff. The *Columbia* broke apart over the southern United States during reentry on February 1, 2003. In both cases, all crew members were killed.

rain and collect in a huge hall to serve as so many clues in a judicial scientific investigation? Here, suddenly, in a stroke, an object had become a thing, a matter of fact was considered as a matter of great concern. If a thing is a gathering, as Heidegger says, how striking to see how it can suddenly *disband*. If the “thinging of the thing” is a gathering that always connects the “united four, earth and sky, divinities and mortals, in the simple onefold of their self-unified fourfold,”² how could there be a better example of this making and unmaking than this catastrophe unfolding all its thousands of folds? How could we see it as a normal accident of technology when, in his eulogy for the unfortunate victims, your president said: “The crew of the shuttle *Columbia* did not return safely to Earth; yet we can pray that all are safely home”?³ As if no shuttle ever moved simply in space, but also always in heaven.

This was on C-Span 1, but on C-Span 2,⁴ at the very same time, early February 2003, another extraordinary parallel event was occurring. This time a Thing—with a capital T—was assembled to try to coalesce, to gather in one decision, one object, one projection of force: a military strike against Iraq.⁵ Again, it was hard to tell whether this gathering was a tribunal, a parliament, a command-and-control war room, a rich man’s club, a scientific congress, or a TV stage. But certainly it was an assembly where matters of great concern were debated and proven—except there was much puzzlement about which type of proofs should be given and how accurate they were. The difference between C-Span 1 and C-Span 2, as I watched them with bewilderment, was that while in the case of *Columbia* we had a perfectly mastered object that suddenly was transformed into a shower of burning debris that was used as so much evidence in an investigation, there, at the United Nations, we had an investigation that tried to coalesce, in one unifying, unanimous, solid, mastered object, masses of people, opinions, and might. In one case the object was metamorphosed into a thing; in the second, the thing was attempting to turn into an object. We could witness, in one case, the head, in another, the tail of the trajectory through which matters of fact emerge out of matters of concern. In both cases we were offered a unique window into the number of *things* that have to participate in the gathering of an *object*. Heidegger was not a very good anthropologist of science and technology; he had only four folds, while the smallest shuttle, the shortest war, has millions. How many gods, passions, controls, institutions, techniques, diplomacies, wits have to be folded to connect “earth and sky, divinities and mortals”—oh yes, especially mortals. (Frightening omen, to launch such a complicated war, just when such a beautifully mastered object as the shuttle disintegrated into thousands of pieces of debris raining down from the sky—but the omen was not heeded; gods nowadays are invoked for convenience only.)

2. Heidegger, “The Thing,” *Poetry, Language, Thought*, trans. Albert Hofstadter (New York, 1971), p. 178 [Latour’s note].

3. “Bush Talking More about Religion: Faith to Solve the Nation’s Problems,” CNN website, 18 Feb 2003, www.cnn.com/2003/ALLPOLITICS/02/18/bush.faith/ [Latour’s note]. The quotation is from a speech by George W. Bush (b. 1946; 43d U.S. president, 2001–09), given hours after the *Columbia* disaster.

4. Two channels of the nonprofit U.S. cable company that provides public access to governmental proceedings.

5. That is, the second channel was broadcasting the debate at the United Nations on authorizing the use of force against Iraq; though the resolution failed, the United States and a number of allies sent ground troops into Iraq on March 20, 2003.

My point is thus very simple: things have become Things again, objects have reentered the arena, the Thing, in which they have to be gathered first in order to exist later as what *stands apart*. The parenthesis that we can call the modern parenthesis during which we had, on the one hand, a world of objects, *Gegenstand*, out there, unconcerned by any sort of parliament, forum, agora,⁶ congress, court and, on the other, a whole set of forums, meeting places, town halls where people debated, has come to a close. What the etymology of the word *thing*—*chose*, *causa*, *res*, *aitia*⁷—had conserved for us mysteriously as a sort of fabulous and mythical past has now become, for all to see, our most ordinary present. Things are gathered again. Was it not extraordinarily moving to see, for instance, in the lower Manhattan reconstruction project, the long crowds, the angry messages, the passionate emails, the huge agoras, the long editorials that connected so many people to so many variations of the project to replace the Twin Towers? As the architect Daniel Libeskind⁸ said a few days before the decision, building will never be the same.

I could open the newspaper and unfold the number of former objects that have become things again, from the global warming case I mentioned earlier to the hormonal treatment of menopause, to the work of Tim Lenoir, the primate studies of Linda Fedigan and Shirley Strum, or the hyenas of my friend Steven Glickman.⁹

Nor are those gatherings limited to the present period as if only recently objects had become so obviously things. Every day historians of science help us realize to what extent we have never been modern because they keep revising every single element of past matters of fact from Mario Biagioli's Galileo, Steven Shapin's Boyle, and Simon Schaffer's Newton, to the incredibly intricate linkages between Einstein and Poincaré that Peter Galison has narrated in his latest masterpiece.¹ Many others of course could be cited, but the crucial point for me now is that what allowed historians, philosophers, humanists, and critics to trace *the* difference between modern and premodern, namely, the sudden and somewhat miraculous appearance of matters of fact, is now thrown into doubt with the merging of matters of fact into highly complex, historically situated, richly diverse matters

6. Marketplace; in Greek city-states, the place of open assembly.

7. All words that mean "thing" (*chose*, French; *res*, Latin) or "cause" (*causa*, Latin; *aitia*, Greek).

8. Polish-born American architect (b. 1946), who in 2003 won the competition to provide the master plan for rebuilding the World Trade Center site after the attacks of 9/11.

9. Serres proposed the word *quasi-object* to cover this intermediary phase between things and objects—a philosophical question much more interesting than the tired old one of the relation between *words* and *worlds*. On the new way animals appear to scientists and the debate it triggers, see *Primate Encounters: Models of Science, Gender, and Society*, ed. Shirley Strum and Linda Fedigan (Chicago, 2000), and Vinciane Despret, *Quand le loup habitera avec l'agneau* [*When the Wolf Lies Down with the Lamb*] (Paris, 2002) [Latour's note]. Lenoir (b. 1948), professor of the history and philosophy of science and technology, Fedigan (b. 1949), profes-

sor of primatology. Strum (b. 1947), a primatologist and professor of anthropology, who has collaborated with Latour. Stephen Glickman (b. 1933), professor of biology and director of the Berkeley Spotted Hyena Project.

1. See Peter Galison, *Einstein's Clocks, Poincaré's Maps: Empires of Time* (New York, 2003) [Latour's note]. In addition to the one study named—of the German-born American physicist Albert Einstein (1879–1955) and the French physicist Henri Poincaré (1854–1912), by the American historian of science Galison (b. 1955)—Latour alludes to studies of three other great scientists, Galileo Galilei (1564–1642; Italian), Robert Boyle (1627–1692; British), and Sir Isaac Newton (1642–1727; English): Biagioli's *Galileo, Courtier: The Practice of Science in the Culture of Absolutism* (1993), Shapin and Schaffer's *Leviathan and the Air-Pump: Hobbes, Boyle, and the Experimental Life* (1985), and Schaffer's "Glass Works: Newton's Prisms and the Uses of Experiment" (1989).

of concern. You can do one sort of thing with mugs, jugs, rocks, swans, cats, mats but not with Einstein's Patent Bureau electric coordination of clocks in Bern.² Things that gather cannot be thrown at you like objects.

And, yet, I know full well that this is not enough because, no matter what we do, when we try to reconnect scientific objects with their aura, their crown, their web of associations, when we accompany them back to their gathering, we always appear to *weaken* them, not to *strengthen* their claim to reality. I know, I know, we are acting with the best intentions in the world, we want to *add* reality to scientific objects, but, inevitably, through a sort of tragic bias, we seem always to be subtracting some bit from it. Like a clumsy waiter setting plates on a slanted table, every nice dish slides down and crashes on the ground. Why can we never discover the same stubbornness, the same solid realism by bringing out the obviously webby, "thingy" qualities of matters of concern? Why can't we ever counteract the claim of realists that only a fare of matters of fact can satisfy their appetite and that matters of concern are much like nouvelle cuisine—nice to look at but not fit for voracious appetites?

One reason is of course the position objects have been given in most social sciences, a position that is so ridiculously useless that if it is employed, even in a small way, for dealing with science, technology, religion, law, or literature it will make absolutely impossible any serious consideration of objectivity—I mean of "thinginess." Why is this so? Let me try to portray the critical landscape in its ordinary and routine state.³

We can summarize, I estimate, 90 percent of the contemporary critical scene by the following series of diagrams that fixate the object at only two positions, what I have called the *fact* position and the *fairy* position—*fact* and *fairy* are etymologically related but I won't develop this point here.⁴ The fairy position is very well known and is used over and over again by many social scientists who associate criticism with antifetishism. The role of the critic is then to show that what the naïve believers are doing with objects is simply a projection of their wishes onto a material entity that does nothing at all by itself. Here they have diverted to their petty use the prophetic fulfilment against idols "they have mouths and speak not, they have ears and hear not,"⁵ but they use this prophecy to decry the very objects of belief—gods, fashion, poetry, sport, desire, you name it—to which naïve believers cling with so much intensity.⁶ And then the courageous critic, who alone remains aware and attentive, who never sleeps, turns those false objects into fetishes⁷ that are supposed to be nothing but mere empty white screens

2. While working as a patent examiner in Bern (1902–08), Einstein evaluated new inventions to synchronize clocks, and the idea of synchronizing clocks was key to his revolutionary 1905 paper on special relativity.

3. I summarize here some of the results of my already long anthropological inquiry into the iconoclastic gesture, from Latour, *We Have Never Been Modern*, trans. Catherine Porter (Cambridge, Mass., 1993) to *Pandora's Hope: Essays on the Reality of Science Studies* (Cambridge, Mass., 1999) and of course *Iconoclasm* [Latour's note].

4. The English word *fact* derives from *facere*, a

Latin verb meaning "to do"; *fairy* is usually traced back to *fari*, a Latin verb meaning "to say."

5. Psalm 115.5 ("and" is usually translated "but," in both clauses).

6. See William Pietz, "The Problem of the Fetish, I," *Res* 9 (Spring 1985): 5–17, "The Problem of the Fetish, II: The Origin of the Fetish," *Res* 13 (Spring 1987): 23–45, and "The Problem of the Fetish, IIIa: Bosman's Guinea and the Enlightenment Theory of Fetishism," *Res* 16 (Autumn 1988): 105–23 [Latour's note].

7. Inanimate objects invested with magical, religious, or sexual qualities.

Critical Gesture: Move One

...that merely projects onto an indifferent matter your own power.

Figure 1

on which is projected the power of society, domination, whatever. The naïve believer has received a first salvo (figure 1).

But, wait, a second salvo is in the offing, and this time it comes from the fact pole. This time it is the poor bloke, again taken aback, whose behavior is now “explained” by the powerful effects of indisputable matters of fact: “You, ordinary fetishists, believe you are free but, in reality, you are acted on by forces you are not conscious of. Look at them, look, you blind idiot” (and here you insert whichever pet facts the social scientists fancy to work with, taking them from economic infrastructure, fields of discourse, social domination, race, class, and gender, maybe throwing in some neurobiology, evolutionary psychology,⁸ whatever, provided they act as indisputable facts whose origin, fabrication, mode of development are left unexamined) (figure 2).

Do you see now why it feels so good to be a critical mind? Why critique, this most ambiguous *pharmakon*,⁹ has become such a potent euphoric drug? You are always right! When naïve believers are clinging forcefully to their objects, claiming that they are made to do things because of their gods, their poetry, their cherished objects, you can turn all of those attachments into so many fetishes and humiliate all the believers by showing that it is nothing but their own projection, that you, yes you alone, can see. But as soon as naïve believers are thus inflated by some belief in their own importance, in their own projective capacity, you strike them by a second uppercut and humiliate them again, this time by showing that, whatever they think, their behavior is entirely determined by the action of powerful causalities coming from objective reality they don’t see, but that you, yes you, the never sleeping critic, alone can see. Isn’t this fabulous? Isn’t it really worth going to graduate school to study critique? “Enter here, you poor folks. After arduous years of

8. A field of study that attempts to investigate psychological traits, such as memory, perception, or language, in terms of evolutionary processes.

9. Drug, whether healing or harmful (Greek); an allusion to JACQUES DERRIDA’S “Plato’s Pharmacy,” from *Dissemination* (1972; see above).

Critical Gesture: Move Two

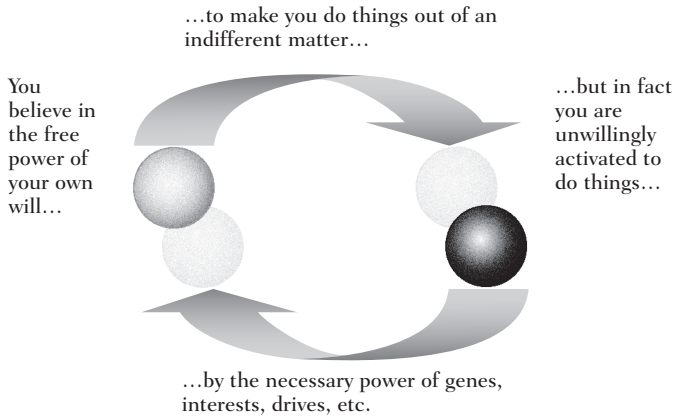

Figure 2

reading turgid prose, you will be always right, you will never be taken in any more; no one, no matter how powerful, will be able to accuse you of naïveté, that supreme sin, any longer? Better equipped than Zeus¹ himself you rule alone, striking from above with the salvo of antifetishism in one hand and the solid causality of objectivity in the other." The only loser is the naïve believer, the great unwashed, always caught off balance (figure 3).

Is it so surprising, after all, that with such positions given to the object, the humanities have lost the hearts of their fellow citizens, that they had to retreat year after year, entrenching themselves always further in the narrow barracks left to them by more and more stingy deans? The Zeus of Critique rules absolutely, to be sure, but over a desert.

One thing is clear, not one of us readers would like to see *our* own most cherished objects treated in this way. We would recoil in horror at the mere suggestion of having them socially explained, whether we deal in poetry or robots, stem cells, black holes, or impressionism, whether we are patriots, revolutionaries, or lawyers, whether we pray to God or put our hope in neuroscience. This is why, in my opinion, those of us who tried to portray sciences as matters of concern so often failed to convince; readers have confused the treatment we give of the former matters of fact with the terrible fate of objects processed through the hands of sociology, cultural studies, and so on. And I can't blame our readers. What social scientists do to our favorite objects is so horrific that certainly we don't want them to come any nearer. "Please," we exclaim, "don't touch them at all! Don't try to explain them!" Or we might suggest more politely: "Why don't you go further down the corridor to this other department? *They* have bad facts to account for; why don't you explain away those ones instead of ours?" And this is the reason why, when we want respect, solidity, obstinacy, robustness, we all prefer to stick to the language of matters of fact no matter its well-known defects.

1. In Greek mythology, the king of the gods, whose weapon is the thunderbolt.

Figure 3

The Critical Trick: Two Objects—Two Subjects

Figure 4

And yet this is not the only way because the cruel treatment objects undergo in the hands of what I'd like to call *critical barbarity* is rather easy to undo. If the critical barbarian appears so powerful, it is because the two mechanisms I have just sketched are never put together in one single diagram (figure 4). Antifetishists debunk objects they don't believe in by showing the productive and projective forces of people; then, without ever making the connection, they use objects they do believe in to

resort to the causalist or mechanist explanation and debunk conscious capacities of people whose behavior they don't approve of. The whole rather poor trick that allows critique to go on, although we would never confine our own valuables to their sordid pawnshop, is that there is never any *crossover between the two lists of objects* in the fact position and the fairy position. This is why you can be at once and without even sensing any contradiction (1) an antifetishist for everything you don't believe in—for the most part religion, popular culture, art, politics, and so on; (2) an unrepentant positivist for all the sciences you believe in—sociology, economics, conspiracy theory, genetics, evolutionary psychology, semiotics, just pick your preferred field of study; and (3) a perfectly healthy sturdy realist for what you really cherish—and of course it might be criticism itself, but also painting, bird-watching, Shakespeare, baboons, proteins, and so on.

If you think I am exaggerating in my somewhat dismal portrayal of the critical landscape, it is because we have had in effect almost no occasion so far to detect the total mismatch of the three contradictory repertoires—antifetishism, positivism, realism—because we carefully manage to apply them on *different* topics. We explain the objects we don't approve of by treating them as fetishes; we account for behaviors we don't like by discipline whose makeup we don't examine; and we concentrate our passionate interest on only those things that are for us worthwhile matters of concern. But of course such a cavalier attitude with such contradictory repertoires is not possible for those of us, in science studies, who have to deal with states of affairs that fit neither in the list of plausible fetishes—because everyone, including us, does believe very strongly in them—nor in the list of undisputable facts because we are witnessing their birth, their slow construction, their fascinating emergence as matters of concern. The metaphor of the Copernican revolution,² so tied to the destiny of critique, has always been for us, science students, simply moot. This is why, with more than a good dose of field chauvinism, I consider this tiny field so important; it is the little rock in the shoe that might render the routine patrol of the critical barbarians more and more painful.

The mistake would be to believe that we too have given a social explanation of scientific facts. No, even though it is true that at first we tried, like good critics trained in the good schools, to use the armaments handed to us by our betters and elders to crack open—one of their favorite expressions, meaning to destroy—religion, power, discourse, hegemony. But, fortunately (yes, fortunately!), one after the other, we witnessed that the black boxes³ of science remained closed and that it was rather the tools that lay in the dust of our workshop, disjointed and broken. Put simply, critique was useless against objects of some solidity. You can try the projective game on UFOs or exotic divinities, but don't try it on neurotransmitters, on gravitation, on

2. That is, a paradigm shift in how the world is viewed, similar to the change from the cosmology of the Greek astronomer Ptolemy (active 127–148 C.E.), according to which all heavenly bodies revolved around Earth, to that of the Polish astronomer Nicolaus Copernicus (1473–1543),

who argued that the sun is the center of our solar system.

3. In cybernetics, complex systems or devices represented only in terms of input and output, without concern for their internal processes.

Monte Carlo calculations.⁴ But critique is also useless when it begins to use the results of one science uncritically, be it sociology itself, or economics, or postimperialism, to account for the behavior of people. You can try to play this miserable game of explaining aggression by invoking the genetic makeup of violent people, but try to do that while dragging in, at the same time, the many controversies in genetics, including evolutionary theories in which geneticists find themselves so thoroughly embroiled.⁵

On both accounts, matters of concern never occupy the two positions left for them by critical barbarity. Objects are much too strong to be treated as fetishes and much too weak to be treated as indisputable causal explanations of some unconscious action. And this is not true of scientific states of affairs only; this is our great discovery, what made science studies commit such a felicitous mistake, such a *felix culpa*.⁶ Once you realize that scientific objects cannot be socially explained, then you realize too that the so-called weak objects, those that appear to be candidates for the accusation of antifetishism, were never mere projections on an empty screen either.⁷ They too act, they too do things, they too *make you do* things. It is not only the objects of science that resist, but all the others as well, those that were supposed to have been ground to dust by the powerful teeth of automated reflex-action deconstructors. To accuse something of being a fetish is the ultimate gratuitous, disrespectful, insane, and barbarous gesture.⁸

Is it not time for some progress? To the fact position, to the fairy position, why not add a third position, a *fair* position? Is it really asking too much from our collective intellectual life to devise, at least once a century, some *new* critical tools? Should we not be thoroughly humiliated to see that military personnel are more alert, more vigilant, more innovative than we, the pride of academia, the *crème de la crème*, who go on ceaselessly transforming the whole rest of the world into naïve believers, into fetishists, into hapless victims of domination, while at the same time turning them into the mere superficial consequences of powerful hidden causalities coming from infrastructures whose makeup is never interrogated? All the while being intimately certain that the things really close to our hearts would in no way fit any of those roles. Are you not all tired of those “explanations”? I am, I have always been, when I know, for instance, that the God to whom I pray, the works of art I cherish, the colon cancer I have been fighting, the piece of law I am studying, the desire I feel, indeed, the very book I am writing could in no way be accounted for by fetish or fact, nor by any combination of those two absurd positions.

To retrieve a realist attitude, it is not enough to dismantle critical weapons so uncritically built up by our predecessors as we would obsolete but still

4. A class of computational algorithms whose results are calculated by repeated random sampling; they are used in fields ranging from finance to medicine.

5. For a striking example, see Jean-Jacques Kupiec and Pierre Sonigo, *Ni Dieu ni gène: Pour une autre théorie de l'hérédité* [Neither God nor Gene: Toward Another Theory of Heredity] (Paris, 2000); see also Evelyn Fox-Keller, *The Century of the Gene* (Cambridge, Mass., 2000) [Latour's note].

6. Happy or lucky fault (Latin).

7. I have attempted to use this argument recently on two most difficult types of entities, Christian divinities (Latour, *Jubiler ou les tourments de la parole religieuse* [To Exalt or the Torments of Religious Words] [Paris, 2002]), and law (Latour, *La Fabrique du droit: Une Ethnographie du Conseil d'État* [The Fabric of Law: An Ethnography of the Council of State] [Paris, 2002]) [Latour's note].

8. The exhibition in Karlsruhe, Germany, *Iconoclasm*, was a sort of belated ritual in order to atone for so much wanton destruction [Latour's note].

dangerous atomic silos. If we had to dismantle social theory only, it would be a rather simple affair; like the Soviet empire, those big totalities have feet of clay. But the difficulty lies in the fact that they are built on top of a much older philosophy, so that whenever we try to replace matters of fact by matters of concern, we seem to lose something along the way. It is like trying to fill the mythical Danaid's barrel⁹—no matter what we put in it, the level of realism never increases. As long as we have not sealed the leaks, the realist attitude will always be split; matters of fact take the best part, and matters of concern are limited to a rich but essentially void or irrelevant *history*. More will always seem less. Although I wish to keep this paper short, I need to take a few more pages to deal with ways to overcome this bifurcation.

Alfred North Whitehead famously said, "The recourse to metaphysics is like throwing a match into a powder magazine. It blows up the whole arena."¹ I cannot avoid getting into it because I have talked so much about weapon systems, explosions, iconoclasm, and arenas. Of all the modern philosophers who tried to overcome matters of fact, Whitehead is the only one who, instead of taking the path of critique and directing his attention *away* from facts to what makes them possible as Kant did; or adding something to their bare bones as Husserl² did; or avoiding the fate of their domination, their *Gestell*,³ as much as possible as Heidegger did; tried to get *closer* to them or, more exactly, to see through them the reality that requested a new respectful realist attitude. No one is less a critic than Whitehead, in all the meanings of the word, and it's amusing to notice that the only pique he ever directed against someone else was against the other W., the one considered, wrongly in my view, as the greatest philosopher of the twentieth century, not W. as in Bush but W. as in Wittgenstein.⁴

What set Whitehead completely apart and straight on our path is that he considered matters of fact to be a very poor rendering of what is given in experience and something that muddles entirely the question, What is there? with the question, How do we know it? as Isabelle Stengers has shown recently in a major book about Whitehead's philosophy.⁵ Those who now mock his philosophy don't understand that they have resigned themselves to what he called the "bifurcation of nature." They have entirely forgotten what it would require if we were to take this incredible sentence seriously: "For natural philosophy everything perceived is in nature. We may not pick up and choose. For us the red glow of the sunset should be as much part of nature as are the molecules and electric waves by which men of science would explain the phenomenon" (CN, pp. 28–29).

9. That is, an impossible task. In Greek mythology, all but 1 of the 50 Danaids (daughters of Danaus) killed their husbands on their wedding night; according to the later poets, their eternal punishment in the underworld is to carry water to a leaky jar that they can never fill.

1. Alfred North Whitehead, *The Concept of Nature* (Cambridge, 1920), p. 29; hereafter abbreviated CN [Latour's note]. Whitehead (1861–1947), English mathematician and philosopher.

2. Edmund Husserl (1859–1938), German philosopher and founder of phenomenology.

3. A technical term (roughly, "enframing"; German) used by Heidegger to describe the essence

of technology as a peculiarly dehumanizing and dangerous orientation to the world.

4. Ludwig Wittgenstein (1889–1951), Austrian-born British philosopher who was highly influential in both philosophy of mind and philosophy of language.

5. See Isabelle Stengers, *Penser avec Whitehead: Une Libre et sauvage creation de concepts* [Thinking with Whitehead: A Free and Wild Creation of Concepts] (Paris, 2002), a book which has the great advantage of taking seriously Whitehead's science as well as his theory of God [Latour's note]. Stengers (b. 1949), Belgian philosopher of science.

All subsequent philosophies have done exactly the opposite: they have picked and chosen, and, worse, they have remained content with that limited choice. The solution to this bifurcation is not, as phenomenologists⁶ would have it, adding to the boring electric waves the rich lived world of the glowing sun. This would simply make the bifurcation greater. The solution or, rather, the adventure, according to Whitehead, is to dig much further into the realist attitude and to realize that matters of fact are totally implausible, unrealistic, unjustified definitions of what it is to deal with things:

Thus matter represents the refusal to think away spatial and temporal characteristics and to arrive at the bare concept of an individual entity. It is this refusal which has caused the muddle of *importing the mere procedure of thought into the fact of nature*. The entity, bared of all characteristics except those of space and time, has acquired a physical status as the ultimate texture of nature; so that the course of nature is conceived as being merely the fortunes of matter in its adventure through space. [CN, p. 20]

It is not the case that there would exist solid matters of fact and that the next step would be for us to decide whether they will be used to explain something. It is not the case either that the other solution is to attack, criticize, expose, historicize those matters of fact, to show that they are made up, interpreted, flexible. It is not the case that we should rather flee out of them into the mind or add to them symbolic or cultural dimensions; the question is that matters of fact are a poor *proxy* of experience and of experimentation and, I would add, a confusing bundle of polemics, of epistemology, of modernist politics that can in no way claim to represent what is requested by a realist attitude.⁷

Whitehead is not an author known for keeping the reader wide awake, but I want to indicate at least the *direction* of the new critical attitude with which I wish to replace the tired routines of most social theories.

The solution lies, it seems to me, in this promising word *gathering* that Heidegger had introduced to account for the “thingness of the thing.” Now, I know very well that Heidegger and Whitehead would have nothing to say to one another, and, yet, the word the latter used in *Process and Reality*⁸ to describe “actual occasions,” his word for my matters of concern, is the word *societies*. It is also, by the way, the word used by Gabriel Tarde, the real founder of French sociology, to describe all sorts of entities. It is close enough to the word *association* that I have used all along to describe the objects of science and technology. Andrew Pickering would use the words “mangle of practice.”⁹ Whatever the words, what is presented here is an entirely

6. Philosophers who practice phenomenology, a philosophical method restricted to analyzing the intellectual processes of which we are introspectively aware.

7. That matters of fact represent now a rather rare and complicated historical rendering of experience has been made powerfully clear by many writers; see, for telling segments of this history, Christian Licoppe, *La Formation de la pratique scientifique: Le Discourse de l'expérience en France et en Angleterre (1630–1820)* [The Formation of Scientific Practice: The Discourse of Experiment in France and England] (Paris, 1996); Mary Poovey, *A History of the Modern Fact: Problems of*

Knowledge in the Sciences of Wealth and Society (Chicago, 1999); Lorraine Daston and Katherine Park, *Wonders and the Order of Nature, 1150–1750* (New York, 1998); and *Picturing Science, Producing Art*, ed. Catherine A. Jones, Galison, and Amy Slaton (New York, 1998) [Latour's note].

8. A work published in 1929, in which Whitehead argues for the primacy of process in constituting objects (reality).

9. See Andrew Pickering, *The Mangle of Practice: Time, Agency, and Science* (Chicago, 1995) [Latour's note]. Pickering (b. ca. 1950), British sociologist and historian of science.

different attitude than the critical one, not a flight into the conditions of possibility of a given matter of fact, not the addition of something more human than the inhumane matters of fact would have missed, but, rather, a multifarious inquiry launched with the tools of anthropology, philosophy, metaphysics, history, sociology to detect *how many participants* are gathered in a *thing* to make it exist and to maintain its existence. Objects are simply a gathering that has failed—a fact that has not been assembled according to due process.¹ The stubbornness of matters of fact in the usual scenography of the rock-kicking objector—“It is there whether you like it or not”—is much like the stubbornness of political demonstrators: “the U.S., love it or leave it,” that is, a very poor substitute for any sort of vibrant, articulate, sturdy, decent, long-term existence.² A gathering, that is, a thing, an issue, inside a Thing, an arena, can be very sturdy, too, on the condition that the number of its participants, its ingredients, nonhumans as well as humans, not be limited in advance.³ It is entirely wrong to divide the collective, as I call it, into the sturdy matters of fact, on the one hand, and the dispensable crowds, on the other. Archimedes⁴ spoke for a whole tradition when he exclaimed: “Give me one fixed point and I will move the Earth,” but am I not speaking for another, much less prestigious but maybe as respectable tradition, if I exclaim in turn “Give me one matter of concern and I will show you the whole earth and heavens that have to be gathered to hold it firmly in place”? For me it makes no sense to reserve the realist vocabulary for the first one only. The critic is not the one who debunks, but the one who assembles. The critic is not the one who lifts the rugs from under the feet of the naïve believers, but the one who offers the participants arenas in which to gather. The critic is not the one who alternates haphazardly between antifetishism and positivism like the drunk iconoclast drawn by Goya,⁵ but the one for whom, if something is constructed, then it means it is fragile and thus in great need of care and caution. I am aware that to get at the heart of this argument one would have to renew also what it means to be a constructivist, but I have said enough to indicate the direction of critique, not *away* but *toward* the gathering, the Thing.⁶ Not westward, but, so to speak, eastward.⁷

The practical problem we face, if we try to go that new route, is to associate the word *criticism* with a whole set of new positive metaphors, gestures, attitudes, knee-jerk reactions, habits of thoughts. To begin with this new habit forming, I'd like to extract another definition of critique from the most unlikely source, namely, Alan Turing's original paper on thinking

1. See Latour, *Politics of Nature: How to Bridge the Sciences into Democracy*, trans. Porter (Cambridge, Mass., 2004) [Latour's note].

2. See the marvelously funny rendering of the realist gesture in Malcolm Ashmore, Derek Edwards, and Jonathan Potter, “The Bottom Line: The Rhetoric of Reality Demonstrations,” *Configurations* 2 (Winter 1994): 1–14 [Latour's note].

3. This is the challenge of a new exhibition I am curating with Peter Weibel in Karlsruhe and that is supposed to take place in 2004 under the provisional title “Making Things Public.” This exhibition will explore what *Iconoclasm* had simply pointed at, namely, beyond the image wars [Latour's note]. See Latour and Weibel, eds., *Making Things Public: Atmospheres of Democracy* (2005).

4. Greek mathematician and inventor (ca. 287–212 B.C.E.); the quotation is from Simplicius's commentary (6th c. C.E.) on ARISTOTLE's *Physics*.

5. Francisco Goya (1746–1828), Spanish painter.

6. This paper is a companion of another one: Latour, “The Promises of Constructivism,” in *Chasing Technoscience: Matrix for Materiality*, ed. Don Ihde and Evan Selinger (Bloomington, Ind., 2003), pp. 27–46 [Latour's note].

7. This is why, although I share all the worries of Thomas de Zengotita, “Common Ground: Finding Our Way Back to the Enlightenment,” *Harpers* 306 (Jan. 2003): 33–45, I think he is entirely mistaken in the *direction* of the move he proposes back to the future; to go back to the “natural” attitude is a sign of nostalgia [Latour's note].

machines.⁸ I have a good reason for that: here is the typical paper about formalism, here is the origin of one of the icons—to use a cliché of antifetishism—of the contemporary age, namely, the computer, and yet, if you read this paper, it is so baroque, so kitsch, it assembles such an astounding number of metaphors, beings, hypotheses, allusions, that there is no chance that it would be accepted nowadays by any journal. Even *Social Text* would reject it out of hand as another hoax!⁹ “Not again,” they would certainly say, “once bitten, twice shy.” Who would take a paper seriously that states somewhere after having spoken of Muslim women, punishment of boys, extra-sensory perception: “In attempting to construct such machines we should not be irreverently usurping [God’s] power of creating souls, any more than we are in the procreation of children: rather we are, in either case, instruments of His will providing mansions for the souls that He creates” (“CM,” p. 443).

Lots of gods, always in machines.¹ Remember how Bush eulogized the crew of the *Columbia* for reaching home in heaven, if not home on earth? Here Turing too cannot avoid mentioning God’s creative power when talking of this most mastered machine, the computer that he has invented. That’s precisely his point. The computer is in for many surprises; you get out of it much more than you put into it. In the most dramatic way, Turing’s paper demonstrates, once again, that all objects are born things, all matters of fact require, in order to exist, a bewildering variety of matters of concern.² The surprising result is that we don’t master what we, ourselves, have fabricated, the object of this definition of critique.³

Let us return for a moment to Lady Lovelace’s⁴ objection, which stated that the machine can only do what we tell it to do. One could say that a man can “inject” an idea into the machine, and that it will respond to a certain extent and then drop into quiescence, like a piano string

8. See A. M. Turing, “Computing Machinery and Intelligence,” *Mind* 59 (Oct. 1950): 433–60; hereafter abbreviated “CM.” See also what Powers in *Galatea 2.2* (New York, 1995) did with this paper; this is critique in the most generous sense of the word. For the context of this paper, see Andrew Hodges, *Alan Turing: The Enigma* (New York, 1983) [Latour’s note]. Turing (1912–1954), English mathematician, cryptographer, and pioneer of computer theory.

9. In 1996 the physicist Alan Sokal submitted to the cultural studies journal *Social Text* an article that parodied postmodern science critique; after it was published, he announced the hoax, designed to prove that such analyses were nonsense.

1. The phrase evokes both the *deus ex machina* of classical drama—a god who unexpectedly appears and makes possible a resolution—and “the ghost in the machine,” the dismissive phrase applied in *The Concept of Mind* (1949) by the English philosopher Gilbert Ryle to the mind-body dualism proposed by René Descartes (1596–1650).

2. A nonformalist definition of formalism has been proposed by Brian Rotman, *Ad Infinitum: The Ghost in Turing’s Machine: Taking God out of Mathematics and Putting the Body Back in* (Stanford, Calif., 1993) [Latour’s note].

3. Since Turing can be taken as the first and best programmer, those who believe in defining machines by inputs and outputs should meditate his confession:

Machines take me by surprise with great frequency. This is largely because I do not do sufficient calculation to decide what to expect them to do, or rather because, although I do a calculation, I do it in a hurried, slipshod fashion, taking risks. Perhaps I say to myself, “I suppose the voltage here ought to be the same as there: anyway let’s assume it is.” Naturally I am often wrong, and the result is a surprise for me for by the time the experiment is done these assumptions have been forgotten. These admissions lay me open to lectures on the subject of my vicious ways, but do not throw any doubt on my credibility when I testify to the surprises I experience. (“CM,” pp. 450–51)

On this nonformalist definition of computers, see Brian Cantwell Smith, *On the Origin of Objects* (Cambridge, Mass., 1997) [Latour’s note].

4. Augusta Ada King, countess of Lovelace (1815–1852), an English mathematician and pioneer of early computers, who commented that Charles Babbage’s “Analytical Engine has no pretension whatever to originate anything.”

struck by a hammer. Another simile would be an atomic pile of less than critical size: an injected idea is to correspond to a neutron entering the pile from without. Each such neutron will cause a certain disturbance which eventually dies away. If, however, the size of the pile is sufficiently increased, the disturbance caused by such an incoming neutron will very likely go on and on increasing until the whole pile is destroyed. Is there a corresponding phenomenon for minds, and is there one for machines? There does seem to be one for the human mind. The majority of them seem to be "sub-critical," *i.e.* to correspond in this analogy to piles of sub-critical size. An idea presented to such a mind will on average give rise to less than one idea in reply. A smallish proportion are supercritical. An idea presented to such a mind may give rise to a whole "theory" consisting of secondary, tertiary and more remote ideas. Animals' minds seem to be very definitely sub-critical. Adhering to this analogy we ask, "Can a machine be made to be super-critical?" ["CM," p. 454]

We all know subcritical minds, that's for sure! What would critique do if it could be associated with *more*, not with *less*, with *multiplication*, not *subtraction*. Critical theory died away long ago; can we become critical again, in the sense here offered by Turing? That is, generating more ideas than we have received, inheriting from a prestigious critical tradition but not letting it die away, or "dropping into quiescence" like a piano no longer struck. This would require that all entities, including computers, cease to be objects defined simply by their inputs and outputs and become again things, mediating, assembling, gathering many more folds than the "united four." If this were possible then we could let the critics come ever closer to the matters of concern we cherish, and then at last we could tell them: "Yes, please, touch them, explain them, deploy them." Then we would have gone for good beyond iconoclasm.

2003, 2004

MARTHA C. NUSSBAUM

b. 1947

Martha C. Nussbaum takes philosophy out of the academic realm and applies it to public issues of our day. While many contemporary philosophers focus on relatively technical issues of language or cognition, Nussbaum explores the therapeutic good that philosophy brings society. In pursuit of this wider aim, she draws on several other fields, such as law, public policy, international development, and, perhaps most surprisingly, literature. In our selections from *Cultivating Humanity: A Classical Defense of Reform in Liberal Education* (1997), Nussbaum argues that American higher education should produce "citizens of the world," and that literature plays a key role in achieving that goal because of its special efficacy in helping us to understand others.

Born in 1947, Nussbaum grew up in the suburbs of Philadelphia, where her father was an attorney. After attending Wellesley College, she completed her B.A.

at New York University in 1969. She did graduate work in classics at Harvard University, earning her M.A. in 1971; she was the first woman to receive a prestigious junior fellowship at Harvard's Society of Fellows, and completed her Ph.D. in 1975. Nussbaum then taught classics and philosophy at Harvard from 1975 to 1983; in 1984 she joined the faculty of Brown University and held a prestigious University Professorship from 1988 to 1995. In addition, she was research adviser to the World Institute for Development Economics Research (WIDER) in Helsinki, a division of the United Nations University, from 1987 to 1993. She moved to the University of Chicago in 1995, where she is the Ernst Freund Distinguished Service Professor of Law and Ethics.

Many contemporary critics have espoused poststructuralist theory, but Nussbaum represents a different tradition of thought, grounding her work in moral philosophy. Touchstones for her are the ancient Stoic philosophers, such as the Roman emperor Marcus Aurelius (121–180 C.E.), who reflected on how to live deliberately and honorably. One of Nussbaum's concerns has been the emotions, particularly their relation to ethics and politics; rather than dismissing them as irrational or irrelevant to judgment, as many thinkers have, she shows their role in evaluation and ethical judgment. For instance, justified anger at inequality, or compassion for those in poverty, works to spur needed social change. Another concern has been the philosophical import of literature, as she has paid particular attention to its capacity to represent emotion and to portray good and bad moral choices.

Much of Nussbaum's work deals with ethics, emotion, and literature, but through the 1990s her work expanded to consider politics more explicitly. Her participation in WIDER and travels to India, where she witnessed the inequalities experienced by many of the women of the world, affected her powerfully; as she remarks in her 2000 book *Women and Human Development*, these influences "transformed my work, making me aware of urgent problems and convincing me that philosophy had a contribution to make toward their solution." In collaboration with the Nobel Prize-winning economist Amartya Sen, she has promoted "the capabilities approach," which redefines social good as assessed not by measuring wealth or a country's per capita gross national product, as many economists and policy makers do, but by determining what capabilities people can exercise and how likely they are to flourish. This new metric entails attention to literacy, health care, and freedom of religion, which she sees as minimal requirements for a decent society.

In foregrounding traditional humanist concerns—in her emphasis on universal human capabilities, as well as in her defense of the tradition of literature and liberal learning—Nussbaum departs from much poststructuralist theory, which espouses antihumanism and stresses the ways in which abstract structures, such as language or ideology, determine human life. Nussbaum also asserts normative standards, believing, for instance, that all people should have health care and "liberty of conscience" (freedom of religion), at a time when much theory rejects normative standards and universal ideals to embrace difference.

A central element in creating a better society for Nussbaum, as it was for PLATO in his *Republic*, is the education of citizens; in our selections from *Cultivating Humanity*, Nussbaum contends that an important purpose of higher education is not just job training but to train citizens of the world who are sensitive to social justice. She believes that one way to achieve such sensitivity is through exposure to literature, especially drama and fiction. Literature makes us better citizens because it helps train us to understand others. Rather than being simply a private pursuit, as is often thought, "narrative imagination is an essential preparation for moral interaction." It makes us more "capable of compassion," which "involves the recognition that another person, in some ways similar to [ourselves], has suffered some significant pain or misfortune." Thus one might vote for universal health care not only out of self-interest but also out of empathy for those who have the misfortune of suffering ill health and lacking insurance.

In the background of Nussbaum's argument are the "culture wars" and debates over the literary canon in the United States during the late 1980s and the 1990s, when conservatives charged that higher education had become politicized and, led by liberals, had abandoned the classics. Nussbaum counters by not only attacking their assumptions about the goal of education but also by grounding her argument that education *should* be political and cosmopolitan in the very tradition that they esteem—the literature and philosophy of the ancient Greeks and Romans. Nussbaum also criticizes the identity politics favored by liberals, asserting that the goals of education are universal. She further diverges from contemporary theorists in refusing to join the widespread critique, inspired by MICHEL FOUCAULT and others, of the Enlightenment and its stress on reason; instead, she strongly defends rational argument and its key role in a deliberative democracy.

One other way that Nussbaum differs from many contemporary theorists is in the accessibility of her writing. She employs philosophical concepts without jargon, determined to convey to a general readership how theory contributes to making a good society. One of her most impassioned critiques, published in the *New Republic* in 1999, was of JUDITH BUTLER, whose writing she finds esoteric and whose arguments for subversion without a vision of normative justice she finds irresponsible, contributing to counterproductive social goals. Nussbaum, in turn, has been criticized from both the right and the left. From the right, she has been attacked for espousing multiculturalism under cover of the classics. From the left, she has been criticized for holding a traditional and unoriginal view of education, as well as for defending normative values. Because Nussbaum advocates cosmopolitanism, the postcolonial theorist GAYATRI CHAKRAVORTY SPIVAK has charged her with carrying out an imperialist, "civilizing mission" directed at other cultures. The pragmatist philosopher Richard Rorty, who joined Nussbaum in calling for the public use of philosophy, nevertheless has criticized her argumentative stance, remarking that "her tone sometimes suggests that to differ from her is to imperil the social bond." Through all of these debates, Nussbaum has been tireless in defending moral values and capabilities, and in insisting on the public role of philosophy and criticism.

Cultivating Humanity: A Classical Defense of Reform in Liberal Education

Keywords: The Canon/Tradition, Classical Theory, Ethics, Institutional Studies, The Novel

*From Cultivating Humanity: A Classical Defense
of Reform in Liberal Education*

From Introduction. The Old Education and the Think-Academy

* * *

Our campuses are producing citizens, and this means that we must ask what a good citizen of the present day should be and should know. The present-day world is inescapably multicultural and multinational. Many of our most pressing problems require for their intelligent, cooperative solution a dialogue that brings together people from many different national and cultural and religious backgrounds. Even those issues that seem closest to home—issues, for example, about the structure of the family, the regulation of sexuality, the future of children—need to be approached with a broad historical and cross-cultural understanding. A graduate of a U.S. university or college ought to be the sort of citizen who can become an intelligent participant in debates involving these differences, whether professionally or simply as a voter, a juror, a friend.

When we ask about the relationship of a liberal education to citizenship, we are asking a question with a long history in the Western philosophical tradition. We are drawing on Socrates' concept of "the examined life," on Aristotle's notions of reflective citizenship, and above all on Greek and Roman Stoic notions¹ of an education that is "liberal" in that it liberates the mind from the bondage of habit and custom, producing people who can function with sensitivity and alertness as citizens of the whole world. This is what Seneca² means by the cultivation of humanity. The idea of the well-educated person as a "citizen of the world" has had a formative influence on Western thought about education: on David Hume and Adam Smith in the Scottish/English tradition, on Immanuel Kant in the continental Enlightenment tradition, on Thomas Paine³ and other Founding Fathers in the American tradition. Understanding the classical roots of these ideas helps us to recover powerful arguments that have exercised a formative influence on our own democracy.

Our democracy, indeed, has based its institutions of higher learning on these ideals to a degree unparalleled in the world. In most nations students enter a university to pursue a single subject, and that is all they study. The idea of "liberal education"—a higher education that is a cultivation of the whole human being for the functions of citizenship and life generally—has been taken up most fully in the United States. This noble ideal, however, has not yet been fully realized in our colleges and universities. Some, while using the words "liberal education," subordinate the cultivation of the whole person to technical and vocational education. Even where education is ostensibly "liberal," it may not contain all that a citizen really needs to know. We should ask, then, how well our nation is really fulfilling a goal that it has chosen to make its own. What does the "cultivation of humanity" require?

The classical ideal of the "world citizen" can be understood in two ways, and "cultivation of humanity" along with it. The sterner, more exigent version is the ideal of a citizen whose *primary* loyalty is to human beings the world over, and whose national, local, and varied group loyalties are considered distinctly secondary. Its more relaxed version allows a variety of different views about what our priorities should be but says that, however we order our varied loyalties, we should still be sure that we recognize the worth of human life wherever it occurs and see ourselves as bound by common human abilities and problems to people who lie at a great distance from us. These two different versions have existed at least since ancient Rome, when statesman and philosopher Cicero⁴ softened the stern demands of Greek Stoicism for a Roman audience. Although I do sympathize with the sterner thesis, it is the more relaxed and inclusive thesis that will concern me here. What, then, does this inclusive conception ask us to learn?

1. Ideas associated with followers of the Greek philosopher Zeno (335–263 B.C.E.); later, in a passage not included here, Nussbaum observes that the Stoics were interested in "sympathetic perception" and "asked the world citizen to gain an empathic understanding of people who are different." Socrates (469–399 B.C.E.), Greek philosopher known for relentless questioning, as depicted in the dialogues of his pupil PLATO (ca. 427–ca. 347 B.C.E.). ARISTOTLE (384–322 B.C.E.), Greek philosopher who considers citizenship especially in his *Nicomachean Ethics* and *Politics*

(both ca. 330 B.C.E.).

2. Roman Stoic philosopher and dramatist (4 B.C.E.–65 C.E.).

3. British-born American political theorist and polemicist for American independence (1737–1809). HUME (1711–1776), Scottish philosopher and historian. SMITH (1723–1790), Scottish moral philosopher and founding figure in economics. KANT (1724–1804), German idealist philosopher.

4. The great Roman orator (106–43 B.C.E.).

Three capacities, above all, are essential to the cultivation of humanity in today's world. First is the capacity for critical examination of oneself and one's traditions—for living what, following Socrates, we may call “the examined life.” This means a life that accepts no belief as authoritative simply because it has been handed down by tradition or become familiar through habit, a life that questions all beliefs and accepts only those that survive reason's demand for consistency and for justification. Training this capacity requires developing the capacity to reason logically, to test what one reads or says for consistency of reasoning, correctness of fact, and accuracy of judgment. Testing of this sort frequently produces challenges to tradition, as Socrates knew well when he defended himself against the charge of “corrupting the young.”⁵ But he defended his activity on the grounds that democracy needs citizens who can think for themselves rather than simply deferring to authority, who can reason together about their choices rather than just trading claims and counterclaims. Like a gadfly on the back of a noble but sluggish horse, he said, he was waking democracy up so that it could conduct its business in a more reflective and reasonable way. Our democracy, like ancient Athens, is prone to hasty and sloppy reasoning, and to the substitution of invective for real deliberation. We need Socratic teaching to fulfill the promise of democratic citizenship.

Citizens who cultivate their humanity need, further, an ability to see themselves not simply as citizens of some local region or group but also, and above all, as human beings bound to all other human beings by ties of recognition and concern. The world around us is inescapably international. Issues from business to agriculture, from human rights to the relief of famine, call our imaginations to venture beyond narrow group loyalties and to consider the reality of distant lives. We very easily think of ourselves in group terms—as Americans first and foremost, as human beings second—or, even more narrowly, as Italian-Americans, or heterosexuals, or African-Americans first, Americans second, and human beings third if at all. We neglect needs and capacities that link us to fellow citizens who live at a distance or who look different from ourselves. This means that we are unaware of many prospects of communication and fellowship with them, and also of responsibilities we may have to them. We also sometimes err by neglect of differences, assuming that lives in distant places must be like ours and lacking curiosity about what they are really like. Cultivating our humanity in a complex, interlocking world involves understanding the ways in which common needs and aims are differently realized in different circumstances. This requires a great deal of knowledge that American college students rarely got in previous eras, knowledge of non-Western cultures, of minorities within their own, of differences of gender and sexuality.

But citizens cannot think well on the basis of factual knowledge alone. The third ability of the citizen, closely related to the first two, can be called the narrative imagination. This means the ability to think what it might be like to be in the shoes of a person different from oneself, to be an intelligent reader of that person's story, and to understand the emotions and wishes and desires that someone so placed might have. The narrative imagination is not uncritical, for we always bring ourselves and our own judgments to

5. Tried by an Athenian jury, Socrates was condemned to death. During his trial, recounted in Plato's *Apology* (ca. 395 B.C.E.), he declared that

“the unexamined life is not worth living” (38a); for his description of himself as a gadfly, see 30e.

the encounter with another; and when we identify with a character in a novel, or with a distant person whose life story we imagine, we inevitably will not merely identify; we will also judge that story in the light of our own goals and aspirations. But the first step of understanding the world from the point of view of the other is essential to any responsible act of judgment, since we do not know what we are judging until we see the meaning of an action as the person intends it, the meaning of a speech as it expresses something of importance in the context of that person's history and social world. The third ability our students should attain is the ability to decipher such meanings through the use of the imagination.

Intelligent citizenship needs more than these three abilities. Scientific understanding is also of the first importance. My excuse for not dwelling on this aspect of a liberal education is that others are far better placed to describe it than I. The same is true of economics, which I shall approach only in its relationship to philosophy and political theory. I focus on the parts of a liberal education that have by now become associated with "the humanities" and to some extent "the social sciences": above all, then, on philosophy, political science, religious studies, history, anthropology, sociology, literature, art, music, and studies of language and culture. Nor do I describe everything in these areas that a good citizen should know. I focus on areas of current urgency and controversy. (Even within the areas of controversy I am selective, allowing the example of African-American studies to stand for more complex debates about ethnic studies generally. Issues of poverty and social class, which I have treated elsewhere, are treated selectively, within chapters organized along other lines.)

It was through ancient Greek and Roman arguments that I came upon these ideas in my own history. The Greek and Roman versions of these ideas are immensely valuable to us as we pursue these debates today, and I shall focus on that contribution. But ideas of this sort have many sources in many traditions. Closely related notions can be found in India, in Africa, in Latin America, and in China. One of the errors that a diverse education can dispel is the false belief that one's own tradition is the only one that is capable of self-criticism or universal aspiration.

* * *

From *Chapter 3. The Narrative Imagination*

[There] are many forms of thought and expression within the range of human communications from which the voter derives the knowledge, intelligence, sensitivity to human values: the capacity for sane and objective judgement which, so far as possible, a ballot should express. [The] people do need novels and dramas and paintings and poems, "because they will be called upon to vote."

—Alexander Meiklejohn,⁶
"The First Amendment Is an Absolute"

The world citizen needs knowledge of history and social fact. We have begun to see how those requirements can be met by curricula of different

6. British-born American philosopher (1872–1964), who as a university president became an influential advocate of a liberal education. The article quoted was published in 1961.

types. But people who know many facts about lives other than their own are still not fully equipped for citizenship. As Heraclitus⁷ said 2,500 years ago, “Learning about many things does not produce understanding.” Marcus Aurelius⁸ insisted that to become world citizens we must not simply amass knowledge; we must also cultivate in ourselves a capacity for sympathetic imagination that will enable us to comprehend the motives and choices of people different from ourselves, seeing them not as forbiddingly alien and other, but as sharing many problems and possibilities with us. Differences of religion, gender, race, class, and national origin make the task of understanding harder, since these differences shape not only the practical choices people face but also their “insides,” their desires, thoughts, and ways of looking at the world.

Here the arts play a vital role, cultivating powers of imagination that are essential to citizenship. As Alexander Meiklejohn, the distinguished constitutional scholar and theorist of “deliberative democracy,” put it fifty years ago, arguing against an opponent who had denied the political relevance of art, the people of the United States need the arts precisely because they will be called upon to vote. That is not the only reason why the arts are important, but it is one significant reason. The arts cultivate capacities of judgment and sensitivity that can and should be expressed in the choices a citizen makes. To some extent this is true of all the arts. Music, dance, painting and sculpture, architecture—all have a role in shaping our understanding of the people around us. But in a curriculum for world citizenship, literature, with its ability to represent the specific circumstances and problems of people of many different sorts, makes an especially rich contribution. As Aristotle said in chapter 9 of *The Poetics*, literature shows us “not something that has happened, but the kind of thing that might happen.”⁹ This knowledge of possibilities is an especially valuable resource in the political life.

To begin to understand how literature can develop a citizen’s imagination, let us consider two literary works widely separated in place and time. In both cases, the literary work refers to its own distinctive capacity to promote adequate civic perception.

Sophocles’¹ *Philoctetes*, produced in 409 B.C., during a crisis in the Athenian democracy, concerns the proper treatment of a citizen who has become an outcast, crippled by a disfiguring illness. On his way to Troy to fight with the Greeks in the Trojan War, Philoctetes stepped by mistake into a sacred shrine. His foot, bitten by the serpent who guards the shrine, began to ooze with an ulcerous sore, and his cries of pain disrupted the army’s religious festivals. So the commanders abandoned him on the deserted island of Lemnos, with no companions and no resources but his bow and arrows. Ten years later, learning that they cannot win the war without his magical bow, they return, determined to ensnare him by a series of lies into participating in the war. The commander Odysseus shows no interest in Philoctetes

7. Greek philosopher (active ca. 500 B.C.E.), best known for his insistence that the only permanent reality is change; Nussbaum quotes his fragment 40.

8. Roman emperor and philosopher (121–180 C.E.; emperor, 161–180); his *Meditations* is an

influential expression of Stoic philosophy, emphasizing the ideal of the wise and virtuous man in a society in which all share in a common nature.

9. For Aristotle’s *Poetics*, see above.

1. Greek tragedian (ca. 496–406 B.C.E.).

as a person; he speaks of him only as a tool of public ends. The chorus of common soldiers has a different response (lines 169–176):

For my part, I have compassion for him. Think how
with no human company or care,
no sight of a friendly face,
wretched, always alone,
he wastes away with that savage disease,
with no way of meeting his daily needs.
How, how in the world, does the poor man survive?

Unlike their leader, the men of the chorus vividly and sympathetically imagine the life of a man whom they have never seen, picturing his loneliness, his pain, his struggle for survival. In the process they stand in for, and allude to, the imaginative work of the audience, who are invited by the play as a whole to imagine the sort of needy, homeless life to which prosperous people rarely direct their attention. The drama as a whole, then, cultivates the type of sympathetic vision of which its characters speak. In the play, this kind of vivid imagining prompts a political decision against using Philoctetes as a means, and the audience is led to believe this to be a politically and morally valuable result. In this way, by showing the public benefits of the very sort of sympathy it is currently awakening in its spectators, the drama commends its own resources as valuable for the formation of decent citizenship and informed public choice. Although the good of the whole should not be neglected, that good will not be well served if human beings are seen simply as instruments of one another's purposes.

Ralph Ellison's² *Invisible Man* (1952) develops this tradition of reflection about our failures of perception and recognition. Its hero describes himself as "invisible" because throughout the novel he is seen by those he encounters as a vehicle for various race-inflected stereotypes: the poor, humiliated black boy who snatches like an animal at the coins that lie on an electrified mat; the good student trusted to chauffeur a wealthy patron; the listening ear to whom this same patron unburdens his guilt and anxiety; the rabble-rousing activist who energizes an urban revolutionary movement; the violent rapist who gratifies the sexual imagination of a woman brought up on racially charged sexual images—always he is cast in a drama of someone else's making, "never more loved and appreciated" than when he plays his assigned role. The "others," meanwhile, are all "lost in a dream world"—in which they see only what their own minds have created, never the reality of the person who stands before them. "You go along for years knowing something is wrong, then suddenly you discover that you're as transparent as air." Invisibility is "a matter of the construction of their *inner* eyes, those eyes with which they look through their physical eyes upon reality."³

Ellison's grotesque, surreal world is very unlike the classical world of Sophocles' play. Its concerns, however, are closely linked: social stratification and injustice, manipulation and use, and above all invisibility and the condition of being transparent to and for one's fellow citizens. Like Sophocles'

2. African American novelist (1914–1994); *Invisible Man*, the only novel he published in his lifetime, is widely recognized as a modern classic.

3. Ralph Ellison, *Invisible Man* (New York: Random House, 1992), pp. 563, 566, 3 [Nussbaum's note].

drama, it explores and savagely excoriates these refusals to see. Like that drama, it invites its readers to know and see more than the unseeing characters. "Being invisible and without substance, a disembodied voice, as it were, what else could I do? What else but try to tell you what was really happening when your eyes were looking through?"⁴ In this way, it works upon the inner eyes of the very readers whose moral failures it castigates, although it refuses the easy notion that mutual visibility can be achieved in one heartfelt leap of brotherhood.

Ellison explicitly linked the novelist's art to the possibility of democracy. By representing both visibility and its evasions, both equality and its refusal, a novel, he wrote in an introduction, "could be fashioned as a raft of hope, perception and entertainment that might help keep us afloat as we tried to negotiate the snags and whirlpools that mark our nation's vacillating course toward and away from the democratic idea." This is not, he continued, the only goal for fiction; but it is one proper and urgent goal. For a democracy requires not only institutions and procedures; it also requires a particular quality of vision, in order "to defeat this national tendency to deny the common humanity shared by my character and those who might happen to read of his experience."⁵ The novel's mordantly satirical treatment of stereotypes, its fantastic use of image and symbol (in, for example, the bizarre dreamlike sequence in the white-paint factory), and its poignant moments of disappointed hope, all contribute to this end.

As Ellison says, forming the civic imagination is not the only role for literature, but it is one salient role. Narrative art has the power to make us see the lives of the different with more than a casual tourist's interest—with involvement and sympathetic understanding, with anger at our society's refusals of visibility. We come to see how circumstances shape the lives of those who share with us some general goals and projects; and we see that circumstances shape not only people's possibilities for action, but also their aspirations and desires, hopes and fears. All of this seems highly pertinent to decisions we must make as citizens. Understanding, for example, how a history of racial stereotyping can affect self-esteem, achievement, and love enables us to make more informed judgments on issues relating to affirmative action and education.

Higher education should develop students' awareness of literature in many different ways. But literature does play a vital role in educating citizens of the world. It makes sense, then, to ask how it can perform this function as well as possible—what sorts of literary works, and what sort of teaching of those works, our academic institutions should promote in order to foster an informed and compassionate vision of the different. When we ask this question, we find that the goals of world citizenship are best promoted by a literary education that both adds new works to the well-known "canon" of Western literature and considers standard texts in a deliberative and critical spirit.

It is frequently claimed that it is inappropriate to approach literature with a "political agenda." Yet it is hard to justify such a claim without embracing an extreme kind of aesthetic formalism that is sterile and unap-

4. *Ibid.*, p. 572 [Nussbaum's note].

5. *Ibid.*, pp. xxiv–xxv, xxvi [Nussbaum's note].

pealing. The Western aesthetic tradition has had throughout its history an intense concern with character and community. The defense of that tradition in the contemporary “culture wars” should enlist our support.

FANCY AND WONDER

When a child and a parent begin to tell stories together, the child is acquiring essential moral capacities. Even a simple nursery rhyme such as “Twinkle, twinkle little star, how I wonder what you are” leads children to feel wonder—a sense of mystery that mingles curiosity with awe. Children wonder about the little star. In so doing they learn to imagine that a mere shape in the heavens has an inner world, in some ways mysterious, in some ways like their own. They learn to attribute life, emotion, and thought to a form whose insides are hidden. As time goes on, they do this in an increasingly sophisticated way, learning to hear and tell stories about animals and humans. These stories interact with their own attempts to explain the world and their own actions in it. A child deprived of stories is deprived, as well, of certain ways of viewing other people. For the insides of people, like the insides of stars, are not open to view. They must be wondered about. And the conclusion that this set of limbs in front of me has emotions and feelings and thoughts of the sort I attribute to myself will not be reached without the training of the imagination that storytelling promotes.

Narrative play does teach children to view a personlike shape as a house for hope and fear and love and anger, all of which they have known themselves. But the wonder involved in storytelling also makes evident the limits of each person’s access to every other. “How I wonder what you are,” goes the rhyme. In that simple expression is an acknowledgment of the lack of completeness in one’s own grasp of the fear, the love, the sympathy, the anger, of the little star, or of any other creature or person. In fact the child adept at storytelling soon learns that people in stories are frequently easier to know than people in real life, who, as Proust puts it in *The Past Recaptured*,⁶ frequently offer “a dead weight that our sensitivity cannot remove,” a closed exterior that cannot be penetrated even by a sensitive imagination. The child, wondering about its parents, soon learns about these obstacles, just as it also learns that its parents need not know everything that goes on in its own mind. The habits of wonder promoted by storytelling thus define the other person as spacious and deep, with qualitative differences from oneself and hidden places worthy of respect.

In these various ways, narrative imagination is an essential preparation for moral interaction. Habits of empathy and conjecture conduce to a certain type of citizenship and a certain form of community: one that cultivates a sympathetic responsiveness to another’s needs, and understands the way circumstances shape those needs, while respecting separateness and privacy. This is so because of the way in which literary imagining both inspires intense concern with the fate of characters and defines those characters as containing a rich inner life, not all of which is open to view; in the process, the reader learns to have respect for the hidden contents of that

6. The 7th and final volume (1927) of one of the great narratives of the 20th century—*In Search of Lost Time* (1913–27), by the French novelist Marcel Proust (1871–1922).

inner world, seeing its importance in defining a creature as fully human. It is this respect for the inner life of consciousness that literary theorist Lionel Trilling describes when he calls the imagination of the novel-reader a “liberal imagination”⁷—meaning by this that the novel-reader is led to attribute importance to the material conditions of happiness while respecting human freedom.

As children grow older, the moral and social aspects of these literary scenarios become increasingly complex and full of distinctions, so that they gradually learn how to ascribe to others, and recognize in themselves, not only hope and fear, happiness and distress—attitudes that are ubiquitous, and comprehensible without extensive experience—but also more complex traits such as courage, self-restraint, dignity, perseverance, and fairness. These notions might be defined for the child in an abstract way; but to grasp their full meaning in one’s own self-development and in social interactions with others requires learning their dynamics in narrative settings.

As children grasp such complex facts in imagination, they become capable of compassion. Compassion involves the recognition that another person, in some ways similar to oneself, has suffered some significant pain or misfortune in a way for which that person is not, or not fully, to blame. As many moral traditions emphasize—the analysis of compassion is remarkably constant in both Western and non-Western philosophy—it requires estimating the significance of the misfortune as accurately as one can—usually in agreement with the sufferer, but sometimes in ways that depart from that person’s own judgment. Adam Smith points out that people who lose their mental faculties are the objects of our compassion even though they themselves are not aware of this loss: what is significant is the magnitude of the loss, as the onlooker estimates its role in the life of the loser.⁸ This requires, in turn, a highly complex set of moral abilities, including the ability to imagine what it is like to be in that person’s place (what we usually call *empathy*), and also the ability to stand back and ask whether the person’s own judgment has taken the full measure of what has happened.

Compassion requires one thing more: a sense of one’s own vulnerability to misfortune. To respond with compassion, I must be willing to entertain the thought that this suffering person might be me. And this I will be unlikely to do if I am convinced that I am above the ordinary lot and no ill can befall me. There are exceptions to this, in some religious traditions’ portrayals of the compassion of God; but philosophers such as Aristotle and Rousseau⁹ have plausibly claimed that imperfect human beings need the belief that their own possibilities are similar to those of the suffering person, if they are to respond with compassion to another’s plight. This recognition, as they see it, helps explain why compassion so frequently leads to generous support for the needs of others: one thinks, “That might have been me, and that is how I should want to be treated.”

8. See Smith, *The Theory of Moral Sentiments* (1759), 1.1.1.

9. Jean-Jacques Rousseau (1712–1778), Swiss-born French political philosopher; his writings include *Emile* (1762), a novel that sets forth his theory of education.

Compassion, so understood, promotes an accurate awareness of our common vulnerability. It is true that human beings are needy, incomplete creatures who are in many ways dependent on circumstances beyond their control for the possibility of well-being. As Rousseau argues in *Emile*, people do not fully grasp that fact until they can imagine suffering vividly to themselves, and feel pain at the imagining. In a compassionate response to the suffering of another, one comprehends that being prosperous or powerful does not remove one from the ranks of needy humanity. Such reminders, the tradition argues, are likely to lead to a more beneficent treatment of the weak. Philoctetes, in Sophocles' play, asks for aid by reminding the soldiers that they themselves might suffer what he has suffered. They accept because they are able to imagine his predicament.

It seems, then, to be beneficial for members of a society to see themselves as bound to one another by similar weaknesses and needs, as well as by similar capacities for achievement. As Aristotle argues in chapter 9 of *The Poetics*, literature is "more philosophical than history"—by which he means more conducive to general human understanding—precisely because it acquaints us with "the kind of thing that might happen," general forms of possibility and their impact on human lives.

Compassion requires demarcations: which creatures am I to count as my fellow creatures, sharing possibilities with me? One may be a person of refined feeling and still treat many people in one's world as invisible, their prospects as unrelated to one's own. Rousseau argues that a good education, which acquaints one with all the usual vicissitudes of fortune, will make it difficult to refuse acknowledgment to the poor or the sick, or slaves, or members of lower classes. It is easy to see that any one of those might really have been me, given a change of circumstances. Boundaries of nationality can similarly be transcended in thought, for example by the recognition that one of the frequent hazards of wartime is to lose one's nation. Boundaries of race, of gender, and of sexual orientation prove, historically, more recalcitrant: for there might appear to be little real-life possibility of a man's becoming a woman, a white person's becoming black, or even (*pace* earlier psychiatry) a straight person's becoming gay or lesbian. In these cases, then, it is all the more urgent to cultivate the basis for compassion through the fictional exercise of imagination—for if one cannot in fact change one's race, one can imagine what it is like to inhabit a race different from one's own, and by becoming close to a person of different race or sexual orientation, one can imagine what it would be like for someone one loves to have such a life.

Rousseau thought that people differed only in circumstances: underneath, their desires, aims, and emotions were the same. But in fact one of the things imagining reveals to us is that we are not all brothers under the skin, that circumstances of oppression form desire and emotion and aspiration. Some characters feel like us, and some repel easy identification. But such failures to identify can also be sources of understanding. Both by identification and by its absence, we learn what life has done to people. A society that wants to foster the just treatment of all its members has strong reasons to foster an exercise of the compassionate imagination that crosses social boundaries, or tries to. And this means caring about literature.

WORLD CITIZENSHIP, RELATIVISM, AND IDENTITY POLITICS

* * *

The really grave cause for concern in the current teaching of literature, however, is not the presence of defective arguments, which can easily be criticized. It is, instead, the prevalence of an approach to literature that questions the very possibility of a sympathy that takes one outside one's group, and of common human needs and interests as a basis for that sympathy. The goal of producing world citizens is profoundly opposed to the spirit of identity politics, which holds that one's primary affiliation is with one's local group, whether religious or ethnic or based on sexuality or gender. Much teaching of literature in the current academy is inspired by the spirit of identity politics. Under the label "multiculturalism"—which can refer to the appropriate recognition of human diversity and cultural complexity—a new antihumanist view has sometimes emerged, one that celebrates difference in an uncritical way and denies the very possibility of common interests and understandings, even of dialogue and debate, that take one outside one's own group. In the world-citizen version of multiculturalism, the ethical argument for adding a work such as *Invisible Man* to the curriculum will be Ellison's own argument: that our nation has a history of racial obtuseness and that this work helps all citizens to perceive racial issues with greater clarity. In the identity-politics version of multiculturalism, by contrast, the argument in favor of *Invisible Man* will be that it affirms the experience of African-American students. This view denies the possibility of the task Ellison set himself: "of revealing the human universals hidden within the plight of one who was both black and American."¹

These different defenses of literature are connected with different conceptions of democracy. The world-citizen view insists on the need for all citizens to understand differences with which they need to live; it sees citizens as striving to deliberate and to understand across these divisions. It is connected with a conception of democratic debate as deliberation about the common good. The identity-politics view, by contrast, depicts the citizen body as a marketplace of identity-based interest groups jockeying for power, and views difference as something to be affirmed rather than understood. Indeed, it seems a bit hard to blame literature professionals for the current prevalence of identity politics in the academy, when these scholars simply reflect a cultural view that has other, more powerful sources. Dominant economic views of rationality within the political culture have long powerfully promoted the idea that democracy is merely a marketplace of competing interest groups, without any common goals and ends that can be rationally deliberated. Economics has a far more pervasive and formative influence on our lives than does French literary theory, and it is striking that conservative critics who attack the Modern Language Association² are slow to criticize the far more powerful sources of such antic cosmopolitan ideas when they are presented by market economists. It was no postmod-

vention, scholarly papers (whose titles on occasion elicit outrage from conservatives) are presented in hundreds of panels.

ernist, but Milton Friedman, who said that about matters of value, “men can ultimately only fight.”³ This statement is false and pernicious. World citizens should vigorously criticize these ideas wherever they occur, insisting that they lead to an impoverished view of democracy.

An especially damaging consequence of identity politics in the literary academy is the belief, which one encounters in both students and scholars, that only a member of a particular oppressed group can write well or, perhaps, even read well about that group’s experience. Only female writers understand the experience of women; only African-American writers understand black experience. This claim has a superficial air of plausibility, since it is hard to deny that members of oppressed groups frequently do know things about their lives that other people do not know. Neither individuals or groups are perfect in self-knowledge, and a perceptive outsider may sometimes see what a person immersed in an experience fails to see. But in general, if we want to understand the situation of a group, we do well to begin with the best that has been written by members of that group. We must, however, insist that when we do so it may be possible for us to expand our own understanding—the strongest reason for including such works in the curriculum. We could learn nothing from such works if it were impossible to cross group boundaries in imagination.

Literary interpretation is indeed superficial if it preaches the simplistic message that we are all alike under the skin. Experience and culture shape many aspects of what is “under the skin,” as we can easily see if we reflect and read. It is for this reason that literature is so urgently important for the citizen, as an expansion of sympathies that real life cannot cultivate sufficiently. It is the political promise of literature that it can transport us, while remaining ourselves, into the life of another, revealing similarities but also profound differences between the life and thought of that other and myself and making them comprehensible, or at least more nearly comprehensible. Any stance toward criticism that denies that possibility seems to deny the very possibility of literary experience as a human social good. We should energetically oppose these views wherever they are found, insisting on the world-citizen, rather than the identity-politics, form of multiculturalism as the basis for our curricular efforts.

Literature makes many contributions to human life, and the undergraduate curriculum should certainly reflect this plurality. But the great contribution literature has to make to the life of the citizen is its ability to wrest from our frequently obtuse and blunted imaginations an acknowledgment of those who are other than ourselves, both in concrete circumstances and even in thought and emotion. As Ellison put it, a work of fiction may contribute “to defeat this national tendency to deny the common humanity shared by my character and those who might happen to read of his experience.”⁴ This contribution makes it a key element in higher education.

3. Milton Friedman, “The Methodology of Positive Economics,” reprinted in Daniel M. Hausman, ed., *The Philosophy of Economics* (Cambridge: Cambridge University Press, 1984), p. 212 [Nussbaum’s note]. Friedman (1912–

2006), American economist whose advocacy of free markets was highly influential.

4. Ellison, *Invisible Man*, p. xxvi [Nussbaum’s note].

We are now trying to build an academy that will overcome defects of vision and receptivity that marred the humanities departments of earlier eras, an academy in which no group will be invisible in Ellison's sense. That is in its way a radical political agenda; it is always radical, in any society, to insist on the equal worth of all human beings, and people find all sorts of ways to avoid the claim of that ideal, much though they may pay it lip service. The current agenda is radical in the way that Stoic world citizenship was radical in a Rome built on hierarchy and rank, in the way that the Christian idea of love of one's neighbor was and is radical, in a world anxious to deny our common membership in the kingdom of ends or the kingdom of heaven. We should defend that radical agenda as the only one worthy of our conception of democracy and worthy of guiding its future.

1997

HOMI K. BHABHA

b. 1949

A prominent figure in postcolonial studies, Homi K. Bhabha has infused thinking about nationality, ethnicity, and politics with poststructuralist theories of identity and indeterminacy. Drawing on a wide range of theorists, particularly the deconstructive philosopher JACQUES DERRIDA, Bhabha's essay "The Commitment to Theory" (1989) revises conventional notions of nationality and the colonial subject, showing how both are shifting, hybrid cultural constructions. It also provides a powerful argument for the importance of theory, for the indelible link between theory and politics, and for the use of poststructuralist theory in the tacitly anti-imperialist cause of postcolonial studies.

Bhabha was born two years after India gained national independence from British colonial rule, and his life exemplifies some of the hybrid subject positions of the postcolonial world. He was raised in the Parsi community of Bombay, India, where his father was an important constitutional lawyer. After receiving a B.A. from Bombay University, he traveled to England to earn his M.A., M.Phil., and D.Phil. from Oxford University. Beginning in 1978, he taught at Sussex University for sixteen years; he also held visiting appointments in the United States. In 1994 he took a professorship at the University of Chicago, and in 2001 he moved to Harvard University, where he is Anne F. Rothenberg Professor of the Humanities and director of the Humanities Center. He is also Distinguished Visiting Professor in the Humanities at University College, London.

Postcolonial criticism arose in the wake of the turbulent struggles for national independence of many African, Asian, and Latin American countries that were under the rule of European colonial empires through the middle of the twentieth century. Many early anticolonialist critics—among them, C. D. NARASIMHAIAH in India—promoted autonomous, nationalistic literary traditions to counteract the cultural as well as material domination of imperialism. Later, postcolonial theorists turned to analyze the ideological bases of colonial domination. Perhaps the two most influential figures in this development of contemporary postcolonial theory were EDWARD W. SAID and GAYATRI CHAKRAVORTY SPIVAK. In *Orientalism* (1978; see above), a foundational text of postcolonial studies, Said diagnosed the paths of cul-

tural domination that projected non-Western people as the "Other." In "Can the Subaltern Speak?" (1988; see above), Spivak argued that postcolonial subjects have no voice under the dominant regime of colonial discourse.

Extending the work of Said and Spivak, Bhabha starts with a deconstructive critique of the dichotomies of the West and the Orient, the center and the periphery, the empire and the colonized, the oppressor and the oppressed, and the self and the other. He adapts Derrida's analysis of how binary oppositions structure Western thought, arguing that such dichotomies are too reductive because they imply that any national culture is unitary, homogeneous, and defined by "fixity" or an essential core. Instead, Bhabha proposes that nationalities, ethnicities, and identities are dialogic, indeterminate, and characterized by "hybridity"—one of his key terms. In "The Commitment to Theory," he defines hybridity as what "is new, *neither the one nor the other*," which emerges from a "Third Space." To reinforce this fluid sense of nationality and identity, Bhabha employs a vocabulary of process-oriented terms, including *dialogic*, *translation*, *negotiation*, *in-between*, *cross-reference*, and *ambivalence*.

Although "the wit and wisdom of Jacques Derrida" (as he calls it in another essay) is fundamental to his work, Bhabha draws on a wide array of twentieth-century theorists throughout "The Commitment to Theory." Building on the influential concept of nations set forth by BENEDICT ANDERSON in *Imagined Communities* (1983), Bhabha stresses how nationality is narratively produced, rather than arising from an intrinsic essence. From MIKHAIL M. BAKHTIN, he takes the concept of dialogue to stress that colonialism is not a one-way street but entails an interaction between colonizer and colonized. Regarding identity, he draws on FRANTZ FANON's psychoanalytic model of colonialism and JACQUES LACAN's concepts of "mimicry" and the split subject, arguing that there is always an "excess" in the cultural imitation that the colonial subject is forced to produce. This mimicry in turn both revises colonial discourse and creates a new, hybrid identity for the colonial subject.

The goal of Bhabha's theorizing of hybridity is not simply to modify the terms of debate in postcolonial studies but to make a political intervention. In general, Bhabha contends that theory is not separate from or opposed to political activism, but works hand in hand with it. Employing a deconstructive reversal of the opposition between textuality and the world, Bhabha claims that political events—he uses the example of a famous British strike—are in fact textual and discursive, often generated and spurred by "oppositional *cultural practices*." More specifically, the concept of hybridity militates against "restrictive notions of cultural identity" that result in political separatism, as seen in nationalistic movements or in identity politics. For Bhabha, hybridity fosters the larger goal of "socialist community" while acknowledging cultural differences. Such socialist community arises from the solidarity of different groups and movements working in coalition to create a new, progressive hegemony, as STUART HALL similarly urges.

Although preoccupied with postcolonialism, "The Commitment to Theory" also addresses another field of critical debate. In his unabashed advocacy of poststructuralist theory, Bhabha tacitly responds to many critics of the 1980s and 1990s. Their attacks came both from within the academy and from outside, in claims that theory was too obscure, detracted from literature, and represented a solipsistic academic pursuit. Like PAUL DE MAN's "Resistance to Theory" (1982), which asserts theory's philosophical inevitability, "The Commitment to Theory" offers a staunch defense; but unlike de Man, Bhabha argues for theory's political relevance.

While rooted in contemporary debates, "The Commitment to Theory" also takes part in the larger tradition of defenses of literary practices, which starts with ARISTOTLE's defense of poetry in the *Poetics* (see above) and extends to nineteenth- and twentieth-century defenses of criticism, such as OSCAR WILDE's claims for the artistic value of criticism, "The Critic as Artist" (1890; see above), and JOHN CROWE RANSOM's argument for the value of professional criticism, "Criticism, Inc." (1938; see above). Such works shield literature and criticism against accusations that they lack utility, social

relevance, and moral good. Bhabha updates the tradition by declaring the political efficacy of literary theory.

This debate continues to the present day, and Bhabha has frequently been criticized for his embrace of theory at the expense of practice, his dense jargon, and his copiously allusive writing style. His sharpest critics have come from the left, taking to task his view of politics as textual. In particular, the Marxist critic Aijaz Ahmad has criticized him for detaching politics from specific locations and political situations. Ahmad also upbraids him for ignoring class and caste, charging that Bhabha's concept of hybridity applies more aptly to privileged postcolonial intellectuals who have gained success in the Western world, like Bhabha himself, than to those in colonial situations. Other commentators, more concerned with theoretical consistency, have noted that the notion of a hybrid identity is too broad and amorphous, applying ultimately to all identities. But within the context of debates in postcolonial studies, the concept of hybridity has decisively altered thinking about nations and identities.

The Commitment to Theory

I

There is a damaging and self-defeating assumption that theory is necessarily the elite language of the socially and culturally privileged. It is said that the place of the academic critic is inevitably within the Eurocentric archives of an imperialist or neo-colonial West. The Olympian realms of what is mistakenly labelled 'pure theory' are assumed to be eternally insulated from the historical exigencies and tragedies of the wretched of the earth.¹ Must we always polarize in order to polemicize? Are we trapped in a politics of struggle where the representation of social antagonisms and historical contradictions can take no other form than a binarism of theory vs politics? Can the aim of freedom of knowledge be the simple inversion of the relation of oppressor and oppressed, centre and periphery, negative image and positive image? Is our only way out of such dualism the espousal of an implacable oppositionality or the invention of an originary counter-myth of radical purity? Must the project of our liberationist aesthetics be forever part of a totalizing Utopian vision of Being and History that seeks to transcend the contradictions and ambivalences that constitute the very structure of human subjectivity and its systems of cultural representation?

Between what is represented as the 'larceny' and distortion of European 'metatheorizing' and the radical, engaged, activist experience of Third World creativity,² one can see the mirror image (albeit reversed in content and intention) of that ahistorical nineteenth-century polarity of Orient and

1. An allusion to *The Wretched of the Earth* (1961; see above), by the Martinique-born French psychoanalyst and postcolonial theorist FRANTZ FANON (1925–1961).

2. See C. Taylor, "Eurocentrics vs. New Thought at Edinburgh," *Framework* 34 (1987), for an illustration of this style of argument. See particularly

footnote 1 (p. 148) for an exposition of his use of "larceny" ("the judicious distortion of African truths to fit western prejudices") [Bhabha's note]. Third World: "underdeveloped" nations, many of which were formerly colonies of "First World" nations (countries of the industrialized West).

Occident which, in the name of progress, unleashed the exclusionary imperialist ideologies of self and other. This time round, the term 'critical theory', often untheorized and unargued, is definitely the Other, an otherness that is insistently identified with the vagaries of the depoliticized Eurocentric critic. Is the cause of radical art or critique best served, for instance, by a fulminating professor of film who announces, at a flashpoint in the argument, 'We are not artists, we are political activists?' By obscuring the power of his own practice in the rhetoric of militancy, he fails to draw attention to the specific value of a politics of cultural production; because it makes the surfaces of cinematic signification the grounds of political intervention, it gives depth to the language of social criticism and extends the domain of 'politics' in a direction that will not be entirely dominated by the forces of economic or social control. Forms of popular rebellion and mobilization are often most subversive and transgressive when they are created through oppositional *cultural practices*.

Before I am accused of bourgeois voluntarism, liberal pragmatism, academicist pluralism and all the other '-isms' that are freely bandied about by those who take the most severe exception to 'Eurocentric' theoreticism (Derrideanism, Lacanianism,³ poststructuralism . . .), I would like to clarify the goals of my opening questions. I am convinced that, in the language of political economy, it is legitimate to represent the relations of exploitation and domination in the discursive division between the First and Third World, the North and the South. Despite the claims to a spurious rhetoric of 'internationalism' on the part of the established multinationals and the networks of the new communications technology industries, such circulations of signs and commodities as there are, are caught in the vicious circuits of surplus value that link First World capital to Third World labour markets through the chains of the international division of labour, and national comprador⁴ classes. Gayatri Spivak is right to conclude that it is 'in the interest of capital to preserve the comprador theatre in a state of relatively primitive labour legislation and environmental regulation'.⁵

I am equally convinced that, in the language of international diplomacy, there is a sharp growth in a new Anglo-American nationalism which increasingly articulates its economic and military power in political acts that express a neo-imperialist disregard for the independence and autonomy of peoples and places in the Third World. Think of America's 'backyard' policy towards the Caribbean and Latin America, the patriotic gore and patrician lore of Britain's Falklands Campaign or, more recently, the triumphalism of the American and British forces during the Gulf War.⁶ I am further convinced that such economic and political domination has a profound hegemonic influ-

6. The international conflict (1990–91) triggered

by Iraq's August 1990 invasion of oil-rich Kuwait; a U.S.-led coalition decisively defeated the Iraqi forces. The Falklands Campaign: a brief, undeclared war in 1982 between Great Britain and Argentina over control of the Falkland Islands (off the coast of Argentina), occupied and administered by the British since 1833; the ignominious defeat of the Argentine forces led to a landslide victory for Prime Minister Margaret Thatcher's Conservative Party in that year's parliamentary elections in Britain (and to the fall of the military government in Argentina the following year).

ence on the information orders of the Western world, its popular media and its specialized institutions and academics. So much is not in doubt.

What does demand further discussion is whether the 'new' languages of theoretical critique (semiotic, poststructuralist, deconstructionist and the rest) simply reflect those geopolitical divisions and their spheres of influence. Are the interests of 'Western' theory necessarily collusive with the hegemonic role of the West as a power bloc? Is the language of theory merely another power ploy of the culturally privileged Western elite to produce a discourse of the Other that reinforces its own power-knowledge equation?

A large film festival in the West—even an alternative or counter-cultural event such as Edinburgh's 'Third Cinema' Conference⁷—never fails to reveal the disproportionate influence of the West as cultural forum, in all three senses of that word: as place of public exhibition and discussion, as place of judgement, and as market-place. An Indian film about the plight of Bombay's pavement-dwellers wins the Newcastle Festival⁸ which then opens up distribution facilities in India. The first searing exposé of the Bhopal disaster is made for Channel Four.⁹ A major debate on the politics and theory of Third Cinema first appears in *Screen*, published by the British Film Institute. An archival article on the important history of neo-traditionalism and the 'popular' in Indian cinema sees the light of day in *Framework*.¹ Among the major contributors to the development of the Third Cinema as precept and practice are a number of Third World film-makers and critics who are exiles or *émigrés* in the West and live problematically, often dangerously, on the 'left' margins of a Eurocentric, bourgeois liberal culture. I don't think I need to add individual names or places, or detail the historical reasons why the West carries and exploits what Bourdieu² would call its symbolic capital. The condition is all too familiar, and it is not my purpose here to make those important distinctions between different national situations and the disparate political causes and collective histories of cultural exile. I want to take my stand on the shifting margins of cultural displacement—that confounds any profound or 'authentic' sense of a 'national' culture or an 'organic' intellectual³—and ask what the function of a committed theoretical perspective might be, once the cultural and historical hybridity of the postcolonial world is taken as the paradigmatic place of departure.

Committed to what? At this stage in the argument, I do not want to identify any specific 'object' of political allegiance—the Third World, the working

7. A showcase for films by Latin American, African, Middle Eastern, and Asian filmmakers at the Edinburgh International Film Festival; Bhabha is referring to the 40th festival (August 11–13, 1986).

8. Arts festival in northeastern England.

9. A British commercially supported network, created in 1982 and intended to increase the representation of minorities on television; it is known for high-quality dramas and documentaries. "Bhopal disaster": the leakage of tons of poisonous gas in December 1984 from a pesticide plant in central India owned by Union Carbide, a U.S. multinational, which was one of the worst industrial disasters in history; thousands died and tens (perhaps hundreds) of thousands were injured.

1. See T. H. Gabriel, "Teaching Third World Cinema," and Julianne Burton, "The Politics of Aesthetic Distance—Sao Bernardo," both in *Screen* 24.2 (1983), and A. Rajadhyaksha, "Neo-traditionalism: Film as Popular Art in India," *Framework*, nos. 32/33 (1986) [Bhabha's note].

2. PIERRE BOURDIEU (1930–2002), French sociologist; one of his key terms is "symbolic capital," the tools used by individuals and institutions within a given environment to gain dominance and thus to reproduce themselves over time.

3. Someone (regardless of profession) who directs the ideas and aspirations of the particular social class to which he or she "organically" belongs, as described by the Italian Marxist theorist ANTONIO GRAMSCI (1891–1937). "National culture": a term associated with Fanon.

class, the feminist struggle. Although such an objectification of political activity is crucial and must significantly inform political debate, it is not the only option for those critics or intellectuals who are committed to progressive political change in the direction of a socialist society. It is a sign of political maturity to accept that there are many forms of political writing whose different effects are obscured when they are divided between the 'theoretical' and the 'activist'. It is not as if the leaflet involved in the organization of a strike is short on theory, while a speculative article on the theory of ideology ought to have more practical examples or applications. They are both forms of discourse and to that extent they produce rather than reflect their objects of reference. The difference between them lies in their operational qualities. The leaflet has a specific expository and organizational purpose, temporally bound to the event; the theory of ideology makes its contribution to those embedded political ideas and principles that inform the right to strike. The latter does not justify the former; nor does it necessarily precede it. It exists side by side with it—the one as an enabling part of the other—like the recto and verso of a sheet of paper, to use a common semiotic analogy in the uncommon context of politics.

My concern here is with the process of 'intervening ideologically', as Stuart Hall describes the role of 'imagining' or representation in the practice of politics in his response to the British election of 1987.⁴ For Hall, the notion of hegemony implies a politics of *identification* of the imaginary.⁵ This occupies a discursive space which is not exclusively delimited by the history of either the right or the left. It exists somehow in-between these political polarities, and also between the familiar divisions of theory and political practice. This approach, as I read it, introduces us to an exciting, neglected moment, or movement, in the 'recognition' of the relation of politics to theory; and confounds the traditional division between them. Such a movement is initiated if we see that relation as determined by the rule of repeatable materiality, which Foucault describes as the process by which statements from one institution can be transcribed in the discourse of another.⁶ Despite the schemata of use and application that constitute a field of stabilization for the statement, any change in the statement's conditions of use and reinvestment, any alteration in its field of experience or verification, or indeed any difference in the problems to be solved, can lead to the emergence of a new statement: the difference of the same.

In what hybrid forms, then, may a politics of the theoretical statement emerge? What tensions and ambivalences mark this enigmatic place from which theory speaks? Speaking in the name of some counter-authority or horizon of 'the true' (in Foucault's sense of the strategic effects of any apparatus or *dispositif*⁷), the theoretical enterprise has to represent the adversarial authority (of power and/or knowledge) which, in a doubly inscribed move, it simultaneously seeks to subvert and replace. In this complicated

7. Apparatus, device (French).

formulation I have tried to indicate something of the boundary and location of the event of theoretical critique which does not *contain* the truth (in polar opposition to totalitarianism, 'bourgeois liberalism' or whatever is supposed to repress it). The 'true' is always marked and informed by the ambivalence of the process of emergence itself, the productivity of meanings that construct counter-knowledges in *medias res*, in the very act of agonism,⁸ within the terms of a negotiation (rather than a negation) of oppositional and antagonistic elements. Political positions are not simply identifiable as progressive or reactionary, bourgeois or radical, prior to the act of *critique engagée*,⁹ or outside the terms and conditions of their discursive address. It is in this sense that the historical moment of political action must be thought of as part of the history of the form of its writing. This is not to state the obvious, that there is no knowledge—political or otherwise—outside representation. It is to suggest that the dynamics of writing and textuality require us to rethink the logics of causality and determinacy through which we recognize the 'political' as a form of calculation and strategic action dedicated to social transformation.

'What is to be done?'¹ must acknowledge the force of writing, its metaphoricality and its rhetorical discourse, as a productive matrix which defines the 'social' and makes it available as an objective of and for, action. Textuality is not simply a second-order ideological expression or a verbal symptom of a pre-given political subject. That the political subject—as indeed the subject of politics—is a discursive event is nowhere more clearly seen than in a text which has been a formative influence on Western democratic and socialist discourse—Mill's essay 'On Liberty'.² His crucial chapter, 'On The Liberty of Thought and Discussion', is an attempt to define political judgement as the problem of finding a form of *public rhetoric* able to represent different and opposing political 'contents' not as a priori preconstituted principles but as a dialogical discursive exchange; a negotiation of terms in the on-going present of the enunciation of the political statement. What is unexpected is the suggestion that a crisis of identification is initiated in the textual performance that displays a certain 'difference' *within* the signification of any single political system, prior to establishing the substantial differences *between* political beliefs. A knowledge can only become political through an agonistic process: dissensus, alterity and otherness are the discursive conditions for the circulation and recognition of a politicized subject and a public 'truth':

[If] opponents of all important truths do not exist, it is indispensable to imagine them . . . [He] must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; *else he will never really possess himself of the portion of truth which meets and removes that difficulty*. . . . Their conclusion may be true, but it might be false for anything they know: they have never thrown themselves into the *mental position* of those who think differently from them . . . and consequently

8. Combat, contest. In *medias res*: in the middle of things (Latin); usually, in the midst of a narrative.
9. Engaged criticism (French), a term associated with the French philosopher, playwright, and political activist Jean-Paul Sartre (1905–1980).

1. The title of a famous 1902 pamphlet by the Russian Marxist revolutionary V. I. Lenin.

2. Published in 1859 by the English philosopher and social reformer John Stuart Mill (1806–1873).

they do not, in any proper sense of the word, *know the doctrine which they themselves profess*.³ (My emphases)

It is true that Mill's 'rationality' permits, or requires, such forms of contention and contradiction in order to enhance his vision of the inherently progressive and evolutionary bent of *human* judgement. (This makes it possible for contradictions to be resolved and also generates a sense of the 'whole truth' which reflects the natural, organic bent of the human mind.) It is also true that Mill always reserves, in society as in his argument, the unreal neutral space of the Third Person as the representative of the 'people', who witnesses the debate from an 'epistemological distance' and draws a reasonable conclusion. Even so, in his attempt to describe the political as a form of debate and dialogue—as the process of public rhetoric—that is crucially mediated through this ambivalent and antagonistic faculty of a political 'imagination', Mill exceeds the usual mimetic sense of the battle of ideas. He suggests something much more dialogical: the realization of the political idea at the ambivalent point of textual address, its emergence through a form of political projection.

Rereading Mill through the strategies of 'writing' that I have suggested, reveals that one cannot passively follow the line of argument running through the logic of the opposing ideology. The textual process of political antagonism initiates a contradictory process of reading between the lines; the agent of the discourse becomes, in the same time of utterance, the inverted, projected object of the argument, turned against itself. It is, Mill insists, only by effectively assuming the mental position of the antagonist and working through the displacing and decentring force of that discursive difficulty that the politicized 'portion of truth' is produced. This is a different dynamic from the ethic of tolerance in liberal ideology which has to imagine opposition in order to contain it and demonstrate its enlightened relativism or humanism. Reading Mill, against the grain, suggests that politics can only become representative, a truly public discourse, through a splitting in the signification of the subject of representation; through an ambivalence at the point of the enunciation of a politics.

I have chosen to demonstrate the importance of the space of writing, and the problematic of address, at the very heart of the liberal tradition because it is here that the myth of the 'transparency' of the human agent and the reasonableness of political action is most forcefully asserted. Despite the more radical political alternatives of the right and the left, the popular, common-sense view of the place of the individual in relation to the social is still substantially thought and lived in ethical terms moulded by liberal beliefs. What the attention to rhetoric and writing reveals is the discursive ambivalence that makes 'the political' possible. From such a perspective, the problematic of political judgement cannot be represented as an epistemological problem of appearance and reality or theory and practice or word and thing. Nor can it be represented as a dialectical problem or a symptomatic contradiction constitutive of the materiality of the 'real'. On the contrary, we are made excruciatingly aware of the ambivalent juxtaposition, the dangerous interstitial relation of the factual and the projective, and, beyond that, of the crucial

3. J. S. Mill, "On Liberty," in *Utilitarianism, Liberty, Representative Government* (London: Dent and Sons, 1972), pp. 93–94 [Bhabha's note].

function of the textual and the rhetorical. It is those vicissitudes of the movement of the signifier,⁴ in the fixing of the factual and the closure of the real, that ensure the efficacy of strategic thinking in the discourses of *Realpolitik*. It is this to-and-fro, this *fort/da*⁵ of the symbolic process of political negotiation, that constitutes a politics of address. Its importance goes beyond the unsettling of the essentialism or logocentrism of a received political tradition, in the name of an abstract free play of the signifier.⁶

A critical discourse does not yield a *new* political object, or aim, or knowledge, which is simply a mimetic reflection of an a priori political principle or theoretical commitment. We should not demand of it a pure teleology of analysis whereby the prior principle is simply augmented, its rationality smoothly developed, its identity as socialist or materialist (as opposed to neo-imperialist or humanist) consistently confirmed in each oppositional stage of the argument. Such identikit⁷ political idealism may be the gesture of great individual fervour, but it lacks the deeper, if dangerous, sense of what is entailed by the *passage* of history in theoretical discourse. The language of critique is effective not because it keeps forever separate the terms of the master and the slave,⁸ the mercantilist and the Marxist, but to the extent to which it overcomes the given grounds of opposition and opens up a space of translation: a place of hybridity, figuratively speaking, where the construction of a political object that is new, *neither the one nor the other*, properly alienates our political expectations, and changes, as it must, the very forms of our recognition of the moment of politics. The challenge lies in conceiving of the time of political action and understanding as opening up a space that can accept and regulate the differential structure of the moment of intervention without rushing to produce a unity of the social antagonism or contradiction. This is a sign that history is *happening*—within the pages of theory, within the systems and structures we construct to figure the passage of the historical.

When I talk of *negotiation* rather than *negation*, it is to convey a temporality that makes it possible to conceive of the articulation of antagonistic or contradictory elements: a dialectic without the emergence of a teleological or transcendent History,⁹ and beyond the prescriptive form of symptomatic reading where the nervous tics on the surface of ideology reveal the 'real materialist contradiction' that History embodies. In such a discursive temporality, the event of theory becomes the *negotiation* of contradictory and antagonistic instances that open up hybrid sites and objectives of struggle, and

4. The symbol or sound that conveys meaning (what is conveyed is the signified), as described in the analysis of signs by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913).

5. Gone/here (German). In *Beyond the Pleasure Principle* (1920), SIGMUND FREUD describes how his 18-month-old nephew would throw a spool tied to a piece of yarn, saying "Fort," and then pull it back in, saying "Da"; for Freud this game was a way for the child to work out his anxiety about his mother's absence. In "The Mirror Stage" (1949; see above), Lacan argues that the game is about the child's entry into the Symbolic (the structure of language itself).

6. "The free play of the signifier," like "logocentrism" (the privileging of speech, the assumption that knowledge is organized around some central Truth), is a concept developed by Jacques Der-

rida in *Of Grammatology* (1967).

7. Likeness of a person's face constructed from descriptions (used by the police to help identify a suspect).

8. An allusion to the Master-Slave dialectic developed by the German philosopher GEORG FRIEDRICH WILHELM HEGEL in *Phenomenology of Spirit* (1807; see above), which describes two self-consciousnesses that confront each other and fight for mutual recognition; each identifies him- or herself through the eyes of the other as ruler and ruled.

9. That is, a process of change through contest of opposites that—unlike in the systems of Hegel or the German political and economic theorist KARL MARX (1818–1883), in which the dialectic plays a key role—does not necessarily lead to a predetermined end.

destroy those negative polarities between knowledge and its objects, and between theory and practical-political reason.¹ If I have argued against a primordial and previsionary division of right or left, progressive or reactionary, it has been only to stress the fully historical and discursive *différance*² between them. I would not like my notion of negotiation to be confused with some syndicalist sense of reformism because that is not the political level that is being explored here. By negotiation I attempt to draw attention to the structure of *iteration*³ which informs political movements that attempt to articulate antagonistic and oppositional elements without the redemptive rationality of sublation or transcendence.⁴

The temporality of negotiation or translation, as I have sketched it, has two main advantages. First, it acknowledges the historical connectedness between the subject and object of critique so that there can be no simplistic, essentialist opposition between ideological miscognition and revolutionary truth. The progressive reading is crucially determined by the adversarial or agonistic situation itself; it is effective because it uses the subversive, messy mask of camouflage and does not come like a pure avenging angel speaking the truth of a radical historicity and pure oppositionality. If one is aware of this heterogeneous emergence (not origin) of radical critique, then—and this is my second point—the function of theory within the political process becomes double-edged. It makes us aware that our political referents and priorities—the people, the community, class struggle, anti-racism, gender difference, the assertion of an anti-imperialist, black or third perspective—are not there in some primordial, naturalistic sense. Nor do they reflect a unitary or homogeneous political object. They make sense as they come to be constructed in the discourse of feminism or Marxism or the Third Cinema⁵ or whatever, whose objects of priority—class or sexuality or ‘the new ethnicity’—are always in historical and philosophical tension, or cross-reference with other objectives.

Indeed, the whole history of socialist thought which seeks to ‘make it new and better’ seems to be a different process of articulating priorities whose political objects can be recalcitrant and contradictory. Within contemporary Marxism, for example, witness the continual tension between the English, humanist, labourist faction and the ‘theoreticist’, structuralist, new left tendencies. Within feminism, there is again a marked difference of emphasis between the psychoanalytic/semiotic tradition and the Marxist articulation of gender and class through a theory of cultural and ideological interpellation.⁶ I have presented these differences in broad brush-strokes, often using the language of polemic to suggest that each position is always a process of

1. For a significant elaboration of a similar argument, see E. Laclau and C. Mouffe, *Hegemony and Socialist Strategy*, [trans. W. Moore and P. Cammack] (London: Verso, 1985), chap. 3 [Bhabha's note]. Ernesto Laclau (1935–2014), Argentine political theorist, and his wife Chantal Mouffe (b. 1943), Belgian political theorist, are known for their elaboration of “post-Marxism.”

2. Derrida's term, drawing on the two senses of the French verb *différer*, that combines spatial difference and temporal deferral.

3. Repetition; Derrida applies the term to the repetitious structure of signification.

4. For a philosophical underpinning of some of the

concepts I am proposing here see R. Gasché, *The Tain of the Mirror* (Cambridge, Mass.: Harvard University Press, 1986) [Bhabha's note]. “Sublation”: in Hegel, the negation but partial incorporation of an element in the dialectic process.

5. A movement calling for political, anticolonial filmmaking in the third world, independent of commercial models; it began in Latin America in the late 1960s.

6. The term used by the French Marxist philosopher LOUIS ALTHUSSER (1918–1990) to refer to how ideology “hails” or creates individuals as subjects, in “Ideology and Ideological State Apparatuses” (1970; see above).

translation and transference of meaning. Each objective is constructed on the trace of that perspective that it puts under erasure; each political object is determined in relation to the other, and displaced in that critical act. Too often these theoretical issues are peremptorily transposed into organizational terms and represented as sectarianism. I am suggesting that such contradictions and conflicts, which often thwart political intentions and make the question of commitment complex and difficult, are rooted in the process of translation and displacement in which the object of politics is inscribed. The effect is not stasis or a sapping of the will. It is, on the contrary, the spur of the negotiation of socialist democratic politics and policies which demand that questions of organization are theorized and socialist theory is 'organized', *because there is no given community or body of the people whose inherent, radical historicity emits the right signs.*

This emphasis on the representation of the political, on the construction of discourse, is the radical contribution of the translation of theory. Its conceptual vigilance never allows a simple identity between the political objective and its means of representation. This emphasis on the necessity of heterogeneity and the double inscription of the political objective is not merely the repetition of a general truth about discourse introduced into the political field. Denying an essentialist logic and a mimetic referent to political representation is a strong, principled argument against political separatism of any colour, and cuts through the moralism that usually accompanies such claims. There is literally, and figuratively, no space for the unitary or organic political objective which would offend against the sense of a socialist *community* of interest and articulation.

In Britain, in the 1980s, no political struggle was fought more powerfully, and sustained more poignantly, on the values and traditions of a socialist community than the miners' strike of 1984–5.⁷ The battalions of monetarist figures and forecasts on the profitability of the pits were starkly ranged against the most illustrious standards of the British labour movement, the most cohesive cultural communities of the working class. The choice was clearly between the dawning world of the new Thatcherite city gent and a long history of the working man, or so it seemed to the traditional left and the new right. In these class terms the mining women involved in the strike were applauded for the heroic supporting role they played, for their endurance and initiative. But the revolutionary impulse, it seemed, belonged securely to the working-class male. Then, to commemorate the first anniversary of the strike, Beatrix Campbell,⁸ in the *Guardian*, interviewed a group of women who had been involved in the strike. It was clear that their experience of the historical struggle, their understanding of the historic choice to be made, was startlingly different and more complex. Their testimonies would not be contained simply or singly within the priorities of the politics of class or the histories of industrial struggle. Many of the women began to question their

7. A yearlong struggle, sometimes violent, between the United Kingdom's Conservative government and the National Union of Mineworkers, which went on strike after the government announced that it would close uneconomic coal pits; the union defeat capped Margaret Thatcher's efforts,

begun when she became prime minister in 1979, to impose legal restrictions on British unions.

8. English journalist, feminist, and socialist (b. 1947); the *Guardian* is a major daily newspaper in England.

roles within the family and the community—the two central institutions which articulated the meanings and mores of the *tradition* of the labouring classes around which ideological battle was enjoined. Some challenged the symbols and authorities of the culture they fought to defend. Others disrupted the homes they had struggled to sustain. For most of them there was no return, no going back to the ‘good old days’. It would be simplistic to suggest either that this considerable social change was a spin-off from the class struggle or that it was a repudiation of the politics of class from a socialist-feminist perspective. There is no simple political or social truth to be learned, for there is no unitary representation of a political agency, no fixed hierarchy of political values and effects.

My illustration attempts to display the importance of the hybrid moment of political change. Here the transformational value of change lies in the rearticulation, or translation, of elements that are *neither the One* (unitary working class) *nor the Other* (the politics of gender) *but something else besides*, which contests the terms and territories of both. There is a negotiation between gender and class, where each formation encounters the displaced, differentiated boundaries of its group representation and enunciative sites in which the limits and limitations of social power are encountered in an agonistic relation. When it is suggested that the British Labour Party should seek to produce a socialist alliance among progressive forces that are widely dispersed and distributed across a range of class, culture and occupational forces—without a unifying sense of the class for itself—the kind of hybridity that I have attempted to identify is being acknowledged as a historical necessity. We need a little less pietistic articulation of political principle (around class and nation); a little more of the principle of political *negotiation*.

This seems to be the theoretical issue at the heart of Stuart Hall’s arguments for the construction of a counter-hegemonic power bloc through which a socialist party might construct its majority, its constituency; and the Labour Party might (in)conceivably improve its image. The unemployed, semi-skilled and unskilled, part-time workers, male and female, the low paid, black people, underclasses: these signs of the fragmentation of class and cultural consensus represent both the historical experience of contemporary social divisions, and a structure of heterogeneity upon which to construct a theoretical and political alternative. For Hall, the imperative is to construct a new social bloc of different constituencies, through the production of a form of symbolic identification that would result in a collective will. The Labour Party, with its desire to reinstate its traditionalist image—white, male, working class, trade union based—is not hegemonic enough, Hall writes. He is right; what remains unanswered is whether the rationalism and intentionality that propel the collective will are compatible with the language of symbolic image and fragmentary identification that represents, for Hall and for ‘hegemony’ /‘counter-hegemony’, the fundamental political issue. Can there ever be hegemony enough, except in the sense that a two-thirds majority will elect us a socialist government?

It is by intervening in Hall’s argument that the necessities of negotiation are revealed. The interest of Hall’s position lies in his acknowledgement, remarkable for the British left, that, though influential, ‘material interests

on their own have no necessary class belongingness.⁹ This has two significant effects. It enables Hall to see the agents of political change as discontinuous, divided subjects caught in conflicting interests and identities. Equally, at the historical level of a Thatcherite population, he asserts that divisive rather than solidary forms of identification are the rule, resulting in undecidabilities and aporia¹ of political judgement. What does a working woman put first? Which of her identities is the one that determines her political choices? The answers to such questions are defined, according to Hall, in the ideological definition of materialist interests; a process of symbolic identification achieved through a political technology of imaging that hegemonically produces a social bloc of the right or the left. Not only is the social bloc heterogeneous, but, as I see it, the work of hegemony is itself the process of iteration and differentiation. It depends on the production of alternative or antagonistic images that are always produced side by side and in competition with each other. It is this side-by-side nature, this partial presence, or metonymy of antagonism, and its effective significations, that give meaning (quite literally) to a politics of struggle *as the struggle of identifications* and the war of positions. It is therefore problematic to think of it as sublated into an image of the collective will.

Hegemony requires iteration and alterity to be effective, to be productive of politicized populations: the (non-homogeneous) symbolic-social bloc needs to represent itself in a solidary collective will—a modern image of the future—if those populations are to produce a progressive government. Both may be necessary but they do not easily follow from each other, for in each case the mode of representation and its temporality are different. The contribution of negotiation is to display the ‘in-between’ of this crucial argument; it is *not* self-contradictory but significantly performs, in the process of its discussion, the problems of judgement and identification that inform the political space of its enunciation.

For the moment, the act of negotiation will only be interrogatory. Can such split subjects and differentiated social movements, which display ambivalent and divided forms of identification, be represented in a collective will that distinctively echoes Gramsci’s enlightenment inheritance and its rationalism?² How does the language of the will accommodate the vicissitudes of its representation, its construction through a symbolic majority where the have-nots identify themselves from the position of the haves? How do we construct a politics based on such a displacement of affect or strategic elaboration (Foucault), where political positioning is ambivalently grounded in an acting-out of political fantasies that require repeated passages across the differential boundaries between one symbolic bloc *and an other*, and the positions available to each? If such is the case, then how do we fix the counter-image of socialist hegemony to reflect the divided will, the fragmented population? If the policy of hegemony is, quite literally, *unsignifiable* without the metonymic representation of its agonistic and ambivalent structure of articulation, then how does the collective will stabilize and unify its address as an agency of *representation*, as representative of a people? How do we avoid the mixing

9. Hall, “Blue Election,” p. 33 [Bhabha’s note].

1. Difficulty, logical impasse (a term often used in deconstructive criticism to indicate the point in a text where inherent contradictions render inter-

pretation undecidable).

2. I owe this point to Martin Thom [Bhabha’s note].

or overlap of images, the split screen, the failure to synchronize sound and image? Perhaps we need to change the ocular language of the image in order to talk of the social and political identifications or representations of a people. It is worth noting that Laclau and Mouffe have turned to the language of textuality and discourse, to *différance* and enunciative modalities, in attempting to understand the structure of hegemony.³ Paul Gilroy also refers to Bakhtin's theory of narrative when he describes the performance of black expressive cultures as an attempt to transform the relationship between performer and crowd 'in *dialogic* rituals so that spectators acquire the active role of participants in collective processes which are sometimes cathartic and which may symbolize or even create a community' (my emphasis).⁴

Such negotiations between politics and theory make it impossible to think of the place of the theoretical as a metanarrative claiming a more total form of generality. Nor is it possible to claim a certain familiar epistemological distance between the *time and place* of the intellectual and the activist, as Fanon suggests when he observes that 'while politicians situate their action in actual present-day events, men of culture take their stand in the field of history'.⁵ It is precisely that popular binarism between theory and politics, whose foundational basis is a view of knowledge as totalizing generality and everyday life as experience, subjectivity or false consciousness,⁶ that I have tried to erase. It is a distinction that even Sartre subscribes to when he describes the committed intellectual as the theoretician of practical knowledge whose defining criterion is rationality and whose first project is to combat the irrationality of ideology.⁷ From the perspective of negotiation and translation, *contra* Fanon and Sartre, there can be no final discursive *closure* of theory. It does not foreclose on the political, even though battles for power-knowledge⁸ may be won or lost to great effect. The corollary is that there is no first or final act of revolutionary social (or social-ist) transformation.

I hope it is clear that this erasure of the traditional boundary between theory/politics, and my resistance to the *en-closure* of the theoretical, whether it is read negatively as elitism or positively as radical supra-rationality, do not turn on the good or bad faith of the activist agent or the intellectual *agent provocateur*. I am primarily concerned with the conceptual structuring of the terms—the theoretical/the political—that inform a range of debates around the place and time of the committed intellectual. I have therefore argued for a certain relation to knowledge which I think is crucial in structuring our sense of what the *object* of theory may be in the act of determining our specific political *objectives*.

II

What is at stake in the naming of critical theory as 'Western'? It is, obviously, a designation of institutional power and ideological Eurocentricity. Critical theory often engages with texts within the familiar traditions and conditions of colonial anthropology either to universalize their meaning within its own cultural and academic discourse, or to sharpen its internal critique of the Western logocentric sign, the idealist subject, or indeed the illusions and delusions of civil society. This is a familiar manoeuvre of theoretical knowledge, where, having opened up the chasm of cultural difference, a mediator or metaphor of otherness must be found to contain the effects of difference. In order to be institutionally effective as a discipline, the knowledge of cultural difference must be made to foreclose on the Other; difference and otherness thus become the fantasy of a certain cultural space or, indeed, the certainty of a form of theoretical knowledge that deconstructs the epistemological 'edge' of the West.

More significantly, the site of cultural difference can become the mere phantom of a dire disciplinary struggle in which it has no space or power. Montesquieu's Turkish Despot, Barthes's Japan, Kristeva's China, Derrida's Nambikwara Indians, Lyotard's Cashinahua pagans⁹ are part of this strategy of containment where the Other text is forever the exegetical horizon of difference, never the active agent of articulation. The Other is cited, quoted, framed, illuminated, encased in the shot/reverse-shot strategy of a serial enlightenment. Narrative and the *cultural* politics of difference become the closed circle of interpretation. The Other loses its power to signify, to negate, to initiate its historic desire, to establish its own institutional and oppositional discourse. However impeccably the content of an 'other' culture may be known, however anti-ethnocentrically it is represented, it is its *location* as the closure of grand theories, the demand that, in analytic terms, it be always the good object of knowledge, the docile body of difference, that reproduces a relation of domination and is the most serious indictment of the institutional powers of critical theory.

There is, however, a distinction to be made between the institutional history of critical theory and its conceptual potential for change and innovation. Althusser's critique of the temporal structure of the Hegelian-Marxist expressive totality, despite its functionalist limitations, opens up the possibilities of thinking the relations of production in a time of differential histories. Lacan's location of the signifier of desire, on the cusp of language and the law, allows the elaboration of a form of social representation that is alive to the ambivalent structure of subjectivity and sociality. Foucault's archaeology of the emergence of modern, Western man as a problem of finitude, inextricable from its afterbirth, its Other, enables the linear, progressivist claims of the social

9. Bhabha gives examples of cultural others used by French cultural critics and philosophers to further their own arguments: Charles-Louis de Secondat, baron de la Brède et de Montesquieu (1689–1755), employs the "Turkish Despot" in his *Persian Letters* (1721), which satirizes French society; his observations on Japan, presented in *Empire of Signs* (1970), convinced ROLAND BARTHES (1915–1980) that some signs have no signified; JULIA KRISTEVA (b. 1941) treats China in

About Chinese Women (1974); in *Of Grammatology*, Derrida finds in CLAUDE LÉVI-STRAUSS's anthropological descriptions of Brazil's Nambikwara in *Tristes Tropiques* (1955; see above) evidence of internal resistance to coercive naming practices; and JEAN-FRANÇOIS LYOTARD (1925–1998) discusses the storytelling of the tribal Cashinahua of Peru in *The Postmodern Condition* (1979).

sciences—the major imperializing discourses—to be confronted by their own historicist limitations. These arguments and modes of analysis can be dismissed as internal squabbles around Hegelian causality, psychic representation or sociological theory. Alternatively, they can be subjected to a translation, a transformation of value as part of the questioning of the project of modernity in the great, revolutionary tradition of C. L. R. James—*contra* Trotsky¹ or Fanon, *contra* phenomenology and existentialist psychoanalysis. In 1952, it was Fanon who suggested that an oppositional, differential reading of Lacan's Other might be more relevant for the colonial condition than the Marxist² reading of the master-slave dialectic.

It may be possible to produce such a translation or transformation if we understand the tension within critical theory between its institutional containment and its revisionary force. The continual reference to the horizon of other cultures which I have mentioned earlier is ambivalent. It is a site of citation, but it is also a sign that such critical theory cannot forever sustain its position in the academy as the adversarial cutting edge of Western idealism. What is required is to demonstrate another territory of translation, another testimony of analytical argument, a different engagement in the politics of and around cultural domination. What this other site for theory might be will become clearer if we first see that many poststructuralist ideas are themselves opposed to Enlightenment humanism and aesthetics. They constitute no less than a deconstruction of the moment of the modern, its legal values, its literary tastes, its philosophical and political categorical imperatives. Secondly, and more importantly, we must rehistoricize the moment of 'the emergence of the sign', or 'the question of the subject', or the 'discursive construction of social reality' to quote a few popular topics of contemporary theory. This can only happen if we relocate the referential and institutional demands of such theoretical work in the field of cultural difference—*not cultural diversity*.

Such a reorientation may be found in the historical texts of the colonial moment in the late eighteenth and early nineteenth centuries. For at the same time as the question of cultural difference emerged in the colonial text, discourses of civility were defining the doubling moment of the emergence of Western modernity. Thus the political and theoretical genealogy of modernity lies not only in the origins of the *idea* of civility, but in this history of the colonial moment. It is to be found in the resistance of the colonized populations to the Word of God and Man—Christianity and the English language. The transmutations and translations of indigenous traditions in their opposition to colonial authority demonstrate how the desire of the signifier, the indeterminacy of intertextuality, can be deeply engaged in the postcolonial struggle against dominant relations of power and knowledge. In the following words of the missionary master we hear, quite distinctly, the oppositional voices of a culture of resistance; but we also hear the uncertain and threatening process of cultural transformation. I quote from A. Duff's³ influential *India and India Missions* (1839):

1. Leon Trotsky (1879–1940), Russian Marxist revolutionary and theorist. James (1901–1989), Trinidadian political activist and critic of colonialism.

2. Marxism-influenced. Bhabha is referring to

Fanon's *Black Skin, White Masks* (1952; see above).

3. Alexander Duff (1806–1878), Scottish missionary to India from the Free Church of Scotland.

Come to some doctrine which you believe to be peculiar to Revelation; tell the people that they must be regenerated or born again, else they can never 'see God'. Before you are aware, they may go away saying, 'Oh, there is nothing new or strange here; our own Shastras⁴ tell us the same thing; we know and believe that we must be born again; it is our fate to be so.' But what do they understand by the expression? It is that they are to be born again and again, in some other form, agreeably to their own system of transmigration or reiterated births. To avoid the appearance of countenancing so absurd and pernicious a doctrine, you vary your language, and tell them that there must be a second birth—that they must be twice-born. Now it so happens that this, and all similar phraseology, is preoccupied. The sons of a Brahman have to undergo various purificatory and initiatory ceremonial rites, before they attain to full Brahmanhood. The last of these is the investiture with the sacred thread; which is followed by the communication of the Gayatri, or most sacred verse in the Vedas. This ceremonial constitutes, 'religiously and metaphorically, their second birth'; henceforward their distinctive and peculiar appellation is that of the twice-born, or regenerated men. *Hence it is your improved language might only convey the impression that all must become perfect Brahmans, ere they can 'see God'.*⁵ (My emphasis)

The grounds of evangelical certitude are opposed not by the simple assertion of an antagonistic cultural tradition. The process of translation is the opening up of another contentious political and cultural site at the heart of colonial representation. Here the word of divine authority is deeply flawed by the assertion of the indigenous sign, and in the very practice of domination the language of the master becomes hybrid—neither the one thing nor the other. The incalculable colonized subject—half acquiescent, half oppositional, always untrustworthy—produces an unresolvable problem of cultural difference for the very address of colonial cultural authority. The 'subtile system of Hinduism', as the missionaries in the early nineteenth century called it, generated tremendous policy implications for the institutions of Christian conversion. The written authority of the Bible was challenged and together with it a postenlightenment notion of the 'evidence of Christianity' and its historical priority, which was central to evangelical colonialism. The Word could no longer be trusted to carry the truth when written or spoken in the colonial world by the European missionary. Native catechists therefore had to be found, who brought with them their own cultural and political ambivalences and contradictions, often under great pressure from their families and communities.

This revision of the history of critical theory rests, I have said, on the notion of cultural difference, not cultural diversity. Cultural diversity is an epistemological object—culture as an object of empirical knowledge—whereas cultural difference is the process of the *enunciation* of culture as 'knowledgeable', authoritative, adequate to the construction of systems of cultural identifica-

ing Sketches of the Gigantic System of Hinduism (Edinburgh: John Johnstone; London: John Hunter, 1839), p. 560 [Bhabha's note].

tion. If cultural diversity is a category of comparative ethics, aesthetics or ethnology, cultural difference is a process of signification through which statements *of* culture or *on* culture differentiate, discriminate and authorize the production of fields of force, reference, applicability and capacity. Cultural diversity is the recognition of pre-given cultural contents and customs; held in a time-frame of relativism it gives rise to liberal notions of multiculturalism, cultural exchange or the culture of humanity. Cultural diversity is also the representation of a radical rhetoric of the separation of totalized cultures that live unsullied by the intertextuality of their historical locations, safe in the Utopianism of a mythic memory of a unique collective identity. Cultural diversity may even emerge as a system of the articulation and exchange of cultural signs in certain early structuralist accounts of anthropology.

Through the concept of cultural difference I want to draw attention to the common ground and lost territory of contemporary critical debates. For they all recognize that the problem of cultural interaction emerges only at the signifiatory boundaries of cultures, where meanings and values are (mis)read or signs are misappropriated. Culture only emerges as a problem, or a problematic, at the point at which there is a loss of meaning in the contestation and articulation of everyday life, between classes, genders, races, nations. Yet the reality of the limit or limit-text of culture is rarely theorized outside of well-intentioned moralist polemics against prejudice and stereotype, or the blanket assertion of individual or institutional racism—that describe the effect rather than the structure of the problem. The need to think the limit of culture as a problem of the enunciation of cultural difference is disavowed.

The concept of cultural difference focuses on the problem of the ambivalence of cultural authority: the attempt to dominate in the *name* of a cultural supremacy which is itself produced only in the moment of differentiation. And it is the very authority of culture as a knowledge of referential truth which is at issue in the concept and moment of *enunciation*. The enunciative process introduces a split in the performative present of cultural identification; a split between the traditional culturalist demand for a model, a tradition, a community, a stable system of reference, and the necessary negation of the certitude in the articulation of new cultural demands, meanings, strategies in the political present, as a practice of domination, or resistance. The struggle is often between the historicist teleological or mythical time and narrative of traditionalism—of the right or the left—and the shifting, strategically displaced time of the articulation of a historical politics of negotiation which I suggested above. The time of liberation is, as Fanon powerfully evokes, a time of cultural uncertainty, and, most crucially, of signifiatory or representational undecidability:

But [native intellectuals] forget that the forms of thought and what [they] feed . . . on, together with modern techniques of information, language and dress, have dialectically reorganized the people's intelligences and *the constant principles (of national art)* which acted as safeguards during the colonial period are now undergoing extremely radical changes. . . . [We] must join the people in that fluctuating movement which they are *just* giving a shape to . . . which will be the signal for

everything to be called into question . . . it is to the zone of *occult instability* where the people dwell that we must come.⁶ (My emphases)

The enunciation of cultural difference problematizes the binary division of past and present, tradition and modernity, at the level of cultural representation and its authoritative address. It is the problem of how, in signifying the present, something comes to be repeated, relocated and translated in the name of tradition, in the guise of a pastness that is not necessarily a faithful sign of historical memory but a strategy of representing authority in terms of the artifice of the archaic. That iteration negates our sense of the origins of the struggle. It undermines our sense of the homogenizing effects of cultural symbols and icons, by questioning our sense of the authority of cultural synthesis in general.

This demands that we rethink our perspective on the identity of culture. Here Fanon's passage—somewhat reinterpreted—may be helpful. What is implied by his juxtaposition of the constant national principles with his view of culture-as-political-struggle, which he so enigmatically and beautifully describes as 'the zone of occult instability where the people dwell'? These ideas not only help to explain the nature of colonial struggle; they also suggest a possible critique of the positive aesthetic and political values we ascribe to the unity or totality of cultures, especially those that have known long and tyrannical histories of domination and misrecognition. Cultures are never unitary in themselves, nor simply dualistic in the relation of Self to Other. This is not because of some humanistic nostrum that beyond individual cultures we all belong to the human culture of mankind; nor is it because of an ethical relativism which suggests that in our cultural capacity to speak of and judge others we necessarily 'place ourselves in their position', in a kind of relativism of distance of which Bernard Williams has written at length.⁷

The reason a cultural text or system of meaning cannot be sufficient unto itself is that the act of cultural enunciation—the *place of utterance*—is crossed by the *différance* of writing. This has less to do with what anthropologists might describe as varying attitudes to symbolic systems within different cultures than with the structure of symbolic representation itself—not the content of the symbol or its social function, but the structure of symbolization. It is this difference in the process of language that is crucial to the production of meaning and ensures, at the same time, that meaning is never simply mimetic and transparent.

The linguistic difference that informs any cultural performance is dramatized in the common semiotic account of the disjuncture between the subject of a proposition (*énoncé*) and the subject of enunciation, which is not represented in the statement but which is the acknowledgement of its discursive embeddedness and address, its cultural positionality, its reference to a present time and a specific space. The pact of interpretation is never simply an act of communication between the I and the You designated in the statement. The production of meaning requires that these two places be mobilized in the passage through a Third Space, which represents both the general condi-

tions of language and the specific implication of the utterance in a performative and institutional strategy of which it cannot 'in itself' be conscious. What this unconscious relation introduces is an ambivalence in the act of interpretation. The pronominal I of the proposition cannot be made to address—in its own words—the subject of enunciation, for this is not personable, but remains a spatial relation within the schemata and strategies of discourse. The meaning of the utterance is quite literally neither the one nor the other. This ambivalence is emphasized when we realize that there is no way that the content of the proposition will reveal the structure of its positionality; no way that context can be mimetically read off from the content.

The implication of this enunciative split for cultural analysis that I especially want to emphasize is its temporal dimension. The splitting of the subject of enunciation destroys the logics of synchronicity and evolution which traditionally authorize the subject of cultural knowledge. It is often taken for granted in materialist and idealist problematics that the value of culture as an object of study, and the value of any analytic activity that is considered cultural, lie in a capacity to produce a cross-referential, generalizable unity that signifies a progression or evolution of ideas-in-time, as well as a critical self-reflection on their premisses or determinants. It would not be relevant to pursue the detail of this argument here except to demonstrate—via Marshall Sahlins's *Culture and Practical Reason*—the validity of my general characterization of the Western expectation of culture as a disciplinary practice of writing. I quote Sahlins at the point at which he attempts to define the difference of Western bourgeois culture:

We have to do not so much with functional dominance as with structural—with different structures of symbolic *integration*. And to this gross difference in design correspond differences in symbolic performance: between an *open, expanding* code, responsive by *continuous* permutation to events it has itself staged, and an apparently *static* one that seems to know not events, but only its own preconceptions. The gross distinction between 'hot' societies and 'cold', development and underdevelopment, societies with and without history—and so between large societies and small, expanding and self-contained, colonizing and colonized.⁸ (My emphases)

The intervention of the Third Space of enunciation, which makes the structure of meaning and reference an ambivalent process, destroys this mirror of representation in which cultural knowledge is customarily revealed as an integrated, open, expanding code. Such an intervention quite properly challenges our sense of the historical identity of culture as a homogenizing, unifying force, authenticated by the originary Past, kept alive in the national tradition of the People. In other words, the disruptive temporality of enunciation displaces the narrative of the Western nation which Benedict Anderson so perceptively describes as being written in homogeneous, serial time.⁹

8. M. Sahlins, *Culture and Practical Reason* (Chicago: University of Chicago Press, 1976), p. 211 [Bhabha's note]. Sahlins (b. 1930), American anthropologist.

9. B. Anderson, *Imagined Communities* (London: Verso, 1983), chap. 1 [Bhabha's note]. ANDERSON (1936–2015), American-based British historian; for *Imagined Communities*, see above.

It is only when we understand that all cultural statements and systems are constructed in this contradictory and ambivalent space of enunciation, that we begin to understand why hierarchical claims to the inherent originality or 'purity' of cultures are untenable, even before we resort to empirical historical instances that demonstrate their hybridity. Fanon's vision of revolutionary cultural and political change as a 'fluctuating movement' of occult instability could not be articulated as cultural *practice* without an acknowledgement of this indeterminate space of the subject(s) of enunciation. It is that Third Space, though unrepresentable in itself, which constitutes the discursive conditions of enunciation that ensure that the meaning and symbols of culture have no primordial unity or fixity; that even the same signs can be appropriated, translated, rehistoricized and read anew.

Fanon's moving metaphor—when reinterpreted for a theory of cultural signification—enables us to see not only the necessity of theory, but also the restrictive notions of cultural identity with which we burden our visions of political change. For Fanon, the liberatory people who initiate the productive instability of revolutionary cultural change are themselves the bearers of a hybrid identity. They are caught in the discontinuous time of translation and negotiation, in the sense in which I have been attempting to recast these words. In the moment of liberatory struggle, the Algerian people destroy the continuities and constancies of the nationalist tradition which provided a safeguard against colonial cultural imposition. They are now free to negotiate and translate their cultural identities in a discontinuous intertextual temporality of cultural difference. The native intellectual who identifies the people with the true national culture will be disappointed. The people are now the very principle of 'dialectical reorganization' and they construct their culture from the national text translated into modern Western forms of information technology, language, dress. The changed political and historical site of enunciation transforms the meanings of the colonial inheritance into the liberatory signs of a free people of the future.

I have been stressing a certain void or misgiving attending every assimilation of contraries—I have been stressing this in order to expose what seems to me a fantastic mythological congruence of elements. . . . And if indeed therefore any real sense is to be made of material change it can only occur with an acceptance of a concurrent void and with a willingness to descend into that void wherein, as it were, one may begin to come into confrontation with a spectre of invocation whose freedom to participate in an alien territory and wilderness has become a necessity for one's reason or salvation.¹

This meditation by the great Guyanese writer Wilson Harris on the void of misgiving in the textuality of colonial history reveals the cultural and historical dimension of that Third Space of enunciations which I have made the precondition for the articulation of cultural difference. He sees it as accompanying the 'assimilation of contraries' and creating that occult instability which presages powerful cultural changes. It is significant that the productive capacities of this Third Space have a colonial or postcolonial provenance. For

1. W. Harris, *Tradition, the Writer, and Society* (London: New Beacon, 1973), pp. 60–63 [Bhabha's note].

a willingness to descend into that alien territory—where I have led you—may reveal that the theoretical recognition of the split-space of enunciation may open the way to conceptualizing an *international* culture, based not on the exoticism of multiculturalism or the *diversity* of cultures, but on the inscription and articulation of culture's *hybridity*. To that end we should remember that it is the 'inter'—the cutting edge of translation and negotiation, the *in-between* space—that carries the burden of the meaning of culture. It makes it possible to begin envisaging national, anti-nationalist histories of the 'people'. And by exploring this Third Space, we may elude the politics of polarity and emerge as the others of our selves.

1989

LENNARD J. DAVIS
b. 1949

The 1980s and early 1990s saw the rise of identity studies, as critics emphasized the diverse ways that race, class, gender, ethnicity, sexuality, and location shape our identities. Yet Lennard J. Davis pointed to a significant gap in this critical turn; as he charges in his book *Enforcing Normalcy: Disability, Deafness, and the Body* (1995), disability was largely ignored, if not "relegated to a sideshow, a freak show at that, far away from the academic midway of progressive ideas and concerns." With *Enforcing Normalcy* and his anthology, *The Disabilities Studies Reader* (1997; 5th ed., 2016), Davis pioneered the field of disability studies in criticism and theory. In those works and several books since, he has focused on the "biopolitics" involved in our understanding of our bodies, in particular how a coercive ideology of "normalcy" specifies a "normal body" and stigmatizes any divergence from that norm, even though bodies have many variations. In our selection from *Enforcing Normalcy*, "Visualizing the Disabled Body: The Classical Nude and the Fragmented Torso," Davis melds literary analysis and contemporary theory, especially from psychoanalysis, to show the many (and often unnoticed) images of disability appearing in art, fiction, and film and to expose the negative effects of "normalcy," enforced through the almost unattainable projection of a "normal ideal."

Davis experienced the politics of disability while growing up with deaf, working-class Jewish parents in the Bronx, as he saw how his family was isolated and demeaned simply because of the cultural view of deafness. He attended Columbia University, receiving a B.A. in 1970 and a Ph.D. in 1976, writing his doctoral dissertation under the supervision of EDWARD W. SAID. He also attended courses in the early 1970s at the École Pratique des Hautes Études in Paris, where he studied with ROLAND BARTHES. Davis has taught at Columbia, at the State University of New York at Binghamton, and since 2000 at the University of Illinois at Chicago, where he helped found one of the first programs in disability studies. He published his first two books on the history of the novel, but his research interests shifted in the early 1990s when he became a member of Children of Deaf Adults (CODA). Thereafter he has concentrated on deafness and disability, co-founding the Modern Language Association's Committee on Disability Issues in the Profession and

writing on disability in academic venues as well as more mainstream ones such as the *Nation* and the *New York Times*.

Like other versions of identity studies, disability studies focuses on the way that identity relates to the body and on the social constructions of marginality and normality. It draws on a wide array of contemporary theoretical sources, including psychoanalysis, cultural studies, feminism, and especially body studies. Beginning with the work of MICHEL FOUCAULT, who examined the disciplining and medicalization of the body as a form of social control, the body has emerged as a central theoretical category, often replacing the concern with subjectivity that was prominent in the 1970s and 1980s. In particular, feminist theorists such as SUSAN BORDO have exposed the frequently negative body images enforced on women. In a different vein, DONNA HARAWAY's "Manifesto for Cyborgs" (1985; see above) has also influenced disability studies by promoting a postmodern view of the body as a technologically constructed "cyborg."

Demonstrating how the body is a social construction rather than a universal constant, Davis—and disability studies—starts with a critique of "normalcy," which functions to stigmatize as abnormal those with different or limited abilities. In *Enforcing Normalcy*, he traces the history of the idea of the normal, initiated in the eighteenth century with eugenics and statistics, which mandated that people fit within the limits of a "normal curve." Before that time, Davis argues, the "ideal" was the primary model in Western culture, which assumed that all bodies were less than ideal, and there was therefore less stigma attached to disability. Some disability theorists trace the emphasis on the normal body to industrial capitalism, which required a standardized body for factory work and labeled other bodies as abnormal, relegating them to marginal status. In our own era we have seen the rise of the "normal ideal," especially in Hollywood movies, which depict ideal bodies as normal and less-than-ideal bodies as abnormal.

Our selection from "Visualizing the Disabled Body" analyzes the frequent depiction of disability and normalcy in art, literature, and film. Beginning with a striking comparison between a famous classical Greek statue, the Venus de Milo, and a contemporary woman with disabilities, Davis questions aesthetic and social preconceptions that lead us to think an armless statue beautiful and a living woman without arms ugly, deformed, and de-eroticized. After deconstructing this dichotomy, he investigates the images of disability prevalent in a range of works of art and literature, including Mary Shelley's novel *Frankenstein* (1818), the photography of Diane Arbus (1923–1971) and others, and films such as *Frankenstein* (1931) and *Born on the Fourth of July* (1989). Davis finds that the "visual arts have done a magnificent job of centralizing normalcy and of marginalizing different bodies."

Turning to psychoanalysis, Davis draws on JACQUES LACAN's notion of the primordial "fragmented body" to understand the persistence of images of disabled bodies. The abnormal body suggests that one's coherent identity is actually a fantasy construction concealing the fundamentally fragmentary nature of identity. In particular, Davis considers *Frankenstein* in terms of the fragmented, grotesque body, finding the scientist's creation representative of a person with disabilities. The creature is horrible because he is a composite made from disparate body parts, thereby literalizing the notion we hold from early infancy of the primordial fragmented body.

Disability theorists like Davis aim not only at making a theoretical intervention but at changing community views of disability and removing its social stigma. Just as feminism, queer studies, and African American studies arose out of political mobilizations, so disability studies is connected with a movement that seeks greater rights for people with disabilities. As Davis argued in his introduction to the first *Disability Studies Reader*, "people with disabilities have been an oppressed and repressed group. People with disabilities have been isolated, incarcerated, . . . institutionalized, and controlled to a degree probably unequal to that experienced by any other minority

group. As fifteen percent of the population, people with disabilities make up the largest physical minority within the United States.” Construed as one among many minority groups, disabled people can demand equal treatment as a matter of human rights whose denial is a form of unjust discrimination.

A problematic issue for disability theorists is that of definition. The central critique launched by disability studies aims to break down the dichotomy of abled/disabled and normal/abnormal, offering instead a wide conceptual continuum encompassing persons of varying abilities. At the same time, however, disability is cast as a specific identity defined narrowly enough that most people (e.g., the near-sighted) are not considered disabled. This narrower definition invokes “the disabled” as a category designed to convey minority status and legal rights. The tension between wide and narrow definitions of disability mirrors a tension in other identity-based studies—whether focusing on race, ethnicity, gender, or sexuality—between deconstructing conventional categories that marginalize individuals and asserting a separate status to remedy losses of rights. Perhaps it reflects less a contradiction than a two-pronged strategy, aiming ideologically to dispel prejudice and pragmatically to assert the rights of those injured by prejudice. In concentrating on these tasks, Davis’s work and disability studies compellingly reconfigure concepts of identity, the body, and normalcy.

Enforcing Normalcy: Disability, Deafness, and the Body Keywords: The Body, Cultural Studies, Identity, The Novel, Popular Culture, Psychoanalysis, Representation

From Enforcing Normalcy: Disability, Deafness, and the Body

From Chapter 6. Visualizing the Disabled Body: The Classical Nude and the Fragmented Torso

A human being who is first of all an invalid is *all* body, therein lies his inhumanity and his debasement. In most cases he is little better than a carcass—.

. . . the female is as it were a deformed male.

Aristotle, *Generation of Animals*²

When I begin to wish I were crippled—even though I am perfectly healthy—or rather that I would have been better off crippled, that is the first step towards *butoh*.

Tatsumi Hijikata,³ co-founder of the Japanese performance art/dance form *butoh*

She has no arms or hands, although the stump of her upper right arm extends just to her breast. Her left foot has been severed, and her face is badly scarred, with her nose torn at the tip, and her lower lip gouged out. Fortunately, her facial mutilations have been treated and are barely visible, except for minor scarring visible only up close. The big toe of her right foot

1. The 1924 masterpiece by the German novelist Mann (1875–1955); the novel is set in a tuberculosis sanatorium.

2. One of the zoological works of the Greek philosopher (384–322 B.C.E.; see above), who set the

course of Western science for centuries.

3. Japanese dancer, teacher, and choreographer (1928–1986); his style featured dancers with distorted, emaciated bodies, shaved heads, and white-plastered faces.

has been cut off, and her torso is covered with scars, including a particularly large one between her shoulder blades, one that covers her shoulder, and one covering the tip of her breast where her left nipple was torn out.

Yet she is considered one of the most beautiful female figures in the world. When the romantic poet Heinrich Heine saw her he called her 'Notre-Dame de la Beauté'.⁴

He was referring to the Venus de Milo.⁵

Consider too Pam Herbert, a quadriplegic with muscular dystrophy, writing her memoir by pressing her tongue on a computer keyboard, who describes herself at twenty-eight years old:

I weigh about 130 pounds; I'm about four feet tall. It's pretty hard to get an accurate measurement on me because both of my knees are permanently bent and my spine is curved, so 4' is an estimate. I wear size two tennis shoes and strong glasses; my hair is dishwater blonde and shoulder length.⁶

In this memoir, she describes her wedding night:

We got to the room and Mark laid me down on the bed because I was so tired from sitting all day. Anyway, I hadn't gone to the bathroom all day so Mark had to catheterize me. I had been having trouble going to the bathroom for many years, so it was nothing new to Mark, he had done it lots of times before.

It was time for the biggest moment of my life, making love. Of course, I was a little nervous and scared. Mark was very gentle with me. He started undressing me and kissing me. We tried making love in the normal fashion with Mark on top and me on the bottom. Well, that position didn't work at all, so then we tried laying on our sides coming in from behind. That was a little better. Anyway, we went to sleep that night a little discouraged because we didn't have a very good lovemaking session. You would have thought that it would be great, but sometimes things don't always go the way we want them to. We didn't get the hang of making love for about two months. It hurt for a long time.⁷

I take the liberty of bringing these two women's bodies together. Both have disabilities. The statue is considered the ideal of Western beauty and eroticism, although it is armless and disfigured. The living woman might be considered by many 'normal' people to be physically repulsive, and certainly without erotic allure. The question I wish to ask is why does the impairment of the Venus de Milo in no way prevent 'normal' people from considering her beauty, while Pam Herbert's disability becomes the focal point for horror and pity?

In asking this question, I am really raising a complex issue. On a social level, the question has to do with how people with disabilities are seen and

4. Our Lady of Beauty (French). Heine (1797–1856), German Romantic poet and journalist.

5. Famous classical statue of Aphrodite (called Venus by the Romans), Greek goddess of love (2d c. B.C.E. copy of a 4th c. original), found on the island of Melos in 1820; it is now displayed in the Louvre, the national art museum of France.

6. In S. E. Browne, D. Connors, and N. Stern, eds., *With the Power of Each Breath: A Disabled Women's Anthology* (Pittsburgh: Cleis Press, 1985), p. 147 [Davis's note]. Some of the author's notes have been edited, and some omitted.

7. *Ibid.*, p. 155 [Davis's note].

why, by and large, they are de-eroticized. If, as I mentioned earlier, disability is a cultural phenomenon rooted in the senses, one needs to inquire how a disability occupies a field of vision, of touch, of hearing; and how that disruption or distress in the sensory field translates into psycho-dynamic representations. This is more a question about the nature of the subject than about the qualities of the object, more about the observer than the observed. The 'problem' of the disabled has been put at the feet of people with disabilities for too long.

Normalcy, rather than being a degree zero of existence, is more accurately a location of bio-power, as Foucault⁸ would use the term. The 'normal' person (clinging to that title) has a network of traditional ableist assumptions and social supports that empowers the gaze⁹ and interaction. The person with disabilities, until fairly recently, had only his or her own individual force or will. Classically, the encounter has been, and remains, an uneven one. Anne Finger describes it in strikingly visual terms by relating an imagined meeting between Rosa Luxemburg and Antonio Gramsci,¹ each of whom was a person with disabilities, although Rosa is given the temporary power of the abled gaze:

We can measure Rosa's startled reaction as she glimpses him the misshapen dwarf limping towards her in a second-hand black suit so worn that the cuffs are frayed and the fabric is turning green with age, her eye immediately drawn to this disruption in the visual field; the unconscious flinch; the realization that she is staring at him, and the too-rapid turning away of the head. And then, the moment after, the consciousness that the quick aversion of the gaze was as much of an insult as the stare, so she turns her head back but tries to make her focus general, not a sharp gaze. Comrade Rosa, would you have felt a slight flicker of embarrassment? shame? revulsion? dread? of a feeling that can have no name?²

In this encounter what is suppressed, at least in this moment, is the fact that Rosa Luxemburg herself is physically impaired (she walked with a limp for her whole life). The emphasis then shifts from the cultural norm to the deviation; Luxemburg, now the gazing subject, places herself in the empowered position of the norm, even if that position is not warranted.

Disability, in this and other encounters, is a disruption in the visual, auditory, or perceptual field as it relates to the power of the gaze. As such, the disruption, the rebellion of the visual, must be regulated, rationalized, contained. Why the modern binary—normal/abnormal—must be maintained is a complex question. But we can begin by accounting for the desire to split bodies into two immutable categories: whole and incomplete, abled and disabled, normal and abnormal, functional and dysfunctional.

8. MICHEL FOUCAULT (1926–1984), French philosopher and historian of ideas; the study of bio-power (as a political technology for manipulating the body) is a major theme in his work.

9. A term associated with the psychoanalytic theory of JACQUES LACAN (1901–1981) and, more specifically, with Lacan-influenced film studies (e.g., LAURA MULVEY's 1975 "Visual Pleasure and Narrative Cinema"; see above).

1. Italian Marxist philosopher (1891–1937; see

above). Luxemburg (1871–1919), Polish-born German Marxist revolutionary.

2. Anne Finger, "Comrade Luxemburg and Comrade Gramsci Pass Each Other at a Congress of the Second International in Switzerland on the 10th of March, 1912," unpublished manuscript, 1994 [Davis's note]. Finger (b. 1951), American activist in the disabilities movement and writer of fiction and nonfiction.

In the most general sense, cultures perform an act of splitting (*Spaltung*,³ to use Freud's term). These violent cleavages of consciousness are as primitive as our thought processes can be. The young infant splits the good parent from the bad parent—although the parent is the same entity. When the child is satisfied by the parent, the parent is the good parent; when the child is not satisfied, the parent is bad. As a child grows out of the earliest phases of infancy, she learns to combine those split images into a single parent who is sometimes good and sometimes not. The residue of *Spaltung* remains in our inner life, personal and collective, to produce monsters and evil stepmothers as well as noble princes and fairy godmothers.

In this same primitive vein, culture tends to split bodies into good and bad parts. Some cultural norms are considered good and others bad. Everyone is familiar with the 'bad' body: too short or tall, too fat or thin, not masculine or feminine enough, not enough or too much hair on the head or other parts of the body, penis or breasts too small or (excepting the penis) too big. Furthermore, each individual assigns good and bad labels to body parts—good: hair, face, lips, eyes, hands; bad: sexual organs, excretory organs, underarms.

The psychological explanation may provide a reason why it is imperative for society at large to engage in *Spaltung*. The divisions whole/incomplete, able/disabled neatly cover up the frightening writing on the wall that reminds the hallucinated whole being that its wholeness is in fact a hallucination, a developmental fiction. *Spaltung* creates the absolute categories of abled and disabled, with concomitant defenses against the repressed fragmented body.

But a psychological explanation alone is finally insufficient. Historical specificity makes us understand that disability is a social process with an origin. So, why certain disabilities are labeled negatively while others have a less negative connotation is a question tied to complex social forces (some of which I have tried to lay out in earlier chapters). It is fair to say, in general, that disabilities would be most dysfunctional in postindustrial countries, where the ability to perambulate or manipulate is so concretely tied to productivity, which in itself is tied to production. The body of the average worker, as we have seen, becomes the new measure of man and woman. Michael Oliver, citing Ryan and Thomas (1980), notes:

With the rise of the factory . . . [during industrialization] many more disabled people were excluded from the production process for 'The speed of factory work, the enforced discipline, the time-keeping and production norms—all these were a highly unfavourable change from the slower, more self-determined and flexible methods of work into which many handicapped people had been integrated.'⁴

3. Crack; splitting, division (German). The term is used by SIGMUND FREUD (1856–1939) in discussing psychosis and fetishism, especially in "Splitting of the Ego in the Process of Defense" (1940) and "Fetishism" (1927; see above); more important for the point made here, Lacan makes

the concept fundamental to subjectivity itself.

4. J. Ryan and F. Thomas, *The Politics of Mental Handicap* (Harmondsworth: Penguin, 1980), ctd. in Michael Oliver, *The Politics of Disablement: A Sociological Approach* (New York: St. Martin's, 1990), p. 27 [Davis's note].

Both industrial production and the concomitant standardization of the human body have had a profound impact on how we split up bodies.

We tend to group impairments into the categories either of 'disabling' (bad) or just 'limiting' (good). For example, wearing a hearing aid is seen as much more disabling than wearing glasses, although both serve to amplify a deficient sense. But loss of hearing is associated with aging in a way that nearsightedness is not. Breast removal is seen as an impairment of femininity and sexuality, whereas the removal of a foreskin is not seen as a diminution of masculinity. The coding of body parts and the importance attached to their selective function or dysfunction is part of a much larger system of signs and meanings in society, and is constructed as such.
